It shall be listed all deliverables that are required for the transfer to be considered as completed. The list shall include, for example, the signing of terms for the amendment of agreements and instruments, the transfer of data base, information and documents, the performance of trainings and, if applicable, the engagement of a service for the independent assessment of the financial and accounting information of the Sectorial Program, in order to assure that the assets and liabilities related thereto comply with the level of risk that is acceptable to ENBPar.

SCHEDULE IV

GUIDELINES FOR THE TRANSITION PLAN OF FINANCINGS WITH FUNDS OF RGR

The Transition Plan shall describe at least the context and legal grounds of the program, the instruments to be assigned, the activities to be performed by Eletrobras and later undertaken by ENBPar, the timeline of transfer and the requirements for the signing of the term of completion of transfer.

I. Context and Legal Grounds

This section shall list the legal grounds of the Sectorial Program and indicate whether those applicable laws already provide for the transition of operation to ENBPar.

Eletrobras is currently responsible for the management of the financing agreements that use funds for the Global Reversion Reserve (*Reserva Global de Reversão* or "**RGR**") and that were signed before November 17, 2016, and Eletrobras shall (i) monthly deliver to CCEE the applicable evidence of the amounts to be delivered to and received by CCEE for the compliance with the financing agreements signed in the context of the Power Development Account (*Conta de Desenvolvimento Energético* or "**CDE**") and RGR, (ii) charge those financing agreements in accordance with the timeline set forth in the applicable sections of each agreement, and (iii) reimburse RGR, no later than five days from the actual payment by the debtor, the funds relating to the amortization, contractual interest fees and credit reserve fees, and, if applicable, default penalties and interest; provided that, as a result of those activities, Eletrobras is entitled to receive a contractual management fee, in accordance with Decree No. 9,022/2017.

Eletrobras shall indicate any pending amendments of laws and regulation that may be required for the transfer of the duties thereunder from Eletrobras to ENBPar.

II. Assignment and Amendment of Agreements and others Instruments

This section shall list all agreements and others instruments that shall be assigned or amended to replace Eletrobras for ENBPar under those agreement.

Eletrobras shall list the instruments that need to be amended and the communication plan of the Parties and call for signing of those amendment terms.

When listing those instruments, it shall also inform any possible disputes involving the financial agreements that use funds of RGR, the history of defaults, full registration data of the agents and any other material contractual information.

III. Activities and Processes

This section shall detail the activities performed by Eletrobras in the context of the program, followed by the mapping of the applicable flows and processes.

Eletrobras shall deliver the manuals of the processes that will be migrated to ENBPar, such as the processes for charging, transfer of funds and publishing.

The manuals of processes shall include at least the following items: flow charts, operational processes, reference terms and amounts, targets and indexes, references to manuals and technical notes issued about specific matters of the program.

IV. Proposed structure

This section shall include a reasonable estimate from Eletrobras with respect to the number of people and type of infrastructure that will be required for the operation of the Sectorial Program.

Staff

Professional	Title	Duties	Use
1	Technical Assistant I		50%
2	Technical Assistant 2		10%
3	Manager NH-II		2%

Note: It was not considered other supporting activities, such as legal, financial and accounting support which may also be needed, as those supporting departments shall also be structured by ENBPar.

Minimum infrastructure

Eletrobras shall present a reference of minimum infrastructure for the operation of the Sectorial Program, such as third-party software that ENBPar shall engage.

V. Information Technology

This section shall provide for the conditions for the rendering of possible information technology services, by Eletrobras to ENBPar, that may have been developed in the context of the Sectorial Program.

If applicable, Eletrobras shall indicate the use by ENBPar, of proprietary systems and bases of Eletrobras that may be required for the operation of the processes to be migrated, until the moment on which ENBPar may assume those bases in its infrastructure. It shall be included any observations about the operation and maintenance of existing systems and bases related to the processes to be migrated during the transition process.

In case of proprietary systems and bases, Eletrobras shall also inform the use and maintenance assignment terms for software designed for the sectorial program. If there are other software, Eletrobras shall deliver a list of technical and operational requirements that support the choice of similar software by ENBPar.

VI. Date Base, Information and Documents

This section shall inform the data base that shall be transferred, from Eletrobras to ENBPar, in the context of the transfer of duties related to the Sectorial Program.

Eletrobras shall provide a list of data base, information and documents, including a bibliographic archive, that shall be transferred to ENBPar for the operation of Procel, as well as operational guidelines for the migration of data, information and documents to the infrastructure of ENBPar.

VII. Training

This section shall describe the specific trainings about the Sectorial Program that shall be performed by Eletrobras in order to allow ENBPar's staff to undertake the execution of the migrated activities.

Eletrobras shall detail the trainings that will be performed to the staff of ENBPar about the Sectorial Programs and the prior conditions that shall be observed by that staff (such as third-party platform trainings that may be required for the

operation of the Sectorial Program, but that are not exclusively designed for the Sectorial Programs – such as SAP, if applicable).

Trainings that involve systems and processes that are developed internally by Eletrobras shall be given by employees of Eletrobras during the Transition Period. Trainings with respect to platforms of third parties shall be indicated by Eletrobras and engaged directly by ENBPar.

Trainings assume that ENBPar's staff is familiar with the specific legislation that applies to the Sectorial Program.

VIII. Financial remarks

This section shall describe any financial remarks that may apply to the transfer of Sectorial Programs, if applicable.

Eletrobras shall list the requirements for the issuance of invoices, tax receipts, performance of payments, financial, accounting and budget controls, bank information, among others.

IX. Timeline

This section shall set forth the timeline and activities that are attributed to each party, as well as an estimate of the deadline for the completion of each activity.

It shall be set forth the date for the transfer of duties (always respecting the Deadline for Transfer), and the requirements and activities that are needed for the compliance with that date.

Date	Responsible	Activity	Estimated duration	Requirements
[●]	[●]	[●]	[●]	[●]
[●]	[●]	[●]	[●]	[●]
[●]	[●]	[●]	[●]	[●]
[●]	[●]	[●]	[●]	[●]

X. Requirements for the Certificate of Completion

This section shall provide for the requirements for the signing of the Certificate of Completion, as well as the mechanism to certify the satisfaction of those requirements.

It shall be listed all deliverables that are required for the transfer to be considered as completed. The list shall include, for example, the signing of terms for the amendment of agreements and instruments, the transfer of data base, information and documents listed in the section, the performance of trainings and, if applicable, the engagement of a service for the independent assessment of the financial and accounting information of the Sectorial Program, in order to assure that the assets and liabilities related thereto comply with the level of risk that is acceptable to ENBPar.

SCHEDULE V

GUIDELINES FOR THE TRANSITION PLAN OF "MAIS LUZ PARA A AMAZÔNIA" PROGRAM AND "LUZ PARA TODOS" PROGRAM

The Transition Plan shall describe at least the context and legal grounds of the program, the instruments to be assigned, the activities to be performed by Eletrobras and later undertaken by ENBPar, the timeline of transfer and the requirements for the signing of the term of completion of transfer.

I. Context and Legal Grounds

This section shall list the legal grounds of the Sectorial Program and indicate whether those applicable laws already provide for the transition of operation to ENBPar.

Eletrobras was indicated by the Ministry of Mines and Energy to operate MLA program, in accordance with Order (*Portaria*) No. 86, dated March 9, 2020, and it should be a party to the commitments and agreements for the operation of the program, in accordance with the Program Operation Manual (*Manual de Operacionalização do Programa*).

Eletrobras was also indicated by the Ministry of Mines and Energy to operate LPT program, in accordance with Order (*Portaria*) No. 175, dated May 17, 2018, and it is a party to the commitments, cooperation agreements and operation agreements and intervening party to financing agreements. Eletrobras is also responsible for delivering to the Electric Energy Commercialization Chamber (*Câmara de Comercialização de Energia Elétrica* or "**CCEE**") evidence of the amounts to be transferred and received for the compliance with the program, in accordance with Decree No. 9,022/2017.

Eletrobras shall indicate any pending amendments of laws and regulation that may be required for the transfer of the duties thereunder from Eletrobras to ENBPar.

II. Assignment and Amendment of Agreements and others Instruments

This section shall list all agreements and others instruments that shall be assigned or amended to replace Eletrobras for ENBPar under those agreement.

Eletrobras shall list the instruments that need to be amended and the communication plan of the Parties and call for signing of those amendment terms, including the commitment terms between the Ministry of Mines and

Energy and the executing agents, which have Eletrobras, ANEEL and CCEE as intervening parties.

When listing those instruments, it shall also inform any possible disputes involving the MLA and LPT programs, the history of defaults, full registration data of the agents, system of management of data base of MLA and LPT programs, standards for the performance of technical-financial analyses of work programs presented by executing agents and any other material contractual information.

III. Activities and Processes

This section shall detail the activities performed by Eletrobras in the context of the program, followed by the mapping of the applicable flows and processes.

Eletrobras shall deliver the manuals of the processes that will be migrated to ENBPar.

The manuals of processes shall include at least the following items: flow charts, operational processes, reference terms and amounts, targets and indexes, references to manuals and technical notes issued about specific matters of the program.

IV. Proposed structure

This section shall include a reasonable estimate from Eletrobras with respect to the number, classification and habilitation of people and type of infrastructure that will be required for the operation of the Sectorial Program.

Note: It was not considered other supporting activities, such as legal, financial and accounting support which may also be needed, as those supporting departments shall also be structured by ENBPar.

The financial department performs a material duty when operating the Programs, since it is responsible for the delivery of accounts and the process of termination of credit under the agreements. For those activities of support to the execution of programs, the department provides 5 partial-time employees, 3 of which are employees with 75% of participation and 2 with 50% of participation.

With respect to the Information Technology department, in order to perform the operation agent duties, Eletrobras developed and provides support to several technological tools for the management of the programs.

Minimum infrastructure

Eletrobras shall present a reference of minimum infrastructure for the operation of the Sectorial Program, such as third-party software that ENBPar shall engage.

V. Information Technology

This section shall provide for the conditions for the rendering of possible information technology services, by Eletrobras to ENBPar, that may have been developed in the context of the Sectorial Program.

If applicable, Eletrobras shall indicate the use by ENBPar, of proprietary systems and bases of Eletrobras that may be required for the operation of the processes to be migrated, until the moment on which ENBPar may assume those bases in its infrastructure. It shall be included any observations about the operation and maintenance of existing systems and bases related to the processes to be migrated during the transition process.

In case of proprietary systems and bases, Eletrobras shall also inform the use and maintenance assignment terms for software designed for the sectorial program. If there are other software, Eletrobras shall deliver a list of technical and operational requirements that support the choice of similar software by ENBPar.

VI. Date Base, Information and Documents

This section shall inform the data base that shall be transferred, from Eletrobras to ENBPar, in the context of the transfer of duties related to the Sectorial Program.

Eletrobras shall provide a list of data base, information and documents, including a bibliographic archive, that shall be transferred to ENBPar for the operation of Procel, as well as operational guidelines for the migration of data, information and documents to the infrastructure of ENBPar.

VII. Training

This section shall describe the specific trainings about the Sectorial Program that shall be performed by Eletrobras in order to allow ENBPar's staff to undertake the execution of the migrated activities.

Eletrobras shall detail the trainings that will be performed to the staff of ENBPar about the Sectorial Programs and the prior conditions that shall be observed by that staff (such as third-party platform trainings that may be required for the operation of the Sectorial Program, but that are not exclusively designed for the Sectorial Programs – such as SAP, if applicable).

Trainings that involve systems and processes that are developed internally by Eletrobras shall be given by employees of Eletrobras during the Transition Period. Trainings with respect to platforms of third parties shall be indicated by Eletrobras and engaged directly by ENBPar.

Trainings assume that ENBPar's staff is familiar with the specific legislation that applies to the Sectorial Program and are able to perform works in the area of electric risks and in remote areas and that they are already trained in NR-10 provided by ENBPar itself.

VIII. Financial remarks

This section shall describe any financial remarks that may apply to the transfer of Sectorial Programs, if applicable.

Eletrobras shall list the requirements for the issuance of invoices, tax receipts, performance of payments, financial, accounting and budget controls, bank information, among others.

IX. Timeline

This section shall set forth the timeline and activities that are attributed to each party, as well as an estimate of the deadline for the completion of each activity.

It shall be set forth the date for the transfer of duties (always respecting the Deadline for Transfer), and the requirements and activities that are needed for the compliance with that date.

[●]	[●]	[●]	[●]	[●]

X. Requirements for the Certificate of Completion

This section shall provide for the requirements for the signing of the Certificate of Completion, as well as the mechanism to certify the satisfaction of those requirements.

It shall be listed all deliverables that are required for the transfer to be considered as completed. The list shall include, for example, the signing of terms for the amendment of agreements and instruments, the transfer of data base, information and documents listed in the section, the performance of trainings and, if applicable, the engagement of a service for the independent assessment of the financial and accounting information of the Sectorial Program, in order to assure that the assets and liabilities related thereto comply with the level of risk that is acceptable to ENBPar.

SCHEDULE VI
MODELO DE TERMO DE CESSÃO CONTRATUAL

(This schedule provides indication of the standard sections for the assignment of contractual position, and shall be adjusted to reflect each instrument to be assigned by Eletrobras to ENBPar)

ASSIGNMENT TERM OF [INSTRUMENT]

By this private instrument, the parties:

(1) [PARTIES AND INTERVENING PARTIES];

(2) **CENTRAIS ELÉTRICAS BRASILEIRAS S.A.**, a company of mixed capital (*sociedade de economia mista*), enrolled with the CNPJ/ME under No. 00.001.180/0001-26, with its head office in the city of Rio de Janeiro, State of Rio de Janeiro, at Rua da Quitanda, No. 196, city center, Zip Code 20090-070, hereby duly represented pursuant to its bylaws ("**Assignor**"); and

Hereinafter jointly referred to as "Parties" and, individually, as "Party";

(3) **EMPRESA BRASILEIRA DE PARTICIPAÇÕES EM ENERGIA NUCLEAR E BINACIONAL S.A.**, a state-owned company, enrolled with the CNPJ/ME under No. 43.913.162/0001-23, with its head office in the city of Brasília, Federal District, at Esplanada dos Ministérios, block U, ground floor, Zip Code 70065-900, hereby duly represented pursuant to its bylaws ("**Assignee**");

WHEREAS:

(A) [History of the agreement and previous amendments];

(B) The Assignee is a state-owned company linked to the Ministry of Mines and Energy, which was incorporated pursuant to the Brazilian Law No. 14,182/2021, for the purpose of, among others, keep the rights and obligations relating to the sectorial programs, including Proinfa and its extension, the Procel account, the management of financings that use the funds of RGR signed before November 17, 2016 and the management of BUSA set forth in the Decree-Law No. 1,383, dated December 26, 1974;

(C) Decree No. 10,791/2021 sets forth that the duties related to those sectorial programs shall be undertaken by ENBPar within twelve (12) months from the date

when the shareholders' meeting confirming the capital increase of Eletrobras has occurred as a result of its privatization process;

(D) Resolution No. 203/2021 of the Board of Investment Partnerships Program (*Conselho do Programa de Parcerias de Investimentos*), which approved the operational model, adjustments and conditions for the privatization da Eletrobras in the context of the National Privatization Program (*Programa Nacional de Desestatização*), provides for the operational transfer of the sectorial programs, including LPT and MLA, shall occur within twelve (12) months from the liquidation of the Global Offer provided in Law No. 14,182/2021, and that, among other provisions, the agreements related to sectorial programs, as well as to LPT and MLA, shall be assigned and amended to formalize the succession of the Assignor by the Assignee;

(E) The Global Offer was completed on [●], and the Assignor and Assignee are currently in a transition period with respect to the duties related to the sectorial programs;

(F) The Assignor intends to assign and transfer the Agreement and its contractual position in the Agreement to the Assignee, and the Assignee intends to undertake the position of the Assignor in the Agreement;

(G) The remaining Parties agree with the assignment and transfer of the Agreement and the contractual position of the Assignor to the Assignee;

(H) The Parties agree to enter into this instrument for the assignment of the agreement, and its effectiveness is subject to a suspensive condition as set forth in this instrument.

Therefore, based on the foregoing, the Parties decide to enter into this Term of Assignment of [Instrument] ("**Assignment Term**"), which shall be governed and interpreted in accordance with the following terms and conditions:

1 **PURPOSE**The purpose of this Assignment Term is to provide for the assignment and transfer of the Agreement and the contractual position of the Assignor under the Agreement to the Assignee, subject to the Suspensive Condition set forth in Section 2.2.

1.2 As a result of the aforementioned assignment and transfer, the Assignee, with the express consent of the other Parties, will replace the Assignor in its contractual position under the Agreement, and will irrevocably and irreversibly undertake all rights, obligations and liabilities of the Assignor that may have been agreed with the other Parties in the Agreement. As a result, all references to the Assignor in the Agreement shall be understood as references to the Assignee, after the satisfaction of the Suspensive Condition and actual assignment and transfer.

1.3 Also as a result of the assignment and transfer, the Parties grant full, irreversible and irrevocable release to the Assignor for all rights and obligations arising from the Agreement since the beginning of its effectiveness until the date hereof, including with respect to the amounts paid by the Assignor to the other Parties, at any title, and thereafter those rights and obligations and any and all legal relationship or event of any nature arising from acts or legal transactions arising from the civil relationship between the Assignor and the other Parties of the Agreement are hereafter terminated, and the other Parties hereby agree that there are no claims, interest or intention that may justify any dispute in any jurisdiction against the Assignor, and nothing else may therefore be claimed against the Assignor, in the present or in the future, at any title.

2 **EFFECTIVENESS**As from the satisfaction of the Suspensive Condition of this Assignment Term, the Assignee is liable for all obligations and rights arising from the Agreement that were originally attributed to the Assignor.

2.2 This Assignment Term will be in effect as from the date of completion of the transfer of the management of the sectorial program [●], by means of the signing, by Assignor and Assignee, of a certificate of transfer, which shall be broadly disclosed by ENBPar in its website ("**Suspensive Condition**").

3 **COMMUNICATIONS**All communications set forth in this Agreement with respect to the contractual position undertaken by the Assignee shall be made in writing and delivered by means of express delivery, e-mail or registered mail with proof of receipt, to the following addresses:

If to ENBPar:

Address: Esplanada dos Ministérios, block U, ground floor, Brasília – DF, Zip Code 70065-900

E-mail: [●]

Telephone: ([●]) [●]

Attn.: [●]

4 **MISCELLANEOUS**All other terms and conditions of the Agreement which are not expressly amended as a result of this Assignment Term (including expressly the dispute resolution section set forth in the Agreement) shall remain in full force and effect and are hereby confirmed, and those terms and conditions shall be complied with by the Assignee and other Parties (except for the Assignor) in accordance with the terms and conditions of the Agreement.

In witness whereof, the Parties enter into this Agreement in three (3) counterparts of same content and form, in the presence of the two (2) witness identified below.

(City, date and signatures)

SCHEDULE VII
TEMPLATE OF CERTIFICATE OF TRANSFER

CEERTIFICATE OF TRANSFER OF [NAME OF THE SECTORIAL PROGRAM]

We hereby certify that the Transition Plan and transfer of [NAME OF THE SECTORIAL PROGRAM], as set forth in the Agreement for the Transition and Transfer of Management of Sectorial Programs entered into by and between Centrais Elétricas Brasileiras S.A. – Eletrobras and Empresa Brasileira de Participações em Energia Nuclear and Binacional S.A. – ENBPar, on [•] ("**Agreement**"), was duly completed on the date hereof, after verification of all requirements for the completion of the transfer of the aforementioned program in accordance with the applicable plan.

It is hereby agreed that, as from the date hereof, ENBPar is the sole responsible for the management of such sectorial program.

PR Technical Note PR 005/2021 Government Programs

Classificação: Pública

SUBJECT: Transition of the management of government programs from Eletrobras to ENBpar.

REFERENCES:
CPPI Resolution No. 203 of October 14, 2021; Law No. 14,182 of July 13, 2021; Decree No. 10,791/2021 of September 10, 2021; Law No. 10,438 of April 26, 2002; Ordinance No. 556/GM/MME of October 6, 2021.

1. PURPOSE:

This Technical Note aims at presenting the main aspects of the SECTORAL PROGRAM MANAGEMENT TRANSITION AND TRANSFER AGREEMENT to be entered into by and between Eletrobras, and ENBpar with the Federal Government as an intervening-consenting party, herein represented by the Ministry of Mines and Energy, to support the decision-making process of the Shareholders' Meeting that shall assess such transaction.

2. BACKGROUND:

Eletrobras is a publicly-held, state-owned company with shares in three stock exchanges (São Paulo, New York, and Madrid) and in the US stock market (NYSE), where its shares are traded since 2008.

Eletrobras is currently in preparation for capitalization under Law No. 14,182 of July 13, 2021, as a result of Conversion Bill PLV 7/2021 and Provisional Measure No. 1,031.

According to Law No. 14,182 of July 13, 2021, some activities predominantly related to Public Policies shall be transferred from Eletrobras to a new State-owned company yet to be established.

Article 9 of Law No. 14,182 of July 13, 2021:

Article 9. For purposes of the provisions in item I of the main section of article 3 of this Law, the Federal Government is hereby authorized to create a public-private company or governmental entity, in case the companies are not under its direct control.
Paragraph 1. The public-private company or governmental entity referred to in the main section of this article shall:

I – keep the operation of nuclear power plants under the control of the Federal Government, pursuant to item V of the main section of art. 177 of the Federal Constitution;

II – maintain the ownership of the capital stock and the acquisition of electricity services provided by Itaipu Binacional by a federal public agency or entity, to comply with the provisions in the Treaty between the Federative Republic of Brazil and the Republic of Paraguay for the Use of the Water Resources of the Paraná River for Hydroelectric Purposes, Resources which are Held in Condominium by Both Countries, from and Including Salto Grande de Sete Quedas or Salto de Guairá to the Mouth of the Iguaçu River, enacted by Decree No. 72,707 of August 28, 1973;

III – manage credit facility agreements that use funds from the Global Reversal Reserve (RGR) entered into up to November 17, 2016, and manage assets of the Federal Government managed by Eletrobras as provided for in Decree Law No. 1,383 of December 26, 1974, and keep rights and obligations related to the Incentive Program For Alternative Energy Sources (Proinfa) and its extension; and

IV – manage the checking account referred to as National Program for Energy Conservation (Procel), as provided for in Law No. 9,991 of July 24, 2000.

Paragraph 2. Eletronuclear is hereby authorized to include in its purposes those set forth in ¶ 1 of this Article in case the Federal Government does not create the governmental entity or public-private company referred to in the main section of this article.

Paragraph 3. The public-private company or governmental entity referred to in the main section of this article is hereby authorized to associate with the Electric Energy Research Center – Cepel.

Decree No. 10,791/2021 of September 10, 2021 was published in the Federal Official Gazette to create Empresa Brasileira de Participações em Energia Nuclear e Binacional S.A. – ENBpar. The new state-owned company, established as a result of the Eletrobras capitalization process, as provided for in Law No. 14,182/2021, was designed as a holding company model.

Article 2 of Decree No. 10,791 of September 10, 2021 indicates the activities that shall be transferred from Eletrobras to ENBpar.

"Article 2. ENBpar, as provided for in art. 9 of Law No. 14,182 of July 12, 2021, shall:

I – keep the operation of nuclear power plants under the control of the Federal Government;

II – maintain the ownership of the capital stock and the acquisition of electricity services provided by Itaipu Binacional by a federal public agency or entity, to comply with the provisions in the Treaty between the Federative Republic of Brazil and the Republic of Paraguay for the Use of the Water Resources of the Paraná River for Hydroelectric Purposes, Resources which are Held in Condominium by Both Countries, from and including Salto Grande de Sete Quedas or Salto de Guairá to the Mouth of the Iguaçu River, enacted by Decree No. 72,707 of August 28, 1973;

Classification: Confidential

III – manage credit facility agreements that use funds from the Global Reversal Reserve (RGR) entered into up to November 17, 2016;

IV – manage the assets of the Federal Government managed by Centrais Elétricas Brasileiras S.A. – Eletrobras, as provided for in Decree-Law No. 1,383 of December 26, 1974;

V – manage the checking account referred to as National Program for Electric Energy Conservation (Procel), as provided for in Law No. 9,991 of July 24, 2000; and

VI – manage the agreements for trading the electricity generated by the undertakings contracted under the Incentive Program for Alternative Energy Sources (Proinfa), as provided for in Law No. 10,438 of April 26, 2002.

Sole paragraph. *The powers referred to in items III to VI of the main section shall be undertaken by ENBpar within twelve months of the date of the meeting for ratification of the result of the increase in the capital stock of Eletrobras, referred to in ¶ 1 of art. 1 of Law No. 14,182 of 2021.*"

Additionally, Ordinance No. 556/GM/MME of October 6, 2021 defined the appointment of ENBpar as Operator of the National Program for Universalization of the Access and Use of Electric Energy ("LUZ PARA TODOS" ["Light for All"]) and the National Program for Universalization of the Access and Use of Electric Energy in the Legal Amazon (Mais Luz para a Amazônia [More Light for the Amazon]), whose powers shall be undertaken within up to twelve months of the date of the meeting of ratification of the result of the increase in the capital stock of Centrais Elétricas Brasileiras S.A. – Eletrobras.

Within the scope of the Board of the Investment Partnership Program – CPPI, among the resolutions issued, Resolution No. 203 of October 14, 2021, which addressed the operational method, adjustments, and conditions for privatization of Centrais Elétricas Brasileiras S.A. – Eletrobras under the National Privatization Program (PND), was published. Article 11, items XIV and XV, reproduced below, presented guidelines with respect to the transition process of the Government Programs and some activities that shall be transferred from Eletrobras to ENBpar.

"XIV – Eletrobras shall continue to manage, for the transition period of up to twelve months of the settlement date of the Global Public Offering, the trading agreements under the Incentive Program for Alternative Energy Sources (Proinfa), the checking account referred to as National Program for Electric Energy Conservation (Procel), the credit facility agreements that use funds from the Global Reversal Reserve (RGR), the Mais Luz para a Amazônia and Luz para Todos programs, and the assets of the Federal Government as provided for in Decree-Law No. 1,383 of December 26, 1974;

XV – execution by and between ELETROBRAS and ENBpar of an agreement governing the operational transition of the management of the activities and the

Classification: Confidential

assignment of the agreements referred to in item XIV of the main section, as well as the assumption, by ELETROBRAS, free of charge, of the commitment to provide support and assistance to ENBpar for management of these activities, including training personnel, making databases and information available;"

3. ASPECTS OF THE TRANSFER OF ACTIVITIES AND GOVERNMENT PROGRAMS FROM ELETROBRAS TO ENBPAR

As provided for in Law No. 14,182/2021, in Decree No. 10,791 of September 10, 2021, in Ordinance No. 556/GM/MME of October 6, 2021, in CPPI Resolution No. 203 of October 14, 2021, regardless of the order of the foregoing documents, Eletrobras shall transfer the following activities to ENBpar:

Management of the following activities and government programs within 12 months of the date of the meeting of ratification of the result of the increase in the capital stock of Eletrobras:

i. National Program for Electric Energy Conservation (Procel);

ii. Incentive Program for Alternative Energy Sources (Proinfa);

iii. Luz Para Todos Program (LPT);

iv. Mais Luz para a Amazônia Program (MLA);

v. Management of the Global Reversal Reserve (RGR) agreements entered into up to 2016;[1]

vi. BUSA – Management of the assets of the Federal Government managed by Centrais Elétricas Brasileiras S.A. – Eletrobras, as provided for in Decree-Law No. 1,383 of December 26, 1974;

On the other hand, it is also important to add that, based on the reading of the applicable laws and regulations, it can be concluded that the activities/processes listed below shall be transferred to ENBpar soon after the meeting for ratification of the result of the increase in the capital stock of Eletrobras. Accordingly, the following are not the subject matter of this agreement under analysis:

i. Trading of the electricity generated by the Itaipu hydro power plant;

ii. Maintenance of the ownership of the capital stock of Itaipu Binacional;[2]

[1] RGR remaining agreements.

[2] There shall be a specific agreement that shall address the return of the capital stock of Itaipu to Eletrobras.

Classification: Confidential

iii. It is important to note that the activities related to the disposal of assets of Itaipu Binacional, developed by Eletrobras, pursuant to the Treaty and Internal Regulations of Itaipu, despite not being explicitly listed in the instruments that defined the transfer of the responsibility for the activities to ENBpar, were taken into account among the activities to be transferred to that company in this Technical Note;

iv. Being the majority partner in Eletronuclear/nuclear power plants.[3]

Finally, it is important to note that ENBpar shall be equipped with the processes, systems, and personnel for the development of these activities that, according to the prevailing instruments, shall be transferred to that company immediately after the Eletrobras capitalization process is completed.

4. STATUS OF THE SECTORAL PROGRAMS THAT SHALL BE TRANSFERRED TO ENBPAR

Eletrobras is equipped with the apparatus of personnel, processes, and systems required for the development of the activities inherent to being a holding company and responsible for the implementation of the Government programs.

We emphasize that over years of work in the processes and programs that shall be transferred to ENBpar, the Eletrobras professionals acquired high experience, which has been decisive for the success of the management of these programs and processes.

Personnel

Eletrobras currently has about 82 professionals that work directly in the management of the Government Programs. As described in the table below, these Eletrobras workers, in most cases, are 100% assigned to the implementation of these Programs:

Program/Process	
Procel	26
LPT e MLA	22
PROINFA	19
BUSA	10
RGR	5
Grand Total	**82**

[3] There shall be several documents and agreements that shall address the transfer of the controlling interest of Eletronuclear to ENBpar, as well as the partnership of ENBpar with Eletrobras in Eletronuclear.

Classification: Confidential

It is important to note that the chart above does not account for services provided by other supporting areas.

The areas operating directly in the management of the Sectoral Programs are supported by other areas inside the company, which, at some time during the process, provide services.

Procel

Area	Apportionment %	Number of professionals
Contracts	40%	6
Legal	20%	5
Communication	10%	4
Financial	5%	2
Information Technology (IT)	2%	2

Luz Para Todos e Mais Luz para Amazônia

Area	Apportionment %	Number of professionals
Financial	75%	3
Financial	50%	2

PROINFA

Area	Apportionment %	Number of professionals
Advisory Legal Department	6.75%	6
Internal Audit	4.35%	12
General Accounting	7.07%	7
Tax and Fiscal Planning	4.64%	4
Financial Transactions and Insurance	16.49%	9
Shared Services Center (CSC) Assigned Personnel – Finance	2.09%	10
Electricity Trading	10.00%	2

BUSA

It is supported by areas such as Expansion and Implementation; Environment; Operating and Maintenance (O&M), and Modernization of Generation; Accounting; Shared Services

Classification: Confidential

Center; Information Technology; Advisory Legal Department and Litigation; Acquisition, and Contract Planning.

RGR

It is supported by areas such as Accounting and the Legal Department – On demand.

Processes and Systems

Eletrobras processes are properly designed according to its own method. ENBpar shall evaluate the relevance of using the designs that shall be provided to it by Eletrobras, or even of any details, as it deems convenient.

The sectoral Programs use several systems for management, as shown by the examples listed below:

Procel: "Clarity" (CA PPM); SAP R3.

LPT and MLA: Distribution Modular Cost System (SMD); Technical and Budget Analysis System (ATO); Project Management System for the Luz para Todos Program (LPT System); Accountability Module (PCP).

Proinfa: SAP and a Trading Program in implementation stage;

BUSA: Computerized System for Management of Assets of the Federal Government Managed by Eletrobras (SIGBUSA) (developed by Eletrobras); Citrix Workspace; Microsoft 365 Apps for Large Companies – Power BI.

RGR: FER System – internally developed in Eletrobras.

As we can see, self-owned systems and licensed systems owned by third parties are used, including the integrated management system, which is SAP for Eletrobras and, as for ENBpar, the company shall choose its system, as well as customize it for use.

Main quantitative information on the Sectoral Programs are listed in a brief summary below:

Classification: Confidential

Programs	Direct MO	Supporting Areas	Volume
PROCEL	26	Legal Department; Contracts; Financial Department;	Projects: 84 in progress; 30 under contract; 32 expected; and 57 terminated. Funds: BRL10.0 million (average 2018 to 2021). Cost: BRL10.2 million (average 2018 to 2021).
LPT and MLA	22	Financial Department; IT; and Presidency	Agreements: 19 agreements in progress; 19 in termination. Programs: 4 under contract; 7 expected; 4 under analysis; Funds: BRL13.7 million (average 2017 to 2020). Cost: BRL13.4 million (average 2017 to 2020).
PROINFA	19 – Partial assignment	Trading; Financial Department; Accounting; Legal Department; and Audit	PROINFA: 140 agreements Estimated Revenue 2022 – BRL6.5 Bi Estimated Expense 2022 – BRL 6.5 Bi
BUSA	10 – Partial assignment	Generation; Accounting; IT; Legal Department; Treasury; and Supplies	BUSA: 1994 Assets Expenses Reimbursed: BRL 13,1 million (17 to 21) To be reimbursed: 5.9 million (2021/2022)
RGR	5 – Partial assignment	Treasury; Accounting; Legal Department	Credit Facility Agreements: 51 Management fee received: 2% per annum on the outstanding balance of the agreements. Expenses: Basically with personnel.

5. ASPECTS OF THE SECTORAL PROGRAM MANAGEMENT TRANSITION AND TRANSFER AGREEMENT EVALUATED BY ELETROBRAS' GENERAL MEETING

CPPI Resolution No. 203 of October 14, 2021, in addition to addressing the continuous management by ELETROBRAS during the transition period of up to twelve months of the settlement date of the Global Public Offering, of the Government Programs listed in its item XIV of article 11, addressed in item XV a guideline with respect to the execution by and between Eletrobras and ENBpar, of an agreement governing the operational transition of the management of the activities and assignment of the agreements referred to in item XIV of such resolution, as well as the assumption, by ELETROBRAS, free of charge, of the commitment to provide support and assistance to ENBpar for management of these activities, including training personnel, making databases and information available. Thus, the agreement evaluated in this Technical Note is hereby supported.

It is an agreement to be entered into by and between Eletrobras and ENBpar with the FEDERAL GOVERNMENT as an intervening-consenting party, herein represented by the Ministry of Mines and Energy – MME.

Such Agreement comprises the rules and definition of the procedures to be observed in the Sectoral Program transition process, which summary we now describe below:

- Considering that they include the background and legal basis for the settlement of the Agreement;

  The subject matter of the agreement is to provide for the rules that shall be observed throughout the entire period until the effective transfer, by Eletrobras to ENBpar, of the powers related to: **(i)** management of all electricity trading agreements in effect entered into under the Incentive Program for Alternative Energy Sources ("**Proinfa**"), **(ii)** management of the Assets of the Federal Government managed by Eletrobras ("**BUSA**") expropriated and taken over with funds from the Global Reversal Reserve ("**RGR**") and management of all partnerships, and agreements in effect related to the BUSA; **(iii)** management of the National Program for Energy Conservation ("**Procel**") checking account and management of all administrative, financial, consulting, and engineering service agreements, technical and financial cooperation partnerships, technical cooperation term sheets, and technical cooperation agreements in effect entered into under the Procel and its subprograms, **(iv)** management of all credit facility agreements that use funds from the RGR entered into up to November 17, 2016, **(v)** implementation of the Mais Luz para a Amazônia Program ("**MLA**") and management of all term sheets and implementation agreements in effect and those in termination of credit under the MLA, and **(vi)** implementation of the Luz para Todos Program ("**LPT**") and management of all term sheets, technical

Classification: Confidential

cooperation agreements, implementation agreements, and credit facility agreements in effect and those in termination of credit entered into under the LPT.

- Other definitions:

  - Services, duties, or responsibilities of each Sectoral Program and the management of the BUSA shall be performed according to the applicable laws and regulations until the transition is completed;

  - The duty of the parties to enter into instruments of assignment and/or amendments to agreements in effect to which Eletrobras is a party or intervening consenting party, substantially in the form of **Annex VI – Form of Assignment Agreement**, in order to effect the transfer of the Sectoral Programs and of the management of the BUSA, and transfer such agreements to ENBpar, according to the planned schedule in the corresponding Transition Plan.

- Definition of the Effective Period until (i) the transfer of the management of all Sectoral Programs and BUSA to ENBpar is effectively completed, upon the issuance of all Certificates of Transfer Completion, or (ii) the Transfer Deadline, whichever is the earlier ("Effective Period").

- Definition that the transfer of the management of each Sectoral Program and the BUSA shall be completed within twelve (12) months.

- Transition process governance, which involves, among others aspects:

  - The establishment of a Transition Committee, its roles, and responsibilities presided over by one of the representatives appointed by Eletrobras ("Chairman of the Committee"); and

  - The establishment of a specific Working Group for the transition of the Sectoral Programs by each Party; its responsibilities and report frequency.

- Determination of the creation of Transition Plans according to certain requirements, specific to each Sectoral Program and BUSA, within 30 days of the start date of the transition;

- Details of the free provision of training and current databases and information during the Transition Period.

Classification: Confidential

- The definition of a TRANSFER CERTIFICATE to be prepared with a series of requirements and procedures so that the Programs are effectively deemed transferred, which includes the contract on the part of ENBpar of Assurance services, regardless of accounting and financial information of the Sectoral Programs, aiming at ensuring combined assets and liabilities are at a risk level acceptable for ENBpar;

- Eletrobras obligations related to terms for the appointment of members of the Transition Committee, organization of Working Groups, in addition to reasonable support and assistance to ENBpar for full assumption of each activity referred to in this agreement, including the training of personnel and the provision of current databases, information, documents, and manuals, in addition to complying with the provisions in the Transition Plan, among others.

- ENBpar obligations related to terms for appointment of members of the Transition Committee, organization of Working Groups, their internal organization, aiming at transferring activities and complying with the provisions in the Transition Plan, among others.

- Eletrobras' responsibilities for the management of Sectoral Programs and the BUSA until the issuance of the Transfer Certificate and definition that Eletrobras shall continue to be entitled to the financial support for the management of the Sectoral Programs and the BUSA as provided for in the laws and regulations applicable to each Sectoral Program and to management of the BUSA, as applicable, with no payments due by ENBpar.

- Conflict resolution clause, in addition to other protective elements typical of agreements such as this.

- Annexes I to V addressing the Guidelines FOR THE TRANSITION PLAN Of each Sectoral Program and the BUSA, to be prepared and sent by Eletrobras to ENBpar within 30 days of the Transition Start Date with the following structure:

Classification: Confidential

I. Context and Legal Grounds:

- This section shall list the legal grounds that provide for the Sectoral Program and indicate whether the referred laws and regulations already reflect the transition to implementation by ENBpar.

II. Assignment and Amendments to Agreements and other Instruments:

- This section shall list all agreements and other instruments that shall need to be assigned or amended to replace the contract position of Eletrobras with ENBpar.

III. Activities and Processes:

- This section shall detail the activities developed by Eletrobras under the program, and accompanied by the mapping of flows and processes.

IV. Suggested structure, staff, and minimum infrastructure:

- This section shall include a reasonable estimate of Eletrobras the number of people and the type of infrastructure required for the implementation of the Sectoral Program.

V. Information Technology:

- This section shall set forth the conditions for the provision of occasional information technology services by Eletrobras to ENBpar that have been developed under the Sectoral Program.

VI. Databases, Information, and Documents:

- This section shall provide for the databases that shall be transferred from Eletrobras to ENBpar in the context of the transfer of the Sectoral Program powers.

Classification: Confidential

VII. Training:

- This section shall describe the specific training on the Sectoral Program that shall be held by Eletrobras so that ENBpar employees are eligible to undertake the development of the activities transferred.

VIII. Financial considerations:

- This section shall describe any financial considerations regarding the Sectoral Program transfer.

IX. Schedule:

- This section shall set forth the schedule and the activities under the responsibility of each party, as well as an estimated term for the completion of each activity.

X. Requirements for the Certificate of Completion:

- This section shall provide for the requirement for the signature of the Certificate of Completion, as well as the mechanism of proof of completion of these requirements.

- Annex VI "FORM OF ASSIGNMENT AGREEMENT", presents standard clauses for the assignment of contracts, which shall be adapted to reflect each instrument to be assigned from Eletrobras to ENBpar, as the parties shall execute assignment agreements and/or amendments to agreements in effect to which Eletrobras is a party or intervening consenting party, and transfer such contracts to ENBpar, according to the schedule provided for in the corresponding Transition Plan.

- ANNEX VII "FORM OF TRANSFER CERTIFICATE" to be used, as the completion of the transfer of each Sectoral Program shall be effected upon the signature by the Parties

Classification: Confidential

of the Transfer Certificate, by means of which ENBpar shall fully and promptly assume any and all rights or obligations related to the Sectoral Programs.

6. FINANCIAL ASPECTS OF THE SECTORAL PROGRAM MANAGEMENT TRANSITION AND TRANSFER AGREEMENT EVALUATED BY ELETROBRAS' GENERAL MEETING

From a financial point of view, the two main topics are addressed in the paragraphs below, reproduced from the Sectoral Program and BUSA Management Transition and Transfer Agreement:

(i) "Until the date of the effective transfer of each Sectoral Program to ENBpar, Eletrobras shall continue to be entitled to the financial support for the management of the Sectoral Programs and Busa, as established in the applicable laws and regulations, until the date of effective transfer of each Sectoral Program and the management of the BUSA, as applicable, (…)."

(ii) "The completion of the transfer of each Sectoral Program shall be effected upon the signature by the Parties of the Transfer Certificate, by means of which ENBpar shall fully and promptly assume any and all rights or obligations related to the Sectoral Programs or the BUSA."

And, among the aspects presented in item (ii) above, there is the following responsibility:

"ENBpar has contracted assurance services, regardless of accounting and financial information of the Sectoral Programs or the BUSA, as the case may be, aiming at ensuring that assets and liabilities, combined, are at a risk level acceptable for ENBpar."

7. ANALYSIS FROM THE POINT OF VIEW OF THE RELATED-PARTY TRANSACTION POLICY

Pursuant to the "Identification Form for Related-Party Transactions" attached hereto.

8. CONCLUSION

In view of the foregoing, aiming at complying with the laws and regulations that govern the Eletrobras capitalization process and the transfer of the Sectoral Programs and the Management of the BUSA to ENBpar, as well as aiming at the maintenance and full operation of the Programs and activities included in the

Classification: Confidential

agreement addressed herein and that shall be subject to transfer, we recommend the approval of the agreement subject matter of this Technical Note for execution.

Very truly yours,

Fernando Antônio Ribeiro Soares	**Ronaldo Garcia Barboza**
Presidency Advisor	**Sustainability Director´s Advisor**

Annexes: "Identification Form for Related-Party Transactions".

RELATED-PARTY TRANSACTION IDENTIFICATION FORM

This form identifies a transaction with a related party of the Eletrobras companies and provides guidance on the necessary procedures for accounting and/or capital market disclosure, under the terms of the TPR Policy of the Eletrobras companies.

In accordance with Technical Pronouncement CPC 05 (R1) which can be consulted at the link CPC_05_R1_rev06_Consolidado.pdf (cvm.gov.br)

A. OPERATION

1. Operation Amount:

Basically, these are the reimbursement amounts paid to Eletrobras for the provision of services related to government (sectoral) and BUSA programs. Each one has its details and specifics. These details can be seen in the table below.

Programs	Direct labor	Support Departments	Volume
PROCEL	26	Legal; Hiring; Financial; IT; and Communication.	Projects: 84 in progress; 30 in contracting; 32 predicted; and 57 closed. Resources: BRL 10.0 MM (average 2018 to 2021). Cost: BRL 10.2 MM (average 2018 to 2021)
LPT and MLA	22	Financial; IT; and Presidency	Contracts: 19 contracts in progress; 19 in closing. Programs: 4 under contract; 7 predicted; 4 under review; Resources: BRL 13.7 MM (average 2017 to 2020) Cost: BRL 13.4 MM (average 2017 to 2020)
PROINFA	19 – Partial Allocation	Commercialization; Financial; Accounting; Legal; and Audit	PROINFA: 140 contracts Estimated Revenue 2022 - R$ 6.5 billion Estimated Expenses 2022 - R$ 6.5 billion
BUSA	10 – Partial Allocation	Generation; Accounting; IT; Legal; Treasury; and supplies	BUSA: 1994 Goods Reimbursed Expenses: R$ 13.1 MM (17 to 21)

Classification: Internal

			To be reimbursed: R$ 5.9 MM (2021/2022)
RGR	5 – Partial Allocation	Treasury; Accounting; Legal	Financing Agreements: 51 Administration fee received: 2% per year on the outstanding balance of the contracts. Costs: Basically with personnel.

2. Type of Operation:

According to CPC 05 (R1), item 21, this transaction falls into the following category: "(c) provision or receipt of services". In this case, it is about **providing services**.

It is important to note, however, that this is a corporate restructuring operation whose terms of the modeling were defined by Law No. 14,182, of 2021, and by CPPI Resolution No. 203, of 2021. In addition, it should also be noted that the present operation has extensive knowledge of the market and regulatory bodies, which are bound by its terms.

3. Will the operation be carried out with an individual, legal entity, government, company or entity related to the Eletrobras Related Parties List? (x) Yes ( ) No
[item 4.2.1 of the TPR Policy of the Eletrobras companies]

Case affirmative, the operation is characterized as a transaction with related parties, requiring accounting disclosure pursuant to item 4.8.1 of the TPR Policy of the Eletrobras companies. In this case, item C of this form does not need to be completed. If not, fill out the entire form.

B. PARTIES INVOLVED IN THE OPERATION

1. Eletrobras Company:

Centrais Elétricas Brasileiras S.A. – Eletrobras.

I - Shareholding Composition:

See documentation on Eletrobras' investor relations website (ri.eletrobras.com).

II – Has affiliates? (x) Yes ( ) No Which:

All affiliated companies of the Eletrobras Group.

2. Related entity:

Federal Government, through the Ministry of Mines and Energy – MME, and Empresa Brasileira de Participações em Energia Nuclear e Binacional SA – ENBpar, a public company linked to the MME, authorized by Law No. 10,791 of 2021.

Classification: Internal

I - Shareholding Composition As it is a public company, ENBpar is 100% (one hundred percent) controlled by the Union. It should be considered that the company's incorporation meeting is still awaited, which should take place in early January 2022.
II - Has affiliates? ( ) Yes (x) No Which: After the capitalization of Eletrobras, ENBpar will have the majority of the common shares of Eletrobras Termonuclear S.A. – Eletronuclear.

C. IDENTIFICATION OF RELATIONSHIP BETWEEN THE PARTIES INVOLVED IN THE OPERATION

(Filling in any item that composes C.1 or C.2 identifies a transaction with related parties, requiring accounting disclosure, pursuant to item 4.8.1 of the TPR Policy of the Eletrobras companies)

1. Relationship with Individuals (A person, or a close family member, is related to the Eletrobras company if any of the conditions below are met.)	
I - Does any person or family member of the entity that is related to the Eletrobras company have full or shared control of the Eletrobras company? [CPC 05 - item 9 (a)(i)] *If so, specify:* (A family member means (a) the person's children, spouse or partner; (b) the children of the person's spouse or partner; and (c) dependents of the person, his or her spouse or partner).	( ) Yes ( ) No
II - Does any person or family member of the entity that is related to the Eletrobras company have significant influence over the Eletrobras company? [CPC 05 - item 9 (a)(ii)] *If so, specify:* (According to item 6.9 b of the TPR Policy, significant influence means having full or shared control of an Eletrobras company)	( ) Yes ( ) No
III - Is any person or family member of the entity that is related to the Eletrobras company a member of the key management personnel of the Eletrobras company or the parent company of the Eletrobras company? [CPC 05 - item 9 (a)(iii)] If so, justify: *If so, specify:* (Key management personnel are those persons who have authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (executive or otherwise) of that entity.)	( ) Yes ( ) No
IV - Is any person, or family member of the entity that is related to the Eletrobras company, a member of the fiscal council, the board of directors, and committees subordinate to it, or the executive board of the Eletrobras company? [item 6.18 of the TPR Policy of Eletrobras companies)] *If so, specify:* (spouses, partners and relatives, by blood or similar, up to the second degree are also included)	( ) Yes ( ) No
2. Relationship between Legal Entities (Two entities - the Eletrobras company and the company related to the Eletrobras company - are related if any of the conditions below are met.)	

Classification: Internal

I - Are the two entities members of the same economic group? [CPC 05 - item 9 (b)(i)] *If so, specify:* (the parent company and each subsidiary are interrelated, and entities under common control are related to each other)	( ) Yes ( ) No
II - Is an entity an associate or joint venture of another entity or an economic group of which the other entity is a member? [CPC 05 - item 9 (b)(ii)] *If so, specify:*	( ) Yes ( ) No
III - Are both entities under the joint control of a third entity? [CPC 05 - item 9 (b)(iii)] *If so, specify:*	( ) Yes ( ) No
IV - Is one entity under the joint control of a third entity and the other entity is an affiliate of that third entity? [CPC 05 - item 9 (b)(iv)] *If so, specify:*	( ) Yes ( ) No
V - Is the entity a post-employment benefit plan whose beneficiaries are the employees of both entities? [CPC 05 - item 9 (b)(v)] *If so, specify:*	( ) Yes ( ) No
VI - Is the entity controlled, fully or under joint control, by a person identified in item I-a? [CPC 05 - item 9 (b)(vi)] *If so, specify:*	( ) Yes ( ) No
VII - a person identified in letter I-a has significant influence over the entity, or is a member of the key management personnel of the entity (or the entity's parent company) [CPC 05 – item 9 (b)(vii)] *If so, specify:*	( ) Yes ( ) No
VIII- Does the Federal Government (Public Power) have significant influence over the decision-making of the entity related to the Eletrobras company? [item 4.2.3 of the TPR Policy of the Eletrobras Companies]. *If so, specify:*	( ) Yes ( ) No

Classification: Internal

D. PREVIOUS ANALYSIS OF THE OPERATION BY THE AUDIT AND STATUTORY RISKS COMMITTEE OF ELETROBRAS (CAE)

1. Condições de Celebração da Transação com Partes Relacionadas A análise vai ser realizada a partir do "Contrato de Transição da Gestão dos Programas Setoriais e dos BUSA", desenvolvimento no âmbito da capitalização da Eletrobras, a ser assinado pela Eletrobras e ENBpar com anuência do Ministério das Minas e Energia. (A área responsável pela transação com partes relacionadas deve encaminhá-la para análise prévia do CAE, nos termos do item 4.5.1 da Política de TPR das empresas Eletrobras, se a condição abaixo for observada)	
I –If the authority for approval is the Board of Directors of the Eletrobras companies, in accordance with the Rules of Authority of the Eletrobras Companies [item 4.5.1) of the TPR Policy of the Eletrobras companies]; *If so, specify*: **Note the contract referred to in the previous item must be submitted not only to the Eletrobras Board of Directors, but also to the General Meeting.**	(x) Yes ( ) No

Classification: Internal

2. Transactions exempt from prior analysis by the CAE	
I – Is the transaction with related parties of an operational and recurring nature, integrating the company's routine activities and requiring a short-term decision to close the transaction? *If so, specify*: (transactions of this nature are exempt from prior analysis by the CAE, as determined in item 4.6.1 of the Related Party Transactions Policy).	( ) Yes (x) No
II –Is the transaction with related parties subject to specific regulation where there is no type of negotiation between the parties, with rules established for all companies? *If so, specify*: In the legal and infralegal rules of each of the government programs and the BUSAs now under development at Eletrobras, which, in the future, will be transferred to ENBpar. (transactions of this nature are exempt from prior analysis and disclosure under ICVM 552/2014 and in the financial statement, as established in item 4.6.2 of the TPR Policy of the Eletrobras companies).	( ) Yes (x) No

E. VERIFICATION OF THE MATERIALITY AND COMMUTATIVENESS OF RELATED-PARTY TRANSACTIONS

(Transactions with related parties must meet the materiality and commutativity criteria under ICVM 552/2014, and must meet items 4.4.1, 4.4.2, 4.4.5 and 4.4.6 of the TPR Policy of the Eletrobras companies)

1. Transaction Materiality Analysis with Related Parties
I – Does the transaction with related parties meet the materiality criteria established in CVM Instruction 552/2014 and its amendments, under the terms of the TPR Policy of the Eletrobras companies? (x) Yes ( ) No If so, specify: Note: in fact, Eletrobras will continue to provide the services provided in the government programs (Procel, Luz para Todos, Mais Luz Amazônia, Proinfa, Remaining Accounts from RGR and BUSA) until its entire transfer to ENBpar within a period of up to 1 year. [Item 6.11 of the TPR Policy of the Eletrobras companies]
2. Analysis of Commutativity of the Transaction with Related Parties

Classification: Internal

I – A transação com partes relacionadas atende aos critérios de comutatividade estabelecidos nos itens 4.4.2 e 4.4.3 da Política de TPR das empresas Eletrobras? Does the transaction with related parties meet the commutativity criteria established in items 4.4.2 and 4.4.3 of the TPR Policy of the Eletrobras companies? (x) Yes ( ) No If so, specify: **Note: there is merely the temporary maintenance of a policy already provided by Eletrobras at present. On the other hand, it is important to inform that there is no comparability with the market, since it is about Eletrobras executing public policies on behalf of the government.**

F. DISCLOSURE OF TRANSACTIONS WITH PARTIES RELATED TO THE CAPITAL MARKET

(The disclosure of transactions with parties related to the capital market must be carried out, pursuant to ICVM 552/2014 and item 4.8.2 of the TPR Policy of the Eletrobras companies, if any of the conditions below are observed)

I - Does the transaction with related parties, their set or related transactions, have a total value greater than BRL 50,000,000.00 (fifty million reais)? [Article 1 of ANNEX 30-XXXIII of ICVM 552/2014 and item 4.8.2.5, item a of the TPR Policy of the Eletrobras companies]	(x) Yes ( ) No
II - Transactions with related parties, their set or related transactions, represent 1% (one percent) of the total assets of the Eletrobras company involved, considering the value of the asset calculated based on the latest financial statements or, when applicable, the latest financial statements consolidated statements disclosed by the company? [Annex 30-XXXIII, Art 1 of ICVM 552/2014 and item 4.8.2.5 item a of the TPR Policy of the Eletrobras companies]	(x) Yes ( ) No
III- Despite the total amount being lower than the parameters provided for in items I and II above, management, at its discretion, decided to communicate the transaction or a set of related transactions, in view of the characteristics of the transaction, the nature of the related party's relationship with the issuer or the nature and extent of the related party's interest in the transaction? [Annex 30-XXXIII, Art 1 of ICVM 552/2014 and item 4.8.2.5 item b of the TPR Policy of Eletrobras companies] **Note: Not applicable.**	( ) Yes ( ) No

G. TRANSACTIONS WITH RELATED PARTIES EXEMPT FROM DISCLOSURE TO THE CAPITAL MARKET

(The transactions listed below are exempt from disclosure to the capital market)

I –This is a transaction between the issuer and its direct and indirect subsidiaries, except in cases in which there is a stake in the subsidiary's capital stock by the direct (Federal Government) or indirect controllers of the issuer, its managers or persons assigned to them. linked? [Annex 30-XXXIII, Art. 3, item II, item "a" of ICVM 552/2014]	(x) Yes ( ) No
II –] This is a transaction between the issuer's direct and indirect subsidiaries, except in cases where there is an interest in the subsidiary's capital stock by the direct (Federal Government) or indirect controllers of the issuer, its managers or persons related to them. ? [Annex 30-XXXIII Art. 3, item II, item "b" of ICVM 552/2014]	(x) Yes ( ) No

TABLE OF CONTENTS

1. Introduction..... 3
2. Risk Assessment for the Transfer of the Government Programs 5
3. Final Considerations..... 15

1 – INTRODUCTION

This Technical Note (TN) is part of the documentation supporting the management of Eletrobras Holding in the assessment of the risks related to the Eletrobras capitalization process.

In this TN, we will consider the risks related to the process of transferring the management and implementation of the Federal Government programs and assets (National Program for Energy Conservation (PROCEL), LUZ PARA TODOS, MAIS LUZ PARA A AMAZÔNIA, Incentive Program for Alternative Energy Sources (PROINFA), and Properties of the Federal Government Managed by Eletrobras (BUSA)), currently managed and operated by Eletrobras, to Empresa Brasileira de Participações em Energia Nuclear e Binacional S.A. – ENBpar. The risks shall be considered from the Eletrobras' point of view, in terms of how they may impact the schedule and effectiveness of the capitalization process. The risk-mitigating action plans, currently underway, or foreseen in the capitalization schedule, shall also be described.

Law 14,120/2021 established the guidelines, attributions, and rules for the capitalization process of Eletrobras. The creation of ENBpar (Decree nº 10,791 of September 10, 2021) was the way provided for in the law to, among other objectives, assimilate the Federal Government programs and assets currently managed by Eletrobras. Due to the nature of the activities, focused on the development of sector public policies, social development, and the use of sources of public funds, it is necessary that, after the transition period provided for by law, a public company, or another public agency, takes over these activities.

CPPI Resolution 203 of October 14, 2021 establishes the guidelines for the operational transition and assignment of contracts to ENBpar, sector policies, and the government programs managed by Eletrobras, through the execution of an agreement governing the transition, as well as the assumption by Eletrobras, free of charge, of a commitment to provide support and advice to ENBpar in the management of these activities, including personnel training, provision of databases and information.

The following public agencies and institutions may be required to promote management actions, decisions, and assessments during the process for transferring the government programs to ENBpar. We highlight below some duties of these agencies related to the government programs and sectoral policies.

– Ministry of Mines and Energy – MME: definition of guidelines, goals, and scope of the sectoral policies. Monitoring the implementation of policies and achievement of goals; support and guide social energy policy programs and projects; guide and define forms of relationship and coordination between social interests and those of the electricity market;

– Brazilian Electricity Regulatory Agency – ANEEL: regulates the Brazilian energy sector, in compliance with public policies issued by the Ministry of Mines and Energy – MME; Regulation, management, and monitoring of changes in the energy sector, for which we promote sectoral programs; inspection of universalization goals with electric utilities and cooperatives;

– Electricity Trading Chamber – CCEE: manages the funds of the Global Reversal Reserve (RGR) and Energy Development Account (CDE), directly related to the financial flow of the government programs and sectoral policies, such as, for example, in the settlement of the payments provided for in credit facility, subsidy, and disbursement contracts under the Luz para Todos (LPT) and Mais Luz para a Amazônia (MLA) sectoral programs, and in the process of settlement and billing of payments, of the energy generated and supplied by generators related to the PROINFA;

– Federal Properties Management Office – SPU: is the entity that authorizes the occupation of federal public properties, establishing guidelines for use permits, promotion, donation, or free assignment, in case of public interest. Guides the incorporation and regularization of the title to the assets; their proper destination; in addition to the control and inspection of properties. They are described in art. 31 of Decree No. 9,035/2017. It has a relationship with Eletrobras due to the management of the Federal Government assets managed by Eletrobras.

– Brazilian Government Accountability Office – TCU: inspection and approval of the process for transferring the government programs to ENBpar. According to the current regulations, the model presented by MME and BNDES shall be approved by TCU.

– Brazilian Office of the Comptroller General – CGU: assessment of the compliance and governance of the process to transfer the programs to ENBpar;

Eletrobras, pursuant to the current regulations and observing its diligence duties, chose to monitor the main risks for the process to transfer the Federal Government programs and assets managed by Eletrobras.

Eletrobras Holding's Superintendent's Office for Risk Management, Internal Controls, and Information Security – DCR was asked to support the management of the risks of the process to transfer the government programs to ENBpar, together with the specialist areas, who work in the implementation and management of these programs and assets at Eletrobras.

2 – RISK ASSESSMENT IN THE TRANSFER OF GOVERNMENT PROGRAMS

The risk related to the transfer to ENBpar of government programs, sector policies, and the Federal Government assets managed by Eletrobras can be described as potential deficiencies and delays in the transfer of management, operational processes, database and information technology systems, technical collection, and the several contractual and institutional relationships established by Eletrobras for the management of the programs.

The Technical Note of the Holding's Management and Sustainability Office – DS ("Transition of the management of the government programs from Eletrobras to ENBpar") analyzes the Sectoral Program and BUSA Management Transition and Transfer Agreement proposed by BNDES. Its main conclusion is that, considering the agreement and the risks identified to date, as well as compliance with laws and regulations applicable to the Eletrobras capitalization process, and the transfer of the sectoral programs and BUSA management to ENBpar, as well as aiming at maintaining the full operation of the Programs and activities included in the agreement, DS recommends the approval of the execution of the proposed transition and transfer agreement.

2.1 – Luz Para Todos (LPT) and Mais Luz para a Amazônia (MLA) Programs

The Luz Para Todos Program (LPT) was established by Decree 4,873/2003. The main objective is to accelerate the universalization of the access to and use of electrical energy in the country, mitigating the tariff impact through the use of sectoral funds, establishing subsidy and credit facility agreements with the executing agents. After several changes in the goals of universal access to electrical energy, the completion of the program was postponed to December 31, 2022.

The National Program for Universalization of the Access to and Use of Electric Energy in the Legal Amazon – Mais Luz para a Amazônia (MLA) was established by Decree 10,221/2020. The objective is to prioritize the service to the population who lives in places of difficult access in the region of the Legal Amazon, where, due to economic and technical reasons, it would be difficult to provide electrical energy service through the conventional means. The MLA Program is effective until December 31, 2022, with the possibility of extension until full universal access to electrical energy in remote regions of the nine states that make up the Legal Amazon.

ENBpar was designated as the operator of the LPT and MLA, through Ordinance 556/GM/MME. ENBpar shall assume the responsibility for the management and operation of these programs within twelve months of the date of the meeting to homologate the result of the increase in Eletrobras' capital stock.

In general, the external process, with the participation of Eletrobras, for the management and operation of the program takes place as follows: after the initial assessment by the State Management Committees of the demands for electrical energy in rural areas in each region, the Ministry of Mines and Energy approves the contracts that shall be signed between Eletrobras and the distributors for the execution of the works. Eletrobras signs the contracts and proceeds to the physical and financial inspections of the works carried out, issuing to CCEE the authorizations to release the CDE funds, according to the physical and financial progress of the works. The program's State Management Committees monitor the services that were prioritized by that collegiate body. ANEEL, in turn, oversees the fulfillment of the contract targets, which are an integral part of the electric utilities' Universalization Plans.

For the management and implementation of the Luz Para Todos and Mais Luz Para Amazônia programs, Eletrobras carries out the technical and budgetary assessment of the work programs sent by the executing agents (electric utilities and cooperatives), before the execution of the contracts. After the execution of the contracts, upon MME's consent, and of the works by the Executing Agents, Eletrobras also carries out the financial inspection of the contracts, through proofs of the electric utilities' expenditures with the program works. After the financial inspection, Eletrobras sends a specialized technical team to physically inspect the works on-site. For the physical inspection, a sample of works, representative of the characteristics and geographic distribution of the works in each contract, is considered. The physical inspections currently carried out by Eletrobras are highly complex in terms of logistics and engineering, requiring specialization and training of human resources. There are difficulties such as displacement and access to very remote locations in rural areas, aiming at the on-site inspection of the homes of consumers served by the program. Small power plants and substations in isolated areas are also inspected, especially in towns far from capital of the states in the northern region of the country.

After the physical inspections, the physical and financial progress of the contracts are calculated. The amounts are then informed to CCEE, for release of the funds to the Executing Agents. Eletrobras also closes the contract credit facilities at the end of the inspection of the works and the financial inspections.

Eletrobras is remunerated for the activities carried out in the implementation of these programs at a fixed percentage of the financial volume set forth in the contract, according to the current regulations of the program.

To identify the risks, DCR met with the managers of the Luz Para Todos Program and MLA at Eletrobras. Specific points of attention for the transfer of the operational duties and assignments from Eletrobras to ENBpar, to be contemplated in relation to these programs, are listed below:

– Lack of external regulations for the transfer of current LPT/MLA contracts and those whose credit facility is being closed, to ENBpar;

– Very short deadlines for the issuance of regulations by MME and new Term Sheets (or amendments to the current ones) between MME and the Executing Agents (distributors and cooperatives that execute the program works), with the intervention of ENBpar, ANEEL, and CCEE;

– Delays in Eletrobras' operational processes, due to a lack of specific regulations for the transfer to ENBpar of processes related to releases of funds to the Executing Agents, with the possibility of interrupting the financial flow of the LPT and MLA programs. As the entity responsible for the implementation of the programs, Eletrobras may be penalized for the interruptions in the phase of transition to ENBpar.

2.2 – National Program for Energy Conservation (PROCEL)

The PROCEL was established in 1985 by Interministerial Ordinance No. 1,877 to promote the efficient use of electrical energy and fight waste. PROCEL actions contribute to increasing the efficiency of consumer goods, services that use electricity and to the development of habits and knowledge on efficient energy consumption.

In 2016, with the enactment of Law No. 13,280/2016, the PROCEL started to have a source of funds. The Law provides for the definition of annual plans for the investment of funds, which are prepared and approved, after a public consultation process, by government representatives and players of the national energy sector (Energy Efficiency Management Committee – CGEE and Coordinating Group for Energy Conservation – GCCE), which provides transparency and credibility to the investments made. In this context, the PROCEL promotes energy efficiency actions in several segments of the economy that help the country to save electricity and generate benefits to the society. The main sectors in which it operates are efficient equipment and appliances, efficient buildings, efficient street lighting (Reluz), the government with the areas of sanitation and education, industry and commerce, and knowledge (quality information on energy efficiency).

In order to implement the program, Eletrobras has a representative in CGEE and participates in the elaboration of the Investment Plan (PAR). 3 cycles of assessment, implementation, and accountability under the PAR have already been carried out in 2018, 2019, and 2020.

Eletrobras has specific and complex duties in the different areas of PROCEL. Eletrobras is currently responsible for establishing partnerships and service agreements with several institutions, research centers, universities, and specialized companies, for the implementation of the objectives described in the PAR and the country's energy efficiency policies. Through the

management of contracts and agreements, Eletrobras invests the funds provided for in the PAR, as well as develops, together with the institutions, the entire chain of knowledge generation and expected results.

To identify the risks, DCR met with the managers of the PROCEL at Eletrobras. Specific points of attention for the transfer of the operational duties and assignments from Eletrobras to ENBpar, to be contemplated in relation to these program, are listed below:

– Very short deadline for mapping the processes related to each PROCEL subprogram: Reluz, Selo Procel [Procel Seal], Education, Buildings, Industry, Sanitation, Procel Info, Municipal Energy Management (GEM), and Marketing;

– Very short deadline to update the non-statutory framework, so that representatives linked to ENBpar act in groups and managing committees of the Energy Efficiency Program – GCCE and CGEE – preserving the governance of the PROCEL, as well as in other committees and working groups, such as Buildings WG, Motors WG, among others;

– Possible delays in the release of funds to suppliers and partners regarding the complex internal processes for release and institutional relations (point of attention as a risk to the PROCEL program);

– Failure to meet the legal deadline to obtain the spending authorizations for projects under the following Investment Plans (point of attention as a risk for the PROCEL program).

The answers of Eletrobras' managers are listed in the following item:

– Execution of amendments to the legal instruments in force (partnerships, agreements, and technical cooperation agreements, administrative contracts, and financial service agreements) to transfer the project management to ENBpar;

– Transfer of the title to the domains and hosting of the websites used by the PROCEL to ENBpar;

– Transfer to ENBpar of the PROCEL trademarks registered with the Brazilian National Institute of Industrial Property – INPI;

– Transfer of the PROCEL bibliographic collection to ENBpar;

– Implementation of a traceable and auditable ERP system at ENBpar, to carry out the disbursement operations from the PROCEL account to suppliers, and for the collection of funds from distributors.

2.3 – Incentive Program for Alternative Energy Sources (PROINFA)

The PROINFA was established by Law No. 10,438/2002 and aims at increasing the participation of alternative renewable sources (small hydro power plants, wind farms, and biomass thermal power plants) in the production of electricity, prioritizing entrepreneurs who are not linked to generation, transmission, or distribution utilities.

The energy generated by the generation agents linked to the PROINFA is made available through quotas and sold directly to distributors and cooperatives in the country. The cost of the PROINFA is divided into monthly quotas, collected by authorized distributors, transmission companies, and cooperatives, and passed on to Eletrobras.

The calculation of quotas is based on the PROINFA Annual Plan (PAP) prepared by Eletrobras and forwarded to ANEEL. The cost of the program, whose energy is contracted by Eletrobras, is paid by all end consumers (free and captive) of the Brazilian National Interconnected System (SIN), except those classified as low income.

Eletrobras currently manages the contracts of 131 enterprises that trade their electricity through PROINFA. Law 14,182/2021 establishes the possibility of renewing concessions for another 20 years, through new contracts for the PROINFA generating agents, under certain conditions of economic and financial balance. The risks related to the renewal of the PROINFA contracts, during the transition period for ENBpar, shall be subject to risk analysis in the following items.

To identify the risks, DCR met with the managers of the PROINFA at Eletrobras. Specific points of attention for the transfer of the operational duties and assignments from Eletrobras to ENBpar, to be contemplated in relation to these program, are listed below:

– Uncertainty about the most appropriate type of contract, to be entered into for the transition period for ENBpar, with characteristics and scope of a service agreement or as a transition management contract. Potential penalties may be imposed on Eletrobras related to deadlines and regulatory compliance in the management of the PROINFA account, depending on the type of contract to be executed with ENBpar;

–Lack of a better understanding and specific regulations for the PROINFA on the responsibilities in the transition period; if only providing the service, Eletrobras has no responsibility as program manager; if it is a transition contract, Eletrobras shall have all responsibility for managing and operating services included.

– New conditions for the extension of the PROINFA generation contracts may lead to legal proceedings involving Eletrobras on the electricity amounts and prices to be entered into in a contract with the generating agents;

– Uncertainties regarding the renewal of the PROINFA contracts provided for in Law 14,182/2021. Eletrobras shall have to implement the entire renewal, but it has no regulatory definition on whether it shall sign the contracts and subsequently make the assignment to ENBpar and how this shall be done.

– In possible lawsuits for the renewal of concessions for another 20 years, by the energy generating agents that contract with PROINFA, the manager/administrator is the liable party. According to the current understanding, Eletrobras shall be the manager and responsible for the implementation of the renewal of contracts, all of this occurring during the transition.

– Fund contribution by Eletrobras, for the commercialization of PROINFA, which shall be addressed in the contract with ENBPar. Eletrobras has to settle the differences against its cash, in case of differences between revenues and payments:

– The settlement of payments to the PROINFA power generators at CCEE is carried out by Eletrobras on a monthly basis. Annual estimates are made for electricity generation and for the amounts to be settled monthly at CCEE, with the regulatory authorities' consent (ANEEL). Eletrobras has to settle the differences against its cash in case of differences. The reimbursement to Eletrobras for the differences is made in installments in the following year. For the transition period and after the transfer of the operation and management of the PROINFA to ENBpar, the allocation of funds of ENBpar should occur, considering the probability of the PROINFA's energy settlement with CCEE;

– Inadequacy of current regulations and norms for the reimbursement cycle of differences settled at CCEE, after the transition to ENBpar. The treatment for reimbursement of settlement differences at CCEE shall be included in the contract, to be reimbursed month by month to Eletrobras or settled directly at CCEE by ENBpar. The reimbursement and/or settlement of accounts of these amounts for Eletrobras after the transition should be included in the transition contract.

The answers mentioned by Eletrobras managers are listed in the following items:

– Adequacy of the PROINFA regulations for the transition period;

– Construction of specific norms and regulations for the evolution of legal protection and the process of renewal of contracts with the PROINFA electricity generators, including the transition and contractual assignment to ENBpar, after the period provided by law;

2.4 – Properties of the Federal Government Managed by Eletrobras (BUSA)

The Federal Government Assets Managed by Eletrobras (BUSA) are assets and facilities expropriated and taken over by the Federal Government against the RGR funds, and these assets are integrated into the same account as Federal Government assets under special regime for use in the public service, under the management of Eletrobras, as provided for in Decree-Law No. 1,383/1974.

Decree-Law No. 1,383/1974 attributed to Eletrobras the competence to manage the expropriated and taken over assets with funds from the Global Reversal Reserve (RGR). This decree also provides that Eletrobras, as an asset manager, is responsible for the registration, conservation, and operation of the collection of BUSA assets. This decree also authorizes Eletrobras to enter into partnership agreements with state electric utilities with the intervention of ANEEL. The agreements entered into include a specific clause on accounting bookkeeping as belonging to the assets of the Federal Government, with operating, maintenance, and any other costs arising from this exploration being recorded as expenses of the associated concessionaire for legal and tariff purposes.

There are currently 1,994 Federal Government assets registered in the Computerized System for Management of the Federal Government Assets Managed by Eletrobras (SIGBUSA). Of this total, 1,891 assets are considered usable and in operation and 17 usable assets are decommissioned. Another 78 assets are useless and 8 assets have already been sold.

Eletrobras currently has 60 partnership agreements signed with electric utilities and cooperatives, for the management and operation of these assets.

To identify the risks, DCR met with the managers of the BUSA at Eletrobras. Specific points of attention for the transfer of the operational duties and assignments from Eletrobras to ENBpar, to be contemplated in relation to these program, are listed below:

– Uncertainties about recent regulatory and normative changes by ANEEL, on the BUSA, with recent interactions and requests by ANEEL to Eletrobras (legislative change still in progress). These recent changes may increase the impacts and adversely affect the transition process for ENBpar;

– A high number of assets managed by Eletrobras. The company currently manages a total of 1994 assets of the Federal Government, officially registered in the database and management systems – SIGBUSA – of Eletrobras.

– A high number of partnership agreements, totaling 60 agreements, for inspection and operational services for the BUSA, with local electric utilities in the states where the assets are located;

– Deficiencies in the external regulatory provision for the reimbursement of annual administrative costs during the transition period. Amount of approximately BRL13 million from 2017 to June 2021. The current process is carried out by budget forecast and settlement of accounts, with reimbursement of final costs made by CCEE to Eletrobras. There are past credits of historical values already paid, to be corrected, from 2017 to 2021. The uncertainties about the reimbursement of costs may adversely affect the transition process and make it difficult for Eletrobras to receive it;

– Short deadline for the transfer to ENBPar of the partnership agreements, contracts, and free use assignment agreements executed between the Federal Properties Management Office – SPU and the public administrations, with the intervention of Eletrobras.

– Deficiency in the external and internal normative forecast for the transfer of IT systems (SIGBUSA), to be transferred to ENBpar;

– Eletrobras is the intervening-consenting party to partnership agreements for the inspection of cases of disposal and donation of assets. It remains unclear how this procedure shall be carried out in the contract with ENBpar.

As a response listed by Eletrobras managers, we mention the construction of specific norms and regulations for the evolution of legal protection and the BUSA management process, including the transition and assignment of the management to ENBpar, after the period provided for in the decree.

2.5 – Global Reversal Reserve (RGR) – legacy contracts

The Global Reversal Reserve (RGR) was created by Law No. 5,655 of May 20, 1971, legally defined as an accounting fund intended to fund the reversion, taking over, expansion, and improvement of public services. The RGR is a concession charge, thus constituting a cost component of the electricity tariff itself. It was composed aiming at generating funds for the reversal of facilities used in the generation and transport of energy in favor of the electric utilities, in addition to financing the expansion and improvement of the electrical energy service.

Until April 2017, Eletrobras managed the Global Reversal Reserve (RGR) account. In May 2017, with Law 13,360/2013, the Electricity Trading Chamber – CCEE took over the management of RGR. However, contracts signed before November 17, 2016, are still managed by Eletrobras, as defined in Decree No. 9,022/2017.

Law 14,182/2021 defined that all credit facility agreements that use RGR funds, entered into until November 17, 2016 and that is currently managed by Eletrobras, shall be transferred to ENBpar.

Eletrobras is a creditor in credit facility agreements with funds from the Global Reversal Reserve (RGR). It currently carries out the collection, collects the funds, and passes them on to CCEE (within five business days). Eletrobras monitors payments and informs CCEE in case of defaults. Nowadays, Eletrobras also performs debt collections and negotiations. Eletrobras receives an management fee on this service, between 1% and 3% of the operation value, depending on the contract. The risk of default on contracts is not Eletrobras'.

The average maturity of the remaining RGR contracts is 5 years. Only two contracts have longer maturities (CELPA in 2034 and ELETRONUCLEAR in 2038);

To identify the risks, DCR held a meeting with those responsible for managing the remaining RGR contracts at Eletrobras. Specific points of attention for the transfer of the operational duties and assignments from Eletrobras to ENBpar, to be contemplated are listed below:

– Operational risks, regarding compliance with deadlines, such as transfers of funds, collection measures, the deadline for responses to TCU, among others;

– Outdated legislation regulating the RGR, which was not updated or reviewed after the change in the management of funds to CCEE. Outdated regulations may hinder the transition to ENBpar;

– Uncertainties about the transition period provided for in the decree. Eletrobras is not obligated to accept the extension of the operation of RGR contracts after the stipulated period, according to current legislation;

– The total amount of contracts originating from the RGR is approximately BRL1,4 billion. This amount can make the risks material for Eletrobras, in case of difficulties in the transition to ENBpar;

– There is a historical default amount. Only a few specific companies have recidivism of default. On September 30, 2021 there were 4 defaulting companies. The total default amount is approximately BRL324 million. Of this total, approximately BRL232 million are debts that have already expired, which are still under judicial review for possible

collection, based on assessments by TCU. The transition process should consider the amounts in a legal dispute, including the costs, duties, and possible benefits of who shall assume the contracts.

2.6 – Main points of attention

DCR considers the following points of attention as relevant:

– Lack of regulatory provision for the management of social policies or government programs, even if temporarily, for Eletrobras as a private company, with possible consequences with external inspection and control bodies;

– Delays, on the part of ENBPar, in its internal structuring (governance, systems, technical expertise), with the private Eletrobras having the burden of conducting government programs beyond the 12 months of the public offering;

– Approval of the proposed transition to government programs and sectoral policy, by external regulatory authorities (TCU, CGU, among others);

– Possible evasion of specialized human resources with experience in the management and implementation of sectoral programs and policies, given the prospect of ending these activities at Eletrobras after its capitalization, causing unavailability of labor until the end of the transition period for ENBpar;

– Lack of forecasted funds to pay the PROINFA cost reimbursement cycle, with reflexes on ENBpar's budget forecast;

– Normative and regulatory uncertainties about the transition process for ENBpar, specific to each government program or sectoral policy. Some of them, like the PROINFA, are submitted to complex contract renewal processes, which shall take place during the transition process;

– Unpredictability of the amount defaulted by the SIN consumption agents, which can affect the variation in revenues collected by distributors (PROINFRA);

– Penalties and fines by regulatory and supervisory bodies, due to the loss of deadlines for collection of funds from distributors and transfer the executing agents of government programs and public policies, as well as to energy-generating agents (PROINFRA).

3 – FINAL CONSIDERATIONS

The risks related to the process of transferring the management and implementation of Federal Government programs and assets (PROCEL, LUZ PARA TODOS, MAIS LUZ PARA A AMAZÔNIA, PROINFA, and BUSA), currently managed and operated by Eletrobras, to Empresa Brasileira de Participações em Energia Nuclear and Binacional S.A. – ENBpar were considered from the point of view of the future private Eletrobras, and from the point of view of how they may impact the schedule and effectiveness of the capitalization process.

The risks mapped so far were analyzed based on the best available information. The Sectoral Program Management Transition and Transfer Agreement is the main mitigating element, given that its objective is to define the rules that shall be observed throughout the Transition Period until the effective transfer, by Eletrobras to ENBPar, of services, duties, or responsibilities of each of the Sectoral Programs and the management of the BUSA. The Contract considers a specific attachment for each government program to be transferred. This mitigation measure reduces the residual exposure of risks to a level considered acceptable by Eletrobras, which starts to be aligned with its risk appetite statement. Even so, it is possible to note that there is a need for normative definitions and changes in specific regulations for each government program, internal and external, to mitigate certain described risks.

BRAZILIAN ELECTRICITY REGULATORY AGENCY

OFFICIAL LETTER NO. 594/2021-SCG/ANEEL

On October 19, 2021.

To Ms.
MARISETE FÁTIMA DADALD PEREIRA
Executive Secretary
Ministry of Mines and Energy
protocolo@mme.gov.br

Subject: **New Generation Concession Agreement for the hydroelectric potentials covered by Law No. 14,182 of 2021, which provides for the privatization of Eletrobras.**
Proceeding No. 48500.001427/2021-53

Madam Secretary,

1. The following information is provided in compliance with Official Letter No. 109/2021/SE-MME of March 19, 2021, in which the Ministry of Mines and Energy – MME requests the draft concession agreement to be prepared following the guidelines of Provisional Measure (MP) No. 1,031 of 2021, which later became Law No. 14,182 of July 12, 2021.

2. By means of Order No. 3,137 – published in the Official Gazette of October 8, 2021, section 1, page 68, v. 159, n. 192 –, the Collegiate Board of the Brazilian Electricity Regulatory Agency – ANEEL, on October 5, 2021, decided (i) to approve and forward to the Ministry of Mines and Energy – MME, the Draft Concession Agreements that shall regulate the exploitation of the hydroelectric potentials under Law No. 14,182 of 2021, which regulates the privatization of Eletrobras; (ii) to hear and, on the merits, not to grant the Administrative Appeal filed by the Union of the Workers of Urban Industries, Environmental Activities, and Entities that Inspect and Regulate Electricity, Sanitation, Gas, and Environmental Services in the Federal District – STIU-DF against Public Consultation No. 48 of 2021.

3. The Reporting Member's vote, Order No. 3,137/2021, and the draft concession agreement approved by the Agency's Executive Board are attached hereto.

Very truly yours,

(DIGITALLY SIGNED)
CARLOS EDUARDO CABRAL CARVALHO
Superintendent of Generation Concessions and Authorizations

37- Public Ordinary Meeting of the Executive Board
Brasília, October 5, 2021

VOTE

PROCEEDING: 48500.001427/2021-53

INTERESTED PARTIES: Centrais Elétricas Brasileiras S.A. – Eletrobras, Furnas Centrais Elétricas S.A. – Furnas, Companhia Hidroelétrica do São Francisco – Chesf, Centrais Elétricas do Norte do Brasil S.A. – Eletronorte

REPORTING MEMBER: Director Sandoval Feitosa.

AREA IN CHARGE: Superintendent's Office for Generation Concessions and Authorizations – SCG

SUBJECT: Result of Public Consultation No. 48 of 2021, established aiming at collecting supporting and additional information to improve the draft concession agreement that will govern the exploitation of the hydroelectric potentials under Law No. 14,182 of 2021, which provides for the privatization of Eletrobras.

1. REPORT

On August 10, 2021, ANEEL's Executive Board decided to initiate Public Consultation No. 48 of 2021, with a contribution period starting August 11 to August 31, 2021.

2. On August 23, 2021, the Union of the Workers of Urban Industries, Environmental Activities, and Entities that Inspect and Regulate Electricity, Sanitation, Gas, and Environmental Services in the Federal District – STIU-DF filed a claim for reconsideration against the decision to initiate the Public Consultation.[1]

3. On August 31, 2021, the National Council for Energy Policy – CNPE issued Resolution No. 15, which sets the value added by the new electricity generation concession agreements pursuant to Law No. 14,182 of 2021, which provides for the privatization of Centrais Elétricas Brasileiras S.A. – Eletrobras.

4. During the period of Public Consultation No. 48 of 2021, 90 contributions were received through the form provided. Additionally, 1 contribution was sent by email. Of the total, the content of 48 contributions needs analysis, and the others were forwarded without any textual content.

5. On September 16, 2021, through Memorandum No. 175/2021-SCG/ANEEL, the Office of Federal Prosecution at ANEEL was consulted regarding the legal issues raised in the contributions received.

6. On September 29, 2021, Opinion No. 00284/2021/PFANEEL/PGF/AGU was approved. A single reservation is made about the approval Order, regarding the Extension Clause, which shall be

[1] According to information provided: 48513.022914/2021-00

detailed in the *ratio decidendi*.

7. On October 1, 2021, Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT/ANEEL was issued, containing the Superintendent's Office analysis regarding the contributions to Public Consultation No. 48 of 2021.

8. This is the report.

II. *RATIO DECIDENDI*

9. This proceeding deals with the draft concession agreements that shall regulate the exploitation of hydroelectric potentials under Law No. 14,182 of 2021, which provides for the privatization of Centrais Elétricas Brasileiras S.A. – Eletrobras.

10. The decision I hereby forward is to APPROVE the Draft Concession Agreements to be forwarded to the Ministry of Mines and Energy – MME.

11. Table 1 shows the 48 contributions analyzed in the Contribution Analysis Report (RAC), presented by 7 institutions and 1 consumer. Most contributions were presented by Eletrobras and the law firm Pinheiro Neto Advogados.

Despite making considerations on Eletrobras privatization process, 4 contributions are outside the scope of the Public Consultation.

Table 1: Contributions received

Interested Parties	Contributions
Instituto Ilumina	1
Individual (consumer)	1
Associação de Empregados da Eletrobras – AEEL	1
Eletrobras	21
Engie Brasil Energia	3
Furnas Centrais Elétricas S.A.	1
Pinheiro Neto Advogados	19
Energy Workers Union of the State of São Paulo – Sinergia CUT	1
Total contributions	48

12 The main contributions to the Public Consultation are analyzed below.

II.1 Individualization of the agreements

13. Eletrobras understands that it would be convenient to individualize the concessions, adjusting all related contractual provisions.

14. Although the idea is meritorious, the way Law No. 14,182 of 2021 was written hinders its implementation. Several obligations imposed by the laws and regulations, such as river revitalization and navigability programs, reduced generation costs in the Legal Amazon, and assignment of electricity to the Program for Transposition of the São Francisco River were attributed to the electric utilities Furnas, Chesf, and Eletronorte, without any possibility of segregating these obligations between each of plants of these subsidiaries of Eletrobras.

II.2 Waiver of pre-existing rights

15. One of the contributions received inquired about the fact that the legislator, under Law No. 14,182 of 2021, did not condition the privatization upon the waiver of pre-existing rights. Therefore, the Granting Authority or ANEEL would not be responsible for establishing such condition. This contribution mentions, for example, that the right to extend the concession to offset the Generation Scaling Factor (GSF) effects (articles 2-A and 2-B of Law No. 13,203 of 2015) should be transferred to the new concession, which would be extended through new calculations to be carried out.

16. Another contribution argued that those rights already acknowledged by ANEEL but not yet implemented shall be treated as exceptions, aiming to include the supplementary indemnification of plants that had their concessions extended under Law No. 12,783 of 2013, according to ANEEL Normative Resolution No. 942 of 2021.

17. According to the Office of Prosecution's Opinion, the provisions of art. 25 of Law No. 9,074 1995,[2] shall not be used as justification for such a Clause, given that such Law does not cover the concessions discussed herein.

18. In any case, Law No. 14,182 of 2021 deals, mostly, with projects that have already been extended once or twice after Law No. 9,074 became effective. It is assumed, therefore, that to be entitled to such extensions, the waiver of any pre-existing rights has already been required. In this case, there is no reason to require a new waiver regarding a right that is already waived by the holder.

19. It is also noteworthy that the concession agreements for generation projects under Law No. 14,182 and not extended under Law 12,783 have a waiver clause for any pre-existing rights that go against Law No. 8,987. This is what can be seen in the content of Section One, Subsection Three of Concession Agreements No. 006/2004 and 007/2004, as well as of Section One, Subsection Two of Concession Agreement No. 004/2004.

20. In view of the foregoing, it can be concluded that the waiver of any preexisting rights that contravene Law No. 8,987 should be suppressed, whether because it is not an extension regulated by Law No. 9,074 or there was already a waiver of identical content signed by the electric utilities in past agreements.

21. In any case, it is worth commenting on the specific cases mentioned in the contributions. CNPE, by calculating the Value Added to the Concession (VAC), has already considered the GSF concession extension, so that in the simulations, the term of the concessions currently effective was already deemed extended, reducing the Value Added to the Concessions and, consequently, the amounts to be reverted to the National Treasury and the Energy Development Account (CDE) due to the privatization of Eletrobras. In this regard, there would be no reason to talk about maintaining the right to compensation by the GSF.

22. Likewise, with regard to indemnifications after the Basic Design referred to in Law No. 12,783, CNPE calculations also considered maintaining the Costs of Capital for Investments in Improvements (GAG Melhorias) until the end of the effective concessions, also reducing the Value Added to the Concessions. Therefore, consumers or taxpayers should not bear any additional indemnification regarding this topic. Resolution No. 15 of CNPE is clear on this topic, by providing in art. 1, ¶ 6, item II that, the CNPE calculation took into account the indemnifications referred to in

[2] Art. 25. Term extensions dealt with in this Law shall only be effective with the execution of concession agreements providing a waiver clause for any pre-existing rights that go against Law No. 8,987 of 1995.

REN 596, as amended by REN 942, mentioned in the contribution.

II.3 Provisions for the extension of the concession

23. Another controversial point refers to the provisions for the extension of new concessions to be governed by future agreements. Three contributions claim that the legislator did not establish the impossibility of extending the new concession agreement final term, thus, it would not be up to the Granting Authority or ANEEL to impose such restriction in the draft agreement.

24. Regarding this topic, the concession agreement shall comply with the laws and regulations in force applicable to the particular case and, in this case, Law 14,182 of 2021 does not have an express provision prohibiting the extension. Express prohibition on extending concessions shall be clearly and explicitly provided for in a specific legal rule, as is the case, for example, in art. 1 of Law 12,783 (quotas system), which is not the case here.

25. Likewise, when the legislator intends to allow the extension, there is a written mention of this possibility, for example, in art. 4, ¶¶ 2 and 3 of Law 9,074. Article 4, ¶ 9 of Law 9,074 and art. 1 of Law 14,182 are silent regarding the possibility of extending the concession agreement. Therefore, this demonstrates that the legislator deliberately chose not to decide on the extension possibility, so that the electric utilities shall amortize their investments within the time established in the concession. The bidding shall price this scenario.

26. It is important to highlight that the absence of a concession agreement extension provision does not mean the agreement cannot be extended, if this right is ensured by a supervening law. The provisions of the contractual clause do not bind the legislator, who is sovereign to, in harmony with any hierarchically superior rules, provide for the possibility of extending the concession's term in the future.

27. Therefore, the Contractual Clause would not prevent a future extension of the concession as it simply clarified that, in light of current laws and regulations, there is no provision for extension. However, in order to avoid questions as to its interpretation thirty years from now, in the sense that any possibility to extend agreements would be forbidden, I consider its exclusion timely and convenient, as suggested by the Attorney General's Order, which approves the Opinion but recommends the exclusion of this clause.

II.4 Obligations in art. 6, 7, and 8 of Law No. 14,182 of 2021

28. Law No. 14,182 sets forth in arts. 6 to 8 obligations electric utilities Chesf, Eletronorte, and Furnas shall undertake. Nevertheless, the wording used left questions regarding the responsibilities for financial contributions. This is because the main section of these articles appoints the electric utilities as responsible for it, however, the paragraphs of the articles appoint responsibilities to Eletrobras.

29. In this sense, 3 contributions were presented in the sense that the conciliation of legal provisions should provide that contributions shall be made by the electric utilities, and, vicariously, by Eletrobras.

30. Regarding this topic, the Prosecutor's Opinion confirms the contributions understanding presented in the sense that financial contributions legal obligation falls on the electric utilities signatories to the concession agreements, which are the main debtors. Thus, Eletrobras is vicariously liable and shall contribute only in the event the electric utilities signatory to the concession agreement fails to perform the obligation assumed. Art. 3, item VI, of Law 14,182 helps

interpreting the matter by establishing that Eletrobras is vicariously liable for complying with the contributions' programs.

31. Another controversial topic concerns art. 6, ¶ 6, of Law 14,182, which deals with Chesf's obligation to assign 85 avgMW to the São Francisco River Transposition Project. The Law foresees that the obligation begins on the date the Law is published. Nevertheless, it is an obligation to be undertaken by the new electric utilities and, therefore, after formalizing the new concession agreements.

32. Regarding this point, the agreement may not go against the legal provisions. Thus, if there is a legally set date for the start of energy supply, this date shall be considered in the agreement. Nevertheless, it is possible to construe the legal text and conclude that the initial date for supplying energy to the São Francisco River Integration Project (PISF) shall not be on the Law enactment date. This is because the obligation is to be assumed by new electric utilities who shall only execute the new agreements after the Eletrobras capitalization process is completed.

33. Furthermore, it is highlighted that the legislator was careful to respect the agreements in effect and the legal scenario established, promoting a slow and gradual transition from plants operating under the quota system to the independent energy production. In this regard, the interpretation that the legislator intended to bring about an abrupt breach of current agreements of quotas with guaranteed power output allocated to the electricity distribution company seems inadequate to enable the immediate energy supply to the PISF Federal Operator.

34. Such understanding is confirmed by CNPE Resolution No. 15 of 2021, which provides that the obligation begins on January 1, 2023, when the process of termination of the quota system (*descotização*) begins, that is, part of the energy that is no longer allocated to distributors would be used in the Project for the Transposition of the São Francisco River.

35. In this sense, the best interpretation for art. 6, ¶ 6 of Law 14,182 is that the expression "from the date of enactment of this Law" does not mean that the start date of energy supply shall occur on the same date, but from the date defined by CNPE, safeguarding the period of twenty years provided for in the laws and regulations.

II.5 Responsibilities in the operation and maintenance of locks

36. Regarding this topic, two contributions were presented aiming to define the Electric Utilities' responsibilities in projects with locks associated with the dam structure of the hydro power plant.

37. The first contribution proposed the inclusion of a Subsection with the following wording: "*The Electric Utility is not responsible for implementing, licensing, operating, and maintaining locks, according to the provisions of Law No. 13,081/2015, as well as the obligation provided for in art. 7 of Law No. 14,182/2021*."

38. Regarding this contribution, there is no legal conflict between the provisions of art. 7 of Law No. 14,182, regarding resources contribution for actions to ensure the navigability of the Madeira and Tocantins Rivers, and the provisions of Law No. 13,081, regarding the implementation of locks and other structures for river navigation.

39. The Eletrobras Privatization Law sets forth the obligation to invest a minimum amount in actions to ensure the navigability of the Madeira and Tocantins Rivers, to be provided for in the concession agreements. The amount investment method and the navigability projects of the Madeira

and Tocantins Rivers, which shall receive the financial contributions, shall be established by a management committee, chaired by a representative appointed by the Minister of State for Mines and Energy, to be created by a regulation issued by the Federal Executive Branch.

40. Thus, it is not possible to define, *ex-ante*, whether the project to be established by the management committee shall comprise construction, licensing, operation, and maintenance of locks. By the way, it is quite plausible that the construction of these structures on the riverbeds is ordered, since they are essential to ensure river navigability. In this regard, even if it were argued that there could be conflict between the Laws, Law No. 14,182 would prevail, as it is more recent and deals with the specific situation of the Madeira and Tocantins Rivers. Based on the foregoing, the contribution should be refused.

41. The second contribution regarding this topic proposed the inclusion of a Subsection providing for the delimitation of the infrastructure, as well as the rights and obligations of each electric utility related to dam safety, through an operating agreement and specific regulations.

42 On the matter, the Superintendent's Office for Generation Concessions and Authorizations – SCG and the Superintendent's Office for Inspection of the Generation Services – SFG are analyzing a similar topic, with a general scope, in the case of existing locks in dams of hydro power plants. SFG proposed to SCG the inclusion, through an addendum to the concession agreements of existing plants with implemented navigation structures, the following wording:

> Subsection [XX]. If there is a lock for river navigation on the same dam as the hydro power plant, the Electric Utility remains responsible for the dam safety, pursuant to Law No. 12,334 of September 20, 2010.
>
> Subsection [XX]. If the lock is operated by a third party, the Electric Utility shall execute an operating agreement with the entity maintaining the structure, in which the parties' responsibilities and attributions shall be defined, aiming at the dam safety.
>
> I – the operating agreement shall be signed between the Electric Utility and the National Department of Transport Infrastructure – DNIT or relevant state agency;
>
> II – the agreement shall contain, at a minimum:
>
> a) definition regarding the sharing of information on the structure safety;
>
> b) notification for emergency cases;
>
> c) provision on the taking out of insurance; and
>
> d) system to implement the instruments under the National Dam Safety Policy (PNSB).
>
> Subsection [XX]. The Electric Utility is subject to inspection and any penalties provided for in Law No. 12,334/2010 regarding shared structures related to river navigation, considering the dam main use for generating electricity, pursuant to art. 5, II, of Law No. 12,334/2010.

43. The draft met the points listed in Opinion No. 102/2021/PFANEEL/PGF/AGU and also, in Opinion No. 00284/2021/PFANEEL/PGF/AGU, which is the subject matter of this proceeding. The Office of Prosecution only recommended that DNIT or the relevant state agency participation in the

operating agreement to be executed should be made clearer. In this regard, the Superintendents' Offices proposed to make it clear in the Concession Agreement Clause that, if DNIT or the relevant state agency subcontract the operation, their participation shall be as a intervening consenting party.

II.6 Intervention in the Concession

44. As a general rule, concession agreements have a specific Clause on Intervention in the Concession. The contractual provisions proposed in the Public Consultation refer to Law No. 12,767/2012, which provides for the extinction of concessions of public electric utilities, the temporary provision of the service, and the intervention to adapt the public service.

45. In this regard, a contribution was presented proposing the exclusion of the whole clause. It argues that "*strictly speaking, in the case of exploitation under under an independent production regime, there would be no intervention, which is something typical of public services*. *Although an interpretation to maintain such possibility, it would not be appropriate to do so based on Law 12,767/2012*."

46. On the matter, Decree No. 2,003 regulates Law No. 9,074 and sets forth, in art. 6, which addresses, as appropriate, the bidding process to grant a concession to an independent producers and self-producer, the provisions of Law No. 8,987, which set forth the concession and permission regime for public services provided for in art. 175 of the Federal Constitution. Under this legal regime, there is the intervention principle, as a measure the Granting Authority may use to ensure the adequacy of the service provided.

47. A closer look into the regulation reveals the primacy of the public interest over the private one. At first, the National Electric System Operator – ONS defines the amount to be generated by the plants, aiming to optimize the energy resources of the National Interconnected System (SIN). Afterwards, ANEEL shall inspect the works related to the use of potential hydro power plants by an independent producer (art. 17 of Decree No. 2,003) and impose penalties (warnings and fines) in case the legal and regulatory rules are not complied with (art. 18 of the Decree No. 2,003).

48. The agent is also not allowed to freely dispose of the assets, as the assets and facilities of the independent power producer (IPP) may only be removed or disposed of upon ANEEL's prior and written authorization (art. 19 of Decree No. 2,003). In this sense, the IPP may not provide an asset as collateral if the burden compromises the continuity of the operation of power plant. Still regarding assets and facilities, at the end of the concession term, they become part of the Federal Government assets, being the independent producer's entitled to indemnification for investments not yet amortized (art. 20 of Decree No. 2,003).[3] Note that the assets used in the generation activity by IPPs are treated identically to assignable assets of public service concessions.

49. It is also foreseen the possibility of taking over the independent producer's assets and facilities and the lapse of the concession act, very similarly to the connected principles of Law No. 8,987, regarding concessions of public services. Furthermore, pursuant to the provisions of art. 10 of Law 9,074, the areas necessary for the IPP to implement the power plant and transmission lines of restricted interest may be expropriated if ANEEL declares them as of public use, which also applies to utility companies.

50. Nonconstitutional aspects of this regime are supported by the Constitution. Art. 21, XII, "b" of the Brazilian Federal Constitution provides for the Federal Government's responsibility for

[3] Art. 20, ¶ 1 provides that "provided they [previous investments] are approved and carried out, and are not provided for in the original project."

electricity services, showing that, regardless of the exploitation regime, these economic activities are incumbent upon the government.

51. In view of the foregoing, considering the public nature of the electricity services, regardless of the exploitation regime, the Granting Authority and ANEEL shall count on all the necessary instruments to ensure that the service is provided in an adequate manner, in the interests of the society. Therefore, the clause stating the possibility to intervene in the concession should be maintained.

II.7 CNPE Resolution No. 15 of 2021

52. At the time this Public Consultation was initiated, the draft Concession Agreement already mentioned the act by CNPE, which was taken during the contribution period. Thus, the provisions of CNPE Resolution No. 15 of 2021, were considered in the draft that is now approved, especially, the amounts related to the concession bonus, the amounts to the Energy Development Account (CDE) and the *descotização* period, which shall occur at 20% per year from 2023 on. Regarding the *descotização*, the Annual Generation Revenue (RAG) shall be reduced at the same proportion of the process of *descotização*.

53. It is noteworthy that, the issuance of the act that may succeed Resolution CNPE No. 15 of 2021 shall be reflected in the draft agreement proposed, so that the obligations defined within the scope of that Board's powers are correctly correlated with the obligations established in the contract, which, in turn, shall govern the concession.

II.8 Administrative Appeal filed against the Public Consultation

54. Finally, it is worth commenting on the Letter sent by STIU-DF[4] filing an Administrative Appeal against the decision to initiate the Public Consultation. In short, they argue that: i) there are pending decisions such as definitions related to the quota system termination process, the Value Added to the Concession (VAC), the Guaranteed Power Outputs, and the extension of the concession for the Itumbiara HPP; ii) there is no Regulatory Impact Analysis (AIR); iii) failure to comply with the 45-day legal term for Public Consultation.

55. First, ANEEL does not have jurisdiction to rule on the matters brought by the Administrative Appeal. The jurisdiction to set the speed of the quota system termination process and the Value Added to the Concession (VAC) was attributed, by Law, to CNPE, while the jurisdiction to rule on the guaranteed power outputs and the extension of the Itumbiara HPP is MME. In this regard, this discussion as to the opening of the Public Consultation was not necessary and would not change any decision, given that ANEEL would not have the legal capacity to analyze the contributions. CP No. 48 of 2021 is simply not the appropriate forum to debate the issues mentioned in the Administrative Appeal.

56. Regarding the AIR, the Public Consultation goal is only to discuss how to include the issues determined by hierarchically superior rule in the concession agreements, in this case Law No. 14,182 of 2021, leaving ANEEL without any room for regulatory choices. The waiver of the AIR in this situation is provided for in art. 4 of Decree No. 10,411 of 2020. For this reason, in the vote I casted at the opening of the Public Consultation, I proposed the waiver of the AIR, to which ANEEL's Executive Board seconded.

57. Finally, although the General Law of Regulatory Agencies provides for a 45-day term for

[4] According to information provided: 48513.022914/2021-00

Public Consultations, it also provides for the possibility of reducing the term in cases of urgency and relevance, duly motivated. Official Letter No. 317/2021/SE-MME motivates the need to quickly discuss the matter, as detailed in the Public Consultation Opening Vote. Furthermore, it should be noted that there was no prejudice to the possibility of contribution, which is noted by the large number of contributions received.

58. From the foregoing, I understand that the drafts of the New Concession Agreements regarding the plants listed in Table 2 shall be sent to MME in order to proceed as provided for in Law No. 14,182 of 2021.

III. LAW

59. This decision is supported by the following legal and regulatory provisions: Law No. 8,987 of 1995; Law No. 9,074 of 1995; Law No. 11,943 of 2009; Law No. 13,182 of 2015; Law No. 13,848 of 2019; Law No. 14,182 of 2021; Decree No. 2003 of 1996; Decree No. 9,271 of 2018; Decree No. 10,411 of 2020; Normative Resolution No. 273 of 2007; CNPE Resolution No. 15 of 2021.

IV. RULING

60. In view of the foregoing and of Proceeding No. 48500.001427/2021-53, I hereby vote for:

> I) APPROVING and FORWARDING them to the Ministry of Mines and Energy – MME, the Draft Concession Agreements that shall regulate the exploitation of the hydroelectric potentials under Law No. 14,182 of 2021, which provides for the privatization of Eletrobras.
>
> II) HEARING and, on the merits, NOT GRANTING the Administrative Appeal filed by the Union of the Workers of Urban Industries, Environmental Activities, and Entities that Inspect and Regulate Electricity, Sanitation, Gas, and Environmental Services in the Federal District – STIU-DF against Public Consultation No. 48 of 2021.

Brasília, October 5, 2021

BRAZILIAN ELECTRICITY REGULATORY AGENCY – ANEEL

ORDER NO. 3,137 OF OCTOBER 5, 2021

THE GENERAL DIRECTOR OF THE BRAZILIAN ELECTRICITY REGULATORY AGENCY – ANEEL, by using the regulatory powers vested in him according to the resolution of the Executive Board that can be found in Proceeding No. 48500.001427/2021-53, decides to: I) APPROVE and FORWARD them to the Ministry of Mines and Energy – MME, the Draft Concession Agreements that shall regulate the exploitation of the hydroelectric potentials under Law No. 14,182 of 2021, which provides for the privatization of Eletrobras; II) HEAR and, on the merits, NOT TO GRANT the Administrative Appeal filed by the Union of the Workers of Urban Industries, Environmental Activities, and Entities that Inspect and Regulate Electricity, Sanitation, Gas, and Environmental Services in the Federal District – STIU-DF against Public Consultation No. 48 of 2021.

CONCESSION AGREEMENT No. ...../.....- ANEEL – <COMPANY>

CONCESSION AGREEMENT FOR THE USE OF PUBLIC PROPERTY FOR ELECTRICITY GENERATION, BY AND BETWEEN THE FEDERAL GOVERNMENT AND <COMPANY>.

The FEDERAL GOVERNMENT, hereinafter referred to as **Granting Authority**, by the power granted by art. 21, item XII, sub-item “b”, of the Federal Constitution, through the Brazilian Electricity Regulatory Agency – **ANEEL**, hereinafter referred to as **ANEEL**, autarchy under the special regime, headquartered at SGAN, Quadra 603, Módulos I e J, Brasília, Federal District,

enrolled in the National Register of Legal Entities (CNPJ) under No. 02.270.669/0001-29, herein represented by its General Director, ANDRÉ PEPITONE DA NÓBREGA, appointed by Presidential Decree of August 13, 2018, published in the Federal Government's Official Gazette on August 14, 2018, bearer of ID No. 0990374-7 SSP/AM and enrolled in CPF under No. 647.676.801-82, based on the competence delegated by means of Decree No. 10,272 of March 12, 2020, and <COMPANY>, enrolled in CNPJ under No. <CNPJ>, headquartered at <address>, <municipality>, <state>, an Independent Electrical Energy Generation Company, herein represented by its duly authorized representatives <Director's name>, enrolled in CPF under No. <CPF No.>, and Director <Director's name>, enrolled in CPF under No. <CPF No.>, hereinafter referred to as **Electric Utility**, with the intervention of CENTRAIS ELÉTRICAS BRASILEIRAS S.A. – ELETROBRAS, enrolled in CNPJ under No. <CNPJ>, headquartered at <address>, <municipality>, <state>, herein represented by its duly authorized representatives <Director's name>, enrolled in CPF under No. <CPF No.> as the Controlling Shareholder of the **Electric Utilities**, by this Agreement and the law, agree with this CONCESSION AGREEMENT FOR THE USE OF PUBLIC PROPERTY FOR ELECTRICITY GENERATION, hereinafter Agreement, which shall be governed by current and supervening laws, rules and regulations issued by the **Granting Authority** and **ANEEL**, as well as the conditions set forth as follows:

SECTION 1 – SUBJECT MATTER

Regulate hydraulic power potentials exploitation through the **Hydro Power Plants**, listed in Annex 1, hereinafter referred to in this Agreement as **Hydro Power Plants**, as well as their respective Restricted Interest Transmission Facilities to **Hydro Power Plants**, listed in Annex 2, whose concessions were granted through the privatization of CENTRAIS ELÉTRICAS BRASILEIRAS – Eletrobras, pursuant to Law No. 14,182 of July 12, 2021.

Subsection One – The concession of electricity generation to the Energy Utility is an individual concession for each of the **Hydro Power Plants** listed in Annex 1 of this Agreement, for all contractual and legal purposes, including any representation of lapse, intervention, take over, transfer, or extinction of concessions.

Subsection Two – The Restricted Interest Transmission Facilities to **Hydro Power Plants** are an integral part of the electricity generation concession referred to in this **Agreement.**

SECTION TWO – CONCESSION EFFECTIVENESS

The concession referred to in this Agreement is granted for a period of thirty (30) years, counted from the date of its execution.

SECTION THREE – PERFORMANCE

In exploiting **Hydro Power Plants**, the **Electric Utility** is free to conduct its business, including the necessary measures for making investments, hiring personnel, buying material and technology, subject to the provisions of this Agreement, specific legislation, regulations, and the instructions and determinations of the **Granting Authority** and **ANEEL**.

Subsection One – Pursuant to art. 4, item III, of Law No. 14,182 of July 12, 2021, the exploitation regime of the Plants in Annex 1 is the Independent Electric Energy Production with energy availability for the new **Electric Utility** as per the following items.

<ONLY FOR THE PLANTS REFERRED TO IN ITEMS I, II, AND III OF ART. 2 OF LAW No. 14,182 of 2021>

I – the termination of the electricity contracted pursuant to the provisions of art. 1 of Law No. 12,783 of January 11, 2013, to comply with the provisions of item III of the main section of art. 4 of Law No. 14,182 of July 12, 2021, shall happen under the terms of Resolution No. 15 of August 31, 2021, of the National Council for Energy Policy – CNPE, with the provisions of the <Amendment No.> Amendment to the Concession Agreement< CONCESSION AGREEMENT No.> for the respective portion of the plant.

II – The **Electric Utility** shall sell or use the energy produced by the **Hydro Power Plants**, up to the limit of the respective **Hydro Power Plants** Guaranteed Power Output, under the conditions established in this Agreement, at prices freely negotiated between the **Electric Utility** and the buyers, pursuant to art. 12 of Law No. 9,074 of 1995, and Law No. 10,848 of 2004, in their regulations and specific legal rules.

III – During the termination period referred to in item I, payments and reimbursements associated with: Annual Generation Revenue – RAG; hydrological risk; financial outcomes of the Energy Relocation Mechanism – MRE; inspection fee for electricity services; research and development of the Brazilian energy sector and energy efficiency; financial compensation for the use of water resources for electricity generation purposes, by quota distributors, shall be affected in the same proportion as the quota system termination process established by CNPE, through Resolution No. 15 of 2021.

Subsection Two – **Hydro Power Plants** shall be operated in accordance with safety criteria and according to specific technical standards, in accordance with current legislation, subject to the reservoir operation conditions defined by the National Water Agency – ANA alongside the National Electric System Operator – ONS, and instructions they order, according to the operation modality, and observing the Grid Procedures approved by **ANEEL**.

Subsection Three – **Hydro Power Plants** shall be operated in the integrated type, subject to ONS orders instructions under the conditions provided for in the current regulations, and following the rules for access to the National Interconnected System – SIN approved by **ANEEL**.

Subsection Four – **Hydro Power Plants** shall participate in the MRE, with the Electricity Trading Chamber – CCEE, under the conditions provided for in the current regulation.

Subsection Five – Adherence to this Agreement implies assuming hydrological risk management, renegotiation being prohibited under Law No. 13,203 of December 8, 2015.

Subsection Six – **Hydro Power Plants** guaranteed power outputs were defined by Ordinance No. 544/GM/MME of the Ministry of Mines and Energy – MME of August 30, 2021.

I. **Hydro Power Plants** guaranteed power output values were set considering the defining elements of the hydraulic potential that characterize the undertakings, as shown in Annex 1; and

II. **Hydro Power Plants** guaranteed power output shall be revised and amended in accordance with current legislation.

Subsection Seven – **Hydro Power Plants** expansions and modifications shall comply with the specific legal procedures and the regulations of the **Granting Authority** and **ANEEL** and shall be incorporated into the respective concession, provided they are authorized by **ANEEL** after assessment, being governed by the provisions of this Agreement and the relevant legal rules.

I. In order to carry out any expansion or modification of the **Hydro Power Plants**, the studies shall follow the applicable technical standards and be submitted to **ANEEL** for assessment and subsequent authorization, prior to construction.

II. After approval, if there is an amendment to any provision in this Agreement, the **Electric Utility** shall sign an Amendment, aiming to consolidate the expansions and modifications that may have occurred.

If the **Hydro Power Plants** expansions imply changes in the conditions established in the respective concession for the right to use water resources, the **Electric Utility** shall, prior to the expansion, obtain the corresponding amendments to the concession for the right to use water resources from the agency responsible, as well as obtain the relevant licenses from the licensing environmental agency.

<ONLY FOR THE SOBRADINHO HPP, SUBJECT TO ITEM II DO ART. 2 OF LAW NO. 14,182 of 2021>

Subsection Eight – the obligations set forth in art. 22 of Law No. 11,943 of May 28, 2009, subject to the conditions and validity of the current Power Purchase Agreements referred therein, as regulated by the Third Amendment to the Concession Agreement No. 006/2004-**ANEEL** – CHESF, noticing that the energy from the obligations established in art. 22 of Law No. 11,943 of 2009, may not be subject to resale, sale, or assignment in the Free Market Environment (ACL), and its use shall be restricted to consumers who are part of the Power Sales Agreements referred to in the aforementioned articles.

<ONLY FOR THE ITUMBIARA HPP, SUBJECT TO ITEM III OF ART. 2 OF LAW No. 14,182 of 2021>

Subsection Eight – the obligations set forth in art. 10 of Law No. 13,182 of November 3, 2015, are preserved subject to the conditions and validity of the current Power Purchase Agreements referred therein, as regulated by the <Amendment No.> Amendment to the Concession Agreement No. 004/2004-**ANEEL** – FURNAS, noticing that the energy from the obligations established in art. 10 of Law No. 13,182 of 2015, may not be subject to resale, sale, or assignment in the Free Market Environment (ACL), and its use shall be restricted to consumers who are part of the Power Sales Agreements referred to in the aforementioned articles.

SECTION FOUR – **ELECTRIC UTILITY** OBLIGATIONS AND CHARGES

To enable hydraulic potential exploitation referred to in Section One, the **Electric Utility** takes on all responsibilities and charges related to the operation and maintenance of the **Hydro Power Plants**, complying with the applicable technical standards and legal requirements.

Subsection One – Without prejudice to the provisions in the other Sections of this Agreement, the **Electric Utility**'s general charges in exploiting the **Hydro Power Plants** are the following:

I. Meet all the requirements of this Agreement, the Privatization Process that gave rise to the concession regulated by it, the current and supervening legislation that regulates the hydraulic potentials exploitation, answering before the **Granting Authority** and **ANEEL**, users, and third parties, for any losses arising from the **Hydro Power Plants** exploitation;

II. Immediately report the discovery of materials or objects foreign to the **Hydro Power Plants** exploitation, which are of geological or archaeological interest, as they belong to the Federal

Government;

III. Maintain technical and administrative personnel, whether own or from third parties, legally qualified and trained, in a quantity compatible with the activity/service performance, in order to ensure the undertaking's operation continuity, regularity, efficiency, and safety;

IV. Keep the registration and inventory of assets linked to the concession up to date and ensure their integrity, ensuring they are always insured correctly, and the **Electric Utility** shall not dispose or assign them, in any capacity, without **ANEEL**'s prior and written authorization;

V. Respect and comply with environmental and water resources legislation, adopting all the necessary measures along the environmental and water resources agencies to obtain the necessary licenses and permits, at its own risk, complying with all their requirements, meeting the legal terms for the project analysis by the environmental and water resources management agencies, and committing to the quality of information that may be requested by the competent environmental and water resources management agencies, which shall be provided by the **Electric Utility** on time, being liable for the consequences that may arise from any non-compliance;

VI. Keep, during the entire execution of the **Agreement**, consistently with the obligations undertaken, all eligibility and qualification conditions required by the bidding process that gave rise to the concession governed by this **Agreement**;

VII. Send **ANEEL** reports on technical information, the physical situation of facilities and maintenance, whenever requested or when so provided for in specific regulation; and

VIII. Make available, on official websites of the world wide web (internet), for consultation by any interested party, data, and information regarding environmental programs arising from environmental licenses requirements in all of their stages.

Subsection Two – The **Electric Utility** shall adhere to CCEE and become a member of ONS, under the conditions provided for in CCEE's Electricity Trading Convention and in the ONS' Statute, submitting to these institutions' rules and procedures, including, but not limited to, the following obligations:

I. Respect the maximum and minimum limits of restriction flows, downstream the **Hydro Power Plants**, following ONS operating rules;

II. Maintain a data acquisition and measurement system for the purposes of electricity trading and the system's operational supervision, as well as adjusting the necessary means to make this information available;

III. Subsidize or participate in the electricity sector planning, in accordance with art. 174 of the Federal Constitution, as established by regulation; and

IV. Enter into agreements for the transmission and/or distribution systems use and connection, paying the respective charges, in accordance with specific legislation.

Subsection Three – The **Electric Utility** shall adopt the following procedures with regard to the assignment of the right to use marginal areas and islands of the reservoir to be formed by the **Hydro Power Plants**:

I. Permanently inspect and maintain an annual updated diagnosis of the marginal areas of the

reservoir and islands situation with the identification and registration of occupations, available to **ANEEL** and any interested party, being mandatory its disclosure on official websites of the World Wide Web (Internet);

II. Prepare, alongside the communities involved and other management bodies, a Master Plan for the reservoir, aiming at regulating, preserving, and implementing a plan for multiple uses, in particular those of public and social interest, such as Watershed Plans, Regional Development Plans, Master Plans, and/or Plans for the use and occupation of municipal land;

III. Enter into, at its own expense and risk, Assignment Agreements of the right to use marginal areas to the reservoir, the term of which shall respect the term of the concession referred to in Section Two of this Agreement;

IV. Ensure, in the case of a concession for water catchment and effluent discharge, that the sanitation utility responsible for these services has free access and use of the necessary area marginal to the reservoir, without prejudice to the responsibilities described in sub-items (i), (ii), and (iii) of item V and item VII of this Subsection;

V. Clearly establish, in the concession agreements for right to use areas on the margins of the reservoirs, the **Hydro Power Plants** safety and operating conditions, and the restrictions and responsibilities to be observed by users, especially:

i) The obligation to comply with relevant legislation relating to environmental protection, use of water resources, mining rights, and the Forest Code;

ii) Restrictions on the installation of permanent or temporary buildings, land use, untreated effluents discharge, sanitary landfills, or refuse of any kind;

iii) Term conditions, as well as the extension criteria, not being allowed to exceed the term of the concession for the use of the public property to generate electricity.

VI. Establish that **Electric Utility** is responsible for the areas within its concession, in its strict competence, not holding users harmless from their responsibilities;

VII. Determine that the activities arising from remunerated assignment contracts are mandatorily accounted for separately and even if:

(i) The possible positive net value calculated, resulting from the remunerated assignments, is mandatorily reinvested by **Electric Utility** for the benefit of the watershed water resources and environmental conservation where the **Hydro Power Plants** are, or according to specific procedures to be defined by **ANEEL**;

ii) The activities agreements, statements, and records are maintained by the **Electric Utility**, making them available to **ANEEL** Inspection Office;

iii) These activities are controlled in a linked bank account, opened for this purpose, recorded accounting at a supplementary level, until the resources final application.

VIII. **ANEEL** shall previously authorize that the **Electric Utility** itself uses the **Hydro Power Plants** reservoir marginal areas and islands for purposes other than the one of the concession granted and the regulation established in this Agreement.

Subsection Four – Comprise specific charges imposed on the **Electric Utility** regarding the **Hydro Power Plants** operation and maintenance:

I. Obtain from the water resources management responsible agency, the concession of the right to use water resources, in accordance with Joint Resolution ANA-**ANEEL** No. 1,305 of November 20, 2015;

II. Install, operate, and maintain, where determined, the hydrometric stations' facilities for the monitoring of rainfall, limnimetric, river flows, metric sediment, and water quality, associated with the **Hydro Power Plants** reservoirs, pursuant to Joint Resolution **ANEEL**-ANA No. 3 of August 10, 2010, or in the regulation that may replace it;

III. Permanently maintain in perfect operating condition the **Hydro Power Plants** equipment and facilities, through an adequate operation, maintenance, and conservation structure, including stock of spare material;

IV. Allow free access to Restricted Interest Transmission Facilities at **Hydro Power Plants** in accordance with current legislation;

V. Keep updated the technical documentation related to equipment and facilities associated with **Hydro Power Plants** and Transmission Facilities of Interest Restricted to **Hydro Power Plants**;

VI. Keep available in the plant facilities, the "as built" or "executive" design, aiming to record what was actually carried out in the works, from which **ANEEL**, at its discretion, may request a copy.

Subsection Five – The **Electric Utility** shall fully implement the expansions, modernizations, or improvement of any nature, provided for or already being carried out on the date of execution of this Agreement.

Subsection Six – The **Electric Utility** shall comply with the obligations arising from the PNSB, under Law No. 12,344 of September 20, 2010, especially, but not limited to, preparing the Dam Safety Plan and the Emergency Response Plan and carrying out Safety Inspections under the legal and regulatory deadlines, containing, at a minimum, the information and activities set out in Arts. 8 and 9 of said Law and in **ANEEL** Normative Resolution No. 696 of December 15, 2015, or in the regulation that may replace it.

Subsection Seven – The **Electric Utility** is requited to annually apply the amount of, at least, one percent (1%) of its net operating revenue in research and development of the Brazilian energy sector and energy efficiency as provided by Law No. 9,991 of July 24, 2000 and the specific regulations.

Subsection Eight – The **Electric Utility** shall collect the amounts corresponding to financial compensation for the use of water resources for electricity generation purposes under Law No. 7,990 of December 28, 1989, and other specific rules about this topic.

Subsection Nine – The **Electric Utility** shall collect the inspection fee for electricity services, based on the relevant regulations.

Subsection Ten – The **Electric Utility** shall sign the required use and connection agreements, in accordance with the specific regulations, and it shall pay the charges related to the electric power

transmission and distribution system use and connection.

<FOR ELECTRICITY GENERATION **ELECTRIC UTILITIES** LOCATED AT THE SÃO FRANCISCO RIVER BASIN>

Subsection Eleven – Pursuant to art. 6 of Law No. 14,182 of July 12, 2021, to comply with the measure referred to in sub-item "a" of item V of the main section of art. 3 of Law No. 14,182 of July 12, 2021, the **Electric Utility** shall contribute with three hundred and fifty million Reais (BRL350,000,000.00) annually, for a period of ten (10) years, adjusted by the Extended National Consumer Price Index (IPCA), released by the Brazilian Institute of Geography and Statistics – IBGE, or by another index that replaces it, as of the month this Agreement is executed.

I. How to invest the value referred to in the main section of this Subsection and the projects that shall make up the program for the water resources revitalization in the São Francisco River and Parnaíba River basins that shall receive the contribution of resources to comply with the measure referred to in sub-item "a" of item V of the main section of art. 3 of Law No. 14,182 of July 12, 2021, shall be established by a managing committee, chaired by a representative appointed by the Minister of State for Regional Development, to be established in regulation of the Federal Government, focusing on actions that generate recharge of tributary flows and expand the operational flexibility of reservoirs, without prejudice to the priority use and multiple uses of water resources.

II. The **Electric Utility** shall annually contribute the full amount referred to in the main section to a specific account in a financial institution authorized to operate by the Central Bank of Brazil.

III. The account referred to in item II of this Subsection does not comprise the **Electric Utility** assets for any purpose.

IV. Pursuant to Law No. 9,427 of December 26, 1996, **ANEEL** shall regulate and supervise the obligations to pay the amount referred to in the main section of this Subsection and the effective implementation of the projects established by the management committee.

V. At the end of fifteen (15) years, counted from the month of execution of this Agreement, the funds of the account referred to in item II of this Subsection not compromised to projects the management committee contracted or approved shall be reverted in favor of the Energy Development Account (CDE), under art. 13 of Law No. 10,438 of April 26, 2002, without prejudice to the administrative penalties imposed by **ANEEL**.

VI. In addition to the contribution specified in the main section, the electricity generation **Electric Utilities** located in the basins of the São Francisco River, whose concession agreements are governed by Law No. 14,182 of July 12, 2021, shall make electricity available in an annual amount of eighty-five average megawatts (85 avgMW), for a period of twenty (20) years, as of January 1, 2023, for the price of eighty Reais per megawatt-hour (BRL80.00/MWh), on the base date of January 1, 2022, to be adjusted by the IPCA, or by another index that replaces it, through a specific agreement executed with the Federal Operator of the São Francisco River Integration Project to the Hydrographic Basins of the Northern Northeast (PISF).

VII. The annual amount provided for in item VI of this Subsection may be modulated over the months of each year, in order to optimize the use of water operation by the state operators of the receiving basins supplied by the PISF.

VIII. The PISF Facilities Federal Operator may set the energy delivery profile referred to in item

VI, in accordance with ¶ 7, art. 6 of Law No. 14,182 of 2021.

<FOR THE **ELECTRIC UTILITY** SIGNATORY TO THE CONCESSION AGREEMENT No. 007/2004-**ANEEL**- ELETRONORTE, PURSUANT TO ART. 1 OF LAW 14,182 of 2021>

Subsection Eleven – Pursuant to art. 7 of Law No. 14,182 of July 12, 2021, to comply with the measure referred to in sub-item "b" of item V of the main section of art. 3 of Law No. 14,182 of July 12, 2021, the **Electric Utility** shall contribute two hundred and ninety-five million Reais (BRL295,000,000.00) per year, for a period of ten (10) years, adjusted by the IPCA, published by IBGE, or by another index that may replace it, as of the month this Agreement is executed, to apply in the structural energetic generation cost reduction program in the Legal Amazon and at least twenty percent (20%) in actions to ensure the navigability of the Madeira River and ten percent (10%) in actions to guarantee the navigability of the Tocantins River.

I. How to invest the amount referred to in the main section of this Subsection and the projects that will comprise the structural energetic generation cost reduction program in the Legal Amazon and the navigability of the Madeira and the Tocantins Rivers that shall receive the contribution of resources to comply with sub-item "b" of item V of the main section of art. 3 of Law No. 14,182 of July 12, 2021, shall be established by a management committee, chaired by a representative appointed by the Minister of State for Mines and Energy, to be instituted in the Federal Government regulation, considering, the energetic generation in the Legal Amazon, the renewable energy or renewable fuel projects development, and the interconnections of isolated and remote locations.

II. The **Electric Utility** shall annually contribute the full amount referred to in the main section to a specific account in a financial institution authorized to operate by the Central Bank of Brazil.

III. The account referred to in item II of this Subsection does not comprise the **Electric Utility** assets for any purpose.

IV. Pursuant to Law No. 9,427 of December 26, 1996, **ANEEL** shall regulate and supervise the obligations to pay the amount referred to in the main section of this Subsection and the effective implementation of the projects established by the management committee.

V. At the end of fifteen (15) years, counted from the month of execution of this Agreement, the funds of the account referred to in item II of this Subsection not compromised to projects the management committee contracted or approved shall be reverted in favor of the Energy Development Account (CDE), under art. 13 of Law No. 10,438 of April 26, 2002, without prejudice to the administrative penalties imposed by **ANEEL**.

<**ELECTRIC UTILITIES** LOCATED IN THE FURNAS **HYDRO POWER PLANT** RESERVOIR INFLUENCE AREA>

Subsection Eleven – Pursuant to art. 8 of Law No. 14,182 of July 12, 2021, to comply with the measure referred to in sub-item "c" of item V of the main section of art. 3 of Law No. 14,182 of July 12, 2021, the **Electric Utility** shall contribute with two hundred and thirty million Reais (BRL230,000,000.00) annually, for a period of ten (10) years, adjusted by the IPCA, released by IBGE, or by another index that replaces it, as of the month this Agreement is executed.

I. How to invest the value referred to in the main section of this Subsection and the projects that will make up the program for the revitalization of water resources in watersheds in the Furnas **Hydro Power Plants** reservoir influence area, whose agreements are under Law No. 14,182 of July 12, 2021, that shall receive the contribution of resources to comply with the measure referred to in

sub-item “c” of item V of art. 3 of Law No. 14,182 of July 12, 2021, shall be established by a management committee, chaired by a representative appointed by the Minister of State for Regional Development, to be established in a Federal Government regulation, focusing on actions that generate recharge of tributary flows and expand the reservoirs operational flexibility, without prejudice to the priority use and multiple uses of water resources.

II. The **Electric Utility** shall annually contribute the full amount referred to in the main section to a specific account in a financial institution authorized to operate by the Central Bank of Brazil.

III. The account referred to in item II of this Subsection does not comprise the **Electric Utility** assets for any purpose.

IV. Pursuant to Law No. 9,427 of December 26, 1996, **ANEEL** shall regulate and supervise the obligations to pay the amount referred to in the main section of this Subsection and the effective implementation of the projects established by the management committee.

V. At the end of fifteen (15) years, counted from the month of execution of this Agreement, the funds of the account referred to in item II of this Subsection not compromised to projects the management committee contracted or approved shall be reverted in favor of the CDE, under art. 13 of Law No. 10,438 of April 26, 2002, without prejudice to the administrative penalties imposed by **ANEEL**.

VI. The revitalization program referred to in item I of this Subsection shall contemplate the performance of derocking works of the navigation channel downstream of the Nova Avanhandava HPP, which shall be carried out by the first half of 2024.

Subsection Twelve – The **Electric Utility** shall pay an annual fee to the Energy Development Account (CDE), referred to in Law No. 10,438 of April 26, 2002, pursuant to the conditions regulated by art. 3 of Resolution No. 15, of 2021 of CNPE.

I. The payment referred to in the main section shall be made as follows: an initial contribution in up to thirty days of the execution of this **Agreement** and annual contributions, beginning in 2023, to be made in April of each year, for the period of twenty-five years, based on the disbursement schedule set forth in Annex III of Resolution No. 15 of 2021 of CNPE.

II. The amounts referred to in item I shall be adjusted by the IPCA, or whichever index that may replace it, as of the base date of January 1, 2022, and shall be fully credited in favor of the **Electric Utilities** and licensees of electric power distribution, for tariff moderation purposes in the Regulated Market Environment (ACR), distributed in a proportional way to the uncontracted amounts as a result of the change of the exploration regime for independent power production, to the terms of ¶¶ 9 and 10, of art. 2, of Resolution No. 15 of 2021 of CNPE.**Subsection Thirteen** – The **Electric Utility** undertakes to pay the concession bonus of the concession arising from the Privatization Process, in a single installment, within thirty days from the performance of this **Agreement**, according to CNPE Resolution No. 15 of 2021, pursuant to Law No. 14,182 of July 12, 2021, being aware that the default of this obligation constitutes the condition subsequent of this **Agreement**.I. The termination of this Agreement by operation of law in the event of non-payment of the concession bonus, without prejudice to the application of penalties provided in the respective Privatization Process and under this **Agreement**.**Subsection Fourteen** – The following are specific responsibilities related to the concessions of the **Hydro Power Plants** by the **Electric Utility**:

I. Submit the following to the prior and subsequent controls of **ANEEL**, as provided for in a specific regulation:

i) Amendment to the bylaws or articles of association of the **Electric Utility**;

ii) Transactions for the transfer of the concession or spin-off, consolidation or merger of the **Electric Utility**;

iii) Transfer of corporate control;

iv) Execution of contracts, agreements, or arrangements with Controlling Shareholders, whether direct or indirect, and controlled companies or affiliates, especially those dealing with supervision, management, engineering, accounting, consulting, procurement, construction, loans, disposal of shares, as well as with individuals or legal entities forming part, directly or indirectly, of a same controlled company or having officers or managers in common with the **Electric Utility**; and

v) Disposal, assignment, or pledge as a guarantee of the assets linked to the concession.II. Complying and enforcing the legal and regulatory rules of the service;III. Provide annual accounts to the **Granting Authority**, as provided for in item XIII of art. 23 of Law No. 8,987 of 1995;
IV. Comply with the rules for accounting, inventory of assets and asset control, accountability, disclosure of accounting and financial statements, as provided for in specific regulations;

V. Keep separate accounting records of the complementary activities to the concession, or constitute another company; andVI. Disclose its Financial Statements annually, as provided for in item XIV of Art. 23 of Law 8,987 of 1995, and to the terms of the laws and regulations in effect.
Subsection Fifteen – The **Electric Utility** shall perform the tax, labor, and social-security obligations and pay the charges arising from the laws and regulations and regulatory standards established by the **Granting Authority** and **ANEEL**, as well as any other obligations related or resulting from the exploitation of the **Hydro Power Plants**;

Subsection Sixteen – it does not apply to the **Electric Utility** the payment for the Use of Public Property due to the change of the legal regime for the Independent Power Production, provided for in art. 7 of Law No. 9,648 of 1998 under ¶ 2, of art. 4 of Law No. 14,182 of 2021.**Subsection Seventeen** – in the event there are locks intended for river navigation sharing the same structure of the **Hydro Power Plant**, the **Electric Utility**'s responsibility for the dam's safety is maintained, as provided by Law No. 12,334 of 2010.**Subsection Eighteen** – when the lock is operated by a third party, the **Electric Utility** is obligated to maintain an operating agreement, during the effectiveness of the concession, with the structure maintainer, in which the responsibilities and attributions of the parties shall be defined, aiming at dam safety.I. The operating agreement shall be signed between the **Electric Utility** and the National Department of Transport Infrastructure – DNIT or competent state agency;II. When there is subcontracting for lock operation and maintenance by the institutions described in item I, the operating agreement shall be signed between the **Electric Utility** and the Subcontracted Third Party Company, with the intervention and consent of DNIT or the competent state agency;III. The agreement shall contain, at least:
i) definition regarding the sharing of information on the structure safety;

ii) notification for emergency cases;

iii) provision on the taking out of insurance; and

iv) a system to implement the instruments under the National Dam Safety Policy (PNSB).

Subsection Nineteen – the **Electric Utility** shall be subject to the inspection and eventual penalties provided for in Law No. 12,334 of 2010, regarding the shared structures related to river navigation,

in view of the preponderant use of the dam for the electricity generation, pursuant to art. 5, II, of Law No. 12,334 of 2010.**SECTION FIVE – ELECTRIC UTILITY RIGHTS AND PREROGATIVES**The concession for the exploitation of the **Hydro Power Plants** referred to in Annex 1 of this **Agreement** grants the **Electric Utility** the prerogatives set forth in this Section Five, among others, and may not affect the rights of third parties and users of electricity, which are expressly reserved.

Subsection One – The **Electric Utility** shall be free to manage its business, investments, personnel, materials, and technology, pursuant to the terms of this **Agreement**, the specific laws and regulations, the regulatory standards, and instructions and determinations of the **Granting Authority** and **ANEEL**.

Subsection Two – The **Electric Utility** may promote the release, amicably with the owners, of the land areas required for the operation of the **Hydro Power Plants**, including, without limitation, to the areas required for the constitution of the reservoir, the permanent preservation area, and the **Restricted Interest Transmission Facilities** to the **Hydro Power Plants**.**I.** **ANEEL** may promote, at the request of the **Electric Utility** and pursuant to the specific laws and regulations, the declaration of public use for these areas, for expropriation purposes or the institution of administrative easements over private assets, being the **Electric Utility** responsible for taking the necessary measures for its execution and the payment of the pertinent indemnifications; andII. For public properties, the declaration of public use denotes specific allocation for electricity purposes, being the **Electric Utility** responsible for postulating instruments that allow the intended use.**Subsection Three** – The **Electric Utility** may implement telecommunications systems, for exclusive use in the exploration of the granted service, respecting the relevant laws and regulations about the subject, without prejudice to third parties.**Subsection Four** – Subject to the specific laws and regulations, the **Electric Utility** may offer, as guarantees for financing agreements, the rights arising from the concession, including, among others, the electricity to be produced and the revenue resulting from the purchase and sale agreements of this power, as well as the rights and facilities used for its production.I. The eventual foreclosure of the financing agreement guarantee may not compromise the operationalization and continuity of the **Hydro Power Plants** exploration;II. The eventual foreclosure resulting from a guarantee signed by the pledge of the **Electric Utility**'s shares, which implies the transfer of corporate control, shall be preceded by the prior consent of **ANEEL**; and

III. Pursuant to the provisions in art. 27 of Law No. 8,987 of 1995, as amended by Law No. 11,196 of November 21, 2005, the credit facility agreements executed by the **Electric Utility** may provide for a clause granting the lenders, in compliance with applicable private law rules, the right to assume control of the **Electric Utility** in the event of default on such credit facility agreements, subject to the following:i) **ANEEL** shall consent to the assumption of control of the **Electric Utility** by its lenders, after the regular establishment of the corresponding administrative proceeding, upon request, in order to promote the financial restructuring of the **Electric Utility** and ensuring continuity of the operation of the **Hydro Power Plants**;ii) **ANEEL**'s consent shall depend on the lenders' proof that they meet the legal and fiscal regularity requirements set forth in the Privatization Process;iii) Lenders may be exempted from proving that they have the technical capacity, pursuant to Art. 27-A of Law No. 8,987 of 1995;iv) The pertinent authorization to act as a financial institution in Brazil exempts the demonstration of financial standing;v)The assumption of control of the **Electric Utility** pursuant to the caption of this Subsection shall not alter the obligations of the **Electric Utility** and its controllers before the **Granting Authority**;vi) The compliance with the provisions of Law No. 14,182 of 2021, especially the provisions of art. 3.**Subsection Five** – The **Electric Utility** may freely access the transmission and distribution systems, upon payment of the respective use and connection charges, when due, in order to transmit the electricity produced to the delivery or consumption points that result from its operations.**Subsection Six** – Through prior consent of **ANEEL**, the concession or the corporate control of the **Electric Utility** may be

transferred to the company that proves the technical and economic and financial qualification conditions, as well as the legal and fiscal regularity provided for in the Privatization Process that originated this **Agreement** and that commits to execute it pursuant to the clauses of this instrument and the legal and regulatory rules in force, observing the limits and conditions for the participation of the economic agents foreseen in specific regulations, pursuant to the provisions in art. 3 of Law No. 14,182 of 2021.**SECTION SIX – INSPECTION**The operation of the **Hydro Power Plants** shall be inspected by **ANEEL**.

Subsection One – The inspection by **ANEEL** shall encompass the monitoring and control of the **Electric Utility**'s administrative, accounting, technical, and economic and financial actions business, and **ANEEL** may establish procedure guidelines and cancel actions that it deems incompatible with the requirements to exploit **Hydro Power Plants**.

Subsection Two – The inspection by **ANEEL** does not diminish nor exempt the responsibilities of the **Electric Utility** as to the adequacy of its works and installations, the correctness and legality of its accounting records, and its financial and commercial transactions.**Subsection Three** – **ANEEL**'s employees and its agents shall have free and unrestricted access to the documents, works, facilities, and equipment related to the **Hydro Power Plants**, including its accounting records, being able to request, from any sector or person of the **Electric Utility**, in the way it deems necessary, information, and clarifications which allow the assessment of the correct performance of this **Agreement**, as well as data considered necessary for the statistical control and planning of the national electric system, being the **Electric Utility** prohibited from restricting, under any allegation, the provisions in this Subsection.**Subsection Four** – The technical supervision shall comprise:I. The execution of the construction and installation projects;II. Compliance with the schedule;III. The exploitation of the **Hydro Power Plants** and their respective Transmission Facilities of Restricted Interest;IV. Compliance with legal and contractual rules;V. Compliance with contract clauses;VI. The use and destination of energy;VII. The operation of the reservoir; andVIII. The quality and commercialization of the product.**Subsection Five** – The economic and financial inspection shall comprise the analysis and follow-up of the financial transactions, of the records in the books of the **Electric Utility**, of the balance sheets, of the reports and financial statements, of the annual rendering of accounts, and any other documents deemed necessary for the perfect evaluation of the concession management.**Subsection Six – ANEEL** may determine to the **Electric Utility** the termination of any Agreement entered into by it when it verifies that it may result in damage to the concession.**Subsection Seven –** The non-compliance with the inspection requests shall result in the application of penalties provided for in **ANEEL** Normative Resolution No. 846 of June 11, 2019, or in the regulation that may succeed it, as well as those set forth in this **Agreement**.**SECTION SEVEN – PENALTIES**The **Electric Utility** shall be subject to the penalties, pursuant to the prevailing laws and regulations, especially those established in **ANEEL** Resolutions, without prejudice to the provisions of items III and IV of art. 17 of ANNEX I of Decree No. 2,335 of October 6, 1997, as a result of failure to comply with the legal, regulatory, or contractual provisions, pertinent to the operation of the **Hydroelectric Power Plants**.**Subsection One –** Among other sanctions, the **Electric Utility** shall be subject to penalty, applied by **ANEEL**, in the maximum amount, for each infraction incurred, of two percent (2%) of the value of the annual turnover of the **Electric Utility** or the estimated amount of the energy produced, corresponding to the last twelve months prior to the issuance of the notice of infraction or estimated for these twelve months.I. When the penalty consists of a fine for non-compliance with legal, regulatory, or contractual provisions and the respective amount is not paid within the established term, **ANEEL** shall promote its judicial collection, by means of execution, pursuant to the specific laws and regulations.**Subsection Two** – The penalties shall be applied by means of an administrative proceeding, in proportion to the seriousness of the infraction, with the **Electric Utility** assured the right to a legal defense and the right to adversary proceedings.**Subsection Three** – In the event of non-compliance with the penalties imposed for infractions, or non-compliance with the notification or determination of the **Granting Authority** to

regularize the provision of services, the termination of the concession may be decreed, as provided by law and this **Agreement**, without prejudice to the verification of the responsibilities of the **Electric Utility** before the **Granting Authority, ANEEL**, users, and third parties.**SECTION EIGHT – INTERVENTION IN THE CONCESSION**

Without prejudice to the applicable penalties and responsibilities, **ANEEL** may intervene in the concession, as provided by Law No. 12,767 of December 27, 2012, at any time, to ensure the proper operation of the **Hydro Power Plants** or compliance, by the **Electric Utility**, with the legal, regulatory, and contractual rules.

Subsection One – The intervention shall be determined by **ANEEL** Resolution, which shall appoint the Intervening Party, the amount of their compensation, the term of the intervention, and the objectives and limits of the measure.**Subsection Two –** The period of intervention shall be up to one (1) year, extendable once, for up to two (2) more years, at **ANEEL**'s discretion.**Subsection Three** – Once the intervention in the concession of use of the public property is declared, **ANEEL** shall initiate, within thirty (30) days of the date of publication of the Resolution, the corresponding administrative proceeding, in order to prove the determining causes of the measure and the responsibilities involved, assuring the **Electric Utility** the right to legal defense and adversary, to be concluded within one (1) year.

Subsection Four – If it is proved that the intervention did not observe the legal and regulatory requirements, it shall be deemed null, and the concession shall be promptly returned to the **Electric Utility**, without prejudice to its right to indemnification.

Subsection Five – The intervention in the use concession of a public asset implies the suspension of the mandate of the managers and members of the fiscal council, being assured to the Intervening Party full management powers over the operations and assets of the **Electric Utility** and the exclusive prerogative to call the general meeting in the cases it deems convenient.

Subsection Six – Once the intervention is interrupted, if the concession is not cancelled, the management of the **Hydro Power Plants** shall be returned to the **Electric Utility**, preceded by the rendering of accounts by the Intervening Party, which shall be held liable for the acts performed during its management.

Subsection Seven – The provisions of Chapter II of Law No. 12,767 of 2012 and supervening laws and regulations apply, as appropriate.**SECTION NINE – CONCESSION TERMINATION AND BOUND ASSETS' AND FACILITIES' REVERSION**

The concession for the exploitation of the **Hydro Power Plants** regulated by this **Agreement** shall be extinguished by the **Granting Authority**, which shall previously hear **ANEEL**, upon the following events:I. arrival of the final term of the Agreement;

II. taking over;

III. expiration;

IV. termination;

V. annulment resulting from defect or irregularity verified in the concession procedure or act; or

VI. bankruptcy or winding-up of the **Electric Utility**.

Subsection One – The assets of the concession herein granted are all those exclusively and permanently used in the electricity generation activity, and they shall be recorded and controlled in accordance with the accounting and asset control manuals, and other accounting and asset control instructions and guidelines issued by **ANEEL**.**Subsection Two** – In the arrival of the final term of

this **Agreement**, all assignable assets and facilities linked to the **Hydro Power Plants** shall become an integral part of the Federal Government's patrimony.I. In the terms of ¶ 7 of Art. 2 of Resolution No. 15 of 2021 of CNPE, the **Electric Utility** shall not be entitled to compensation for non-amortized investments related to the Basic Projects of the **Hydro Power Plants**, as well as those related to investments linked to assignable assets of the **Hydro Power Plants**, not yet amortized or non-depreciated, whose concessions were extended or not, pursuant to art. 1 of Law No. 12,783 of January 11, 2013 whose criteria and procedures for the calculations of these investments were defined in **ANEEL** Resolution No. 596 of December 19, 2013, pursuant to Art. 2 of Decree No. 7,850 of November 30, 2012.II. The assignable assets linked to the concession of the **Hydro Power Plants**, not framed in item I of Subsection Two of Section Nine, may be indemnified as to the non-amortized investments, provided they have been approved, when applicable, by the **Granting Authority**.III. The amount of the indemnification due to the **Electric Utility** shall be calculated according to the rules in force; andIV. In order to allow the full continuity of the electricity generation, the assets and the installations linked to the **Hydro Power Plants**, to be reverted as a result of the concession termination, shall be in proper operating conditions, in compliance with the characteristics and the basic technical requirements.**Subsection Three** – In the event of termination of the Concession, **ANEEL** or the **Granting Authority** may allow the **Electric Utility** to continue with the operation of the **Hydro Power Plants**, as well as with the possession of the assignable assets as trustee until the new **Electric Utility** takes over, pursuant to article 13 of Decree No. 1,717 of November 24, 1995.**Subsection Four –** To meet the public interest, by means of a specific authorizing law, the **Granting Authority** may take over the assets and installations, after prior payment of compensation for the portions of the investments linked to the assets and installations, not yet amortized or depreciated, as determined in an audit.**Subsection Five –** Once any of the default events set forth in the specific laws and regulations and in this **Agreement** are verified, the **Granting Authority** may declare the concession termination if the **Electric Utility**, notified, does not correct the faults pointed out and does not reestablish the normality of the performance of the **Agreement**, within the term established.I. The declaration of forfeiture shall be preceded by an administrative proceeding to verify the violations or failures of the **Electric Utility**, observing the adversary and the legal defense, assuring the **Electric Utility** any indemnification for investments made and not yet amortized or depreciated, as long as they are determined in an audit and authorized by the **Granting Authority**, after discounting the amounts of the fines imposed by **ANEEL** and compensation for any losses and damages caused by the **Electric Utility**;II. The administrative proceeding mentioned in the caption of this Subsection shall not be initiated until the **Electric Utility** has been made aware of the breaches of contract, as well as given enough time to correct them;III. The decree of forfeiture shall not entail, to the **Granting Authority** or **ANEEL**, any liability in relation to the burdens, charges, or commitments to third parties that have been contracted by the **Electric Utility** or regarding its employees.**Subsection Six –** The **Electric Utility** may submit a plan for the transfer of corporate control as an alternative to the extinction of the grant, in cases of forfeiture, as regulated by **ANEEL**, as provided for in art. 4-C of Law No. 9,074 of 1995, included by Law No. 13,360 of November 17, 2016.I.The corporate control transfer plan shall demonstrate the feasibility of the change of control and the benefit of this measure for the adequate continuity of electricity generation;II. The approval of the corporate control transfer plan by **ANEEL** shall suspend the concession termination process; andIII. The corporate control transfer, within the term defined by **ANEEL**, shall cause the concession extinction process to be filed for forfeiture.**Subsection Seven –** By means of a lawsuit especially filed for this purpose, the **Electric Utility** may promote the termination of this **Agreement**, in case of non-compliance, by the **Granting Authority**, with the rules established herein. In this case, the **Electric Utility** may not interrupt or stop the generation of electricity while the court decision ordering the termination of this **Agreement** does not become final and become final and unappealable.

Subsection Eight – In case of termination or adjudication of bankruptcy of the **Electric Utility**, this **Agreement** shall be considered terminated at the date of the final and unappealable decision that decreed the bankruptcy.I. The bankrupt may continue to manage the assignable assets, as trustee, until the new **Electric Utility** takes over, to be defined by the **Granting Authority**.**Subsection Nine –** In the extinction of the concession based on the provisions of items III and VI of this Section, the **Granting Authority** shall observe the provisions of Law No. 12,767 of 2012, and supervening laws and regulations.**SECTION TEN – COMMITMENT BY THE CONTROLLER(S)**The **Controller(s)** declare(s) to accept and submit to the conditions and clauses of this Agreement, undertaking to introduce, in the Bylaws or Articles of Association of the **Electric Utility**, a provision that prohibits the transfer, assignment or any form of alienation, directly or indirectly, free of charge or on payment, of shares or quotas that result in the transfer of corporate control of the **Electric Utility** without the prior consent of **ANEEL**, pursuant to the laws and regulations in force.
Subsection One: The commitments expressly provided for in Law No. 14,182 of July 12, 2021 are also commitments by the controlling shareholders.

SECTION ELEVEN – FRIENDLY SETTLEMENT OF DISPUTES AND JURISDICTION

The **Electric Utility** undertakes to use all efforts as to amicably settle any and all disputes or controversies arising from this **Agreement** or related thereto.

Subsection One – The **Electric Utility** may request **ANEEL** to hold hearings in case of divergences in the interpretation or execution of the provisions of this **Agreement**, with the purpose of harmonizing the understandings.
Subsection Two – In order to settle doubts or disputes that could not be friendly settled, as indicated in the main section of this Section, the parties elect the Federal Courts of the Judiciary Section of Distrito Federal, to the exclusion of any other courts, however privileged they may be.

SECTION TWELVE – FINAL PROVISIONS

For the **Hydro Power Plants** listed in Annex 1 of this **Agreement**, the clauses and conditions of the <PREVIOUS AGREEMENT>, and their respective amendments, except for those expressly cited herein, are hereby revoked, also pursuant to the provisions in Subsection One and Subsection Eight <only for the Itumbiara and Sobradinho HPPs> of Section Three of this **Agreement**.

SECTION THIRTEEN – PUBLICATION AND REGISTRATION OF THE AGREEMENT

This **Agreement** shall be registered and filed with **ANEEL**, which shall procure, within twenty (20) days of its signature, the publication of its summary in the Official Gazette.

IN WITNESS WHEREOF, the parties had this instrument drawn up, which is signed by the representatives of **ANEEL**, the **Electric Utility**, and the **Controlling Shareholder**, together with witnesses, for the relevant legal effects.

1. PURPOSE

This Technical Information Report aims to present the analysis, from a strictly economic and financial point of view, of the methodology for calculating the Added Value and the Concession Bonus pursuant to arts. 4 and 5 of Law No. 14,182 of July 12, 2021 applied by Upside in its economic and financial model in order to calculate such amounts.

2. DISCLAIMER

It is worth mentioning that the Economic and Financial Analysis Department – DFPA is not responsible for analyzing and validating the technical and regulatory assumptions used in the Upside model, which is the responsibility of the Generation Division, if applicable.

It is highlighted that this Technical Information Report shall analyze the calculation methodology presented by Upside, not entering into the merits of the results obtained and assumptions used.

Finally, It is important to highlight that the analysis performed by DFPA was based on the report "Economic and Financial Study of the Grant Amount" from Upside, from December 2021, and on the modeling entitled "GT_1.00_UHE Eletrobras 5 BASE CASE," available on December 16, 2021.

3. BACKGROUND

Provisional Measure No. 1,031/2021, which provided for the privatization of Eletrobras and other measures, was enacted on February 23, 2021. Such Provisional Measure, as amended, after passing the House of Representatives and the Federal Senate, was converted into Law No. 14,182 of July 12, 2021.

Law No. 14,182/2021 established that the privatization of Eletrobras is subject to the granting of new generation concessions for thirty (30) years in the Independent Power Producer (IPP) regime for the following plants:

- have been extended pursuant to art. 1 of Law No. 12,783 of January 11, 2013;
- are achieved by the provisions in item II of ¶ 2 of art. 22 of Law No. 11,943 of May 28, 2009;
- are achieved by the provisions of ¶ 3 of art. 10 of Law No. 13,182 of November 3, 2015;
- have been authorized by Concession Agreement No. 007/2004-Aneel-Eletronorte;

- have been authorized by Concession Contract No. 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP.

The granting of new generation concessions is conditioned to:

- payment by Eletrobras or its subsidiaries, as defined by the National Council for Energy Policy – CNPE, to the Energy Development Account (CDE), referred to in Law No. 10,438/2002 of April 26, 2002, corresponding to fifty percent (50%) of the added value to the concession by the new contracts;
- payment by Eletrobras or its subsidiaries of concession bonus of new concession agreements for electricity generation corresponding to fifty percent (50%) of the added value to the concession by the new contracts deducted from the following installments:
  a) expenses related to the revitalization of water resources in the São Francisco and Parnaíba river basins, pursuant to subparagraph an of item V of the main section of art. 3 of Law 14,182/2021;
  b) expenses related to the development of projects in the Legal Amazon with a view to structurally reducing energy generation costs and for the navigability of the Madeira River and the Tocantins River, as provided for in subparagraph b of item V of the main section of art. 3 of Law No. 14,182/2021;
  c) expenses related to projects in the area of influence of the reservoirs of the Furnas hydro power plants, whose concession agreements are affected by this Law, pursuant to paragraph c of item V of the main section of art. of Law No. 14,182/2021; and
  d) expenses to reimburse the economic value of the supply of electricity for the São Francisco River Integration Project (PISF) with North Northeast Drainage Basins, as dealt with in ¶ 6 of art. 6 of Law No. 14,182/2021;
- the alteration of the exploration regime for independent production, as provided by Law No. 9,074/1995, including the conditions for the extinction of grants, expropriation of facilities and indemnities;
- the assumption of hydrological risk management, renegotiation being prohibited as provided by Law No. 13,203/2015; and
- compliance with the provisions of item II of ¶ 2 of art. 22 of Law No. 11,943/2009 and ¶ 3 of art. 10 of Law No. 13,182/2015, preserving the established obligations,

conditions, and validity of current electricity sales contracts referred to in the aforementioned articles.

Law No. 14,182/2021 also defines the calculation of the Value Added to the concession, which shall consider:

- changing the exploitation regime from quota regimes to independent production;
- the deduction of credits related to reimbursement for verified fuel expenses, incurred until June 30, 2017, by the concessionaires that were controlled by Eletrobras and holders of the concessions referred to in art. 4-A of Law No. 12,111 of December 9, 2009, which have been proven, but not reimbursed, due to the requirements of economic and energy efficiency referred to in ¶ 12 of art. 3 of the aforementioned Law, including monetary restatements, in which case the compensation shall be limited to three billion and five hundred million Reais (BRL3,500,000,000.00); and
- the decontracting of the electricity contracted pursuant to art. 1 of Law No. 12,783/2013, to comply with the provisions of item III of the caput of art. 4 of Law 14,182/2021, gradually and uniformly, at least five (5) years and a maximum of ten (10) years.

While the Provisional Measure was in force, Eletrobras contracted, through electronic auction, Upside to support the decision of the top management of Eletrobras in defining the concession amount in the possible Company privatization process, establishing scenarios, evaluating the positive impacts and negative relating to Provisional Measure No. 1,031/2021 converted into Law No. 14,182/2021.

The Resolution of the National Council for Energy Policy – CNPE No. 15 of August 31, 2021, amended by CNPE No. 30 of December 21, 2021, established the Value Added by new concession agreements for electricity generation as provided by Law No. 14,182/2021, which is equal to BRL67,052,502,399.86, according to art. 1 of the aforementioned Resolution. From this amount, the amount of BRL2,906,498,547.37 shall be deducted, referring to the reimbursement for verified expenses with the purchase of fuel incurred until June 30, 2017 by the distributors controlled at the time by Eletrobras.

The aforementioned Resolution also defined the amount to be paid as concession bonus of new concession agreements, which is equal to BRL 25,379,079,917.76 already deducted from the installments related to (i) the revitalization of water resources in the river basins

São Francisco and the Parnaíba River; (ii) the development of projects in the Legal Amazon; (iii) the projects in the area of influence of the Furnas hydro power plants reservoirs; (iv) reimburse the economic value of the supply of electricity to the PISF; and (v) the indemnification of non-amortized or non-depreciated reversible assets of the hydro power plants subject to the granting of a new concession. The table below shows the bonus amount defined by the CNPE per subsidiary of Eletrobras:

		Bonificação

Also, according to the Resolution, all values shall be updated until the effective date of payment by the IPCA, having as base date January 1, 2022. Only the concession bonus shall be updated by Selic through the base date.

The CNPE resolution also established that: (i) the energy decontracting will be 20% per year, starting on January 1, 2023; and (ii) the energy sales contracts of UHE Itumbiara and UHE Sobradinho, signed with free consumers, pursuant to Law No. 13,182/2015, must be respected.

On August 26, 2021, DFPA received the first version of the model for calculating the concession amount prepared by Upside, which was forwarded by the Generation Division, responsible for hiring Upside. A second version of the template was forwarded to DFPA on September 14, 2021, together with a tutorial. It is important to note that the second version considered only the premises defined by CNPE, which were disclosed on August 31, 2021. We were provided with the third version of the modeling on September 30, 2021 and the fourth version on October 8, 2021. On October 16, 2021 another version of the Upside model was sent with the respective Economic and Financial Study Report – Calculation of the Concession Amount, which was used as the basis for the production of Technical Information Report IT-DFPA-017/21, in which several critical notes were made by the DFPA team. Subsequently, Upside sent a new version of the economic and financial model "GT_1000_UHE_Eletrobras_1.72v – Resultados" and the respective Economic and Financial Study Report "Resultados_Eletrobras_Calculo_de_Outorga_01.42v" on December 6, 2021 and December 4, 2021 respectively. Finally, on December 16, 2021 DFPA received the latest version of the financial modeling "GT_1.00_UHE_Eletrobras 5 BASE CASE" and the Report "Resultados_Eletrobras_Calculo_de_Outorga_ 01.48v."

It is worth mentioning that Upside considered in the updated versions the points contained in IT-DFPA-017/2021. Such as:

- Consider the investment assumptions (capex and opex) for the maintenance of the plants provided by Eletrobras Generation Division;

- Consider the remaining amounts of the balance of fixed assets, not depreciated, at the end of the analysis;
- Consider the difference in the guaranteed power output when the plant's trading regime is the same in both scenarios, that is, cases where the plant is already under the IPP regime. This applies to the Tucuruí, Curuá-Una, and Mascarenhas de Moraes plants.

In addition to the abovementioned points, some general assumptions, listed below, were analyzed by DFPA and Upside considered in its final report and the most current modeling the considerations carried out by this Department:

- **Base Date**: Upside calculated the value of the concession bonus on the base date of January 2023, such date being corrected according to DFPA guidance for January 2022;
- **Allocation of the guaranteed power output of the Sobradinho HPP and Itumbiara HPP**: Upside initially did not consider the maintenance of the conditions and validity of contracts signed with free consumers (CL) as provided by Law No. 11,943/2009 and Law No. 13,182/2015, which according to ¶ 1, art. 4 of Law No. 14,182/2021 shall be complied with, with the Consultancy having allocated, both in the Current Scenario and in the Capitalization Scenario, one hundred percent (100%) of the guaranteed power output of the Sobradinho HPP under the IPP regime from January 2023 and different percentages from those recommended in Law No. 13,182/2015 were used for the Itumbiara HPP.

  After the DFPA guidance, Upside considered in its report and modeling of October 8, 2021 the allocation of the guaranteed power output of the Sobradinho HPP and the Itumbiara HPP, as established in the Law:

  - Current Scenario:

Sobradinho	IPP	Quotas	Itumbiara	IPP	Quotas
2023 – 02/2032	90%	10%	2023 – 02/2030	80%	20%
02/2032 – 02/2033	75%	25%	02/2030 – 02/2031	67%	33%
02/2033 – 02/2034	60%	40%	02/2031 – 02/2032	53%	47%
02/2034 – 02/2035	45%	55%	02/2032 – 02/2033	40%	60%
02/2035 – 02/2036	30%	70%	02/2033 – 02/2034	27%	73%
02/2036 – 02/2037	15%	85%	02/2034 – 02/2035	13%	87%
02/2037 – 02/2052	0%	100%	02/2035 – 02/2050	0%	100%
02/2052 – 02/2059	100%	0%	02/2050 – 02/2057	100%	0%

- Capitalization Scenario:

Sobradinho	IPP	Quotas	Itumbiara	IPP	Quotas
2023 – 02/2032	90%	10%	2023 – 02/2030	80%	20%
02/2032 – 02/2033	75%	25%	02/2030 – 02/2031	67%	33%
02/2033 – 02/2034	60%	40%	02/2031 – 02/2032	53%	47%
02/2034 – 02/2035	45%	55%	02/2032 – 02/2033	40%	60%
02/2035 – 02/2036	30%	70%	02/2033 – 02/2034	27%	73%
02/2036 – 02/2037	15%	85%	02/2034 – 02/2035	13%	87%
02/2037 – 02/2052	100%	0%	02/2035 – 02/2052	100%	0%

- **Extension of concessions**: Upside's initial report did not consider the extension of the concession for the Tucuruí HPP due to the renegotiation of the hydrological risk. After meetings with DFPA, Upside amended its report in order to take into account the aforementioned extension, pursuant to REH ANEEL No. 2,923/2021, and consequently the modeling;
- **Taxes**: Upside rectified the report and the modeling, after annotations by DFPA, as it was considering the full amounts of Income Tax (IR) for the Chesf and Eletronorte plants that benefit from the tax benefit of Sudene and Sudam, with a 75% deduction of the IR;
- **CDE payment flow**: Both the report and the Upside modeling do not consider the CDE payment flow, as defined in Annex III of CNPE Resolution No. 15/2021.
- **Contributions to sectorial funds**: After being alerted by DFPA, Upside rectified, in the modeling, the projection that initially considered monthly contributions and now considers annual contributions in January, as established in CNPE Resolution No. 15/2021;
- **Rebates from the calculation of the concession bonus**: DFPA, initially, had not identified in the modeling the rebates from the concession bonus to the expense related to the supply of electricity for the São Francisco River Integration Project (PISF) with North-Northeast Drainage Basins, as dealt with in ¶ 6, art. 6 of Law 14,182/2021. Upside informed that such rebate is being deducted from the energy of the Paulo Afonso Complex and detailed this in its report;
- **Indemnity**: In the beginning, Upside considered only the indemnification of the Tucuruí HPP. After being alerted by DFPA and considering the provisions of art. 2 of

CNPE Resolution No. 15/2021, Upside corrected its report and modeling so as to consider indemnities for investments in the calculation of the concession bonus:

- not yet amortized related to the Basic Projects of the HPPs listed in Annex I of CNPE Resolution No. 15/2021; and
- linked to assignable assets of the HPPs listed in Annex I of CNPE Resolution No. 15/2021, not yet amortized or not depreciated, of concessions covered by Law No. 12/783/20213, extended or not, whose calculation criteria and procedures were defined through ANEEL Resolution No. 596/2013, pursuant to art. 2 of Decree No. 7,850/2012.

4. METHODOLOGY APPLIED BY UPSIDE

To determine the added value and consequently the concession amount, Upside considered the Marginal Cash Flow methodology.

In this methodology, the Total Added Value of capitalization ($VAtotal$) is equal to the aggregate individual Added Values (VA_i) of each plant, with each plant deemed as a cash generating unit (CGU). So, you have:

$$VA_{total} = \sum VA_i$$

The Added Value (VA), in turn, shall be calculated by the Discounted Cash Flow method using the difference of the net present value of the free cash flows for the firm (FCFF) of the Capitalization Scenario ($FCFF_{\text{IPP}}$), the regime of IPP, and the Current Scenario ($FCFF_{\text{Quotas}}$), quota system.

$$VA_{total} = \sum_{i=1}^{18} VPL_{FCFF_{PIE,i}} - \sum_{i=1}^{18} VPL_{FCFF_{Cotas,,i}}$$

Where i= 1, 2, ..., 18, as there are eighteen plants that shall have a new concession grant under the IPP regime.

Upside chose to use a single discount rate (WACC) for all cash generating units, in both scenarios, the Capitalization, and Quotas. Thus, it was assumed that the risks arising from

the change in the energy trading regime in compliance with the new concession agreements shall be accounted for along the cash flow of the Capitalization Scenario, excluding the need to project two cash flows. Thus, several envelopes associated with different constraints were created, generating scenarios ordered in terms of Total Added Value, so that the greater their associated p-values, the more conservative the generated scenarios shall be. According to Upside, adopting a more conservative and smaller NPV would be equivalent to a bolder flow discounted at a higher discount rate.

The cash flow in the quota system and IPP was calculated as follows:

+ Annual Generation Revenue (RAG)	*+ Revenue from the Sale of Energy*
- Operating Expenses (Opex)	*- Operating Expenses (Opex)*
- Investments (Capex)	*- Investments (Capex)*
- Sector Charges	*- Short-Term Market Exposure (MCP)*
- Taxes	*- Sector Charges*
$= FCFF_{quotas}$	*- Taxes*
	$= FCFF_{IPP}$

Upside considered that, in the periods in which both energy trading regimes (Quotas and IPP) occur concurrently, some assumptions may be disregarded from the Marginal Cash Flow assuming that there is no change in its forecast from the change in the trading regime applied. These assumptions are Operating Expenses (Opex), Investment (Capex), and Sector Charges.

For the period in which there are no convergence of flows, that is, periods in which there shall only be a cash flow determination for one of the two scenarios (Current Scenario or Capitalization Scenario), the complete cash flow is considered.

When the trading regime is the same between the two scenarios, as there is a difference in energy traded between the regimes, as the flow of the Capitalization Scenario is applied to the new guaranteed power output, there is Value Added, which causes the Marginal Cash Flow does not assume null values. This case applies to the Tucuruí, Curuá-Una, and Mascarenhas de Moraes plants.

Thus, as the CGUs (Cash Generating Units) in the object of analysis is, in the Current Scenario, under specific energy trading regimes, and with different concession terms, the definition of the added value for each CGU is carried out separately.

For periods in which the Value Added is the difference between the Net Present Value of the Independent Energy Producer for the capitalization flow and the Net Present Value of the Independent Energy Producer of the current flow, the cash generation shall be deemed the marginal flow free from the firm resulting from the difference between the revised and current Guaranteed Power Output.

The analysis period for determining the Added Value is from January 2023 to December 2059. In other words, it is deemed that the new concession contracts shall be executed in December 2022 from the payment of the Grants, these contracts shall last until December 2052.

The additional period (from January 2053 to December 2059) refers to the extension of the concession of the Sobradinho and Itumbiara HPPs, which exceed the period of contracts signed in compliance with the Capitalization Scenario. These flows of the additional period, therefore, are considered in order to reduce the Concession amount.

4.1 TAXES

Regarding taxes, Upside adopted that the tax contribution is also marginal, that is, the taxable base shall be equal to the difference in operating income obtained from the difference between the Capitalization Scenario and the Current Scenario. This conclusion, therefore, excludes the need to include the discount of BRL20,000 per month for calculating the additional income tax, which is projected at the amount of 10% on a taxable basis.

The SUDENE/SUDAM benefit is taking into account the plants that hold the benefit, taking into account as free for the firm, that is, the 75% reduction in IRPJ is reported as in the marginal flow, directly impacting the calculation of the Total Added Value. The term of the benefits of 75% reduction of the IRPJ (Corporate Income Tax) is 10 years after the beginning of its enjoyment.

4.2 INVESTMENT ASSUMPTIONS

Upside assumed that the investment assumptions should be treated in marginal terms, that is, the differences between the investments foreseen in the current concession agreements and after the new concession agreements.

For investments in the period of extension of the capitalization contract compared to the contract currently in force, data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE were considered. According to official letters DE.E.017.2021, DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021.

The straight-line depreciation rate used was 2,486%, calculated by the projective weighted average expense for the period 2022 per asset according to the Impairment model of the Eletrobras group with an analysis dated September 2021. The effects of depreciation in the economic modeling are: (i) the tax savings caused by the reduction of the tax base on the marginal cash flow; and (ii) the calculation of the balance of fixed assets arising from these capitalizations at the end of the analysis horizon.

Due to the difficulties of uniting Capex for purposes of starting the depreciation charge only after the effective completion of the fixed asset and due to its low impact on the cash flow (equivalent to the product of the fixed balance by the monthly depreciation rate and the tax rate on the profit), the modeling considered the simplification of applying depreciation to the entire fixed balance of the immediately preceding month since the beginning of the first costing with Capex.

The remaining amounts of property, plant, and equipment at the end of the analysis were conservatively reversed by their historical residual book value, without application of monetary restatements.

4.3 OPERATING ASSUMPTIONS

The operating assumptions for the CGUs used in the model are: operating and administrative costs and expenses, sector charges, working capital, and technical losses of electricity generation.

For the operating costs of the period of extension of the capitalization contract compared to the contract currently in force, data sent by the subsidiaries: CHESF, FURNAS, and

ELETRONORTE, according to official letters DE.E.017.2021, DG-01777-2021, CE -DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021 were considered. For the Tucuruí HPP, the impairment model with analysis date September 21 was considered. These costs, however, shall only be projected for the period in which there is no convergence or coexistence between the two flows (Capitalization Scenario and Current Scenario). For the convergence period, it is assumed that there is no change in costs and expenses.

4.4 AMORTIZATION OF ADDED VALUE

The calculated Added Value shall be amortized over the term of the new concession agreement, that is, over 30 years from the base date.

The amortization of this amount shall affect the tax base calculated for the Marginal Cash Flow. By decreasing the tax base, the lower amount spent to pay taxes affects future cash flows, which in turn affects the calculated Added Value. Thus, the amount that shall be effectively paid for the grant shall be used for calculating the amortization.

4.5 ADVANTAGE ANALYSIS

After verifying the Total Added Value, based on the assumptions defined by Upside, and comparing with the results published by CNPE, an analysis of the advantage of the capitalization process shall be carried out, which shall be presented as results and awareness.

For the analysis of the advantage, the annual payments to the CDE shall be considered, as per Annex III of CNPE Resolution No. 15 of August 31, 2021, as well as the amounts that shall be paid to the funds (item II, article 4 of Law No. 14,182/2021), then the Marginal Flow shall be deducted from such annual payments, and the Total Added Value resulting from this analysis shall be the advantage of the implementation of Law 14,182 of July 2021 compared to the proposed base scenario.

4.6 CONCESSION BONUS REBATES

The methodology considered the rebates from the granted bonus as established in item II, art. 4 of Law No. 14,182/2021, namely:

- expenses related to the revitalization of water resources in the São Francisco and Parnaíba river basins;
- expenses related to the development of projects in the Amazon;
- expenses related to projects in the area of influence of the Furnas hydro power plants reservoirs;
- expenses to reimburse the economic value of the electricity supply for the São Francisco River Integration Project (PISF) with North Northeast Drainage Basins.

In addition to these deductions, the need for indemnification of non-depreciated or non-amortized assets was also considered, given that the concession of some plants, currently under the IPP regime, shall have its early termination. This amount was estimated in accordance with Eletrobras' Complete Financial Statements of December 31, 2020. The indemnities related to the plants under the aegis of Law No. 12,783/2013, regulated by art. 10 of Decree No. 7,805/2012 and art. 2 of Decree No. 7,850/2012, have a balance recorded in December 2012, being corrected by IPCA up to the base date of the Upside modeling.

5. CONSIDERATIONS

DFPA (Economic and Financial Analysis Department) analyzed the Added Value and Concession Bonus calculation model, which used the Marginal Cash Flow methodology.

Regarding the Marginal Cash Flow methodology, it is understood that there is no obstacle to its use, however, one should pay attention to the implicit premise that the two flows have the same risk, which allows, as a consequence, the use of a one-time discount rate. This effectively materializes if the additional risks that the IPP regime incurs are being addressed in your cash flow. Thus, it should be noted whether the assumptions used by Upside are effectively giving adequate treatment to the additional risks of the new regime.

The concession of the Itumbiara HPP should have been extended on February 27, 2020 under the terms of Law No. 12,783/2013 and Law No. 13,182/2015, for thirty (30) years, which had not occurred.

Furnas applied for an extension of the concession within the contractual term. ANEEL, through Dispatch No. 3,108/2020 published on November 10, 2020 recommended to MME the extension of the concession of the Itumbiara HPP under the terms of such laws.

It is important to highlight that Technical Note No. 756/2020-SCG/ANEEL of October 16, 2020, which supported ANEEL's decision, defined the revenue value of the Itumbiara HPP as equal to BRL267 million, referenced to July 2020.

Usina	Código	GAG O&M (R$) (a)	GAG Melhorias (R$) (b)	CAIMI (R$) (c)	GAG Total (R$) (a) + (b) + (c)
UHE Itumbiara	001194-0	104.039.831,35	140.610.213,52	22.369.008,28	267.019.053,15

GAG Total (R$) (a)	EUSD/EUST (R$) (b)	Conexão (R$) (c)	TFSEE (R$) (d)	P&D (R$) (e)	RAG Total (R$) (a) + (b) + (c) + (d) + (e)	Tarifa (R$/MWh)
267.019.053,15	159.417.720,00	1.565.062,21	1.068.076,21	4.323.250,86	433.393.162,44	69,64

Source: Technical Note n° 756/2020-SCG/ANEEL of October 16, 2020

ANEEL's technical staff, also through the aforementioned Technical Note, warned of the need to reassess the plant's guaranteed power output amounts, in order to reflect the real parameters and operating conditions of the enterprise.

In this sense, the Ministry of Mines and Energy, through Ordinance No. 1,102/SPE/MME of December 8, 2021 defined the value of the guaranteed power output of the Itumbiara HPP at 948.9 averageMW, a value to be considered in the extension of the concession pursuant to Laws No. 12,783/2013 and No. 13,182/2015.

On December 13, 2021, the MME issued a Dispatch granting the request for extension of the concession of the Itumbiara HPP.

> "*I – grant, pursuant to art. 1 of Law No. 12,783 of January 11, 2013 and of art. 10 of Law No. 13,182 of November 3, 2015 the Request for Extension of the Concession Term of the Hydro Power Plant named Itumbiara HPP, part of Concession Agreement No. 04/2004-ANEEL, for Electricity Generation, entered into between the Federal Government and Furnas Centrais Elétricas S.A., for thirty years, starting on February 27, 2020, ending on February 26, 2050; and*
>
> *II – summon, by Official Letter, the Concessionaire to sign the Fourth Amendment to the Concession Agreement No. 04/2004-ANEEL, for Electricity Generation, within two hundred and ten days, counted from the call, sending it a copy of said Addendum.*"

Therefore, the recent change made by the Granting Authority, both in the guaranteed power output and in the revenue of the Itumbiara HPP, shall impact the value added calculated by Upside for this HPP and the total value added, bringing changes in the concession amount to be paid and the capitalization of Eletrobras.

It is important to note that both the financial modeling and the Upside Report considered the extension of the concession of said HPP based on the guaranteed power output in force at the time of 964.9 MW average and on the estimated revenue of BRL513 million obtained from the impairment test of Furnas, which should be adjusted in light of the new information posted above.

In general, both the methodology applied by Upside for calculating the Added Value and Concession Bonus and the model used are satisfactory.

Finally, it is highlighted that DFPA continued to analyze the methodology for calculating the Added Value and the Concession Bonus and did not analyze the coherence and timeliness of the technical and regulatory assumptions used in the Upside model, nor the advantage of the business.

1. PURPOSE

This Technical Information Report aims to present the result of the preliminary analysis, from a strictly economic and financial point of view, of the methodology for calculating the Added Value and the Concession Bonus pursuant to arts. 4 and 5 of Law No. 14,182 of July 12, 2021 applied by Upside in its economic and financial model in order to calculate such amounts.

2. *DISCLAIMER*

It is worth mentioning that the Economic and Financial Analysis Department – DFPA is not responsible for analyzing and validating the technical and regulatory assumptions used in the Upside model, which is the responsibility of the Generation Division

It is highlighted that this Technical Information Report shall analyze only the calculation method presented by Upside, not addressing yet the merits of the results obtained and assumptions used., as these are still being discussed by the technical areas. Finally, it is important to highlight that the analysis performed by DFPA was based on the report "Economic and Financial Study of the Grant Amount" from Upside, from October 16, 2021, and on the modeling entitled "GT_1.00_UHE Eletrobras_1.62v – Base Case p90," available on September 30, 2021, and in the modeling versions with the corrections appointed by DFPA entitled "GT_1.00_UHE Eletrobras_1.65v – Base Case p90," available on October 8, 2021, and "GT_1.00_UHE Eletrobras_1.70v – Base Case p90," available on October 16, 2021.

3. BACKGROUND

Provisional Measure No. 1,031/2021, which provided for the privatization of Eletrobras and other measures, was enacted on February 23, 2021. Such Provisional Measure, as amended, after passing the House of Representatives and the Federal Senate, was converted into Law No. 14,182 of July 12, 2021.

Law No. 14,182/2021 established that the privatization of Eletrobras is subject to the granting of new generation concessions for thirty (30) years in the Independent Power Producer (IPP) regime for the following plants:

have been extended pursuant to art. 1 of Law No. 12,783 of January 11, 2013;

- are covered by the provisions in item II of ¶ 2 of art. 22 of Law No. 11,943 of May 28, 2009;
- are covered by the provisions of ¶ 3 of art. 10 of Law No. 13,182 of November 3, 2015;
- have been authorized by Concession Agreement No. 007/2004-Aneel-Eletronorte;
- have been granted through Concession Contract No. 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP.

The granting of new generation concessions is conditioned to:

- payment by Eletrobras or its subsidiaries, as defined by the National Council for Energy Policy – CNPE, to the Energy Development Account (CDE), referred to in Law No. 10,438/2002 of April 26, 2002, corresponding to fifty percent (50%) of the added value to the concession by the new contracts;
- payment by Eletrobras or its subsidiaries of concession bonus of new concession agreements for electricity generation corresponding to fifty percent (50%) of the added value to the concession by the new contracts deducted from the following installments:
  a) expenses related to the revitalization of water resources in the São Francisco and Parnaíba river basins, pursuant to subparagraph an of item V of the main section of art. 3 of Law 14,182/2021;
  b) expenses related to the development of projects in the Legal Amazon with a view to structurally reducing energy generation costs and for the navigability of the Madeira River and the Tocantins River, as provided for in subparagraph b of item V of the main section of art. 3 of Law No. 14,182/2021;
  c) expenses related to projects in the area of influence of the reservoirs of the Furnas hydro power plants, whose concession agreements are affected by this Law, pursuant to paragraph c of item V of the main section of art. of Law No. 14,182/2021; and
  d) expenses to reimburse the economic value of the supply of electricity for the São Francisco River Integration Project (PISF) with North Northeast Drainage Basins, as dealt with in ¶ 6 of art. 6 of Law No. 14,182/2021;

- the alteration of the exploration regime for independent production, as provided by Law No. 9,074/1995, including the conditions for the extinction of grants, expropriation of facilities and indemnities;
- the assumption of hydrological risk management, renegotiation being prohibited as provided by Law No. 13,203/2015; and
- compliance with the provisions of item II of ¶ 2 of art. 22 of Law No. 11,943/2009 and ¶ 3 of art. 10 of Law No. 13,182/2015, preserving the established obligations, conditions, and validity of current electricity sales contracts referred to in the aforementioned articles.

Law No. 14,182/2021 also defines the calculation of the Value Added to the concession, which shall consider:

- changing the exploitation regime from quota regimes to independent production;
- the deduction of credits related to reimbursement for verified fuel expenses, incurred until June 30, 2017, by the concessionaires that were controlled by Eletrobras and holders of the concessions referred to in art. 4-A of Law No. 12,111 of December 9, 2009, which have been proven, but not reimbursed, due to the requirements of economic and energy efficiency referred to in ¶ 12 of art. 3 of the aforementioned Law, including monetary restatements, in which case the compensation shall be limited to three billion and five hundred million Reais (BRL3,500,000,000.00); and
- the decontracting of the electricity contracted pursuant to art. 1 of Law No. 12,783/2013, to comply with the provisions of item III of the caput of art. 4 of Law 14,182/2021, gradually and uniformly, at least five (5) years and a maximum of ten (10) years.

While the Provisional Measure was in force, Eletrobras contracted, through electronic auction, Upside to support the decision of the top management of Eletrobras in defining the concession amount in the possible Company privatization process, establishing scenarios, evaluating the positive impacts and negative relating to Provisional Measure No. 1,031/2021 converted into Law No. 14,182/2021.

The Resolution of the National Council for Energy Policy - CNPE No. 15 of August 31, 2021, established the Value Added by new concession agreements for electricity generation as provided by Law No. 14,182/2021, which is equal to BRL62,479,656,370.10, according to art. 1 of the aforementioned Resolution. From this amount, the amount of

BRL2,906,498,547.37 shall be deducted, referring to the reimbursement for verified expenses with the purchase of fuel incurred until June 30, 2017 by the distributors controlled at the time by Eletrobras.

The aforementioned Resolution also defined the amount to be paid as concession bonus of new concession agreements, which is equal to BRL23,218,488,754.73 already deducted from the installments related to (i) the revitalization of water resources in the river basins São Francisco and the Parnaíba River; (ii) the development of projects in the Legal Amazon; (iii) the projects in the area of influence of the Furnas hydro power plants reservoirs; (iv) reimburse the economic value of the supply of electricity to the PISF; and (v) the indemnification of non-amortized or non-depreciated reversible assets of the hydro power plants subject to the granting of a new concession

CNPE Resolution No. 15/2021 also established the amount to be paid to the CDE by Eletrobras at BRL29,786,578,911.55, with an initial contribution of BRL5 billion within thirty (30) days of signing the new concession agreements. The remaining amount shall be paid as follows.

Year	Payment to the CDE (BRL)
Initial contribution	5,000,000,000.00
2023	526,098,864.13
2024	1,052,197,728.26
2025	1,578,296,592.39
2026	2,104,395,456.52
2027 - 2047	2,630,494,320.65

Also, according to the Resolution, all values shall be updated until the effective date of payment by the IPCA, having as base date January 1, 2022.Only the concession bonus shall be updated by Selic through the base date.

On August 26, 2021, DFPA received the first version of the model for calculating the concession amount prepared by Upside, which was forwarded by the Generation Division, responsible for hiring Upside. A second version of the template was forwarded to DFPA on September 14, 2021, together with a tutorial. It is important to note that the second version

considered only the premises defined by CNPE, which were disclosed on August 31, 2021. We were provided with the third version of the modeling on September 30, 2021 and the fourth version on October 8, 2021.

Finally, the last version of the Upside model and its corresponding Economic and Financial Study Report – Calculation of the Concession Amount were forwarded on October 16, 2021.

4. METHODOLOGY APPLIED BY UPSIDE

To determine the added value and consequently the concession amount, Upside considered the Marginal Cash Flow methodology.

In this method, the Total Added Value of the capitalization ($VAtotal$) is equal to the aggregate individual Added Values (VAi) of each plant, and each plant is deemed a cash-generating unit (CGU). So, you have:$VA_{tol} = \sum VA_i$

$$VA_{tol} = \sum VA_i$$

The Added Value (VA), in its turn, shall be calculated by the Discounted Cash Flow method using the difference of the net present value of the free cash flows for the firm (FCFF) of the Capitalization Scenario (FCFFpie) and the Current Scenario (FCFFcotas), quota system.

$$VA_{total} = \sum_{i=1}^{18} VPL_{FCFF_{PIE\ i}} - \sum_{i=1}^{18} VPL_{FCFF_{Cotas\ i}}$$

Where i= 1, 2, ..., 18, as there are eighteen plants that shall have a new concession grant under the IPP regime.

Upside chose to use a single discount rate (WACC) for all cash generating units, in both scenarios, the Capitalization, and Quotas. Thus, it was assumed that the risks due to the change of the electricity trading regime according to the new concession agreements shall be accounted for throughout the cash flow of the Capitalization Scenario, excluding the need for two forecasted cash flows.

The cash flow in the quota system and IPP was calculated as follows:

+ Annual Generation Revenue (RAG)	*+ Revenue from the Sale of Energy*
- Operating Expenses (Opex)	*- Operating Expenses (Opex)*
- Investments (d)	*- Investment (Capex)*
- Sectorial Charges	*- Short-Term Market Exposure (MCP)*
- TAXES	*- Sector Charges*
= FCFFquotas	*- Taxes*
	= FCFF$_{IPP}$

Upside considered that, in the periods in which both energy trading regimes (Quotas and IPP) occur concurrently, some assumptions may be disregarded from the Marginal Cash Flow assuming that there is no change in its forecast from the change in the trading regime applied. These assumptions are Operating Expenses (Opex), Investment (Capex), and Sector Charges.

Moreover, Upside's method considers, for the period during which the trading system of a plant is the same in both scenarios, that there is no Value Added and the Marginal Cash Flow assumes null values. That is, if a Cash Generating Unit (CGU) is currently under the independent power producer (IPP) system, the Marginal Cash Flow shall be null for the whole period during which the concession agreement of the Current Scenario co-exists with the new concession agreement to be executed in the Capitalization Scenario, because, for that period, the CGU is under the same trading system in both scenarios. This applies to the Tucuruí, Curuá-Una, and Mascarenhas de Moraes plants.

4.1 TAXES

Regarding taxes, Upside adopted that the tax contribution is also marginal, that is, the taxable base shall be equal to the difference in operating income obtained from the difference between the Capitalization Scenario and the Current Scenario. This conclusion, therefore, excludes the need to include the discount of BRL20,000 per month for calculating the additional income tax, which is projected at the amount of 10% on a taxable basis.

With respect to the tax benefit obtained by each one of the CGUs, it was not being originally considered in Upside's modeling, and the tax base was equal to thirty-four percent (34%). Nonetheless, after a meeting of the Economic and Financial Analysis Department – DFPA

team with Upside, the application of the tax benefit was settled, as several plants had this benefit recently extended.

4.2 AMORTIZATION OF ADDED VALUE

Upside' method considers the calculated Added Value Added Value shall be amortized over the term of the new concession agreement, that is, over 30 years.

The amortization of this amount shall affect the tax base calculated for the Marginal Cash Flow. By decreasing the tax base, the lower amount spent to pay taxes affects future cash flows, which in turn affects the calculated Added Value. Thus, the Upside model makes an iterative calculation until reaching a null economic gain for the analysis period.

4.3 CONCESSION BONUS REBATES

The methodology considered the rebates from the granted bonus as established in item II, art. 4 of Law No. 14,182/2021, namely:

- expenses related to the revitalization of water resources in the São Francisco and Parnaíba river basins;
- expenses related to the development of projects in the Amazon;
- expenses related to projects in the area of influence of the Furnas hydro power plants reservoirs;
- expenses to reimburse the economic value of the electricity supply for the São Francisco River Integration Project with North Northeast Drainage Basins (PISF).

In addition to these deductions, the need for indemnification of non-depreciated or non-amortized assets was also considered, given that the concession of some plants, currently under the IPP regime, shall have its early termination. This amount was estimated according to the Complete Financial Statements of Eletrobras as of 12/31/2020. The indemnities related to the plants under the aegis of Law No. 12.783/2013, regulated by art. 10of Decree No. 7.805/2012 and art. 2 of Decree No. 7.850/2012, have a balance recorded in December 2012, being corrected by IPCA up to the base date of the Upside modeling.

5. CONSIDERATIONS

DFPA analyzed the calculation model of the Added Value and Concession Bonus, which used the Marginal Cash Flow method.

Regarding the Marginal Cash Flow methodology, it is understood that there is no obstacle to its use, however, one should pay attention to the implicit premise that the two flows have the same risk, which allows, as a consequence, the use of a one-time discount rate. This effectively materializes if the additional risks that the IPP regime incurs are being addressed in their cash flow. Accordingly, upon assessment of the final modeling, it should be verified if the risks are being properly treated, aiming at mitigating the additional risks of the new regime.

Additionally, as indicated, the method adopted considers that, in the periods in which both electricity trading systems (Quotas and IPP) occur simultaneously, the Opex and Capex values may be excluded from the calculation of the Marginal Cash Flow, as they were considered to be equal in the $FCCF_{PIE}$ and $FCCF_{Cotas}$. In their turn, the Sector Charges were calculated by reference to the difference of revenues between the Current Scenario and the Capitalization Scenario.

Regarding this point, DFPA warned Upside that after the end of the effectiveness of the current agreements (2042), the capex and the opex for the maintenance of the plants shall be considered. The post-2042 capex and opex values for maintenance were provided by the Generation Division – DG on October 1, 2021.

It is important to highlight that, on Upside's report, the capex and opex values were amended as requested by DFPA, which is possible to verify in the latest version of the modeling provided on October 8, 2021.

Regarding the depreciation of these values, Upside's final report states that: (i) the post-2042 values were depreciated on a straight-line basis to the rate of 2.486% per annum; (ii) due to the difficulties of uniting capex for purposes of starting the depreciation charge only after the effective completion of the fixed asset and its low impact on the cash flow, the simplification of applying depreciation to the entire fixed balance of the immediately preceding month since the beginning of the first costing with capex; and (iii) the remaining amounts of the balance of fixed assets were reversed by their historical residual book value, without application of monetary adjustments. In this regard, DFPA emphasizes that these considerations were not included in the modeling submitted on October 16, 2021.

Upside's method originally, considered, for the periods during which the trading system of a plant is the same in both scenarios, i.e., the cases in which the plant is already under the

IPP system, there is no Added Value, with the Marginal Cash Flow assuming null values. This applies to the Tucuruí, Curuá-Una, and Mascarenhas de Moraes plants. However, after meetings between Eletrobras and Upside, the latter volunteered to rectify this point, considering the difference of the guaranteed power output in the two agreements, given that, in the new concession agreements, the guaranteed power outputs shall be redefined (note that, in case there is no execution of new agreements, there shall have no change in the guaranteed power output). It is important to highlight that the modeling presented on October 8, 2021, contemplates these changes. In addition to the abovementioned points, some general assumptions, listed below, were analyzed by DFPA, as follows, and Upside took into account in its final report and the modeling provided on October 8, 2021, the considerations made by this Department:

- **Base Date**: Upside calculated the value of the concession bonus on the base date of January 2023, such date being corrected according to DFPA guidance for January 2022;
- **Allocation of the guaranteed power output of the Sobradinho HPP and Itumbiara HPP**: Upside initially did not consider the maintenance of the conditions and validity of contracts signed with free consumers (CL) as provided by Law No. 11,943/2009 and Law No. 13,182/2015, which according to ¶ 1, art. 4 of Law No. 14,182/2021 shall be complied with, with the Consultancy having allocated, both in the Current Scenario and in the Capitalization Scenario, one hundred percent (100%) of the guaranteed power output of the Sobradinho HPP under the IPP regime from January 2023 and different percentages from those recommended in Law No. 13,182/2015 were used for the Itumbiara HPP.

  After the DFPA guidance, Upside considered in its report and modeling of October 8, 2021 the allocation of the guaranteed power output of the Sobradinho HPP and the Itumbiara HPP, as established in the Law:

  - Current Scenario:

Sobradinho	IPP	Quotas	Itumbiara	IPP	Quotas
2023 – Feb-2032	90%	10%	2023 – Feb-2030	80%	20%
Feb-2032 – Feb-2033	75%	25%	Feb-2030 – Feb-2031	67%	33%
Feb-2033 – Feb-2034	60%	40%	Feb-2031 – Feb-2032	53%	47%
Feb-2034 – Feb-2035	45%	55%	Feb-2032 – Feb-2033	40%	60%
Feb-2035 – Feb-2036	30%	70%	Feb-2033 – Feb-2034	27%	73%

Feb-2036 – Feb-2037	15%	85%	Feb-2034 – Feb-2035	13%	87%
Feb-2037 – Feb-2052	0%	100%	Feb-2035 – Feb-2050	0%	100%
Feb-2052 – Feb-2059	100%	0%	Feb-2050 – Feb-2057	100%	0%

- Capitalization Scenario:

Sobradinho	IPP	Quotas	Itumbiara	IPP	Quotas
2023 – Feb-2032	90%	10%	2023 – Feb-2030	80%	20%
Feb-2032 – Feb-2033	75%	25%	Feb-2030 – Feb-2031	67%	33%
Feb-2033 – Feb-2034	60%	40%	Feb-2031 – Feb-2032	53%	47%
Feb-2034 – Feb-2035	45%	55%	Feb-2032 – Feb-2033	40%	60%
Feb-2035 – Feb-2036	30%	70%	Feb-2033 – Feb-2034	27%	73%
Feb-2036 – Feb-2037	15%	85%	Feb-2034 – Feb-2035	13%	87%
Feb-2037 – Feb-2052	100%	0%	Feb-2035 – Feb-2052	100%	0%

- **Extension of concessions**: The initial report did not consider the extension of the concession for the Tucuruí HPP due to the renegotiation of the hydrological risk. After meetings with DFPA, Upside amended its report in order to take into account the aforementioned extension, pursuant to REH ANEEL No. 2,932/2021, and consequently the modeling;
- **Taxes**: Upside rectified the report and the modeling, after annotations by DFPA, as it was considering the full amounts of Income Tax (IR) for the Chesf and Eletronorte plants that benefit from the tax benefit of Sudene and Sudam, with a 75% deduction of the IR;
- **CDE payment flow**: In Upside's original report, it had considered only the CDE amount informed in the main section of art. 3 of CNPE Resolution No. 15/2021. Upon request of DFPA, Upside considered the present value of the CDE payment flow, as defined in Annex III of such Resolution. It is important to note that this point shall be contemplated by the modeling as of the analysis of the advantage;
- **Contributions to sectorial funds**: After being alerted by DFPA, Upside rectified, in the modeling, the projection that initially considered monthly contributions and now considers annual contributions in January, as established in CNPE Resolution No. 15/2021;

- **Rebates from the calculation of the concession bonus**: DFPA, initially, had not identified in the modeling the rebates from the concession bonus to the expense related to the supply of electricity for the São Francisco River Integration Project (PISF) with North-Northeast Drainage Basins, as dealt with in ¶ 6, art. 6 of Law 14,182/2021. Upside informed that such rebate is being deducted from the energy of the Paulo Afonso Complex and detailed this in its report;
- **Indemnity**: In the beginning, Upside considered only the indemnification of the Tucuruí HPP. After being alerted by DFPA and considering the provisions of art. 2 of CNPE Resolution No. 15/2021, Upside corrected its report and modeling so as to consider indemnities for investments in the calculation of the concession bonus:
    - not yet amortized related to the Basic Projects of the HPPs listed in Annex I of CNPE Resolution No. 15/2021; and
    - linked to assignable assets of the HPPs listed in Annex I of CNPE Resolution No. 15/2021, not yet amortized or not depreciated, of concessions covered by Law No. 12/783/20213, extended or not, whose calculation criteria and procedures were defined through ANEEL Resolution No. 596/2013, pursuant to art. 2 of Decree No. 7,850/2012.

DFPA emphasized that, until the indemnification amounts are published by the Ministry of Mines and Energy – MME, the amounts published in Eletrobras' Financial Statements of December 31, 2012, subject to inflation adjustment by the Extended National Consumer Price Index (IPCA), should be considered. The modeling of October 8, 2021, considered such amounts, but without the proper adjustment. DFPA requested these amounts to be adjusted until the base date of the studies, January 2022, which shall be subject to analysis in a further stage.

In general, both the methodology applied by Upside for calculating the Added Value and Concession Bonus and the model used are satisfactory.

In the due course, it should be noted that, although the amounts referring to the expenses mentioned in items "a," "b," and "c" of item II, art. 4º of Law No. 14,182/2021 (revitalization of water resources in the São Francisco and Parnaíba river basins, development of projects in the Legal Amazon and projects in the area of influence of the reservoirs of the Furnas hydro power plants) have been deducted from the calculation of the concession bonus, they shall be paid accordingly by Eletrobras for ten (10) years.

Finally, it is highlighted that DFPA did not analyze the coherence and timeliness of the technical and regulatory assumptions used in the Upside model, nor the advantage of the business, which shall be assessed in the future. In such stage, the advantage of the execution of new concession agreements shall be analyzed, as well as the results considering the rate calculated by Upside (market insights) and the rate that shall be calculated by Eletrobras (internal insight) shall be presented.

I. Glossary

Current Scenario: Cash flow considering the concession contracts in accordance with current legislation, without alteration, extension, renewal, or any modifications.

Capitalization Scenario: Cash flow after the capitalization of Eletrobras as determined by Law No. 14.182/2021, which replaces the current concession contracts with 30-year concession contracts considering the power plants as independent energy producers.

CPC: Abbreviation for Accounting Pronouncements Committee. Conceived from the union of efforts and communion of different accounting entities to ensure the international convergence of accounting standards.

CSLL: "Social Contribution on Net Income", federal income tax (after calculating the operating income).

BASE DATE: Refers to the Base Date considered to determine the Net Present Value, i.e., January 1, 2022.

DRE: Income Statement for the Year.

EBIT: Acronym for "Earnings Before Interest and Taxes". This is the profit before financial charges (interest payments) and taxes are discounted, an indicator that reflects the company's income before financial and tax deductions.

EBITDA: Acronym for "Earnings Before Interest, Taxes, Depreciation, and Amortization".

EBT: Acronym for "Earnings Before Tax", which corresponds to the difference between revenues and expenses, excluding taxes.

FCFF: Acronym for "Free Cash Flow to Firm". This is a measure of financial performance that indicates the cash generated after costs, taxes, and investments. It is commonly used for calculating project profitability without leverage.

Marginal Cash Flow: Refers to the difference, for each Cash Generating Unit (CGU), between the flow from the new concession contracts defined by Law No. 14.182/2021

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

(Capitalization Scenario) and the pre-capitalization cash flow (i.e., before the effects of Law No. 14.182/2021 or Current Scenario). The marginal cash flow discounted by the discount rate to be defined (WACC) will result in the value added for each CGU.

GSF: "Generating Scaling Factor", Refers to the ratio between the volume of energy generated by the MRE plants and the total Physical Guarantee of these power plants, which is calculated monthly.

IR: "Income Tax", federal income tax (after calculating the operating income).

Financial Model: UPSIDE's economic and financial model for determining the Total Value Added and the Grant Bonus.

MM: Million.

MRE: "Energy Reallocation Mechanism", refers to the mechanism for sharing the risks associated with optimizing electricity resources of the National Interconnected System – SIN.

O&M: Operation and maintenance.

OPEX: "Operational Expenditure" and designates the amount that should be spent to keep the capital assets of a certain company in operation, namely equipment and installations.

Grant Bonus: Portion of the total Value Added destined: (i) 50% deducted from indemnities and revitalizations necessary for the Federal Government, with payment in a single installment, and (ii) 50% to the CDE, with payment flow to be defined by the CNPE.

PIS/COFINS: "Social Integration Program and Contribution to Financing Social Security", federal taxes levied on gross revenue in the non-cumulative regime.

TIR: "Internal Rate of Return", based on the annual free cash flow balance (investments + pre-operating expenses – net income), less depreciation and cash inflows and outflows from financing.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Cash Generating Unit (CGU): Refers to the smallest identifiable group of assets that generate commercial returns. For this report, it refers to the analysis of each power plant (HPP, SHP) of the scope of analysis.

Value Added: It refers to the marginal income referring to the difference between the Capitalization Scenario and the Current Scenario in the present value for each cash generating unit.

Total Value Added: It refers to the sum of the values added for all the power plants analyzed in this report.

NPV: "Net Present Value" is the sum of future free cash flows and a residual value, brought to the present value at a certain discount rate.

WACC: Acronym for "Weighted Average Cost of Capital". It represents the discount rate to be used to determine the discounted cash flow available to the firm. Determined by the opportunity cost of shareholders and the cost of third-party capital, weighted by their amounts.

II. Disclaimer

Upside Finanças Corporativas Ltda. ("Upside") was contracted by Centrais Elétricas Brasileiras S.A. - Eletrobras ("Eletrobras" or "Company") to provide specialized services to support the decision of the senior management, which aims to define the grant amount in the possible privatization process of the Company, establishing scenarios, evaluating the positive and negative impacts related to the submission of Provisional Measure (MP) 1.031/21 by the Ministry of Mines and Energy (MME) to the House of Representatives, as well as relevant fact published by Eletrobras on 02/23/2021, and possible regulatory alternatives, as provided for in the Invitation To Bid of Electronic Auction DSS No. 10/2021 ("Invitation To Bid") and its Exhibits. This Economic and Financial Study Report - Calculation of the Grant Amount ("Report" or "Study") was prepared by Upside based on information and assumptions provided by the Company, as well as on public information ("Information"), without its independent verification.

The Information used is exactly that presented or discussed by the Company with Upside and, in preparing the Report, it was considered that the Information reflects the Company's most accurate assessment of the business and the markets in which it operates. Upside adopted that the Information is true, accurate, complete, and sufficient and that no other information that could be relevant in the scope of the work was made available to Upside; therefore, no evaluation, verification, or inference on the Information was performed, so Upside undertakes no responsibility for independent investigations into the Information.

This Report does not represent a proposal, request, advice, or recommendation from Upside about any investment or divestment decision, of any nature, present, or future ("Transaction"). Also, Upside did not provide legal, accounting, auditing, tax, fiscal, or regulatory services regarding this Report.

Upside's analysis does not include legal, contractual, environmental, land, corporate, tax, accounting, fiscal, and/or technical audit services; thus, Upside will only be responsible for the advisory services provided within its scope of work, as established in the Invitation To Bid, not including the verification and criticism of any

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

assumptions and other legal, contractual, environmental, land, corporate, engineering, tax, accounting, fiscal and/or technical data not expressly contracted. Eletrobras shall carry out its own independent analysis of the aspects not expressly contracted, directly or through specialized consultants.

The base date used in this Report is January 1, 2022, and the Report was concluded on October 5, 2021. This Report is based on Information made available to Upside until the date of its conclusion, considering the market, economic, and other conditions as they were presented and how they can be evaluated up to the completion date. Although future events and other developments may affect the conclusions presented in this Report, Upside has no obligation to update, revise, rectify, or revoke this Study, in whole or in part, because of any development or information made available after the completion date or for any other reason or subsequent event, unless expressly mentioned in the contract.

In addition, this Study may contain forward-looking statements, forecasts, estimates, and projections ("Forward-Looking Statements"). Upside does not undertake any responsibility regarding the Forward-Looking Statements contained in this Report, nor regarding their correctness, accuracy, completeness, and sufficiency, as well as the format they present. The financial calculations contained in this Report themselves may not result in an accurate sum due to rounding.

As the analysis and figures are based on forecasts of future income provided by the Company, they do not necessarily suggest the realization of actual financial income, which may be significantly more or less favorable than those indicated in the Report. If any of the premises listed does not materialize or if, in any case, the Information proves to be incorrect, incomplete, insufficient, or inaccurate, the conclusions of this Report may change substantially. Considering that these analyses are intrinsically and inevitably subject to uncertainties, being based on various events and factors beyond our control and the control of the Company, Upside will not be held liable if future incomes are substantially different from those incomes presented in this Report.

III. Initial Considerations

This Study is part of the process of Eletrobras' privatization. On February 23, 2021, the federal government delivered to the National Congress the Provisional Measure (MP) No. 1.031/2021, to allow the National Bank for Economic and Social Development (BNDES) to proceed with studies to structure the capitalization of Eletrobras.

After the regular procedure in both Houses of the National Congress, the House of Representatives approved Provisional Measure (MP) 1.031/2021 on June 21, 2021, which was submitted for approval of the Brazilian Presidency. On July 12, 2021, such Provisional Measure was converted into Law No. 14.182/2021, with vetoes by the Brazilian Presidency.

In the period between the publication of Provisional Measure No. 1.031/2021 and the publication of Law No. 14.182/2021, Eletrobras released the Invitation To Bid of Electronic Auction DSS No. 10/2021 ("Invitation To Bid") for *"hiring specialized services to support the decision of the senior management, which aims to define the value of the grant in the possible privatization process of the Company, establishing scenarios, evaluating the positive and negative impacts related to the submission of Provisional Measure 1.031/21 by the Ministry of Mines and Energy (MME) to the House of Representatives, as well as the relevant fact published by Eletrobras on 02/23/2021, and possible regulatory alternatives, according to the conditions established in the Invitation To Bid"*.

In this context, according to Contract No. ECE-DSS-4588/2021 ("Contract"), entered into on July 7, 2021, Upside was hired by Eletrobras to calculate the value of the grant in the Company's privatization process, in support of the decision of the high management of Eletrobras.

That said, this chapter will expose the context of the work that resulted in this Report.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

III.1. Justification of the Works

Initially, it is observed that Law No. 14.182/2021 conditioned the privatization of Eletrobras to the granting of new generation concessions and attributes to the National Energy Policy Council (CNPE), chaired by the Minister of State for Mines and Energy (MME), the competence to calculate the value added and the consequent grant bonus.

Indeed, at an extraordinary meeting held on August 31, 2021, the CNPE determined, under CNPE Resolution 15/2021, that the grant bonus to be paid to the Federal Government will be R$ 23.2 billion. At the same time, it established that R$ 29.8 billion of the value added would be allocated to the Account for Energy Development (CDE), as determined by Law No. 14.182/2021.

However, while the calculation had not yet been determined, Eletrobras opted for an independent advisory through a specialized consultancy for this scope to add knowledge and experience so that a better analysis of the capitalization proposal can be carried out to support the decision of the Board of Directors of Eletrobras.

This hiring is justified because, as described in the Invitation to Bid, good Corporate Governance is measured by the four pillars Corporate Responsibility, Accountability, Equity, and Transparency. Thus, the company must conduct its business to perpetuate itself and must ensure its economic and financial viability, reduce negative externalities and increase the positive externalities of its business and transactions, considering, in its business model, the various capitals (financial, human, intellectual, etc.) of the company in the short, medium, and long term.

It is noteworthy that, despite the BNDES having the competence to execute and monitor the privatization process (art. 1, Paragraph 3 of Law No. 14.182/2021), Eletrobras is responsible for contracting the specialized technical services necessary to carry out the issue and public offering of shares, as well as adopting the other measures necessary to implement the capitalization, according to art. 1, paragraph 1, items III and IV, of CPPI Resolution No. 176, of April 27, 2021.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Therefore, the by Eletrobras, with the assistance of an independent advisor, is an adequate measure to the current legislation, as well as the Company's own due diligence.

That said, the history and main experiences of the consultancy advising Eletrobras and which prepared this Report are highlighted below.

III.2. About Upside

Upside was founded in June 2000 by Humberto Bizerril Gargiulo, previously an executive at large national and international financial institutions such as Unibanco, Banco Santander, Citibank, Lloyds, and Chase.

Upside was a pioneer in advising the largest agents in the electricity sector and has in its track record operations of great relevance, such as the funding and advisory services at auction for the Belo Monte HPP (11,233.1 MW), Substations and Transmission Lines of the Complex Madeira River Hydroelectric (2,300 Km), First Project Finance with China Development Bank in the country and Petrobras' Logum pipeline.

Since its foundation, Upside independently advises the most diverse investment decisions in the infrastructure area, promoting debt and equity structuring solutions with national and international sources.

During its more than 20 years of operation, Upside has already provided services to the main companies in the infrastructure sector, such as Ecovix, Duke Energy, Planova, CPFL, Eletronorte, Eletrosul, BR Distribuidora, Desenvix (currently Stratkraft Energias Renováveis), CEEE, Norte Energia, Chesf, Furnas, Sinop, State Grid, Engie Camargo Correia, GE.

With remarkable expertise in advising on Public Concession Auctions, Economic and Financial Analysis, Business Plans, Corporate and Structured Finance, Due Diligence, Project Finance, Issue of Technical Reports, structuring of public-private partnerships, Mergers and Acquisitions (M&A) and Valuation, Upside has a

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

position with the largest banks in the sector in the Anbima Ranking of Project Financing from 2011 to 2019, occupying the 1st place as an Independent Financial Advisor.

In addition to being a pioneer in advising large agents in the infrastructure sector throughout the country, Upside advised, in total, R$ 11.76 billion in Valuation and M&A. Added to the other scopes of the company's work, the value of projects advised exceeds R$ 102.9 billion, divided into 135 transactions.

Upside is committed to the highest standards of integrity and business ethics and, convinced that the best path requires good practices and corporate governance, has invested in hiring a Compliance Officer and in the following management and internal control tools: Code of Conduct, Ethics Channel, Due Diligence of Business Partners, and Training in Business Ethics - Compliance.

III.2.1. Main Company Experiences

Table 1 below lists Upside's main experiences throughout its twenty-one (21) years of operation.

Table 1: Upside's Main Experiences

Contracting Party	Project	Description	Transaction Value	Year
Furnas	Tijoá Participações	Economic and financial evaluation of Tijoá Energia.	CONFIDENTIAL	2020

III.2.2. Qualifications of Specialist Professionals

In alphabetical order:

Edinaldo Paulo Tenório V. do Amaral – Graduated in Law from the Federal University of Pernambuco (UFPE) and took a course in Project Finance from the Brazilian Association of Infrastructure and Basic Industries (Abdib). He is currently a partner at Amaral, Paes de Andrade e Figueirêdo Advogados, specializing in public law, with experience in Administrative, Constitutional, Economic, and Regulatory Law. Its expertise includes the structuring of concession projects and legal advisory for companies participating in public competitions.

Edvaldo Santana – Ph.D. in Production Engineering from the Federal University of Santa Catarina. Full Professor at UFSC from 1994 to 2013. Market Superintendent at ANEEL between 2000 and 2005. Officer of ANEEL for two terms of office between 2005 and 2013. CEO of ABRACE between 2016 and 2019. Vice President of Strategies and New Business at Electra Energy until March 2020. Lattes Curriculum: http://lattes.cnpq.br/7860414535351286

Gustavo Oshiro Henriques - Professional of the Execution Team. He has over ten (10) years of experience, and his curriculum includes activities related to corporate finance in Brazil, such as advisory, structuring, and fundraising via banks and capital markets, highlighting the operations of State Grid Brazil Holding and HPP Sinop. Bachelor in Economics from the University of São Paulo (USP), he has experience developing economic and financial models and tools for Project Finance, project evaluation and analysis. Coordinated the preparation of appraisal reports, financial due diligence, sectorial and macroeconomic technical notes. He led participation in financial advisory services for infrastructure concession auctions.

Humberto Bizerril Gargiulo - Leadership Professional. With more than forty (40) years of experience, he has in his resumé, in the last five (5) years, activities related to Valuation of the following energy companies in Brazil: HPP Sinop, Transmissora Porto Alegrense de Energia (TPAE), Transmissora Delmiro Gouveia (TDG), Extremoz Transmissora Do Nordeste (ETN), Pantanal Transmissão S.A., Firminópolis Transmissão S.A., Caldas Novas Transmissão S.A., and Paineira Participações e

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Empreendimentos Ltda. (according to its shareholding in SHPs, EOLs, and HPPs). In addition to the last five (5) years, the professional coordinated the Valuation service of Rio Grande Estaleiro (for Ecovix), of Linha Verde Transmissora de Energia S.A. (LVTE), three (3) wind projects (for Cemig), UTE Barcarena (for Eletronorte), and confidential electric energy generation projects (for CPFL). Post-Graduated in Management Development by PDG and founder of Upside Finance, he has experience in finance, accounting, and risk analysis. He holds a bachelor's degree in law from the University of São Paulo and has worked with Treasury, Capital Markets, and Corporate Finance in global financial groups such as Citibank, Lloyds, and Chase. Former Officer of Corporate Products at Unibanco, Executive Director of Structured Finance at Banco Santander and visiting speaker at IBMEC-SP and FGV-SP.

Leontina Pinto – Electrical Engineer from the Federal University of Rio de Janeiro – UFRJ (1979), Master in Systems Engineering in Optimization (COPPE-UFRJ, 1981), and Ph.D. in Applied Mathematics (IM/UFRJ, 1986). She was a researcher at the Centro de Pesquisas de Energia Elétrica CEPEL, a professor at COPPE/UFRJ and PUC/RJ. She is currently Executive Officer of Engenho Pesquisa, Desenvolvimento e Consultoria. With over 30 years of experience in the electric energy market, the expert has more than 300 published works. Among the main lines of research are: system planning and reliability, optimal management of energy systems, the study of geomagnetic phenomena, models for risk analysis, models for forecasting climate scenarios, models for forecasting futures market, and energy trading scenarios. Lattes Curriculum: http://lattes.cnpq.br/9577413795829532

Lucas Pimentel – Lawyer, specializes in energy law, focused on structuring electric energy generation projects and consulting advisory in energy law and regulatory law. Graduated in Law at the Federal University of Pernambuco. Post-Graduate at LLM in Business Law at Fundação Getúlio Vargas – FGV. Former Coordinator of the Energy Law Commission of the Escola Superior de Advocacia de Pernambuco – ESA/PE. Secretary for Regulatory Affairs at the National Institute of Clean Energy – INEL.

Matheus Brandão Schmidt – Support Team Professional. Graduated in Business Administration at Faculdade de Economia e Administração da Universidade

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

de São Paulo (FEA-USP). In 2020, he joined Upside Finance as an intern and, in 2021, he assumed the position of analyst, carrying out economic and financial modeling, preparation of presentations and reports, support in M&A transactions through the sell-side, support in fundraising processes (Project Finance and Corporate Finance) and customer relationship management.

III.3. Terms and Conditions of Hiring

Eletrobras published the Invitation To Bid for contracting specialized services aiming to define the grant value in the possible privatization process, to assist the Company's senior management in its decision-making. After winning the bid, Upside ("Contracted Party") entered into, on July 7, 2021, the contract with Eletrobras ("Contracting Party"). Now, therefore, the main terms and conditions of this contract will be explained below.

III.3.1. Terms and Contractual Obligations

Although the Contract was entered into on July 7, 2021, there was a condition precedent linking the Contract's validity to the conversion of Provisional Measure No. 1.031/2021 into law, according to clauses Three - Deadlines and Twenty - Condition Precedent of the Contract. Consequently, the term of effectiveness of the Contract began on July 12, 2021, the date of conversion of Provisional Measure No. 1.031/2021 into Law No. 14.182/2021.

Regarding the execution period, the Contract established ten (10) weeks, and the first meeting between Upside and Eletrobras, in which Eletrobras provided Upside with the operational guidelines for the work, took place on July 20, 2021. Therefore, in the week of July 12 to 16th, 2021, the provision of services had not yet started by the Contracting Party, so that the counting of the execution period started in the following week - from July 19 to 23rd, 2021.

Additionally, because of the contractual relationship, both parties have obligations that must be observed for the correct progress of the work and compliance

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

with the stipulated deadlines. Thus, note that, according to Clause Nineteen of the Contract, Eletrobras' obligations are as follows:

- 19.1. Upon faithful compliance with the agreed conditions, **ELETROBRAS** shall pay the **CONTRACTED PARTY** to execute the service.
- 19.2. Facilitate, promptly for the **CONTRACTED PARTY**, the access to documents and/or information available to it, which may be necessary for the execution of the services.
- 19.3. Provide the **CONTRACTED PARTY's** physical access to **ELETROBRAS** facilities.
- 19.4. Guide the **CONTRACTED PARTY** regarding the indication of possible sources of information, which may be necessary for the execution of the service.
- 19.5. Appoint a responsible employee to monitor the execution of the Contract.
- 19.6. Notify the **CONTRACTED PARTY** about any irregularities found in the execution of the subject matter.

III.3.2. Scope of Work

At first, it is highlighted that the scope of Upside's work, according to the Invitation to Bid, consists of supporting the decision of the high management of Eletrobras, aiming to support the Company in the discussions on the value of the grant in the possible privatization process.

It is important to highlight that, as mentioned in item III.1 - Justification of the Works, the calculation of the grant was determined by the National Energy Policy Council (CNPE), chaired by the Ministry of Mines and Energy (MME), at an extraordinary meeting held on August 31, 2021.

In these terms, the service provided by Upside consists of an independent analysis of the Contracting Party's cash flows, considering the current legislation related to the privatization process. The purpose is to provide technical support to Eletrobras management concerning economic and financial aspects so that the Company has greater security in the analysis of the calculation determined by the

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

CNPE and promoting discussions related to said calculation, from a rational and regarding the considered premises.

III.3.2.1. Definition of Power Plants

According to art. 1 of Law No. 14.182/2021, the privatization of Eletrobras is subject to the granting of new concessions for Concession Contracts No. 007/2004-ANEEL-Eletronorte and No. 004/2004-ANEEL/Furnas. In addition, the Federal Government is authorized to grant new concessions for concessions under the ownership or control, directly or indirectly, of Eletrobras, which have been extended under the terms of art. 1 of Law No. 12783/2013 (art. 2, item I, of Law No. 14.182/2021), as well as for the Sobradinho HPPs (art. 2, item II, of Law No. 14.182/2021) and Itumbiara (art. 2, item III, of Law No. 14.182/2021).

As for the concessions mentioned in the articles above, it should be noted that the Concession Contract No. 007/2004-ANEEL-Eletronorte, of November 12, 2004, grants Centrais Elétricas do Norte do Brasil S.A. – Eletronorte the exploitation of the hydroelectric potential of Tucuruí power plant and, through the Second Amendment to Concession Contract No. 007/2004-ANEEL-Eletronorte, of April 10, 2006, the Curuá-Una plant was included in this contract.

Also, pursuant to Concession Contract No. 004/2004-ANEEL-Furnas, dated on November 12, 2004, the state-owned company Furnas – Centrais Elétricas S.A. is the concessionaire of the Corumbá I, Estreito, Funil – RJ, Furnas, Marimbondo, Porto Colômbia, Itumbiara, and Mascarenhas de Moraes power plants.

Regarding the concession grants extended under Law No. 12783/2013, it is noted that the exploitation of the Coaracy Nunes power plant was granted to Eletronorte by Concession Contract No. 002/2012-ANEEL-Eletronorte, dated on May 7, 2012, and extended under the terms of the First Amendment No. 002/2012-ANEEL-Eletronorte, signed on December 4, 2012.

Also, with regard to the grants of extended concessions, the Concession Contract No. 006/2004-ANEEL-CHESF, of November 12, 2004, grants Companhia

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Hidroelétrica do São Francisco - CHESF to explore the electric energy generation of Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Sobradinho, Funil, and Pedra.

At this point, the First Amendment to the Concession Contract No. 006/2004-ANEEL-CHESF, signed on December 4, 2012, extended the concession of the power plants of Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Funil, and Pedra, according to Provisional Measure (MP) No. 579/2012 – later converted into Law No. 12783/2013. The concession of HPP Sobradinho, in turn, was extended under the Third Amendment to the Concession Contract No. 006/2004/ANEEL/CHESF, of December 16, 2015, based on Law No. 12783/2013.

Therefore, the power plants that will be considered in this Study are: Boa Esperança (CHESF), Apolônio Sales (CHESF), Paulo Afonso I (CHESF), Paulo Afonso II (CHESF), Paulo Afonso III (CHESF), Paulo Afonso IV (CHESF), Luiz Gonzaga (CHESF), Xingó (CHESF), Sobradinho (CHESF), Funil (CHESF), Pedra (CHESF), Coaracy Nunes (Eletronorte), Tucuruí (Eletronorte), Curuá-Una (Eletronorte), Corumbá I (Furnas), Estreito (Furnas), Funil – RJ (Furnas), Furnas (Furnas), Marimbondo (Furnas), Porto Colômbia (Furnas), Itumbiara (Furnas), and Mascarenhas de Moraes (Furnas).

Considering the above, the guidelines to be observed in the provision of services in reference are detailed below.

III.3.2.2. Commercialization Methods

During the execution of the works that comprise the scope of Upside, it will be necessary to consider the form of energy commercialization of each power plant subject matter of the analysis, for which the possible options are: (i) the Quota Regime; (ii) the guidelines established in Law No. 13182/2015; or (iii) the provisions applicable to the Independent Electric Energy Producer (IEEP).

The Quota Regime – governed by Law No. 12783/2013 – is the one in which the electric energy generator provides a Physical Guarantee of energy and power of the hydroelectric power plant and, in return, receives the Annual Generation Revenue (RAG). The RAG is an amount in Reais (R$) subject to adjustments for unavailability or generation performance, comprising the regulatory costs of operation, maintenance, administration, remuneration, and amortization of the hydroelectric power plant, adjusted annually in July, in addition to being revised every 5 years. From the power plants subject matter of this Study, the following are under this energy commercialization regime: Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Funil, Pedra, Coaracy Nunes, Corumbá I, Estreito, Funil – RJ, Furnas, Marimbondo, and Porto Colômbia.

To provide resources for the implementation of electric energy projects, Law No. 13182/2015 authorized the state-owned companies Companhia Hidro Elétrica do São Francisco and Furnas Centrais Elétricas S.A. to participate, respectively, in the Northeast Energy Fund (FEN), and the Southeast and Midwest Energy Fund (FESC). The power plants subject matter of this work submitted to Law No. 13182/2015 are Sobradinho (CHESF) and Itumbiara (Furnas).

In summary, part of the revenue from contracts of power plants governed by this law entered into in the Free Contracting Environment (ACL) are destined to the FEN or FESC, according to specific conditions, not mentioned herein, under art. 10, Paragraphs 16 and 18, and art. 22, Paragraph 16, of Law No. 11.943/2009 (amended by art. 5, Law No. 13.182/2015). Also, by Law No. 13182/2015, as of 2030, in the case of Itumbiara (art. 10, Paragraphs 4 and 16), or 2032, for Sobradinho (art. 5, which amends art. 22, Paragraphs 3 and 4, of Law No. 11943/2009), the amounts of contracted energy would be uniformly reduced at the rate of one-sixth each year, such reductions being subject to the allocation of physical guarantee quotas of energy and power (Quota Regime).

However, with the privatization of Eletrobras, the Sobradinho and Itumbiara regime, and the other power plants that are the subject matter of this Study will

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

continue to be operated for independent production according to art. 3, item II, of Law No. 14.182/2021.

Regarding the regime above, Law 9.074/1996 (art. 11 and 12) grants special conditions for Independent Electric Energy Producers (IEEPs) based on cogeneration units. Under this law, IEEP is anyone who receives a concession or authorization to produce electric energy for the sale of all or part of the electric energy produced at his/her own risk and expense. As for this analysis's power plants subject matter, the HPPs Tucuruí, Curuá-Una, and Mascarenhas de Moraes are considered IEEPs.

III.3.2.3. Invitation to Bid Guidelines

As established in the Invitation to Bid, all methodologies and assumptions used and necessary for the development of the work, which will be established based on the applicable legislation and regulations in force, and public information (not including reserved information), will be validated by Eletrobras. Among them, it is cited, without limitation: (i) physical guarantee of hydroelectric power plants; (ii) hedge for hydrological risk mitigation (GSF) in the operating regime for independent production; (iii) electrical losses; (iv) energy price; (v) quota revenue; (vi) discount rate; (vii) risk premium; (viii) taxes; and (ix) business risk analysis.

As for the projection of prices for energy commercialization, according to the Invitation to Bid, it will be based on market research for the concession period, together with a methodology commonly used in the market to project long-term prices.

Furthermore, according to instructions in the Invitation to Bid, the calculation of the new Physical Guarantee of the hydroelectric power plants involved in the process will be carried out using the methodology established in the current legislation, considering the base case (decks of the computational models involved in the calculation) and the specific assumptions considered by the Energy Research Company for the calculation, both subject to the availability of public information (not reserved). It is noteworthy that, in the provision of services, the legislation and regulations in force throughout the Contract term will be considered.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Finally, as extracted from the Invitation to Bid, the deliverables for the provision of services are described in the following table:

Table 2: Deliverables of the Provision of Services

ITEM	PRODUCT
1	Economic and financial model, prepared in Excel, unlocked, without hidden tabs, and with all available formulas, for calculating the grant amount, quantifying the financial impact using the discounted cash flow methodology. Input data are defined under Provisional Measure 1.031/2021 and the relevant fact published by Eletrobras on 02/23/2021. Since these data are subject to change, the model should allow for appropriate variations. The model should predict, by power plant, the discounted cash flow of the current scenario of exploration by quota regime and independent production regime.
2	Tutorial for using and updating the economic and financial model for calculating the grant value of item 1.
3	A complete report detailing the assumptions and methodologies used (which must take into account the terms of current legislation and regulations applicable to the case) to prepare the economic and financial model. In Portuguese and English.
4	Report with the analysis of attractiveness scenarios for Eletrobras considering the subject matter of Provisional Measure 1.031/2021, observing the costs, risks (taking into account the applicable legislation in force, such as but not limited to ANA, ANEEL, etc.) and benefits associated with the change to free market, quantifying the financial impact using the discounted cash flow methodology. Explain the critical variables that influence the advantage, or not, under the change of operating regime for independent production, from the point of view of Eletrobras. In Portuguese and English.
5	a) Final revised model foreseen for product 1, considering the legislation, regulations, and final regulations issued on capitalization modeling. b) Final report that must evaluate, in addition to the abovementioned topics, the data that will be sent by the competent authority to define the added value of the grants of the new concession contracts under the terms of current legislation and regulations. In Portuguese and English.
6	Eight (8) executive meetings were held, with the preparation of specific material, within the scope of the previous items, with members of the Executive Board and Management Directors.

III.4. Structure of the Report

This Study aims to present the legal and regulatory aspects, the methodology, the assumptions used, and the risk factors associated with the calculation of the Grant amount according to Law No. 14.182/2021.

The Study starts in Chapter IV - Legal and Regulatory Sensitivity Analysis by a risk analysis of legal issues, which examined the matters of extension of the grant, right of extension of the grant, hydrological risk, and other points, as well as the indication of their possible impacts on the cash flow to be worked.

The report follows the presentation of the methodology in Chapter V, which will be discussed in terms of setting up the proposed financial flow in section V.1, preparation of the discount rate in section V.2, timely presentation of the physical guarantee values used in section V.3 and, finally, the energy forecast aspects in section V.4 of the projected values of GSF, PLD, and price curve.

In Chapter VI - Definition of Assumptions, the premises used in this Study will be explained to define, for the Current Scenario and the Capitalization Scenario, the general assumptions of revenues, operating costs and expenses, macroeconomic, tax and fiscal, and the sector charges applicable to the Cash Generating Units (CGU). This chapter ends with the exposition of section VI.9, which presents, for the Base Case, the marketing strategy and the different p-values of the elaborated curves from the methodologies discussed in the previous chapter.

Finally, in Chapter VII - Summary Analysis of the Risk, all analyzes are summarized and mapping the risks addressed in this report and pointing out the directions for the awareness-raising that will be carried out because of the work.

IV. Legal and Regulatory Sensitivity Analysis

Although Upside is not directly engaged in the assessment of legal issues, analyzing certain aspects related to the capitalization model provided for in Law No. 14.182 is relevant to indicate the risks associated with this scenario, considering the current legislation and regulation applicable, as per Exhibit I - Terms of Reference of the Invitation to Bid. Thus, within our analysis, we took into account the following themes:

- Extension of Eletrobras Grants. Form of extension of the Eletrobras HPP concession grants set forth in Law 14.182/2021 and applicable regulatory regimes.

- Right to Extend Eletrobras Grants due to the MRE. Eletrobras acquired the right to extend HPP grants, as established in REN ANEEL 2.919/2021 and REN 2932/21. Define which treatment will be given to the Tucuruí, Itumbiara, Mascarenhas de Moraes, and Sobradinho HPPs, considering that the extension of their concession grants was already expressly established before Law 14.182/2021.

- Hydrological Risk – Impacts in case the expectation of modifications in the current settings of the Energy Reallocation Mechanism – MRE does not occur because of the entry into operation of new Thermoelectric Power Plants as provided for in Paragraph 1 of Art. 1 of Law 14.182/2021, contracted with 70% inflexibility.

- Analysis of Other Points. Analysis of other regulatory and legal points that may impact the privatization of Eletrobras.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

IV.1. Extension of Eletrobras Grant

Law 14.182/2021, through art. 1, expressly provides for conditions, faculties, and requirements related to the privatization of Eletrobras and the extension, by the Federal Government, of certain HPP concessions currently linked to the company:

> *"Art. 1 The privatization of the company Centrais Elétricas Brasileiras S.A. (Eletrobras) will take place under the terms of Law No. 9.491 of September 9, 1997, and of Paragraph 1 of this article and will be* ***subject to the granting of new electric energy generation concessions under Concession Contracts No. 007/2004-Aneel-Eletronorte, signed by the Federal Government e Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and No. 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP),*** *signed by the Federal Government and Furnas Centrais Elétricas S.A. (Furnas), subject to the rules and conditions established in this Law.*
>
> *Paragraph 1 The privatization of Eletrobras will be carried out in the form of the capital stock increase, through the public subscription of ordinary shares with a waiver of the subscription right by the Federal Government, and* ***the granting of new electric energy generation concessions will be carried out for thirty (30) years, from the date of signature of the new agreements referred to in the caput of this article****, and the contracting of thermoelectric generation powered by natural gas will be carried out by the granting authority, in the form of a capacity reserve auction referred to in art. 3 and 3-A of Law No. 10.848, of March 15, 2004, in the amount of one thousand megawatts (1,000 MW) in the Northeast Region in the metropolitan regions of the Federation units that do not have in their capital natural gas supply point on the date of publication of this Law, in the amount of two thousand five hundred megawatts (2,500 MW) in the North Region distributed in the state capitals or metropolitan region where it is feasible to use the existing proven reserves of national natural gas in the Amazon Region, guaranteeing at least the supply to two capitals that do not have a natural gas supply point on the date of publication of this Law, in the amount of two thousand and five hundred megawatts (2,500 MW) in the Midwest Region in the capitals of the States or metropolitan regions that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for the delivery of one thousand megawatts (1,000 MW) of natural gas thermal generation in the year of 2026, two thousand megawatts (2,000 MW) in the year of 2027, and three thousand megawatts (3,000 MW) in the year of 2028, with a supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas*

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

> *generation of Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation do bid by the same correction discretion of Auction A-6 of 2019, and in the amount of two thousand megawatts (2,000 MW) in the Southeast Region, of which one thousand two hundred and fifty megawatts (1,250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of the Superintendence for the Development of the Northeast (Sudene) that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for delivery of thermal generation using natural gas of one thousand megawatts (1,000 MW) in the year of 2029, for States that have a natural gas supply point on the date of publication of this Law, and one thousand megawatts (1,000 MW) in the year of 2030, of which two hundred and fifty megawatts (250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of Sudene that do not have a natural gas supply point on the date of publication of this Law, with supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation in Auction A-6 of 2019, with updating of this value until the date of publication of the specific notice by the same discretion of correction of the Auction A-6 of 2019, and the extension of the contracts of the Alternative Energy Sources Incentive Program (Proinfa) for twenty (20) years, as well as the contracting in Auctions A-5 and A-6 of at least fifty percent (50%) of the declared demand of the distributors, for hydroelectric power plants up to fifty megawatts (50 MW), at the maximum price equivalent to the ceiling established for the generation of Small Hydroelectric Plants (SHP) of Auction A-6 of 2019 for projects without grant, with updating of this value until the date of publication of the specific invitation to bid by the same correction discretion of Auction A-6 of 2019, as established in art. 20 and 21 of this Law.*
>
> *(Emphasis Added)*

According to the excerpts highlighted above, it is an essential condition for the privatization of Eletrobras: (i) granting of new generation concessions for Concession Contract No. 007/2004-Aneel-Eletronorte and the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), granted through Contract No. 004/2004-Aneel/Furnas; and (ii) that the new concession term is thirty (30) years from the signature date of the new concession contracts. Therefore, without the extension of these concession contracts for a new period of thirty (30) years from the signing of the

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

corresponding concession contracts, it will not be possible to complete Eletrobras privatization process.

Art. 2 of Law 14.182/2021, in turn, provides that the Federal Government is authorized to provide new authorization grants, also for thirty (30) years from the signature date of the new contract, to execute the privatization of Eletrobras, which includes grants already mentioned in Art. 1 of Law 14.182/2021:

> *"Art. 2 For the promotion of the privatization referred to in this Provisional Measure, the Federal Government is authorized to grant, for thirty years, counted from the date of the signing of the new contracts, new grants for electricity generation concessions under ownership or control, directly or indirectly, of Eletrobras:*
>
> *I - that have been extended under the terms of art. 1 of Law No. 12.783, of January 11, 2013;*
>
> *II - achieved by the provisions of item II of § 2 of art. 22 of Law No. 11.943, of May 28, 2009;*
>
> *III - achieved by the provisions of § 3 of art. 10 of Law No. 13.182, of November 3, 2015;*
>
> *IV - granted through the Concession Contract No. 007/2004-Aneel-Eletronorte; and*
>
> *V - granted through Concession Contract No. 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP."*

In addition, according to art. 3 of Law 14.182/2021, the privatization of Eletrobras is subject to the shareholders' approval, by shareholders' meeting, of the "*execution of the new electricity concession contracts referred to in art. 2, to replace the contracts in force on the date of publication of this Provisional Measure, with the alteration of the operating regime for independent production, on the terms set out in Law No. 9.074, of July 7, 1995, including the conditions for the termination of the grants, the expropriation of the facilities and the indemnification*".

In other words, if the shareholders' meeting does not approve the execution of new concession contracts for all generation projects covered by the art. 2 of Law 14.182/2021, the privatization of Eletrobras cannot occur.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Regarding the regulatory requirements for the renewal of concessions mentioned above, we highlight the following conditions brought by Law 14.182/2021:

- the change of the exploitation regime to independent production, under the terms of the provisions of Law No. 9.074, of 1995, including the conditions for the extinction of the concessions, the transfer of installations and indemnities (item III of Art. 4 of Law 14.182/2021);
- the assumption of hydrological risk management, with no renegotiation allowed under the provisions of Law No. 13.203, dated December 8, 2015 (item IV of Art. 4 of Law 14.182/2021); and
- The Sobradinho and Itumbiara HPPs, which are subject to, respectively, the provisions of item II of Paragraph 2 of art. 22 of Law No. 11.943/2009, and Paragraph 3 of art. 10 of Law No. 13.182/2015, will preserve their respective legal obligations, observing the conditions and the validity of the current electric energy sales contracts referred to in those devices. The energy arising from the obligations established in the aforementioned legal provisions may not be subject to resale, commercialization, or assignment in the Free Contracting Environment (ACL), and its use shall be restricted to the consumers who are part of those electric energy sales contracts. Therefore, only electric energy unbound to the legal provisions mentioned above can be used for other purposes. (Paragraph 1 of Art. 4 of Law 14.182/2021);

The generation plants of Eletrobras that must or may have their concessions renewed through the provisions of Law 14.182/2021 are listed below:

Part of the generation plants that may have their concession grants renewed under Law 14.182/2021 belongs to the quota system created by Law 12.782/2013. By

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

art. 5 of Law 14.182/2021, CNPE is responsible for defining, through CNPE Resolution No. 15/2021, the HPPs' gradual transition (or change to free market from the quota system to the independent electric energy production model, which shall occur through the partial transition of twenty percent (20%) of the HPPs' physical guarantees each year, ending the transition in five (5) years, from 2023 to 2027.

Thus, while the obligations bound to the quotas remain valid, in whole or in part, a large group of Eletrobras HPPs will maintain their obligations and remuneration bound to the quotas, which will only be 100% bound to the independent production model after the transition to free market end.

Thus, during the transition, part of the physical guarantee of the power plants will be under the quota regime and part under independent production. It is not trivial to calculate the effects of the coexistence of these two modalities, which presents a risk. For example, which methodology will be adopted by CCEE to allocate the hydrological risk? How will the hedge adopted by the new company be distributed?

IV.2. Right to Extend Eletrobras Grants due to the MRE

Under Law 13.203/2015, Eletrobras HPPs whose concessions may be extended by Law 14.182/2021 have the right to extend the terms of their concessions, as approved by ANEEL, to offset the costs associated with the GSF.

ANEEL published, among others, Approval Resolution No. 2.919/2021 and REH No. 2932/21, providing for the extension of concession grants for hydroelectric power plants participating in the MRE. According to REN No. 895/2020, the extension benefit must be applied to HPPs whose holders express an interest in the extension within sixty (60) days after the approval of the respective extension, as noted:

> *Art. 7 ANEEL will authorize the extension of the grant of each MRE power plant with a grant in force on the publication date of Law No. 14.052, of September 8, 2020, according to the deadlines established in the Approval Resolution, and will establish the necessary acts to the realization of the grants' extension.*
>
> *Paragraph 1 The application of the provisions of this article is subject to the request of the interested party within sixty (60) days from the date of publication by*

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

> *ANEEL of the period for extending the grant of each MRE power plant, according to Paragraph 9 of art. 6, as well as compliance with the conditions referred to in items I and II of the caput of art. 2-B of Law No. 13.203, of 2015.*

Supplementarily, Paragraph 1 of art. 1 of REH 2.919/2021 and REH 2.932/2021 provide, in an identical manner, how the holders of HPPs may request the extension of their grants:

> *Sole paragraph. To comply with the provisions of Paragraph 1, of art. 7, of ANEEL Normative Resolution No. 895, of December 1, 2020, the generation agent must complete the electronic form available at the following addresses:*
>
> *I - Authorization Grants: https://forms.office.com/r/eme4P7vtJT*
>
> *II - Concession Grants: https://forms.office.com/r/5TQETM8Bxe*

As seen above, there is no discussion regarding applying the right to extend Eletrobras HPPs' grants due to the compensation applicable to power plants participating in the MRE, according to Law 13.203/2015. However, Law 14.182/2021 is unclear how the extension of terms of grants provided for in Law 13.203/2015 will be applied to Eletrobras HPPs, which may also have their grants extended under privatization.

From the reading of art. 2 of Law 14.182/2021, it can be assumed that the new concession contracts of the Eletrobras HPPs that may have their grants renewed must expressly provide for a concession period of thirty (30) years from their signature, regardless of the concession period existing before its signature:

> *Art. 2. In order to carry out the privatization referred to in this Law, the Federal Government is authorized to grant,* ***for the period provided for in paragraph 1, art. 1, of this Law, from the date of signature of the new contracts****, new grants of electric energy generation concessions under the direct or indirect ownership or control of Eletrobras, which: (emphasis added)*

That is, if the extension of the concession grant of Eletrobras HPPs listed in REH 2.919/2021 and REH 2.932/2021 and/or benefited by Law 13.203/2015 is implemented before the privatization of Eletrobras, which is expected, the extensions

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

of the concessions listed in art. 2 of Law 14.182/2021 shall be of thirty (30) years, regardless of the extension carried out by REH 2.919/2021 and by REH 2.932/2021.

On the contrary, we understand that in case the privatization occurs before the application of the extension of the concession grant of the Eletrobras HPPs listed in REH 2.919/2021 and REH 2.932/2021 and/or benefited by Law 13.203/2015, even if such it is very remote, the term of thirty (30) years should be increased by the respective extension resulting from Law 13.203/2015.

This increase would exceed the limit of thirty (30) years of concession granting, provided for in art. 4 of Law 9.074/1995, which is a contradiction and a legal limitation. However, we understand that its application is due, since the forecast of the increase is a right of the owners of projects that were affected by the MRE and is provided for in a rule after Law 9.074/1995, and deals with a specific topic (treatment of the MRE and applicable compensation).

In turn, the HPPs whose concession grants are extended by REH 2.919/2021 and REH 2.932/2021 and/or by Law 13.203/2015 before the privatization of Eletrobras and the possible extension of their concession contracts through Law 14.182/2021 shall have their grant extensions considered for purposes of calculating the value of their grants, by the CNPE, since such right is already applicable to the respective HPPs under these conditions.

IV.3. Hydrological Risk and Reservoir Capacity

The financial risks associated with hydrological aspects are shared between centrally-dispatched hydroelectric generation plants through the Energy Reallocation Mechanism - MRE, provided for in Law 9.648/1998 and regulated by Decree 2.655/1998 and Electric Energy Commercialization Rules established in the scope of the Electric Energy Commercialization Chamber (CCEE), which conceptualizes it as follows:

> *The Energy Reallocation Mechanism (MRE) was conceived to share among its members the financial risks associated with the commercialization of energy by hydraulic power plants dispatched centrally and optimized by the ONS.*

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

In practical terms, a hydroelectric power plant that has generated less than its respective physical guarantee (GF), by decision of the system operator, may have the difference made up, in whole or in part, by other hydroelectric power plants participating in the MRE that have generated in greater volume. That is, the MRE is a way of sharing risks between hydroelectric power plants.

However, in recent years the generation “deficit” of the power plants participating in the MRE, in relation to the total of Physical Guarantees, has been proportionally high. This has resulted in the frequent application of the Physical Guarantees Adjustment Factor of the MRE power plants, known as GSF. In other words, the MRE's HPPs have, with undesirable frequency, generated much less than their physical guarantees, with important financial implications.

For example, according to the Monthly Bulletin for Monitoring the Brazilian Electric System for July 2021, prepared by the Federal Government, the power plants participating in the MRE had a deficit equivalent to almost 30% concerning seasonal electric energy.

These generation deficits, which in practice form a hydrological risk, have intensified in recent years, especially in 2021, due to a sequence of periods with unfavorable hydrological regimes and the low volume presented in the reservoirs of the HPPs.

But this may not be all. The set of hydroelectric power plants belonging to the MRE may be overvalued by Physical Guarantees, which requires an in-depth analysis by the Government.

Indeed, Eletrobras' HPPs, on average, had their Physical Guarantees reduced by around 7%, which seems reasonable. This significantly contributes to the improvement of the GSF for the set of MRE power plants. However, if, in 2023, the review process does not reach the other participants of the Mechanism, the Eletrobras power plants will be harmed, as they will receive a smaller energy share when they produce less.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

This is a risk with a non-negligible financial impact. It is recommended that Eletrobras look for ways to mitigate this type of risk via interactions with the Government.

In practice, part of the Eletrobras HPPs that will be subject to the grant of new concessions currently comprise the quota regime provided for in Law 12.783/2013. It so happens that such quota regime is not affected by the hydrological risk, since these generation differences are paid by consumers through distributors, as provided for in Art. 1, Paragraph 5 of Law 12.783/2012:

> *Art. 1 As of September 12, 2012, the hydroelectric power generation concessions covered by art. 19 of Law No. 9.074, of July 7, 1995, may be extended, at the discretion of the granting authority, once, for a period of up to thirty (30) years, in order to ensure continuity and efficiency in the provision of the service and the reasonableness of tariffs.*
>
> *(...)*
>
> *Paragraph 5 In the extensions referred to in this article, the hydrological risks, considered as the Energy Reallocation Mechanism - MRE, will be undertaken by the SIN distribution concessionaires and licensees, with the right to be transferred to the final consumer's tariff.*

Differently, Law 14.182/2021 establishes that hydrological risks must be managed by the respective HPPs that will receive new concession grants:

> *Art. 4 These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*
>
> *(...)*
>
> *IV - the assumption of hydrological risk management, renegotiation is prohibited pursuant to Law No. 13.203, of December 8, 2015.*

In other words, the exceptional character created by Law 12.783/2012, which transferred the hydrological risk of the HPPs in the quota regime to captive consumers, ceases to exist, and the power plants subject matter of change to free market will undertake such risk, as it was before the aforementioned law.

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Law 14.182/2021, in its Paragraph 1 of art. 1 and art. 2, provides for the contracting of a series of generation projects in the coming years, mainly from thermal sources, which, together with renewable sources, will significantly alter the electric matrix:

> *Art. 2. The granting authority will contract capacity reservation, referred to in arts. 3 and 3-A of Law No. 10.848, of March 15, 2004, in the amount of one thousand megawatts (1,000 MW) in the Northeast Region in the metropolitan regions of the Federation units that do not have in their capital natural gas supply point on the date of publication of this Law, in the amount of two thousand five hundred megawatts (2,500 MW) in the North Region distributed in the state capitals or metropolitan region where it is feasible to use the existing proven reserves of national natural gas in the Amazon Region, guaranteeing at least the supply to two capitals that do not have a natural gas supply point on the date of publication of this Law, in the amount of two thousand and five hundred megawatts (2,500 MW) in the Midwest Region in the capitals of the States or metropolitan regions that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for the delivery of one thousand megawatts (1,000 MW) of natural gas thermal generation in the year of 2026, two thousand megawatts (2,000 MW) in the year of 2027, and three thousand megawatts (3,000 MW) in the year of 2028, with a supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation of Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation do bid by the same correction discretion of Auction A-6 of 2019, and in the amount of two thousand megawatts (2000 MW) in the Southeast Region, of which one thousand two hundred and fifty megawatts (1,250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of the Sudene that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for delivery of thermal generation using natural gas of one thousand megawatts (1,000 MW) in the year of 2029, for States that have a natural gas supply point on the date of publication of this Law, and one thousand megawatts (1,000 MW) in the year of 2030, of which two hundred and fifty megawatts (250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of Sudene that do not have a natural gas supply point on the date of publication of this Law, with supply period of fifteen (15) years, at the*

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

maximum price equivalent to the ceiling price for natural gas generation in Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation to bid by the same correction discretion of Auction A-6 of 2019.

Such contracts, as mentioned, are provided for in art. 1 of Law 14.182/2021, which represents an obligation of the Federal Government to promote them to encourage and guarantee the privatization of Eletrobras.

As if the high contracting volumes were insufficient, Law 14.182/2021 provides that contracted thermoelectric power plants must have 70% inflexibility. According to Regulation No. 20/GM/MME, which regulates art. 3-A of Law 10.848/2004, the MME guidelines for contracting thermal plants in the capacity reserve modality consider, at most, an inflexibility of 30%, whose contracting must necessarily be associated with the declaration of the need to purchase energy from agents' distribution and marketing.

In addition, due to what was determined by the Provisional Measure 998, converted into Law 14.120, of 2021, the requests for authorization grants of new projects from encouraging sources grew like never before, in order to seek subsidies (discounts in the use of the grid) to which renewable sources are entitled. This volume of projects corresponds to much more than double the current amount in wind and solar energy operations. And most would be in the northeast region. All this volume should start operating from 2023, a condition for obtaining the grant.

It so happens that, within this period, there is no way to connect even 1/3 of this volume of MW to the transmission grid (as pointed out in section V.4.6), which would require new construction works, which new auctions would precede. Even if there were ways to connect all projects to the grid, it is necessary to consider the timely supply of equipment for all projects and obtain power purchase agreements for all projects made possible through grants.

Thus, it is reasonable to consider a shift in these projects' implementation schedule or extend terms for the obstacle course.

On the other hand, as a result of the energy volume that will be granted through the grant of incentive and the inflexibility provided for thermoelectric projects, a high surplus of electric energy is expected, which gives rise to a trend of not using

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

hydroelectric power plants and, consequently, an increase in the risk linked to the MRE. However, not a large growth in the Difference Settlement Price – PLD is expected due to this energy surplus in the market.

These impacts will directly affect the Eletrobras HPPs that will be subject to granting new concessions provided for in Law 14.182/2021, which could hinder such projects' expected generation and profitability.

IV.4. Other risks implicit in the electric matrix

However, it should be noted that as of 2023, when subsidized renewables would be available, and as of 2026, with the highly inflexible and costly TPPs, the electricity system will have an oversupply, but with high tariffs, given the costs of subsidies and such thermoelectric plants.

For example, if the average tariff for consumers in group A (high voltage) is R$ 450/MWh and the purchased energy (generation) is equivalent to R$ 280/MWh, consumers, whether or not they have already migrated to the ACL, usually require, during the term of the PPA, a total cost, also, for example, 20% lower than their current tariff.

As the ACL's scope of action is purchased energy, its leeway would be R$ 290/MWh, which should be reduced by R$ 90/MWh, representing 20% of the final tariff. No scenario points to a reduction in regulated tariffs, at least in the next ten years.

It is important to add that the electric matrix, due to the growth in the participation of renewable sources, such as wind and solar, will become less and less dispatchable, especially from 2035 onwards. Some important features arise from these issues.

The lower degree of dispatchability will require the use of firm energy sources, such as thermoelectric plants, including nuclear ones, which tends to increase or, at least, not let the short-term marginal costs and PLD fall. If this change in the matrix continues to be fostered by subsidies, even after 2035, regulated tariffs also tend to rise, or they would not fall as much as it would be desirable.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Note that even before that, and motivated by the shortage crisis in 2021, the government already authorized the contracting, in a simplified way, of thermoelectric plants with costs above R$ 750/MWh in 5-year agreements, starting mid-2022. In other words, the costs of the crisis will last at least until 2027. There are no great perspectives for tariff reductions.

Thus, the chances of long-term contract prices moving further away from the PLD are not at all negligible, even in a more distant scenario, such as after 2035.

On the other hand, given some of these contradictions, such as oversupply and rising tariffs, the incidence of a mathematical model that for long has not responded to the reality of supply and demand relationship and the progress of distributed generation (GD), it is very likely that, even before 2030, the sector will be much different than today.

The outlook seems to be of changes towards decentralization, as in GD, with greater freedom of choice for consumers. This provides considerable advantages for “traders” with generation assets, such as Eletrobras. The dispersion of the market implies greater risks for the seller, which pure traders would not bear. The trade-off between risk and asset ownership is a way to balance the cost/revenue ratio in a freer environment.

In turn, the maintenance of subsidies, as provided for in at least two bills pending in the Brazilian Congress, will cause even greater increases in regulated tariffs, which would make the transition difficult and raise its costs, lasting several years, maybe even after 2035.

IV.5. Analysis of Other Issues

Additionally, it is important to note that part of the Eletrobras HPPs that will be subject to new grants will migrate, albeit gradually, to the independent production system, in accordance with CNPE Resolution 15/2021. This way, such projects must sell their electric energy generated in accordance with their Physical Guarantees, especially in the Free Contracting Environment – ACL.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

However, considering the high volume of electric energy generated in accordance with the Physical Guarantees of all these projects, part of the electric energy generated may be subject to purchase and sale contracts with very short terms (one month, for example) to avoid settlement in the Short-Term Market – STM, especially in the early years.

In 2021, the sector managed to remedy the risk of default in the STM as a result of the injunctions that discuss the risk shared by the MRE, with the default being reduced to almost zero. However, one-time defaults may happen in some months, or new injunctions may arise, now due to the risk or damage caused by the water crisis, devastating the sector and leading to defaults in the STM.

In any case, in practice, there are ways to mitigate the risks of default in the STM, and it is common for agents with surplus energy to sell it before closing the accounting for the respective month, as described above.

Therefore, we understand that the situation currently experienced is one of reducing defaults in the STM, which will reduce Eletrobras' risks in relation to its performance in the ACL and the possible settlement of surplus energy in the STM.

IV.5.1. Considerations regarding the possibility of challenging Law 14.182/2021 to delay Eletrobras' capitalization process

Law No. 14.182/2021, resulting from the conversion, by the National Congress, of Provisional Measure No. 1.031/2021, conveys a complex plan for the privatization of Eletrobras, which reveals a reasonable potential impact on the electricity sector.

As previously mentioned, the privatization will be carried out through a capital increase, pursuant to Law No. 9.491/97 and art. 1, paragraph 1, of Law No. 14.182/2021, through the placement on the market of ordinary shares intended for public subscription, with a consequent waiver of the right to subscribe them by the Federal Government. Consequently, it goes public, with a resulting decrease in the Federal Government's shareholding so that it loses the majority control of the voting capital.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

> *The mentioned art. 1, in its "caput", conditions the implementation of privatization "on the granting of new electric energy generation concessions for Concession Contracts No. 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and No. 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), signed by the Federal Government and Furnas Centrais Elétricas S.A. (Furnas)".*

The new grants referred to in the provision will continue to integrate, in effect, the supply of energy for 30 years, pursuant to paragraph 1, and will be accompanied by the contracting of thermoelectric generation powered by natural gas, in addition to the contracting, in Auctions A-5 and A-6 of at least 50% of the declared demand of distributors, hydroelectric power plants up to 50 MW, at the maximum price equivalent to the cap established for the generation of a Small Hydroelectric Plant (SHP) of Auction A-6 of 2019 for projects without a grant, as specified in the provision.

The privatization process, as mentioned, has the potential to affect the electricity sector because, once the capitalization of the state-owned company begins, Law No. 14.182/2021 provides for not only the mandatory signing of new concessions related to existing projects but, concomitantly, the purchase of electric energy from concessionaires, licensees and those authorized by the granting authority. Therefore, there is a risk that the auction processes may disrupt the privatization of Eletrobras due to the bureaucracy inherent to this asset-disposal mechanism, the natural complexity of its legal rules and for exposing themselves to judicialization.

In this context, the legal-regulatory risk of the privatization plan will be analyzed next, considering (i) the conditions for implementing the normative program, (ii) the risk of judicialization of the privatization policy of Eletrobras and (iii) the repercussion of the provision for establishing several related concession contracts on possible disruptions in the economic and financial balance, to subsidize the pricing of shares that market agents will subscribe.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

IV.5.2. Conditions for implementing the normative privatization program and economic-financial balance

Art. 4 of Law No. 14.182/2021 provides the conditions for the implementation of the concession grants referred to in art. 2, which in turn provides as follows:

> *Art. 2. In order to carry out the privatization referred to in this Law, the Federal Government is authorized to grant, for the period provided for in paragraph 1 of art. 1 of this Law, from the date of signature of the new contracts, new grants of electric energy generation concessions owned by or under the control of, directly or indirectly, Eletrobras, which:*
>
> *I - have been extended pursuant to art. 1 of Law No. 12.783, of January 11, 2013;*
>
> *II - are achieved through item II of paragraph 2 of art. 22 of Law No. 11.943, of May 28, 2009;*
>
> *III - are achieved through paragraph 3 of art. 10 of Law No. 13.182, of November 3, 2015;*
>
> *IV – have been granted through Concession Contract No. 007/2004-Aneel-Eletronorte; and*
>
> *V – have been granted through Concession Contract No. 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP.*

From the date of signature of the grants of new concessions, Concession Contracts No. 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and No. 004/2004-Aneel/Furnas, the Federal Government is authorized to make other grants, not necessarily linked to the contracts referred to in art. 1, but for the same period of thirty years.

In order to formalize these new grants, art. 4 sets forth the necessary conditions for the economic viability of such a complex operation:

> *Art. 4. These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

I - the payment by Eletrobras or its subsidiaries, as defined by the National Energy Policy Council (CNPE), to the Account for Energy Development (CDE), referred to in Law No. 10.438, of April 26, 2002, corresponding to fifty percent (50%) of the value added to the concession by the new contracts;

II - the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession agreements corresponding to fifty percent (50%) of the value added to the concession by the new contracts, deducted of the following amounts:

a) expenses related to the revitalization of the water resources of the São Francisco River and Parnaíba River basins, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;

b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of the Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;

c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, pursuant to subparagraph c, item V, caput, art. 3 of this Law; and

d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Basins of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;

III - the change of the operating regime for independent production, pursuant to Law No. 9.074, of July 7, 1995, including as regards the conditions for the extinction of grants, the expropriation of facilities and indemnities; and

IV - the assumption of hydrological risk management, renegotiation being prohibited pursuant to Law No. 13.203, of December 8, 2015.

Paragraph 1. The new generation concession contract for the power plants covered by item II of paragraph 2 of art. 22 of Law No. 11.943, of May 28, 2009, and paragraph 3 of art. 10 of Law No. 13.182, of November 3, 2015, will preserve the obligations set forth in art. 22 of Law No. 11.943, of May 28, 2009, and art. 10 of Law No. 13.182, of November 3, 2015, respecting the conditions and effectiveness of the current electric energy sales contracts referred to in the aforementioned articles, provided that the energy arising from the obligations established in art. 22 of Law No. 11.943, of May 28, 2009, and art. 10 of Law No. 13.182, of November 3,

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

> *2015, may not be subject to resale, sale or assignment in the Free Contracting Environment (ACL), and its use shall be restricted to consumers who are part of the electric energy sales contracts referred to in the aforementioned articles.*
>
> *Paragraph 2. The provisions of art. 7 of Law No. 9.648, of May 27, 1998, do not apply to new electric power generation concession agreements referred to in this article, and the quota referred to in item I of the caput of this article will be fully credited in favor of electric energy distribution concessionaires and licensees, for the purpose of reasonable tariffs in the Regulated Contracting Environment (ACR), distributed in proportion to the amounts canceled as a result of the change in the operating regime for independent production referred to in item III of the caput of this article.*

If the privatization plan is implemented in the exact terms recommended by art. 1 of Law 14.182, including the exercise of the option by the Granting Authority to contract the generations under the final wording of the caput of mentioned art. 1, an economic-financial analysis will be made in relation to the expected average generation of Eletrobras HPPs, which will be taken into account in the calculation of the generation grant bonus.

In other words: if this privatization scenario does not take place in the manner recommended by the CNPE for the calculation of the 000000000000grant bonus, there may be an imbalance in the financial equation established as a premise for calculations referred to by the bonus.

According to art. 5 of Law No. 14.182/2021, it was incumbent upon the National Energy Policy Council – CNPE, through CNPE Resolution No. 15/2021, to define the value added of new concessions, as well as the values referred to in items I and II of art. 4. These provisions address the benefits that add to the financing of the concessions and which are also conditions to formalize the grant.

The first item provides for payment by Eletrobras or its subsidiaries, as defined by the CNPE, to the Account for Energy Development (CDE), referred to in Law No. 10.438, of April 26, 2002, corresponding to 50% of the value added to the concession by the new contracts.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

On the other hand, item II refers to the payment by Eletrobras or its subsidiaries of bonuses for the granting of new concession contracts, corresponding to 50% of the value added to the concession, deducted from the installments regarding (i) expenses related to the revitalization of water resources of the São Francisco River and Parnaíba River basins, pursuant to subparagraph “a” of item V of the “caput” of art. 3 of this Law; (ii) expenses related to the development of projects in the Legal Amazon, for structural reduction the energy generation costs and the navigability of Madeira River and Tocantins River; (iii) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, whose concession contracts are affected; and (iv) expenses to reimburse the economic value of the electric energy supply to the Integration Project of the São Francisco River with Hydrographic Basins of Northern Northeast (PISF).

The economic-financial risk that can be seen in the model involves payments for the added values of the concessions, made up based on the criteria defined by the CNPE and in compliance with the minimum conditions defined in the items of paragraph 1 of art. 5:

> *Art. 5. It will be incumbent upon the CNPE to establish the value added by the new electric power generation concession contracts and set the values referred to in items I and II of the caput of art. 4 of this Law.*
>
> *Paragraph 1. The calculation of the value added to the concession will consider:*
>
> *I - the change of the operating regime for independent production;*
>
> *II - the deduction of credits related to refund for proven expenses with the acquisition of fuel incurred until June 30, 2017, by the concessionaires controlled by Eletrobras and holders of the concessions addressed in art. 4-A of Law No. 12.111, dated December 9, 2009, that have been proven but not refunded as a result of the required economic and energetic efficiency addressed in paragraph 12 of article 3 of said Law, including with adjustments for inflation, in which event the offset will be limited to three billion, five hundred million reais (R$ 3,500,000,000.00);*
>
> *III - the cancellation of the electric energy contracted under the terms of article 1 of Law No. 12.783, of January 11, 2013, to comply with the provisions of*

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

> *item III of the caput of art. 4 of this Law, gradually and uniformly, within a minimum period of five (5) years and a maximum period of ten (10) years; and*
>
> *IV - (VETOED).*
>
> *Paragraph 2. The calculation of the value added to the concession may consider the adjustments referred to in subparagraph b of item II of the caput of art. 6 of Law No. 9.491, of September 9, 1997, provided that they are related to obligations recognized by the Federal Government before Eletrobras.*
>
> *Paragraph 3. The recognition of credits in item II of paragraph 1 of this article will imply their discharge.*
>
> *Paragraph 4. It will be incumbent upon the Ministry of Mines and Energy and the Ministry of Economy to propose the values that will be fixed in accordance with what is established in the caput of this article.*

Thus, if the calculations of the value added made by the CNPE are not accurate in relation to the cost components set forth in the above provision, some risks would exist that deserve attention. For example: are price expectations compatible with the sale in the ACL? Were the risks and benefits of acting in the ACL duly considered?

In compliance with the regulatory determination provided for in the aforementioned art. 5 of the privatization plan, the National Energy Policy Council published CNPE Resolution No. 15, of August 31, 2021, in the Federal Official Gazette of September 2, 2021, thus establishing at sixty-two billion, four hundred and seventy-nine million, six hundred and fifty-six thousand, three hundred and seventy reais and ten cents (R$ 62,479,656,370.10) the value added to be granted due to the privatization of Centrais Elétricas Brasileiras S.A. - Eletrobras (art. 1).

In addition to defining the value added, the CNPE's resolution also established the complex methodology for calculation, refunds and adjustments (art. 1, sole paragraph) and the amount to be paid by Eletrobras or its subsidiaries as a bonus for the granting of new electric power generation concession contracts whose subject-matter is a set of HPPs listed in Exhibit I of CNPE Resolution No. 15/2021, in the amount of twenty-three billion, two hundred and eighteen million, four hundred and eighty-eight thousand, seven hundred and fifty-four reais and seventy-three cents (R$ 23,218,488,754.73).

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Another element to be considered in the risk matrix is that, in the event of imperfect compliance with charges and compulsory contracts for concessions and purchases of energy potential, pursuant to Law No. 10.848/2004, established by the provision, there would be a fundamental change in the result originally pictured in the privatization plan, which may be questioned in the future, especially from a political point of view. Thus, the contracting of thermoelectric plants, SHPs or the extension of the terms of PROINFA contracts does not depend on Eletrobras, but its privatization was related to such events.

Considering this possibility, in theory, can be seen as a factor to be taken into account when setting the price of the participation quotas that will be released on the open market in the execution of the nuclear stage of the privatization plan. However, as discussed below, the mere possibility does not seem to indicate a substantial encumbrance of the value of the securities, which could compromise the maximization of disposals of shareholding, since it makes clear the possibility of inducing the market to understand the plan as a riskier disinvestment modality than it is, due to the risks and parameters weighed by the granting authority to precisely define the values and potentials to be delegated and contracted in the future.

In the change to free-market modality, taking into account the studies conducted by the Federal Government and BNDES, which will still be subject to an in-depth economic analysis by the TCU, it is certain that any regulatory and even infrastructural obstacles to implementing concessions and strengthening, among other sources, thermal plants, are deemed circumstances with a mere *possibility* of taking place. It is understood that the risk inherent to any type of contracting does not make them predictable or deprive them of their exceptional character.

In this sense, MARÇAL JUSTEN FILHO (“**Teoria Geral das Concessões de Serviço Público**”, São Paulo, Dialética, 2003, p. 400) teaches that:

> *“(…) the extraordinary nature of the event can be affirmed from both a qualitative and a quantitative perspective. An extraordinary chance is verified when an anomalous and implausible event occurs after the agreement is formalized, producing a change in the original relationship between charges and benefits. When*

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

alluding to the anomaly of the event, reference is made to an event that strays away from predictability standards due to its qualitative or quantitative configuration."

And the very reason for preparing studies before formalizing and implementing the divestment plan? It is to predict, with the greatest accuracy available to the granting authority, the parameters necessary to guarantee the continuity of public interest services.

Hence, in principle, the mere possibility of the charges defined in the risk matrix as sufficient to ensure the soundness of the privatization and the contracts that condition is not being complied with, due to extraordinary reasons, as provided for in the privatization law, does not justify the significant encumbrance on the value of the securities placed on the market, to the point of restricting the interest of economic agents in the capitalization of Eletrobras.

IV.5.3. Considerations on litigation risks surrounding the privatization of Eletrobras

It should be noted, with regard to the sensitive aspects involving Law No. 14.182/2021 and concerning the litigious aspect of the capitalization process of Eletrobras, that this law, upon the conversion of MP 1.031/2021, was challenged before the Federal Supreme Court, through the filing of the Direct Action of Unconstitutionality (ADI) 6,938, in which various party groups appear as plaintiffs.

Among the complex constitutional issues raised in the ADI, the following stand out (i) the questioning around the constitutionality of the entire normative structure of Law No. 14.182/2021, on the grounds that the originally issued Provisional Measure lacked the constitutional premises of urgency and relevance of the matter; and (ii) the specific challenge to art. 1, paragraph 1, and arts. 20 and 21, whose declaration of unconstitutionality is requested alternatively to the invalidation of the entirety of the text.

It should be noted, at this point, regarding item "ii" above, in relation to the subject matter of ADI 6,938, that the provisions are the same that establish the controversy that is to be examined regarding the definition of the risk matrix of the

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

concessions under the public divestment plan and the possibility that the complexification of the supply network could lead to a break in the economic-financial balance of privatization, which would ultimately affect the market price of equity securities.

In order to focus on the argument to be discussed by the Supreme Court and which, in a more significant way, is of interest to the analysis now performed, the examination will now address how a possible granting of the secondary claim would affect the plan and composition of the price of securities.

Indeed, the current wording of art. 1, paragraph 1, as approved by the conversion project, was the result of improvement to the text sent by the Presidency of the Republic, to which 632 amendments were presented, in Parliament, including amendments that added, excluded and modified the text, and whose matters, as claimed by the associations that filed the direct action, exceeded the thematic relevance defined by the text of MP 1,031/2021 sent to the House of Representatives, as they deal with issues such as the debated obligation to extend concession contracts and the imposition of mandatory purchases of energy potential, without the corresponding budget provisions.

They argue, under the said argument of thematic irrelevance, the inclusion of the so-called "budgetary long-tails" contained in the conversion law:

> *(i) the mandatory contracting of 8,000 MW of installed capacity for natural gas-fired thermoelectric plants – 1,000 MW in the Northeast region, 2,500 MW in the North, 2,500 MW in the Midwest and 2,000 MW in the Southeast (art. 1, paragraph 1, combined with art. 20);*
>
> *(ii) the mandatory contracting of 2,000 MW or more of installed capacity of hydroelectric power plants with up to 50 MW of power – the so-called "small hydroelectric plants" (art. 1, paragraph 1, combined with art. 21);*
>
> *(iii) the authorization for the immediate construction of the Tucuruí Line, regardless of the environmental licensing process already in progress (art. 1, paragraphs 10 and 11).*

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

The entry of thermal plants, through the concessions provided for in art. 1, paragraph 1, and reproduced in art. 20, as stated in the ADI, would imply the artificial creation of a market reserve for thermoelectric plants powered by natural gas for fifteen years and the contracting of small hydroelectric power plants in auctions held until 2026.

As seen, the execution needs what is established to the granting authority and to Eletrobras itself by art. 1, paragraph 1 et seq. (arts. 4 and 5 of Law No. 14.182/2021, *v.g.*), and it is an extremely important condition to ensure the soundness of the economic and financial balance mechanism, since the calculations of generating potential, operational inflexibility and subrogation of thermals to energy capacity are based on assumptions that find, in the elements of art. 1, paragraph 1, the conditions that should guarantee national supply according to the average consumption per MWh in the regions affected by privatization.

In fact, the exact provision of art. 1, paragraph 1, combined with the authorization granted to the Federal Government to grant, from the date of signature of the new contracts, new grants of electric energy generation concessions owned by or under the control of, directly or indirectly, Eletrobras, established in art. 2, is a core element of privatization itself.

The lengthy wording contrary to the good legislative technique, which is evidenced by the provision of art. 1, paragraph 1, appeared, due to its importance to privatization, as a drafting strategy undertaken by Congress, aimed at making the Legislative Branch's intention prevail in this privatization, as it virtually made the presidential veto unfeasible due to its content.

This is what art. 66, paragraph 2, of the Federal Constitution, provides for as "the partial veto will only cover the full text of an article, paragraph, item or subparagraph", which made it impossible to veto fragments of art. 1, paragraph 1, or even the entirety of its text, under penalty of emptying the privatization.

This circumstance was even emphasized by the author of the bill of conversion in Parliament, Congressman Elmar Nascimento (DEM-BA) when asked about the purpose of the deliberate lack of technique regarding the wording of the provision:

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

"(…) more or less. It is more or less more assured that the will of the congress will prevail in this matter."[1]

These considerations that have been mentioned reveal an important finding around the judicialization of the capitalization plan, consisting in the fact that the risk was already deemed materialized since the most relevant provision to privatization, currently, has already had its constitutionality challenged.

Thus, presuming that Law no. 14.182/2021 is not declared unconstitutional in full – since the assessment of the existence of the premises authorizing the issuance of Provisional Measures is an act of a political-discretionary nature of the President of the Republic exceptionally reviewed by the Court –, a possible acceptance of the secondary claim made in the ADI would lead to the exact consequence that would result from the presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21 and the conditions addressed in arts. 2, 4, and 5.

ADI 6,938 is currently in the stage of submittal of information by interested parties, after which it will be held under advisement by the Rapporteur, Justice Nunes Marques, to examine the preliminary injunctions filed by the plaintiff associations.

It is worth mentioning that, in addition to the complexity inherent to the privatization plan itself, various constitutional issues surrounding the matter are at play. For no other reason, since the filing of the direct action in July, the injunction has not been examined so far. Federal Supreme Court Chief, Justice Luiz Fux, upon receiving the request at the time of assignment, deferred the examination to the Justice-Rapporteur, recognizing the exceptional complexity of the matter discussed.

This injunction seeks to stay the effects of Law No. 14.182/2021 and, alternatively, of the mentioned provisions challenged on a secondary basis, which would bring forward the definitive remedy until the final judgment of the action. In consequence, the capitalization process as a whole would paralyze.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

However, a critical point to be examined, and one that draws the Government's attention and the market, is the analysis of the privatization project by TCU.

On September 13, 2021, it was found that the Federal Government had already sent the first part of the studies to the Accounting Court, which would be subject to a taking of accounts reported by Justice Aroldo Cedraz. The remittance of the second part of the project studies by the BNDES is currently pending so that the monitoring and preparation by the rapporteur opinion can begin.

Although the TCU no longer has the power to halt the effectiveness of Law no. 14.182/2021, given the superseded opinion in Precedent 347/STF, which authorized deciding on the unconstitutionality of acts by the Government, there is a possibility of the Court staying the privatization, in case of evidence of possible litigation regarding the economy of the project and complexity of the economic-financial balance, likewise ADI 6.938.

In Case TC 000.350/2021-4, a request for examination of the record by Justice Aroldo Cedraz, who reports on the background of the Eletrobras case at the TCU, imposed a sixty-day delay in the publication of the invitation to bid regarding the implementation of 5G technology by auction, and ultimately, voted against the proposal from the technical unit, which was in line with the Federal Government' agenda.

Such considerations lead us to believe that, under the privatization feasibility standpoint, the possibility of the TCU examining more sensitive aspects of the project subsist, and with possible delays in the initially expected schedule to offer the securities in the market, capitalization may be impacted as regards the ratio between the amount defined for Eletrobras changing to the free market and the economy of the mandatory concessions under Law 14.182/2021.

IV.6. Conclusion

The privatization of Eletrobras presupposes the granting of new concessions to hydroelectric power plants generation projects considered of paramount importance for Eletrobras' operations, such as Concession Contracts No. 007/2004-Aneel-

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and No. 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP). In addition to such projects, the Federal Government shall grant new electric energy generation concessions from other priority projects, as per the list presented in Art. 2 of Law 14.182/2021.

The application of grant term extension for Eletrobras' projects participating in the MRE and benefiting from the provisions of Law 13.203/2015 should be taken into account, either to extend the grant term of such undertakings (if the extension is granted after the granting of new concession pursuant to Law 14.182/2021) or for indemnity purposes.

The contracting of thermoelectric power plants with 70% inflexibility, as well as the institution of recovery programs for SIN HPPs reservoirs, may impact the electric energy generation of Eletrobras HPPs, as such HPPs may have their electric energy generation reduced, further increasing the risk of an increase in the deficit in the MRE.

One of the elements to be considered in the risk matrix and which, in principle, is able to affect the pricing of shares, is the possibility of challenges if the thermal plants are not implemented in the exact terms of Law No. 14.182/2021. The partial or imperfect fulfillment of the conditions calculated as necessary and indispensable for privatization may lead to future challenges. However, in practice, the construction schedule of these thermoelectric plants should consider the needs of the electric system, which, as it seems, would not require such power plants in the places established by the law, nor on the dates set forth.

Although the possibility mentioned above can, in theory, be taken as a factor to be considered when setting the price of the quotas that will be released on the open market, in the execution of the core stage of the privatization plan, the mere possibility of the charges defined in the risk matrix as sufficient to ensure the soundness of the privatization and the contracts that condition is not being complied with, due to extraordinary reasons, as provided for in the privatization law, does not justify the significant encumbrance of the value of the securities placed on the market, to the point

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

of restricting the interest of economic agents in the capitalization of Eletrobras, as highlighted in the reasoning.

Regarding the possible risk of commencement of litigation on the complex privatization plan, it should be stated that, at least in part, the risk level that may be envisaged was deemed consummated even before the works trending to the pricing of quotas taken to the market. This is because when the project to convert Provisional Decree - MP 1.031/2021 was approved by the Parliament, with the consequent enactment of Law no. 14.182/2021, ADI 6.839 was immediately filed before the Federal Supreme Court, in which the plaintiff parties question the main provisions that inform privatization.

Considering that the examination of the preliminary injunction requested in ADI 6,839 has been deferred on some occasions, mainly due to the complexity of the constitutional issues addressed in the direct action, it is possible to understand that the processing of this action for abstract control should not bring significant legal uncertainty to the market so that the inconvenience that the possibly aggravated risk could significantly burden Eletrobras' capitalization can be ruled out.

As mentioned in the grounds, assuming that Law No. 14.182/2021 is not declared fully unconstitutional, possible granting of the secondary claim in the ADI would lead to the exact same consequence that would occur with the opposition of presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21 and the conditions addressed in arts. 2, 4, and 5.

However, as the legality and economic assessment of the privatization is pending examination by the Federal Accounting Court - TCU, which imposed hindrances to similar projects in the past, and given the opinion issued by the Justice reporting on the Eletrobras case, to some extent, the process may be impacted by its handling at the Court, which, in principle, could characterize an influencing factor to be considered on the pricing of securities when going public or even due to market orientation.

V. Methodology

In this section, the methodology for determining the Marginal Cash Flow for Grant Determination will be presented, as well as for determining the commercialization assumptions.

V.1. Marginal Cash Flow and Grant Determination

The Total Value Added of the capitalization (VA_{total}) can be understood as the sum of the individual Values Added of each power plant by applying the cash-generating unit (CGU) concept. A CGU is "the smallest identifiable group of assets that generates cash inflows, which are largely independent of cash inflows from other assets or other groups of assets" (CPC 01, item 6). From this derives the formula below:

$$VA_{total} = \sum VA_i$$

Where:

VA_{total} = Total Value Added

VA_i = Value Added for each CGU where i = 1, 2, 3... 18

The Value Added (VA), in turn, will be calculated by the Discounted Cash Flow method using the difference of the net present value of the free cash flows to the firm (FCFF) of the Capitalization Scenario ($FCFFc$) and the Current Scenario ($FCFFa$).

In the BASE DATE, the sum of the discounted cash flow for each period results in the Net Present Value (NPV), according to the following formula:

$$VA_{total} = \sum_{i=1}^{18} NPV_{FCFFc,i} - \sum_{i=1}^{18} VPL_{FCFFa,i}$$

Where:

VA_{total} = Total Value Added;

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

NPV_{FCFFc} = Net Present Value of Capitalization Scenario Flows;

NPV_{FCFFa} = Net Present Value of Current Scenario Flows;

The appropriate discount rate for remunerating these flows is the WACC (Weighted Average Cost of Capital), which reflects the weighted average cost of equity and cost of debt, and represents the minimum rate of return required for the sector evaluated without considering the project indebtedness flow.

Section V.2 - Weighted Average Cost of Capital (WACC) proposes the adoption of a single WACC to calculate both flows, the Capitalization Scenario and the Current Scenario. Therefore, it is presumed that the risks due to the change of the exploration regime in accordance with the new concession contracts will be accounted for along the cash flow of the Capitalization Scenario, excluding the need to project two cash flows.

In this case, the measurement of Value Added can be expressed through the Marginal Cash Flow, that is, the cash flow resulting from the difference between the Capitalization Scenario and the Current Scenario. This mathematical simplification is relevant to reducing the number of assumptions considered and reducing the study to the most relevant and sensitive assumptions for determining the Value Added.

The cash flow under the quota system (Law 12.783/2013) is determined as follows:

+ Annual Generation Revenue (RAG)
- Operating Expenses (OPEX)
- Capital Expenditure (CAPEX)
- Sectorial Charges
- Annual Generation Revenue Taxes

= $FCFF_{Quotas}$

And for the cash flow under the independent power production regime:

+ Power Sale

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

- Operating Expenses (OPEX)
- Capital Expenditure (CAPEX)
- Exposure to the STM
- Sectorial Charges
- Independent Power Producer Taxes[1]

= $FCFF_{IPP}$

Considering that the calculation of the Value Added will be given by the difference between the flows of the Capitalization Scenario and the Current Scenario, it is understood that, for the period in which there is a convergence between the two scenarios (i.e., the period in which they would occur concurrently) some assumptions can be disregarded from the Marginal Cash Flow assuming that there is no change in its forecast from the change in the commercialization regime. These assumptions are Operating Expenses (OPEX) and Capital Expenditure (CAPEX).

Furthermore, it is understood that the sectorial charges and taxes applicable to the Marginal Cash Flow also refer to the marginal sectorial charges and taxes resulting from the difference between the two cash flows.

If there is an understanding, however, that there may be a change in Operating Expenses or Capital Expenditure arising from the renewal of the concession contracts, the marginal variation of these must be implemented in the Marginal Cash Flow.

For the period in which there is no convergence of flows, that is, periods in which there will only be a cash flow determination for one of the two scenarios (Current Scenario or Capitalization Scenario), the complete cash flow must be considered.

It should be noted that, even for the period in which the commercialization system is the same between the two scenarios, there is Value Added, and the Marginal Cash Flow does not presume null values. This is due to the difference in energy traded between the regimes, as the new physical guarantee is applied to the Capitalization Scenario flow. The prices and volumes traded in the Current Scenario for these CGUs are presumed to be the same projected in section VI.9 - Commercialization Assumptions for the Base Case Commercialization Assumptions for the Base Case.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Thus, as the CGUs under analysis are, in the Current Scenario, under specific energy commercialization regimes and with different concession end dates, the value added for each CGU must be defined separately. The basic assumptions for the definition of the Value Added in each period are made according to Table 4 below.

Table 4: Treatment of Value Added for each CGU

HPP	Treatment
Quota Regime in accordance with Law 12.783/2013	
Boa Esperança[1] Paulo Afonso Complex[1] Luiz Gonzaga[1] Xingó[1] Funil - BA Pedra Coaracy Nunes Corumbá I Estreito Funil - RJ Furnas Marimbondo Porto Colômbia	**2023 - 2042**: Value Added = NPV IEEP - NPV Quotas **2042 - 2052**: Value Added = NPV IEEP [1]for the CHESF HPPs (Boa Esperança, Paulo Afonso Complex, Luiz Gonzaga and Xingó), approximately 2% of Physical Guarantees was considered under the Independent Power Regime.
Transition Regime according to Law 13.182/2015	
Sobradinho	**2023 - 2037**: Value Added = $(\text{NPV IEEP} + \text{NPV Quotas})_{\text{capitalization}} - (\text{NPV IEEP} + \text{NPV Quotas})_{\text{current}}$ **2037 - 2052**: Value Added = NPV IEEP - NPV Quotas **2052 - 2059**: Value Added = -NPV IEEP
Itumbiara	**2023 - 2035**: Value Added = $(\text{NPV IEEP} + \text{NPV Quotas})_{\text{capitalization}} - (\text{NPV IEEP} + \text{NPV Quotas})_{\text{current}}$ **2035 - 2050**: Value Added = NPV IEEP - NPV Quotas **2050 - 2057**: Value Added = -NPV IEEP

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

HPP	Treatment
Tucuruí Curuá-Una Mascarenhas de Moraes	**2023 - End of the current Concession Contract**: Value Added = NPV IEEP - NPV IEEP **End of the Current Concession Contract - 2052**: Value Added = NPV IEEP

Source: Prepared in-house.

For periods in which the Value Added is the difference between the Net Present Value of the Independent Power Producer for the Capitalization Scenario and the Net Present Value of the Independent Power Producer for the Current Scenario flow, the free cash generation of the firm resulting from the difference between the revised and current Physical Guarantee will be considered as the marginal flow.

It should be noted that the analysis period for determining the Value Added is from January 2023 to December 2059. In other words, it is considered that the new concession contracts will be signed in December 2022 after the payment of the Grants, and these contracts will be effective until December 2052.

The additional period (from January 2053 to December 2059) refers to the extension of the concession of the Sobradinho and Itumbiara HPPs, which exceed the period of contracts signed in accordance with the Capitalization Scenario. Therefore, these flows of the additional period are considered to reduce the value of the Grant, as shown in Table 4 above. For the Sobradinho and Itumbiara HPPs, the value added of the last period is a negative value related to the negative flow of independent producer that the power plants would be entitled to in the Current Scenario, but which will not be considered in the Capitalization Scenario.

The Grant, on the other hand, will be provided as described by Art. 4 of Law No. 14.182/2013.

> *"Art. 4. These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*
>
> *I - the payment by Eletrobras or its subsidiaries, as defined by the National Energy Policy Council (CNPE), to the Account for Energy Development (CDE),*

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

referred to in Law No. 10.438, of April 26, 2002, corresponding to fifty percent (50%) of the value added to the concession by the new contracts;

II - the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession agreements corresponding to fifty percent (50%) of the value added to the concession by the new contracts, deducted of the following amounts:

a) expenses related to the revitalization of the water resources of São Francisco River and Parnaíba River basins, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;

b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;

c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, pursuant to subparagraph c, item V, caput, art. 3 of this Law; and

d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Basins of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;"

In this way, the Grant bonus to the CDE will be given as 50% of the calculated value added, while the Grant bonus to be paid to the Federal Government will be given by the remaining 50% of the value added deducted from the installments described in the legislation in accordance with section VI.8 - Deductions of the Grant bonus according to Law 14.182/2021.

V.2. Weighted Average Cost of Capital (WACC)

The WACC is the weighted average cost of capital and represents the minimum rate of return required by the project to allocate its equity capital and third-party capital.

It is determined by the opportunity cost of shareholders and the cost of third-party capital, weighted by their respective amounts, in accordance with the following formulation:

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

$$WACC = K_d * w_d * (1 - T) + K_{and} * w_{and}$$

Where:

K_d = cost of third-party capital

w_d = proportion of third-party capital

T = effective tax rate on profit

K_{and} = cost of equity capital

w_{and} = proportion of equity capital

In this Study, the WACC of the project will be determined considering the costs from the financing sources available for the project, as well as the observed average leverage of companies operating in the same sector. In this way, the cost and the respective amount of the project's debt will be defined.

For the cost of equity capital, the Capital Asset Pricing Model (CAPM) methodology will be used, which is commonly used by the international financial literature to determine such cost, defined by the following formulation:

$$K_{and} = R_f + \beta * (ERP)$$

Where:

K_{and} = cost of equity capital;

R_f = risk-free rate refers to the return obtained through risk-free investments;

β = coefficient representing the systematic risk of the business;

ERP = market equity capital risk premium

A problem to be addressed is the different levels of risk perceived between the quota system and the independent production system, in which the concessionaire is subject to GSF and commercialization risks, which would justify, for example, the use of two different discount rates for each of the flows.

However, a satisfactory proposal to address this problem is to incorporate the perceived risk into the projected cash flow. As explained in price formation under

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

section V.4, several envelopments associated with different constraints will be prepared so that the greater their associated p-values, the more conservative the scenarios generated will be. From this, it can be concluded that adopting a more conservative generation curve and, therefore, a lower present value, would be equivalent to a bolder flow discounted at a higher discount rate.

Note that the direct application of two discount rates for each of the flows to be analyzed, although theoretically justifiable, would find little consolidated support in the available literature for the isolated estimation of the additional risks undertaken when assuming the commercialization risk.

Finally, it should be noted that, as explained in section V.1, an important development for the objectivity and simplicity of works using a single discount rate is making the Total Value Added feasible by the Marginal Cash Flow assessment method.

V.2.1. Definition of Beta (β)

β represents the systematic risk of the business, defined as the covariance between the return of the chosen asset in relation to the market, divided by the variance of the market's return. This factor is estimated through changes in the asset price, over time, in relation to the Stock Exchange. However, as the project is not a publicly-traded company in this study, the representative beta value is defined as the average obtained from comparable companies.

For the Study in question, the β obtained must be the unlevered β, that is, the one disregarding the leverage level and capital structure of the group of companies similar to Eletrobras. Thereafter, β will be re-leveraged according to the capital structure to be defined in this section.

The unlevered β considered for this Study is 0.56, as shown in Table 5.

Table 5: Determination of unlevered beta.

Company	D/E	Levered β	Unlevered β

Source: Economatica.

To re-leverage beta, the following formulation must be followed:

$$\beta_{lever} = \beta_{re-lever} * [1 + \left(\frac{D}{E} * (1 - T)\right)]$$

Where:

D = percentage or total debt amount of the asset;

E = percentage or total value of the asset's equity capital;

T = effective marginal tax rate on profit;

$\beta_{re-lever}$ = unlevered beta;

β_{lever} = levered beta.

To determine β_{lever}, the capital structure for the asset in question must be determined, a topic that will be discussed in Section V.2.4 – Optimal Capital Structure.

The actual tax rate on profit (T) will be the benchmark rate of 34%.

V.2.2. Risk-Free Rate, Market Premium and Country Risk, Brazilian and American Inflation

To define the cost of capital, the risk-free rate and the market risk premium must be estimated. The Risk-Free Rate (R_f) was calculated according to the daily average of the trading rate of Brazilian government debt securities (NTN-B) maturing in approximately ten (10) years in the period between 2011-2021.

For the Market Risk Premium (ERP), the United States Equity Risk Premium was used, according to values provided by DAMODARAN (2021).

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Long-term Brazilian Inflation (Π_{BRL}) was adopted as the forecast provided by the BACEN expectation system.

Table 6 contains the data obtained for each of the aforementioned factors:

Table 6: WEIGHTED AVERAGE COST OF CAPITAL - RATES

Risk-Free Rate	Market Risk Premium	Brazilian Inflation
5.16%	4.72%	3.20%

Source: Prepared in-house (with data from BACEN, FED, Ipea, and Aswath Damodaran).

V.2.3. Funding Costs (K_d)

To estimate the funding costs (K_d) for the project, we choose to use the Rating-Based Default Spread method. In this method, a risk spread is assigned over the risk-free rate (R_f), which is presented as a variable depending on the degree of interest coverage for a given level of leverage. That is, for each level of leverage, a level of interest coverage will be determined, which will be understood as a level of credit risk that should impact the level of the indebtedness spread on the risk-free asset, according to values provided by DAMODARAN in Table 7.

Table 7: WEIGHTED AVERAGE COST OF CAPITAL - SPREADS

Interest Coverage Ratio			
>	≤	Rating	Spread
8.500	100,000.00	Aaa/AAA	0.69%
6.500	8.500	Aa2/AA	0.85%
5.500	6.500	A1/A+	1.07%
4.250	5.500	A2/A	1.18%
3.000	4.250	A3/A-	1.33%

Source: Aswath Damodaran

As a reference, we considered the recent issues carried out by Eletrobras in order to understand the company's credit risk perspective regarding the risk pricing for Eletrobras. It is evident that the company's recent issues have an average spread of 1.03%. The spread over the risk-free rate used for Eletrobras is 1.71%.

Table 8: WEIGHTED AVERAGE COST OF CAPITAL - ISSUES

Date	Company	Instrument	Index	Rate	Term (years)	Amount (R$ MM)

Source: Ministry of Economy

V.2.4. Optimal Capital Structure

The capital structure will be estimated from the optimal capital structure, defined as one that minimizes the cost of capital (WACC) and, therefore, maximizes the value of the respective cash-generating unit. Image 1 represents the calculation of the optimal capital structure with different levels of leverage with respective financing costs. The optimal capital structure calculated for the study is 35%.

This amount will be used as the basis for the project's discount rates, as the reference for determining the discounted cash flow, NPV and for calculating the grant bonus, explained in Chapter VI.9 – Commercialization Assumptions for the Base Case Commercialization Assumptions for the Base Case

V.3. Recalculation of physical guarantees

According to Law No. 14.182/2021, new concession contracts will be generated for the CGUs under analysis. A new physical guarantee must be determined in the case of new concession contracts and not renewals, extensions, and amendments to an existing contract.

MME Regulation No. 544, of August 31, 2021, determined the new values for the Physical Guarantees of the power plants; Table 10 summarizes the effects of the publication.

Table 10: Physical Guarantee Reviewed

Subsidiary	CGU (HPP)	Physical Guarantee (MW)	Physical Guarantee (13,182/2015) (MW)	Physical Guarantee Revised (MW)
CHESF	Boa Esperança	132.9	3.0	136.2
	Paulo Afonso Complex	2,067.1	46.7	1658.8
	Luiz Gonzaga (Itaparica)	891.0	20.1	727.0
	Xingó	1,997.3	45.1	1729.8
	Sobradinho	-	504.5	457.5
	Funil - BA	10.6	0.2	4.8
	Pedra	3.6	0.07	1.7
Eletronorte	Coaracy Nunes	62.6	-	62.2
	Tucuruí	4019.1	-	3995.5
	Curuá-Una	24.8	-	30.4
Furnas	Corumbá I	217.4	-	219.5
	Estreito	495.4	-	497.2
	Funil - RJ	115.0	-	102.4
	Furnas	582.0	-	625.0
	Marimbondo	689.7	-	688.7

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Subsidiary	CGU (HPP)	Physical Guarantee (MW)	Physical Guarantee (13,182/2015) (MW)	Physical Guarantee Revised (MW)
	Porto Colômbia	186.0	-	205.4
	Itumbiara	-	964.3	948.9
	Mascarenhas de Moraes	289.5	-	299.8

According to the Invitation to Bid, as to the calculation of the new Physical Guarantee of the power plants to be considered in the modeling, it should "*consider, as a reference, the methodology established in legislation in force, as well as the base case (decks of the computational models involved in the calculation) and/or the specific assumptions that the Energy Research Company will possibly consider for the calculation*". Since Upside used the assumptions of the EPE itself, it was not necessary to calculate the new Physical Guarantees. In addition, during the provision of services, the official calculation of the grant was disclosed by the CNPE, in which the EPE assumptions were also used. In this sense, for the results generated in the base case of this Study, it is presumed that the physical guarantees of the MRE power plants of this scope will have their physical guarantees exactly in accordance with MME Regulation No. 544, of August 31, 2021.

V.4. Pricing and Hydrological Risk Scenario

V.4.1. General Aspects

This report examines the three main price pillars in the Brazilian electricity sector:

- The PLD price (clearance), which is widely used by authorities as a reference - from fines to auction basis;
- The regulated price (distributor tariffs), made up of an array of contracts, charges and mandatory contributions;
- The unregulated price (free market), resulting from bilateral negotiations.

Although not intuitive, the PLD influences the entire market. For example, suppose a generating agent expects a better result simply using settlement as a selling market. In that case, free consumers (even distributors) may be compelled to pay a

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

higher price to "compete" with the PLD (the generator stops settling to sell at more attractive prices).

V.4.2. PLD

PLD prices are calculated by a set of long-term models (the chain of models) managed by the National System Operator (ONS) and by the Commercialization Chamber (CCEE).

As operating conditions and targets change frequently, the volatility of the PLD is very high. Image 2 presents the historical behavior of the PLD, showing sudden (usually unexpected) "surges" that can last from 3 to 12 months. The use of reservoirs - deeply depleted - leaves the system with little (or no) protection against weather events, such as droughts/floods or even weaker winds. Without our “batteries” (full reservoirs), prices fluctuate according to nature.

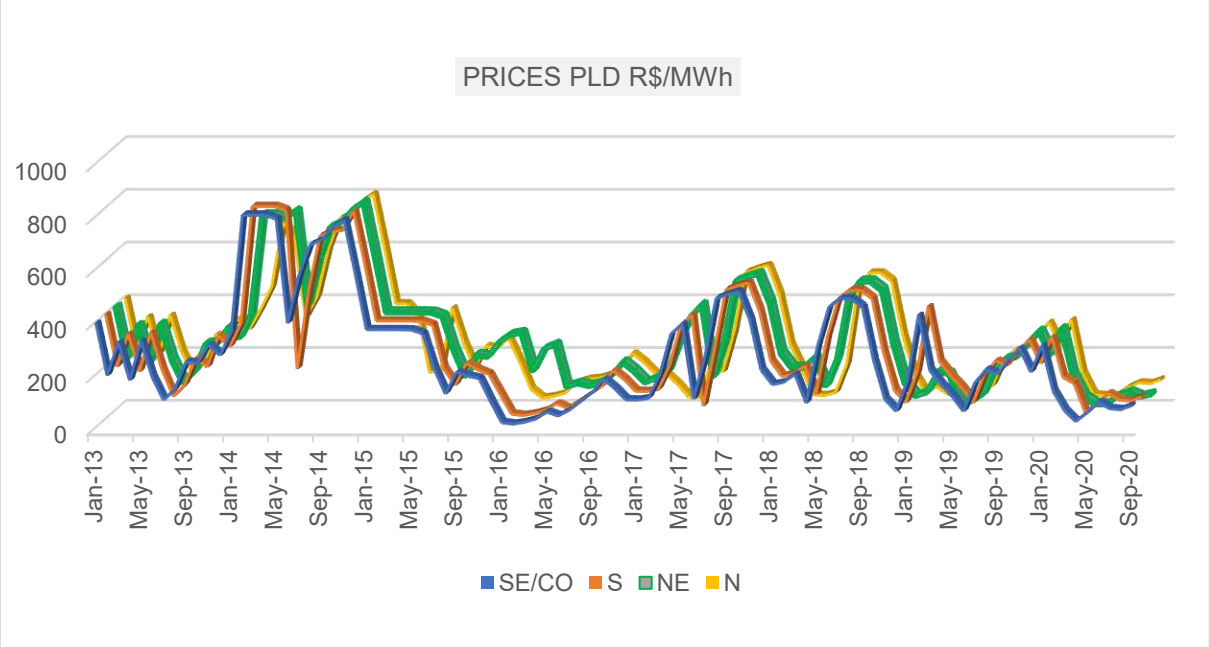

Image 2: PLD Prices – History

Source: Prepared in-house.

For simplicity, let’s say that PLD prices correspond to the marginal costs derived from the optimal functioning of the system. Therefore, we need to know:

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

- Future expansion (installed capacity) and the characteristics and locations of associated sources;
- The future availability of "fuel" (wind, water, radiation, gas, coal...);
- Future demand.

Granularity and location must meet the PLD assessment. Currently, the PLD is evaluated hourly.

V.4.3. Expansion

The expansion combines the generation and transmission projects already contracted, the expected evolution (such as the next auctions) and the long-term future expectations derived from an optimization model compatible with the EPE tools. It is important to note that although our information is based on the PDE 2030 and PNE 2050 reports, we do not reproduce this data accurately. The reason is simple: since the publication of these works, the system and the market have undergone relevant changes – modernization, delays, laws etc.

We can summarize our survey regarding future expansion in the following steps:

1- Use the PDE 2030 and PNE 2050 as a basis
2- Compare the expansion of these documents with the current one: implement delays, new engagements
3- Implement new decisions (modernization, new laws, etc.)
4- From 2030 onwards (when there are no more new contracts, and it is necessary to expand to meet the load, use a model similar to the MDI (from EPE) to calculate the optimal expansion
5- Consolidate final expansion

With the exception of delays, expansion prices do not have a significant impact on the PLD because all units (except fossil and nuclear) operate with "zero fuel cost" (water, wind and sun are free, in theory, and O&M costs/tariffs are disregarded). On the other hand, fossil/nuclear costs are significant and have a high impact on marginal costs (for example, the dispatch - or the expected future dispatch - of a marginal thermal unit will define the marginal costs and, therefore, will impact the PLD).

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Unit prices for fossil power plants fall into two categories:

- "availability price" - fixed price, which will be paid independently of the factory dispatch indexed by inflation;
- "variable price", or CVU, is usually specified under contract and indexed by some defined indicator. This indexing poses an important and sometimes overlooked problem. Its growth is generally higher than inflation rates and causes associated prices to significantly increase on a long-term basis.

The availability of the plant is not enough to meet the load if there is no "fuel" - in this case, water, wind and sun (so far). It is important to “forecast" climatological inputs such as water input (for hydropower plants), wind velocity (for wind farms), and solar radiation (for solar/photovoltaic power plants).

A model that analyzes the climatological dynamics of each series (watershed, regional wind velocity, and solar irradiation) was used to "extract" periodicities and combine their projections in future scenarios.

For example, historical wind velocity records in Northeast Brazil could be broken down into their main periods: long-term Niños/Niñas variation, annual pattern, and intra-annual cycles (2-3 months). Our forecasting model "extends" these periodicities into the future, along with the associated variability, synthesizing realistic wind power production scenarios.

Image 3 below illustrates the projected entry scenarios for each market (normalized by the long-term average).

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

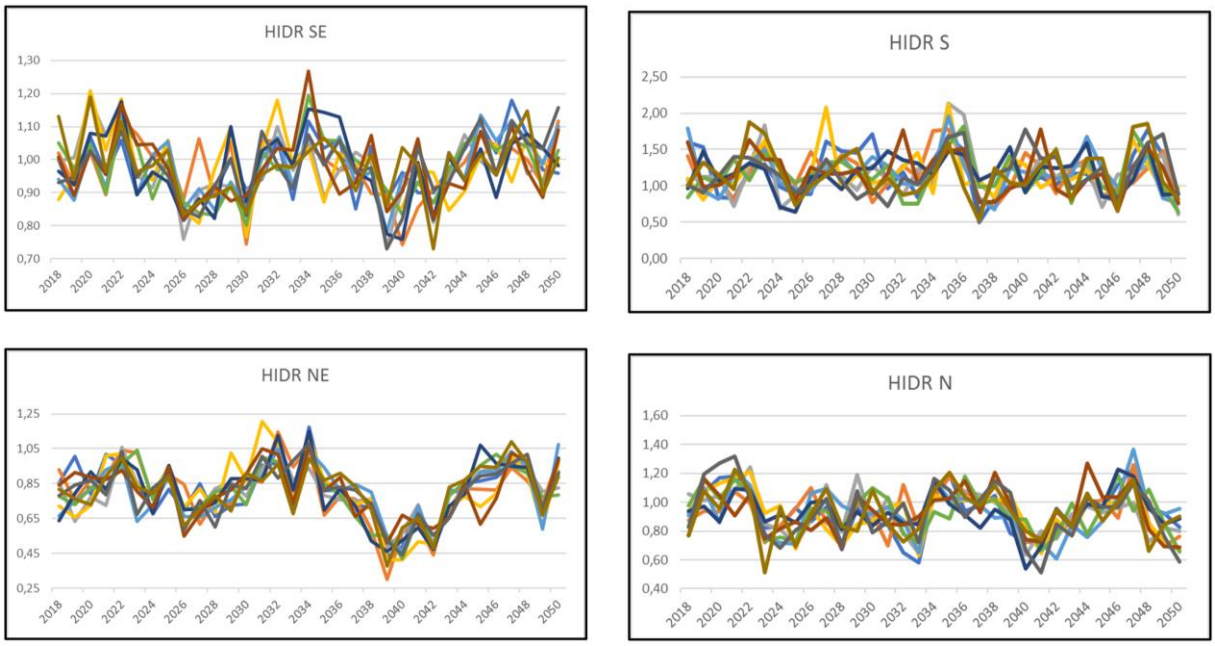

Image 3: Entry scenarios for each submarket

Source: Prepared in-house.

COVID-19 has had a substantial impact on demand growth. Next year's progress is still unknown, and forecasts are challenging. However, most experts agree that 2021 will see a slow recovery, and the years ahead will not reach the luxuriance of the past. Furthermore, efficiency will play an increasingly important role as distributed generation penetrates and more intelligent equipment emerges.

Even so, the growth of the Brazilian electric energy load is remarkable - even with frequent economic crises, past historical averages showed significant annual growth of 3-4%. In other words, approximately 2 GWmed (in physical guarantee) had to be incorporated into the country per year. Even with much more modest dynamics, the load still grows, and some unanticipated needs (such as peak power) will still lead to considerable expansion.

The expansion of the reference generation is calculated by the Energy Planning Authority (Energy Planning Company, PDE 2020-2030). It is essential to note that this benchmark expansion includes already contracted power plants (to be built under concessions or auction contracts) and planned inclusions but not yet contracted (approximately plants to begin to operate after 2026).

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

However, unfortunately, not the entire expansion schedule develops as specified. Delays and inefficiencies are possible - and usually likely.

There is no official plan longer than 2030. Therefore, it is necessary to build a complementary expansion configuration based on credible assumptions, to be listed as follows.

From 2026 onwards, it is reasonable to presume that Brazil will still be growing and that the need for new plants will persist. However, there is not much information about the plants that would be chosen to be built. A brief analysis of the Brazilian hydroelectric inventory shows that, of the total inventory of 72446 MW, only 18115 MW will be viable (according to environmental restrictions). And, of that potential, only 5192 MW are actually under basic design - with actual conditions to be built.

Assuming a conservative hypothesis, we disregard the construction of new plants. The hydroelectric source will be expanded only through SHPs, including mandatory ones, according to Law no. 14.120/2021.

The additions of fossil power plants would not be significant since renewable energies are spread throughout the country, and their price is very competitive. However, fossil energy will be attractive to provide reliability and mitigation of climate-related risks. Recent auctions (capacity, simplified) point to the inclusion of new thermal plants, already established by Law 14.182. The importance of these power plants becomes even greater due to the required inflexibility: at least equal to 70%.

Nuclear power plants, in turn, are widely rejected by society, which fears adverse effects. The costs are not competitive, and - although defended by some specialists, they do not find consistent support either among the authorities or among the Brazilian population.

Renewable energies - wind, solar, biomass, to name a few - are Brazil's best bets. This work presumes a proportionally distributed expansion, although variations (more photovoltaic than wind, for example) have no impact on PLD forecasts, as they are all represented at zero cost in the operating models.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Image 4 below shows the resulting basic expected expansion for the next few years by source (new thermal and renewable additions in search of incentives not yet included)

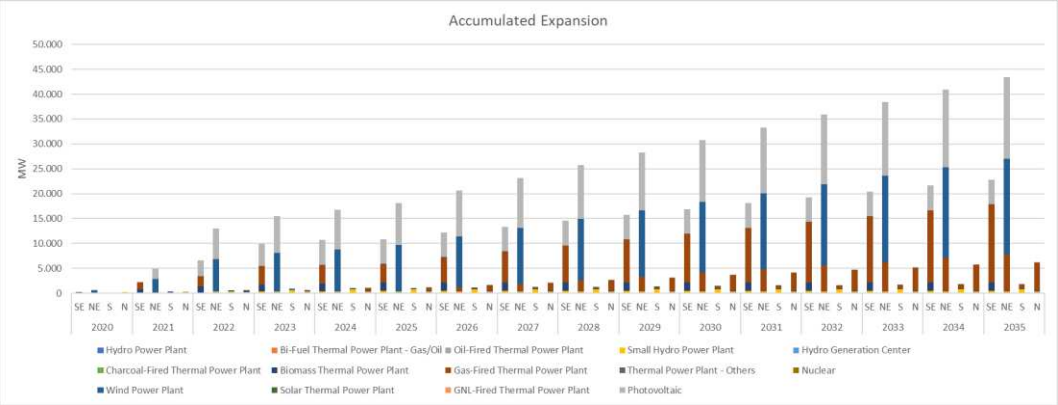

Image 4: Expected Expansion by Source

Source: Prepared in-house.

In addition, two important generation additions were considered:

- New renewable energies to go into commercial operation – many new projects were expected, such as the deadline for receiving incentive subsidies (Law No. 14.120, of March 1, 2021). The Law established that the "grant" (subsidy) must be issued by March 1, 2022; all subsidies were issued with 36 months to start the operation.
- However, as concession deadlines and procedures (including connection authorizations) approach and are being processed at a very slow pace, it is more realistic to presume deadline delay. Therefore, a period of six years was considered to begin the operation (until 2028).
- The Eletrobras Privatization Law (Law No. 14.182 of July 12, 2021) establishes the construction of new thermoelectric power plants (gas-powered) associated with high inflexibility (minimum 70%) located in regions not yet served by gas supply. As a significant time was estimated

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

to construct the necessary infrastructure, the entry dates were postponed by two years.

Table 11 shows the new proposals for renewables and thermal additions for the period 2022-2030.

Table 11: Renewable and Inflexible Thermals Additional Capacity

RENEWABLE + INFLEXIBLE THERMAL ADDITIONAL CAPACITY

Source: Prepared in-house.

V.4.4. Physical Guarantee

The physical guarantee of Eletrobras plants was taken as described in Technical Notes EPE EPE-DEE-RE-086/2021-r0, EPE-DEE-RE-087/2021-r0, and EPE-DEE-RE-088/2021-r0.

We considered the reduction of the physical guarantee of all other MRE plants being 2.0% (as of 2023) and an additional reduction of 1.5% (as of 2028).

It is important to point out that the renewable energies and rigid thermoelectric generators are “non-dispatchable” - in other words, their outputs are mandatorily used for load supply. This will produce a significant impact (reduction) in PLD, as their operating costs are defined as equal to zero in all evaluation models. Table 12 indicates the analytic expansion considered.

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

V.4.5. Demand Prospect (Load)

Future load scenarios are expected for a range of agents and models. The official forecasts, in general, are optimistic, based on the hypothesis of a fast economic recovery - and are seldom confirmed in real life.

A model based on Hilbert Spaces, already implemented in several Brazilian distribution companies and used by the Electric Energy Commercialization Chamber (CCEE), was used. This model breaks down the load and its “drivers” - such as economic indicators, temperatures, consumer behavior.

Image 5 below shows the Load Forecast Platform, building a function capable of “translating” driver input variables (drivers) into future load scenarios. The model is applied both to markets (regulated and free) and all distributors, covering the entire country. The platform derives from a load forecast function for each market and distributor, considering the specific regional characteristics (mining, industry, temperature dynamics, etc.).

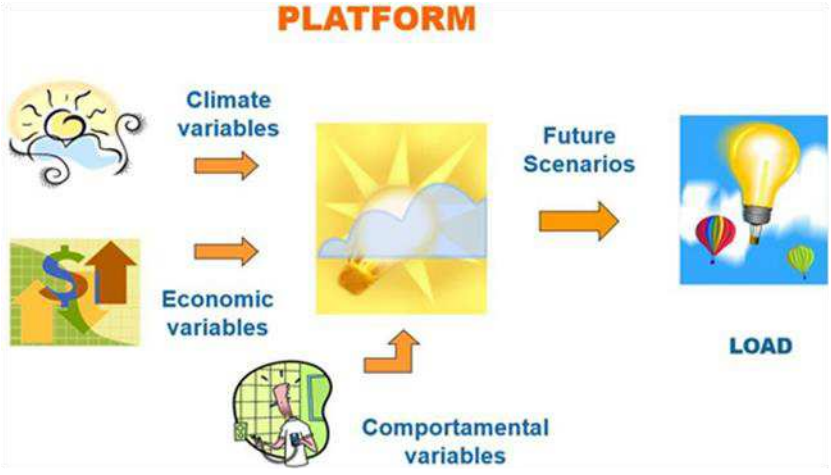

Image 5: Load Forecast Platform

Source: Prepared in-house.

The main algorithm may be described as:

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

- Using the Hilbert spatial model and historical records to build a transfer function and map possible input variables in loads;
- Make input variables projections;
- Use the function constructed to map the projected input variables in future load scenarios.

The main drivers (which will be given specific weights, according to the local load characteristics) are associated with economic indicators:

- Seasonality: the load follows a strong seasonality, according to its periodicity dynamics: high temperatures in the summer, vacations, industrial production peak (March and October).
- Evolution of the Brazilian GNP: higher production requires more energy. In addition, economic growth leads to higher yields, entailing higher consumption. It is positive feedback.
- Broad Consumer Price Index - IPCA index reflecting the inflation rate - sometimes seen by the consumer as a “gain”, a higher income. Part of the population also reacts to inflation with a “buy while you can” approach. Consumption grows.
- Exchange rate: produces the same response as the IPCA.
- U.S. GNP: The USA is still seen by many as the “world engine,” and the industrial activity (steel, ores, etc.) “feeds” American needs. It is interesting to point out that China’s trade would also be a good indicator, were any reliable information available.
- Selic tax: The Brazilian economy is fueled by credit. Better rates encourage consumption (in general) and electricity. As there are no credit volume projections, the interest rates (SELIC) may be used as an indicator.

Projections of the Brazilian input variables are obtained from the Central Bank’s forecast data, while the US GNP is obtained from the Congressional Budget Office.

The efficiency impact is obtained from EPE Studies, summarized in Table 13 below – it is important to stress that the term efficiency herein comprises the distributed generation and possible developments - such as micro-grids and prosumers.

V.4.6. Restrictions of the System transmission and connection

To define the restrictions of the electric energy transmission system and connection to the system, a deck of assumptions adopted by the National Electric System Operator - ONS, published in the Monthly Operation Program (PMO), was used.

For exports between the Northeast and the Southeast, the ONS's limits were considered a restriction for expansion of the system and implementation of new non-dispatchable renewables projects, according to Table 15.

V.4.7. Chain of models

The Brazilian electric system is (still) dominated by huge reservoirs, capable of multi-year regulation. Therefore, the operating models must approach a long-term outlook (typically five years, divided into months). On the other hand, long-term models generally disregard small details like local grid or power plant restrictions.

As a result, the Brazilian operation is not based on a single model but a chain of models, shown in Image 6:

- The long-term model (NEWAVE) has an annual outlook (in general, five years) and evaluates the water values at the end of each period (month);
- The short-term model (DECOMP) has a bi-monthly outlook (generally divided into weekly stages and load levels) and evaluates the operation for each stage of time (dispatch and marginal costs).

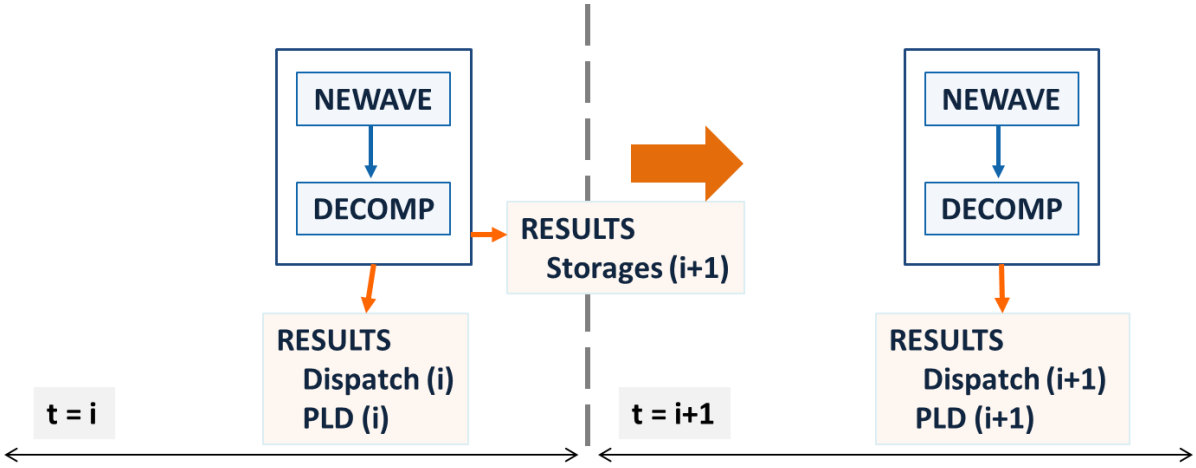

Image 6: Representation of the chain of models

Source: Prepared in-house.

The PLD prices are defined as the marginal operating costs of the system, limited by upper and lower regulatory thresholds. They are evaluated once a month by a chain of models specially designed for operating the Brazilian hydrothermal system and refined weekly).

The PLD is calculated by the Electric Energy Commercialization Chamber (CCEE)

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

- Use the long-term operation model (annual) (NEWAVE) to calculate the value of water at the end of the next two months of operation.
- Upon knowing the value of water at the end of the next two months of operation, use the short-term operation model (weekly) (DECOMP).

Naturally, dispatch and associated marginal costs depend on two key factors: available energy and load to be fulfilled. As in a long-term scenario, it is impossible to know the exact load values and (more importantly) availability; the operation model corresponds to a stochastic algorithm (probabilistic) for decisions under uncertainties, as shown in Image 7.

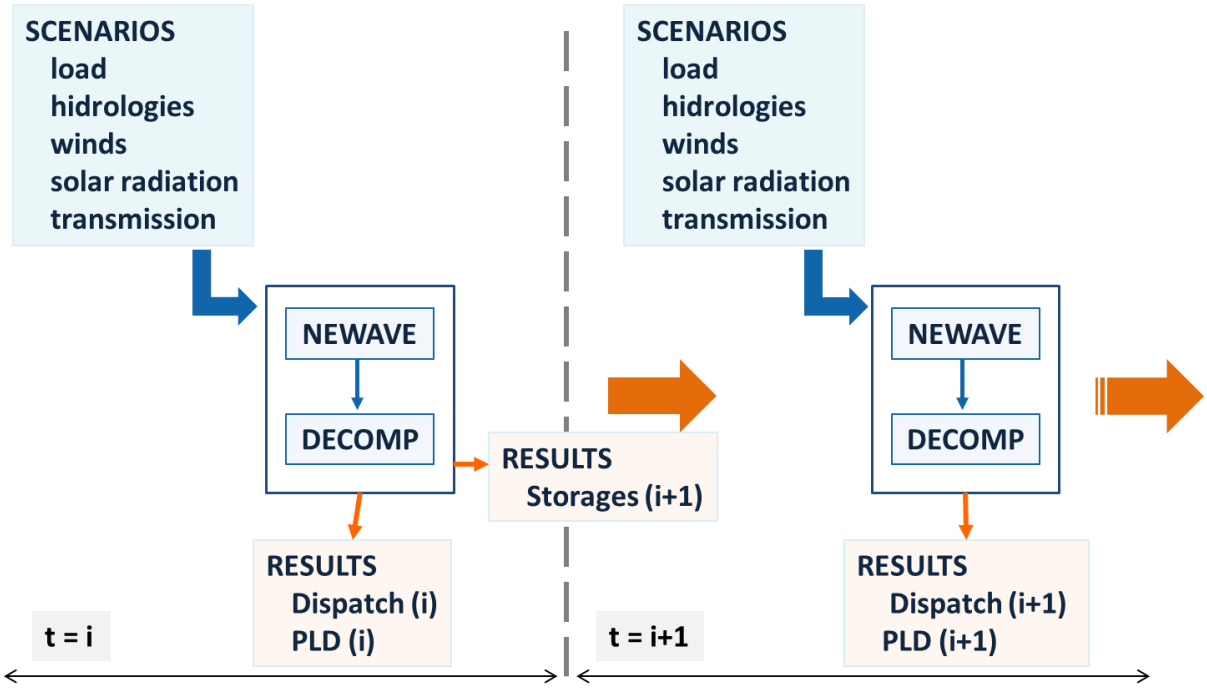

Image 7: Operation model

Source: Prepared in-house.

The Decomp model seeks a weekly discretization, split into three "stages" (levels): load base, average and peak. However, this representation was acknowledged as unable to capture the system's needs and costs. This became a crucial issue, as the offer depends more on renewable generation due to uncertain and volatile resources and daily modulation.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Such variability (predictable or not) makes it impossible to rely on an “average” representation of this type of energy. However, both Newave and Decom (long and medium/short term models) still express the renewable energy (SHP, wind, photovoltaic, bio) through monthly averages, obtained from a typical generation profile (which may not even be realistic).

On the other hand, Newave and Decomp do not represent the transmission system - only the main interchange lines are accommodated without any electrical modeling. It would be interesting to increase the accuracy of the daily operation, introducing some transmission restrictions (even where simplified).

The DESSEM model attempts to fill in these gaps, connecting the weekly dispatch calculated by NEWAVE/DECOMP and the daily pre-dispatch of the following day.

It is interesting to note that future scenarios are built through mathematical models at each PLD assessment - combined with the insights of the Operational Authorities (ONS, the National Electric System Operator).

The future long-term hydrological availability scenarios are calculated through auto-regressive models (Newave) and, in the short term, through forecasting models (Decomp). These models do not consider weather cycles (Niños, Niñas, etc.) or even climate change trends already noticeable in most Brazilian basins. On the contrary, these models “tend” towards a long-term average in a few months, eliminating climate effects.

In addition, the wind, photovoltaic, and SHP alternatives are modeled by the “physical guarantee” - approximately a “worst-case” (admitted risk of 5%) calculated in the past years (number of years, depending on the source and available records). However, the generation available is more abundant than that. For example, in the Northeast region, the Photovoltaic and Wind alternatives are anticorrelated, as shown in Image 8. The same anticorrelations may be found in Hydrologic flows in the Southeast and Wind Velocity in the Northeast.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

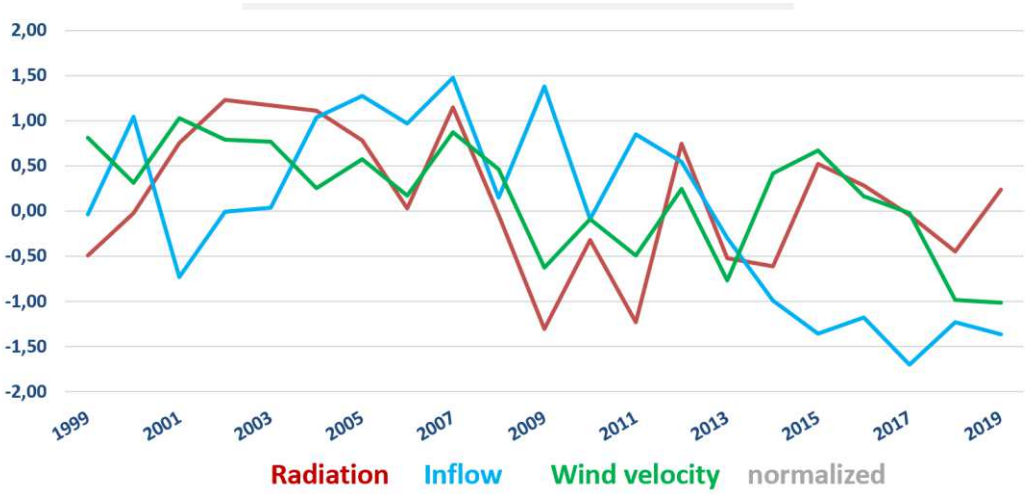

Image 8: Photovoltaic and Wind alternatives

Source: Prepared in-house.

These (anti)correlations are important risk mitigators: when there is no wind, the Sun may “make up” the shortage; an increase in the wind may offset a dry year, and so on. If such effects are not considered, the results of the simulated operation will be far from reality, and the PLD forecasts may be far from accurate[2].

V.4.8. Adjustment Methodology

Our methodology seeks to adjust the simulation of the chain of models to the price calculation while preserving the true reproduction of the official chain of models, however, adjusting the future scenarios to more realistic forecasts.

To this effect, we used a “chain-linked” model (jargon in the sector which at each month re-executes the chain of programs, simulating the “reaction” (calculation) of the models to the forecast models at each moment in time.

The chain-linked model can be summarized in the steps below and Image 9.

[2]For further reference, see Macêdo et al (2007), Macêdo (2006) Pinto et al (2004), Pinto et al (2002), and Szcuzupak, Crombez (2014).

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

1. Climate availability forecasting (hydrologies, wind, solar radiation, etc.) each month. Calculation reservoir producibility associated with level 1 of the represented reservoirs.
2. Reproduction of the Newave/Decomp chain operation for the forecast scenarios.
3. Calculation of dispatch (and byproducts: PLD, GSF, etc.)
4. Correction of the storage status at month-end (considering the actual availabilities based on all climate variables and the effective productivity of the power plants for the observed reservoir levels).
5. Back to 1, to re-execute the chain for the next month.

The results exactly replicate the calculation of the official chain of models (those that calculate the optimal operation) while eliminating the trends of synthetic hydrologic series (too optimistic) and the flow x generation "over productivity".

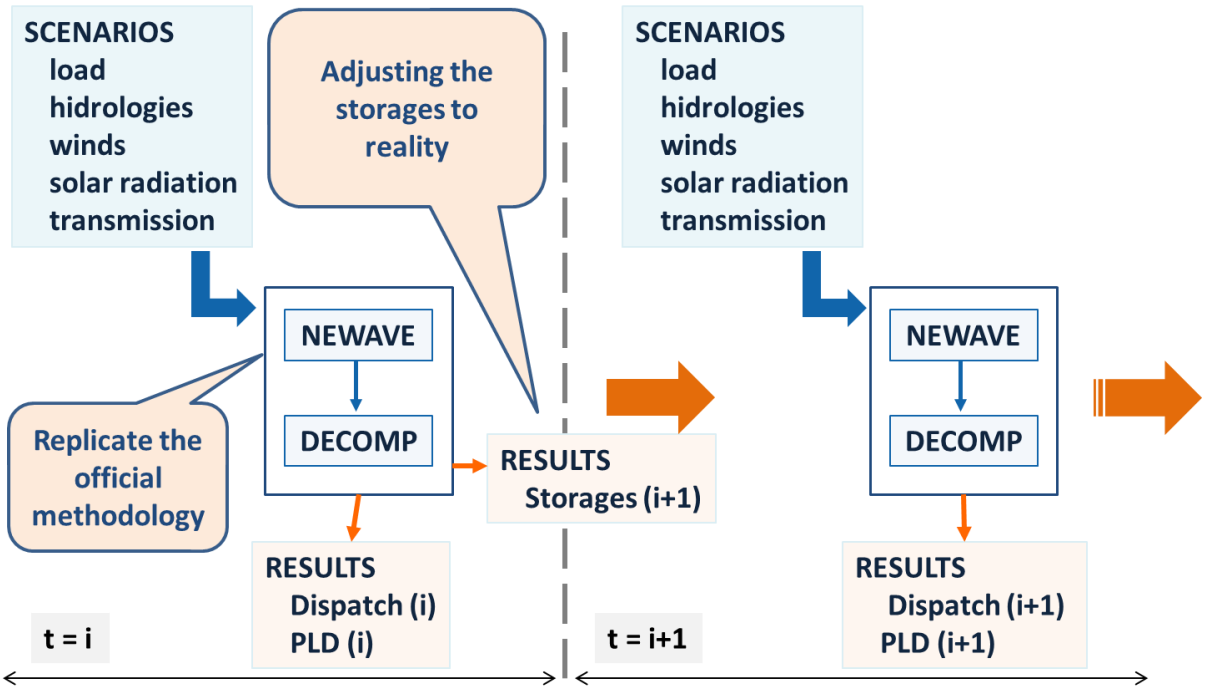

Image 9: Chain-linked model.

V.4.9. Market Prices

We considered the historical market prices and derived a function that associates 1-, 3-, and 5-year contracts regarding PLD and the perceived production costs.

V.4.9.1. Weighted Production Cost per Submarket (CPPS)

The Levelized Cost of Energy (LCOE) is defined as the division of the project's total costs by the energy generated through the entire operation of the power plant. In the long term, it is equal to the marginal cost of the system expansion, which will be treated as the Weighted Production Cost per Submarket (CPPS) in this Study.

To this effect, considering the experience of the professionals of this Study, a periodic survey (every six months) is made with investors in the sector to tabulate the production costs per source and submarket.

Table 16 shows the production costs for each source in the Southeast, obtained from a July 2021 survey.

Table 16: Production Costs in the Southeast, in R$/MWh per source

It is possible to notice a significant increase throughout 2020-2021, mainly due to the dollar valuation (which strongly impacts equipment and inputs), increased civil construction (felt mainly by the hydroelectric power plants) and strong competition among investors to construct their projects before the expiry of the term for tax incentives.

The CPPS in Table 17 is obtained through paying-in of production costs per submarket of all plants associated thereto (paying the revenues between the physical guarantee of each plant and the production cost corresponding to its energy source).

V.4.9.2. Forward Curves

The prices of contracted energy for future delivery (called Forward Curves in the market term) depend on the contracted volume, the contract price and the buyers/sellers' strategy.

As known, the wider the contract scenario, the lower the impact of PLD fluctuations. 5-year contracts are quite similar to CPPS. On the other hand, 1-year contracts are similar to PLD prices.

Merely for illustration purposes, Image 10 shows the Brazilian Over-the-Counter Energy Trade Entity (BBCE) prices for 1, 3, 6, and 12 months, compared to PLD prices. It shows that the short-term prices fluctuate aiming to be equal to PLD, the limit of which (around R$ 180/MWh) results from production costs. An exception is the pandemic period, with an imbalanced market and erratic prices - the generators sold their product at any possible price.

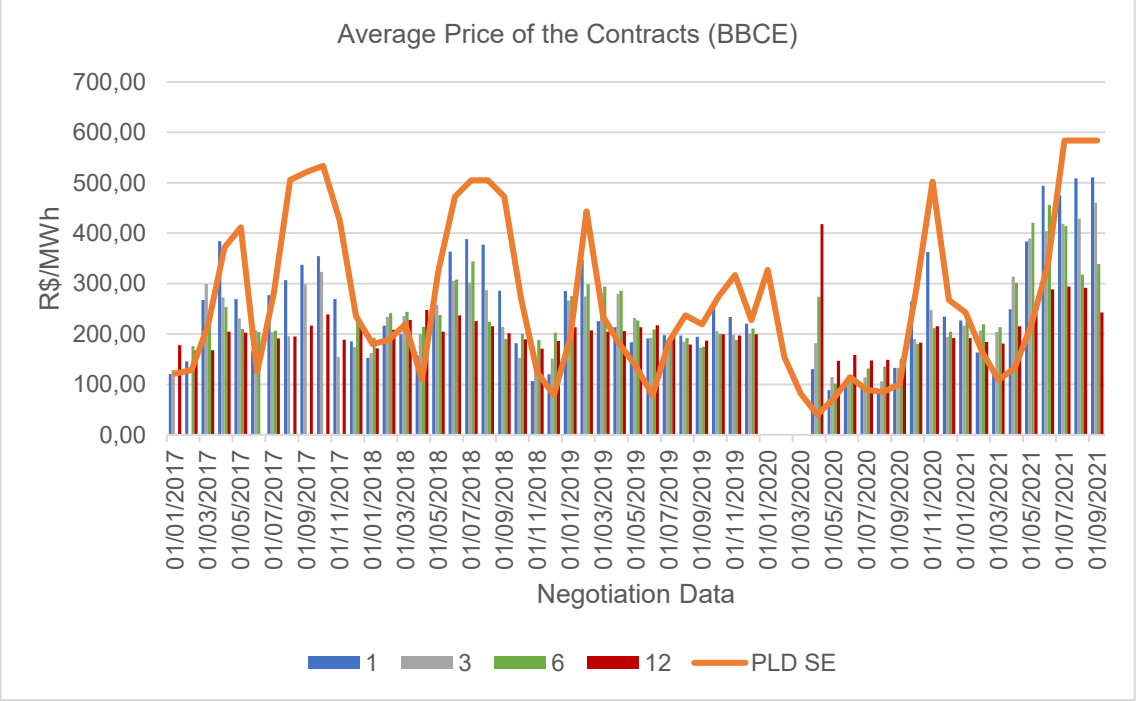

Image 10: BBCE and PLD price comparison

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Source: Prepared in-house.

This study builds a forward price curve based on the observed historical data and some explanatory variables (which impact their behavior). To this effect, we used the CPPS (as selling for long periods at prices below the cost price would harm the business) and the PLD (short-term driver, which affects not only the result but also the perception of the agents).

Interestingly, this forecast does not intend (nor could it) to replicate the specific strategies for commercialization or insights/subjective expectations, which are impossible to predict. On the contrary, we sought modeling based on the factual data we have in hand.

To this effect, we used three forward price historical data for each type of contract (1, 3, 5 years) from several trader companies and specialized institutions (Dcide, BBCE). It is important to compose historical data from several sources to eliminate any strategy trend associated with a single agent or a specific methodology for data processing.

It is also important to note that the monthly price is used as an average of the prices charged in each month, weighted by the amounts sold. It rules out any distortions associated with non-significant deals - e.g., selling a small amount associated with an anomalous price (up or down).

The model was built based on two tools:

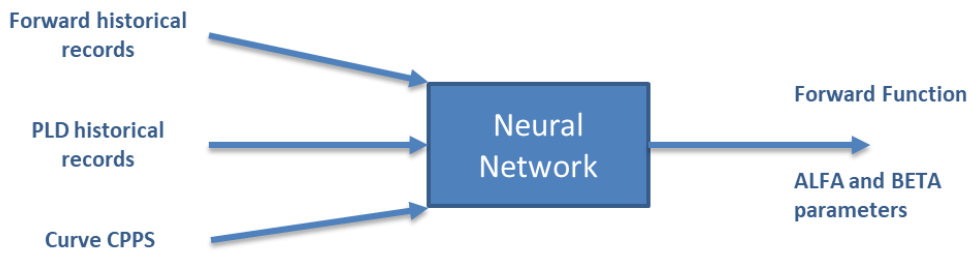
1- A neural network to build the function

Forward Price = ALFA * PLD + BETA * CPPS

The grid is relatively simple and can be presented in the Image below. Different functions were built for contracts with a duration of 1, 3, and 5 years.

Image 11: Neural network Diagram

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B



Source: Prepared in-house.

Table 18 shows the polynomials obtained. However, the neural network indicated an inconsistency: the forward curve variability much lower than that of PLD. As a result, it detected a threshold where the market prices ceased to follow the PLD prices.

The analysis of the results obtained showed that this threshold corresponded to the historic CPPS. In other words, sellers (except for anomalous periods, such as the pandemic) did not sell their production below the cost price.

Therefore, following the results of the mathematical model (explained by reality), the market price expectation function shows the lower threshold equal to the expected CPPS.

2- A linear regression statistical model, which confirms the function obtained from the neural network.

After obtaining the specific function for each type of contract, we used a linear regression model (also for each type of contract) to review the reliability of the resulting function. Table 18 shows the results of the model: the number of samples and adherence, for each year, of approximately 95% - which may be deemed quite satisfactory, given the uncertainties we face in the Brazilian electric energy market.

To compose the forward curve prices, the CPPS and PLD were considered according to Table 18, in which the PLD is multiplied by Alfa and CPPS by Beta. The ratios used show a satisfactory R square.

V.4.10. Results

Please note that:

- El Niño years (2027, 2033, etc.) generally bring air currents to the Southeast, causing a price increase. The La Niña years (2028, 2034, etc.) are associated with better (higher) inflows, leading to a recovery in the water reserves;
- The prices in 2021/2022 are quite high due to a severe hydrological crisis. On the other hand, GSF is low;
- From 2023, the prices start to show a persisting reduction due to the entry of new renewable energy; FGTS is still low, to the extent that the renewable energies start to displace the hydroelectric dispatch;
- From 2028-2030, the entry of rigid thermoelectric plants improves these effects, leading to lower PLDs and GSFs;
- From 2030, the offer and demand start the adjustment process, with the PLD price tending to marginal costs and GSF close to (generation of full physical guarantee).

It is important to see that the models do not show any PLD difference among submarkets. The main changes are:

- A well-planned system will establish an expansion to "direct" the energy from cheaper sources to the loads. The price differences represent gridlocks, in general, the interchange limits that will be solved with backups soon to be built;
- This is exactly what Brazil experienced in the last year. The transmission limits between the Northeast and the North, together

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

with the entry of renewables and the decision to replenish the reservoirs in the North, lead to an excess availability in the Northeast and lack of stored energy in the South and Southeast;

- In addition, regional restrictions set by the ONS indicated minimum generation levels of submarkets, which contributed to the mandatory thermal generation, with consequent higher PLDs.

However, it is important to note that:

- The current situation changed. The energy shortage affects all submarkets, which are equally vulnerable. PLD is equalized. This scenario will remain until the end of 2022. Moreover, there will be no differences in water storage. Therefore, there are no expected price differences;
- After 2022, a significant backup from the NE/SE will end the interchange limits - and will end the gridlock that caused the price differences;
- As to local and regional restrictions, ONS does not inform the future operational restrictions. For this reason, even if they exist (and may result in some differences), at this point, it is not possible to include any limits in the models and, consequently, forecast any difference.

Lastly, it is important to note that although the PLD prices are uniform throughout the submarkets, the forward prices may present differences. The reason is the composition of the sources in each submarket - e.g., higher amounts of wind and solar energy in the Northeast, hydrological prevalence in the North, etc. As production costs are different, the limiting factor will indicate different limits for each submarket. It is worth recalling that negotiations usually have a "premium" for delivery in submarkets other than a generation, mitigating risks - whether existing or not - perceived by the agents.

The results and curves obtained are shown in section VI.9 - Commercialization Assumptions for the Base Case Commercialization Assumptions for the Base Case

V.4.11. Application in the Financial Modeling

The materials in the spreadsheet with 200 GSF and PLD curve envelopments were selected from the DESSEM model. To define the forward curves, we used the ratio between CPPS and PLD defined in section V.4.9. Forward curves are shown for each North, Northeast, Southeast submarket. All prices were generated on the base date of August 2021. The annual price adjustment takes place each January.

The commercialization strategy of the base scenario was then defined as the mix of 5, 3, and 1-year contracts at the ratio of 50%, 30%, and 20%, respectively, of the commercialized energy.

Each of the inter-related 200 envelopments of GSF, PLD, and commercialization curves corresponds to a Total Value-Added. These scenarios were generated and subsequently placed in descending order to select the minimum expected NVP levels for each p-value.

Thus, the p-value levels eligible for the base scenarios will be those resulting from the accumulated cross-section from samples of 200 results. As this simulation implies a computational issue for its processing, the option was to simplify it, using the polynomial below:

$$\Delta GF\ PIE\ * \left[\ PLD\ * \left(GSF\ - (1 - Hedge)\right)\right] +$$

$$\Delta GF\ PIE\ * (Pmed\ * (1 - Hedge - Technical\ Losses))$$

Where:

$\Delta GF\ PIE$ =Difference between the Physical Guarantee of the IEEP Regime from the Capitalization Flow and current Flow.

PLD = Difference Settlement Price in the Southeast.

GSF = Generation Scaling Factor.

$Pmed$ = Average price of the SE Forward Curve, weighted by the allocation in 5, 3, and 1-year contracts.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

$Hedge$ = Portion canceled to mitigate harmful exposure to the STM.

$Technical\ Losses$ = Considered 3.5%.

The expression intends to define the weights for each variable projected in time. Subsequently, the monthly result is brought to present value.

$$\text{NVP} = \sum_{t=0}^{n} \frac{Polynomial}{(1 + WACC)^t}$$

This equation describes the issue of optimizing the joint generation of evaluated power plants, where the scenarios of (i) exposure in the short-term market; and (ii) commercialization of energy in the free/regulated markets, represented respectively by the first and second monomial of the equation above, are weighted intertemporally by the availability of the monthly physical guarantee in the Scenario of Change to Free Market in MWaverage to Marginal Cash Flow. The implicit assumption for this equation is that generation follows the GSF.

To show adherence of the Weight, together with its calculation, the 200 envelopments are simulated with the individual inclusion of each curve in the Financial Modeling. Thus, the resulting NVP is compared through the polynomial above (VPS) with the Total Value Added calculated through the Financial Modeling. Image 12 below shows the results obtained using each methodology:

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

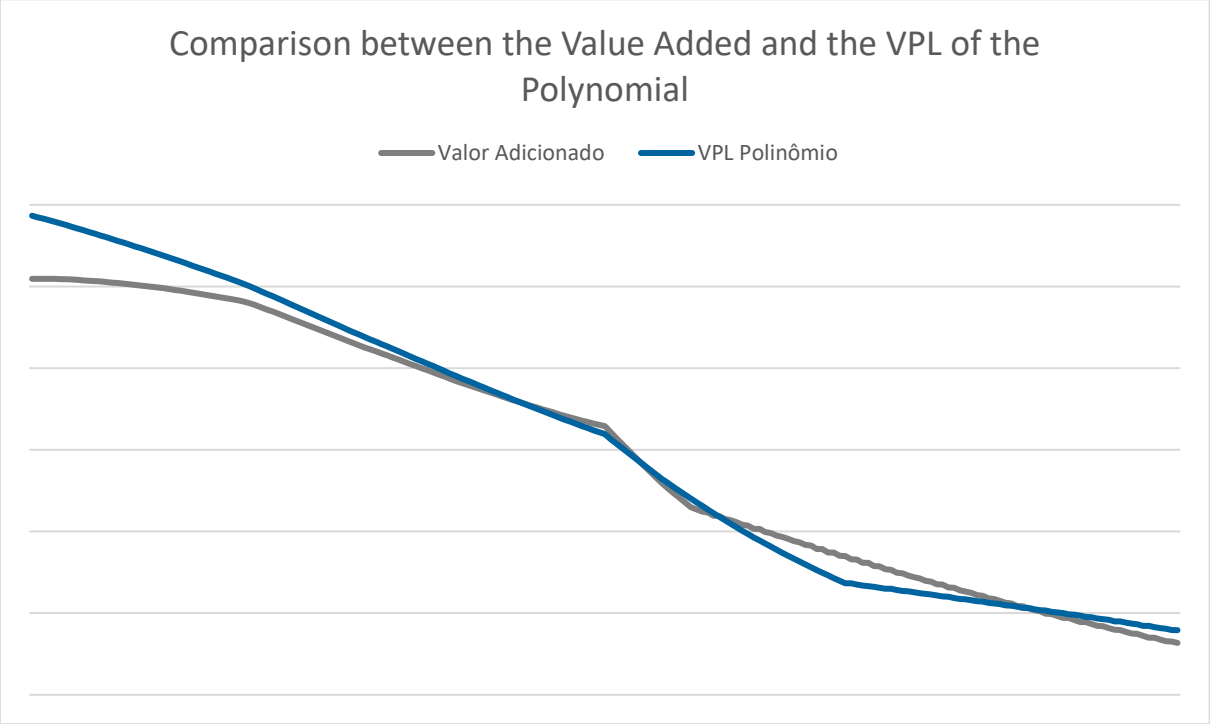

Image 12: Comparison between the Value Added and the NVP generated by the polynomial

Source: Prepared in-house.

When compared dispersedly, the series show a high correlation. In more precise terms, it may be said that the explanatory level of the Weight to determine the ordinality of the Marginal Cash Flow NVPs, that is, the Total Value Added, is satisfactory. In fact, the R-square of the regression in that method concerning this method is 98.6%.

Therefore, the series selected to calculate each p-value, according to the database, will be the 192, 171, 100, 46, and 38 series for the P10, P25, P50, P75, and P90 scenarios, respectively.

It should also be mentioned that although the Weight adherence was tested for the base scenario using linear regression, the use of such regression to estimate the best series to be selected by each p-value was not taken into consideration. Firstly, because it would entail needing to recalculate the regression at each change of assumption; secondly, because the high explanatory level (R-square) of the regression would, in practice, result in redundancy.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

As to this topic, the method to select each series should also be explained. Contrary to intuition, the curves do not follow an ordinality among themselves. This is because the criterion was by order of NVPs rather than order of the curves, given the relevance of capturing the intertemporal effect jointly with them to calculate the Total Value Added.

Considering those mentioned above, the series supplied are time-based, which means that every subsequent value depends on, and is correlated with, its preceding value. Thus, selecting the curves period by period that would generate a certain NVP level or a certain value level would not entail only wrong values - as if the series were a cross-section, but would also tend to generate a range of artificially higher values for p-value levels more distant from the median in P50.

The values of the graphs with the energy commercialization assumptions defined according to this methodology will be shown in Chapter VI.9 - Commercialization Assumptions for the Base Case

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

VI. Definition of Assumptions

This chapter will discuss the assumption of each cash-generating unit (CGU) split into: macro-economic assumptions, tax and fiscal assumptions, general assumptions, investment assumptions, revenue assumptions, operational assumptions, amortization of value-added, and deductions from value-added according to Law 14.182/2021.

VI.1. Macro-Economic Assumptions

The macro-economic assumptions were defined based on the Focus Report of the Central Bank of Brazil, published on August 16, 2021. The project modeling used the IPCA, IGP-M, and Selic Rate Target forecasts.

The Broad Consumer Price Index (IPCA) is prepared by the National Consumer Price Index System (SNIPC) and is intended to measure inflation of a set of products and services sold in the retail market related to families' consumption.

The Selic Rate is the benchmark interest rate of the Brazilian economy. The Selic Rate, calculated in transactions performed in one day among the financial institutions that use federal bonds as security, influences all interest rates in Brazil. To align the effective Selic rate with the Selic target, the Central Bank trades bonds through the Special System for Settlement and Custody.

The Interbank Deposit Certificate (CDI), in turn, is the rate that grounds the yield from loans between financial institutions. As loans are made at Selic rates and received in CDI, these rates are closely related, and it is not possible to have a profit or loss in these transactions.

The General Market Price Index (IGP-M) is one of the versions of the General Price Index (IGP). It is measured by the Getúlio Vargas Foundation (FGV) and is composed of the Wholesale Market Price Index (IPA-M), Consumer Price Index (IPC-M) and the National Construction Cost Index (INCC-M). It is used as an adjustment index in the Brazilian market.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

The indices used in this analysis are in accordance with Table 19 below.

Table 19: Marco-economic Scenario

Index	2020	2021	2022	2023	2024	2025	2026	2027
IPCA	4.52%	7.03%	3.89%	3.35%	3.18%	3.16%	3.16%	3.16%
IGP-M	23.14%	19.64%	5.10%	4.04%	3.96%	3.86%	3.86%	3.86%
CDI	2.76%	7.46%	7.50%	6.73%	6.53%	6.48%	6.48%	6.48%

Source: Focus Report (8/16/2021)

VI.2. Fiscal and Tax Assumptions

The fiscal and tax assumptions adopted are in conformity with the current Brazilian legislation. As Eletrobras is a company under a taxable income regime, this consideration must be extended to the Marginal Cash Flow study. Table 20 below summarizes the rates:

Table 20: Taxes and Taxation Regime

Taxation Regime	Taxable income
Taxes on revenue	
Social Integration Program (PIS)	1.65%
Contribution to Social Security Financing (COFINS)	7.60%
Income Tax	
Social Contribution on Net Income (CSLL)	9.00%
Income Tax (IR)	15.00%
Income Tax Surcharge (AIR)	10.00%

Source: Prepared in-house.

Social Integration Program (PIS): federal tax contribution of social nature, intended to fund unemployment compensation, bonus, and participation by employees in the private or governmental companies in the revenue from agencies and entities. The Federal Tax is levied on gross sales at a 1.65% rate under the non-cumulative regime.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Contribution to Social Security Financing (COFINS): federal tax contribution of social nature, intended to fund the social security, which contemplates essential areas such as the Social Security Institute, Social Assistance and the National Health System. It is levied on gross sales at a 7.60% rate under a non-cumulative regime.

Income Tax (IR): the tax under the income regime is calculated on the taxable base defined by the income before applicable taxes, that is, the net flow of revenues, tax on revenue, operational expenditures, and sectoral charges. This tax has a 25% rate. Because of the marginal flow, that is, the difference between the two flows, analyzed herein, it is understood that the discount of the income tax surcharge (R$ 20,000.00 per month) should not be taken into account.

Social Contribution on Net Income (CSLL): federal tax contribution intended to fund social security. This contribution is levied on the same Income Tax base at a 9.00% rate.

Non-levy of Financial Revenue on the tax base: As the flows were designed to result in the free cash flow to the firm (unlevered flow), the cash-free flows are calculated, which consequently rules out the need to calculate financial revenues on the Income Tax and CSLL tax bases.

It should be stressed that the calculation made to determine the Value Added is the Marginal Cash Flow; hence, it is understood that the contribution of taxes is also marginal, that is, the tax base will be equal to the difference in operating income obtained from the difference between the Capitalization Scenario and the Current Scenario. Thus, under this conclusion, there is no need to include the R$ 20,000.00 deduction per month to calculate the income tax surcharge, which is projected with the 10% rate on the tax base.

VI.2.1. SUDENE/SUDAM Benefit

The Superintendence of Banco do Nordeste (SUDENE) is intended to foster the development of productive activities through the management of tax incentives and benefits in the Northeast macroregion and vicinities (AL, BA, CE, MA, RN, PB, PE, PI,

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

SE, and in part, MG and ES). Similarly, the Superintendence for the Development of the Amazon (SUDAM) applies the same benefits of SUDENE to attract or keep investments in the Legal Amazon region (MA, PA, AP, RR, RO, AC, AM, MT, TO).

For both superintendencies, there are three tax incentive plans:

I. Corporate Income Tax - IRPJ exemption;
II. 75% reduction in the IRPJ for new projects; and
III. IRPJ reinvestments.

The power plants in this study are classified in the second case, where energy infrastructure projects will benefit. The term of the 75% reduction in IRPJ is 10 years from the beginning of its enjoyment. Table 21 shows the power plants with SUDENE and SUDAM tax incentives and their respective periods of enjoyment.

The SUDENE/SUDAM benefit is being considered as free to the firm; that is, a 75% reduction in the IRPJ is recorded in the marginal flow and has a direct impact on the Total Value Added.

VI.3. General Assumptions of the Concessions

This section will present the general assumptions of the concessions under the current regime and specify how the transition to determine the value added in each block power plant taken into account will occur.

Table 22 below, in line with Table 3: Concessions by CGU, presents the general characteristics of the cash-generating units (CGU) considered in this study.

Table 22: General data on the cash-generating units

VI.4. Investment Assumptions

As the marginal flow must be considered, as explained in section V.1 - Marginal Cash Flow and Grant Determination, it is understood that the investment assumptions must be treated in marginal terms, that is, the differences between the investments under the current concession contracts and as from the new concession contracts.

Compared to the contract currently in effect, investments in the capitalization contract extension period considered the data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE. According to official letters DE.E.017.2021, DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021.

The amounts were considered as accrued monthly and based on straight-line from January of each year.

Investments presented by CHESF are detailed in Table 23.

Table 23: Investments by CHESF's CGU

Power plant	Period	CAPEX per period (R$ MM)
Boa Esperança	2042 to 2052	55.20
Paulo Afonso Complex	2042 to 2052	289.80
Luiz Gonzaga	2042 to 2052	82.80
Xingó	2042 to 2052	82.80
Funil	2042 to 2052	20.70
Pedra	2042 to 2052	13.80
Sobradinho	2052 to 2059	82.80

Investments presented by Eletronorte are detailed in Table 24.

The linear depreciation rate of 2.486% was calculated through the weighted average expense per asset forecast for the 2022 period, according to the Impairment model of Eletrobras group, with analysis dated Sep/21. Despite its non-cash effect, its importance for analysis is (i) the tax savings caused by the deduction of the tax base in the marginal cash flow; and (ii) the calculation of the balance of fixed assets from such capitalizations at the end of the analysis scenario.

Due to problems in unitizing Capex to start applying the depreciation only after effective completion of the investment in noncurrent assets and its low impact on the cash flow (equivalent to the balance of fixed assets resulting from the monthly depreciation rate and income tax rate), depreciation was simply applied to the entire balance of fixed assets for the immediately preceding month as from the beginning of the first Capex funding.

The remaining amounts from the balance of fixed assets at the end of the analysis were conservatively reverted by their historical book value without any adjustments for inflation.

VI.5. Revenue Assumptions

According to the current energy commercialization regime, revenue assumptions considered three main blocks of power plants for detailing revenue.

1. Power plants under law 12.783/2013 (Quota Regime). They include the following CGUs: Boa Esperança HPP, Paulo Afonso Complex (HPPs Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV), Luiz Gonzaga HPP, Xingó HPP, Funil-BA HPP, Pedra HPP, Coaracy Nunes HPP, Corumbá I HPP, Estreito HPP, Funil-RJ HPP, Furnas HPP, Marimbondo HPP, and Porto Colômbia HPP.
2. Power plants under law 13.182/2015. They include the following CGUs: Sobradinho HPP and Itumbiara HPP
3. Independent power plants. They include the following CGUs: Tucuruí HPP, Curuá-Una HPP, and Mascarenhas de Moraes HPP.

The sections below will discuss the method to determine the revenue from each of these power plants.

VI.5.1. Revenues from power plants under law 12.783/2013

These power plants were recently renewed, according to Law 12.783/2013, under the quota regime. Under this regime, the generator does not bear the hydrological risks nor the financial income from Energy Reallocation Mechanism but earns a fixed monthly revenue (Annual Generation Revenue - RAP) adjusted each year by the IPCA index and revised every five years according to the physical guarantee quotas associated to each power plant.

Table 26 below shows the RAG amounts, and their components for each power plant analyzed in this report, as mentioned above. The data were obtained through Approval Resolution 2902/2021. The base date of the amounts below is July 2021.

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Table 26: Generation Revenue from power plants under Law 12.783/2013

Subsidiary	CGU (HPP)	Total RAG (REH 2902/2021) (R$)
CHESF	Boa Esperança	77,072,301
	Paulo Afonso Complex	1,153,076,197
	Luiz Gonzaga (Itaparica)	395,392,492
	Xingó	727,311,277
	Funil - BA	14,669,491
	Pedra	7,142,835
Eletronorte	Coaracy Nunes	31,413,266
Furnas	Corumbá I	111.656.166
	Estreito	295,157,823
	Funil - RJ	63,214,475
	Furnas	299,818,820
	Marimbondo	417,669,984
	Porto Colômbia	95,763,481

Source: Prepared in-house.

VI.5.2. Revenues from power plants under law 13.182/2015

Itumbiara HPP and Sobradinho HPP are governed by the special regime of Law 13.182/2015, and under this law, energy is commercialized as below:

- For Sobradinho HPP
  - Electric energy supply contracts in the Free Market (ACL) with a portion linked to 90% of Sobradinho HPP's physical guarantee until February 2037, with a reduction at a rate of one-sixth as from February 2032;
  - In the same period mentioned above, the energy contracts would be reversed in allocating energy and power physical guarantee quotas, pursuant to Law no. 12.783/2013;
- For Itumbiara HPP
  - Electric energy supply contracts in the Free Market (ACL) with a portion linked to 80% of Itumbiara HPP's physical guarantee until

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

February 2035, with a reduction at a rate of one-sixth as from February 2030;

- In the same period mentioned above, the energy contracts would be reversed in allocating energy and power physical guarantee quotas, pursuant to Law 12.783/2013.

Thus, Sobradinho HPP and Itumbiara HPP would move to the quota regime (Law 12.783/2013) from 2032 and 2030, respectively. Consequently, the future RAG to be received by those power plants must be defined, as such value is not available in the Approval Resolution 2902/2021, given that such power plants did not receive the revenue from allocation of physical guarantee quotas in the current cycle.

The RAG values for Sobradinho HPP and Itumbiara HPP were estimated according to the Impairment model of Eletrobras group for subsidiaries CHESF and Furnas, respectively. These values are summarized in Table 27.

Table 27: Revenues from power plants under Law 13.182/2015 after the commercialization period in the Free Market (ACL)

Subsidiary	CGU (HPP)	Total RAG (R$)
CHESF	Sobradinho	198,989,726
Furnas	Itumbiara	513,061,980

Source: Prepared in-house.

The Value-Added calculation in this study is determined through the Marginal Cash Flow. Thus, for the entire period of free energy commercialization (ACL or ACR contracts), the new concession contract flow (Capitalization Scenario) will be the difference between the capitalization scenario cash flow, which contemplates the revision of Physical Guarantee and the current scenario cash flow, which does not.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

VI.5.3. Revenue from independent energy producers

As discussed in the previous section, for generators currently under the independent energy production with free negotiation of their contracts, the value added by the renewal of the concession contracts under Law 14.182/2021 will result from the difference between the current and revised Physical Guarantee, according to Table 22. The value-added of such power plants will then be the cash flow from the Capitalization Scenario, intended for independent energy production, minus the cash from the Current Scenario, intended for the provision of public service, according to the energy commercialization assumptions defined in section V.4 - Pricing and Hydrological Risk Scenario.

VI.6. Operation Assumptions

This section will present the operational assumptions for the CGUs presented previously: administrative costs and expenses and operational expenditure, sectoral charges, working capital, and technical losses from energy generation.

Operating costs in the capitalization contract extension period compared to the contract currently in effect considered the data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE, according to official letters DE.E.017.2021, DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021. Tucuruí HPP considered the impairment model with analysis dated Sep/21. The tables below show the operating costs and expenses for each power plant. However, these costs will only be projected for the period with no convergence or coexistence between both flows (Capitalization Scenario and Current Scenario). The convergence period presumed no change in costs and expenses.

Table 28: Operating Cost - CHESF

Power plant	Opex for 2022 (R$ MM)	Period	OPEX for the Period (R$ MM)
Boa Esperança	55.20	2042 to 2052	55.20
Paulo Afonso Complex	289.80	2042 to 2052	289.80
Luiz Gonzaga	82.80	2042 to 2052	82.80
Xingó	82.80	2042 to 2052	82.80

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Funil	20.70	2042 to 2052	20.70
Pedra	13.80	2042 to 2052	13.80
Sobradinho	82.80	2052 to 2059	82.80

CHESF estimates were defined from the base date of January 2022.

Table 29: Operating Cost - Eletronorte

	Nominal OPEX (R$ MM)	
Year	Coaracy Nunes	Curuá-Una

Eletronorte estimates for Coaracy Nunes HPP and Curuá-Una HPP were defined as nominal values considering the annual IPCA of 4.5%. For this Report, they will be recalculated to BASE DATE. The estimated operating cost of Tucuruí HPP is R$ 546,606,807.12, considering the base date of September 2021.

Table 30: Operating Cost - FURNAS

Power plant	(A) Values informed (R$ MM)	(B) Sectoral Charges (R$ MM)	(A - B) OPEX (R$ MM)
Estreito	192.03	100.44	91.59
Funil	62.06	31.04	31.02
Furnas	229.15	117.86	111.29
Marimbondo	241.85	139.78	102.07
Porto Colômbia	82.90	54.70	28.20
Itumbiara	341.81	202.22	139.59
Mascarenhas de Moraes	113.55	58.78	54.77
Corumbá	115.00	37.83	77.17

CHESF estimates were defined from the base date of December 2020.

Table 31 below shows the sectoral charges applicable to each power plant. Thus, it should be stressed that for the Marginal Cash Flow, the sectoral charges will only be calculated from the difference between the current contract and the future concession contracts determined by Law no. 14.182/2021.

Table 31: Sectoral Charges

Charge	Amount	Reference base
CFURH	5.32 BRL/MWh	Generated energy
ONS & CCEE	0.08%	Net Revenue
R&D	1.00%	Net Revenue
Inspection by ANEEL	0.40%	Net Revenue
TUST	6.98 R$/kWh.month	Physical Guarantee

Source: Prepared in-house.

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

Regarding the Value-Added study, as the energy generation follows the GSF monthly, there is no settlement at Optimization Energy Tariff (TEO); this tariff is not considered, as there is no energy commercialization in the MRE context.

VI.7. Amortization of Value Added

The calculated Value Added will be amortized throughout the new concession contract, that is, throughout 30 years as from BASE DATE.

Amortization of this value will affect the tax base calculated for the Marginal Cash Flow. By reducing the tax base, the lower amount expended to pay taxes affects the future cash flows, affecting the calculated Value Added. Thus, an iterative calculation must be made until a null economic gain for the period under analysis is reached.

After verifying the Total Value Added based on the assumptions defined in this report and comparing the results published by CNPE, the advantage of the capitalization process will be analyzed and presented as results and awareness.

The analysis of the advantage will consider the annual payments to CDE, according to Exhibit III of CNPE Resolution no. 15, of August 31, 2021, then the Marginal Flow will be deducted from annual payments, and the Total Value Added resulting from this analysis will the advantage of implementing Law 14.182 of July 2021, compared to the proposed base scenario.

VI.8. Deductions of the Grant bonus according to Law 14.182/2021

According to item II, Article 4 of Law No. 14.182/2021:

> *"II - the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession contracts corresponding to fifty percent (50%) of the value added to the concession by the new contracts, deducted of the following amounts:*

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

a) *expenses related to revitalizing the water resources of São Francisco River and Parnaíba River basins, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;*

b) *expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;*

c) *expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, according to subparagraph c, item V, caput, art. 3 of this Law; and*

d) *expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Basins of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;"*

Thus, the deductions from the bonus for the grant of new electric energy concession contracts payable to the Federal Government are determined at present value.

It is understood that the amount destined to item a) of item II, Art. 4 of Law No. 14.182/2021, is in agreement with Art. 6 of the same law.

> *"Art. 6 The obligation of electric energy generation concessionaires located in the Rio São Francisco basin the concession contracts of which are affected by this Law, in compliance with the measure under subparagraph a, item V, caput of art. 3 of said Law is a contribution of three hundred and fifty million reais (R$ 350,000,000.00) for ten (10) years, adjusted by the IPCA published by the IBGE or another index that may replace it, as from the month of execution of the new concession contracts.*

It is understood that the amount destined to item b) of item II, Art. 4 of Law No. 14.182/2021, is in agreement with Art. 7 of the same law.

> *"Art. 7 The obligation of the concessionaire executing Concession Contract no. 007/2004-Aneel-Eletronorte, subject to the provision in the caput of art. 1 of this Law, in compliance with the measure addressed in* ***subparagraph b, item V, caput of art. 3 of this Law*** *is the contribution of two hundred and ninety-five million reais*

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

> *(R$ 295,000,000.00) per year, for a term of ten (10) years, adjusted by the IPCA published by IBGE or another index that may replace it, as from the month of execution of the new concession contract, for application in the program for structural reduction of energy generation costs in the Legal Amazon and at least twenty percent (20%) in actions to ensure navigability of the Madeira River and ten percent (10%) in actions to ensure navigability of the Tocantins River.*

It is understood that the amount destined to item c) of item II, Art. 4 of Law No. 14.182/2021, is in agreement with Art. 8 of the same law.

> *"Art. 8 The obligation of electric energy generation concessionaires located in the influence area of Furnas hydroelectric power plant reservoirs, the concession contracts of which are affected by this Law, to comply with the measure under* ***subparagraph c, item V, caput of art. 3*** *of said Law is a contribution of two hundred and thirty million reais (R$ 230,000,000.00) for ten (10) years, adjusted by the IPCA published by the IBGE or another index that may replace it, as from the month of execution of the new concession contracts.*

It is understood that the amount destined to item d) of item II, Art. 4 of Law No. 14.182/2021, is in agreement with paragraph 6, Art. 6 of the same law.

> *"Paragraph 6 In addition to the contribution specified in the caput of this article, the electric energy generation concessionaires located in the São Francisco River basins, the concession contracts of which are affected by this Law, shall make electric energy available at an annual amount of eighty-five average megawatts (85 MWmed) for twenty (20) years as from publication date of this Law, for a price of eighty reais per megawatt-hour (R$ 80.00/MWh), adjusted by the IPCA or another index that may replace it, through a specific agreement, directly to the Federal Operator of the PISF installations."*

The availability of energy to PISF, as detailed above, will be treated as a reducing amount separate from the Physical Guarantee in the Financial Modeling to Paulo Afonso Complex CGU. Despite the forecast modulation of this energy, it was considered based on straight-line in the financial flow.

Further to these amounts, due regard should be given to item II, paragraph 1 of Art. 5 of Law No. 14.182/2021:

> *"Paragraph 1 The calculation of the value added to the concession will consider:*

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

[...]

II - the deduction of credits related to refund for proven expenses with the acquisition of fuel incurred until June 30, 2017, by the concessionaires controlled by Eletrobras and holders of the concessions addressed in art. 4-A of Law No. 12.111, dated December 9, 2009, that have been proven but not refunded as a result of the required economic and energetic efficiency addressed in paragraph 12 of article 3 of said Law, including adjustments for inflation, in which event the offset will be limited to three billion, five hundred million reais (R$ 3,500,000,000.00);"

The composition of the deductions and revitalizations described in this section is included in Table 32, considering contributions made in January.

Table 32: Deductions and revitalizations according to Law No. 14.182/2021

Present Value of the Flows of amounts in items a, b, and c of item II of Art. 4 of Law No. 14.182/2021 (R$)	**6,530,229,510**
Nominal Discount Rate	**10.29%**
Base Date	**Dec/22**

Source: Prepared in-house.

Further to these discounts, indemnity for non-depreciated and non-amortized assets must also be considered, as the current concession will have an early termination. The indemnity related to non-amortized and non-depreciated assets of Tucuruí HPP basic project is considering the estimated R$ 5,103,744,500.00 informed in the parameters published by Regulation no. 544/GM/MME, of August 30, 2021. The indemnities of non-amortized and non-depreciated assets of Curuá-Una HPP and Mascarenhas de Moraes HPP were estimated according to Eletrobras' Full Financial Statements as of December 31, 2020 base date. The indemnities related to the power plants under Law 12.783/2013 have a recorded balance in December 2012, adjusted by the IPCA until the BASE DATE of this report.

VI.9. Commercialization Assumptions for the Base Case

Based on the definition of the methodology and assumptions to forecast the cash flows under the current regime (Current Scenario) and Eletrobras post-capitalization regime (Capitalization Scenario), the Marginal Cash Flow can be built based on the methodology defined in section V.4 - Pricing and Hydrological Risk Scenario.

In principle, based on the 200 analyzed envelopments, as detailed in section V.4 - Pricing and Hydrological Risk Scenario and the sequence of NVPs generated from such series of data, and the base scenario is defined as the Values Added for different values used.

This study will use the results equivalent to P10, P25, P50, P75, and P90. It is understood that P10 is defined as the Value Added so that in 90% of all Valued Added generated from the 200 price envelopments, PLD and GSF are equal to or lower than the latter, or, equivalently, 10% of the scenarios generate Values Added equal to or higher than the latter. The understanding is similar for all other p-values presented subsequently in this section.

The energy commercialization assumptions (price curve, PLD, and GSF) throughout the analyzed period (January 2023 to December 2059) are presented below.

VII. Summary Analysis of the Risks

This section will consolidate the main risk factors extensively scored in this Study. This chapter proposes putting the risks into a system in the groups (i) Legal Notes, (ii) Water and Regulatory Aspects, (iii) Economic and Financial Risks, (iv) Commercialization Risks, and (v) Base Case Sensitivity Factors.

In each group, the risks will be (i) identified; (ii) described; (iii) analyzed in terms of chances of occurrence and impact; and (iv) scored or their mitigating factors proposed.

It is worth stressing that the Study does not contemplate a risk assessment regarding budget, power plant construction work performance schedule, operation, construction, and other engineering-associated risks, despite recognizing their potential impacts on the CGUs' cash flow and, consequently, the Value Added calculated herein.

The proposed approach may be introduced to the Results from the Base Case and subsequent Sensitivity Analysis of the Grant values, with some handling proposed for such identified risks, if any, or define them as points of attention for Eletrobras Management.

VII.1. Legal Notes

1. **Risk of Declaration of Unconstitutionality of Law no. 14.182/2021 in Declaratory Action of Unconstitutionality - ADI 6.938**: Regarding the possible risk of commencement of litigation on the complex privatization plan, it should be stated that, at least in part, the risk level that may be envisaged was deemed consummated even before the works trending to the pricing of quotas taken to the market. This is because when the project to convert Provisional Measure- PM 1.031/2021 was approved by the Parliament, with the consequent enactment of Law no. 14.182/2021, the ADI 6839 was filed immediately with the Federal Supreme Court, in which the plaintiff parties dispute the main provisions that declare the

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

privatization. Presuming that Law no. 14.182/2021 is not declared fully unconstitutional, possible granting of the second claim in the ADI would take to the same consequence that would occur with the opposition of presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21, and the conditions addressed in arts. 2, 4, and 5. Its correction goes through the departments of the Office of the General Counsel for the Federal Government working on the ADI at the Federal Supreme Court and, under the specific procedure to judge this action, competently defended the constitutionality of Law no. 14.182/2021. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

2. **Risk of Accounting Analysis and Legality by the Federal Accounting Court:** As the legality and economic assessment of the privatization is pending examination by the Federal Accounting Court - TCU, which imposed hindrances to similar projects in the past, and given the opinion issued by the Justice reporting on the Eletrobras case, to some extent, the process may be impacted by its handling at the Court. Although the TCU no longer has the power to halt the effectiveness of Law no. 14.182/2021, given the superseded opinion in Precedent 347/STF, which authorized deciding on the unconstitutionality of acts by the Government, there is a possibility of the Court staying the privatization, in case of evidence of possible litigation regarding the economy of the project and complexity of the economic-financial balance, likewise ADI 6.938. In Case TC 000.350/2021-4, a request for examination of the record by Justice Aroldo Cedraz, who reports on the background of the Eletrobras case at the TCU, imposed a sixty-day delay in the publication of the invitation to bid regarding the implementation of 5G technology by auction, and ultimately, voted against the proposal from the technical unit, which was in line with the Federal Government' agenda. Such considerations lead us to believe that, under the privatization feasibility standpoint, the possibility of the TCU examining more sensitive aspects of the project

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

exist, and with possible delays in the initially expected schedule to offer the securities in the market, capitalization may be impacted as regards the ratio between the amount defined for Eletrobras changing to the free market and the economy of the mandatory concessions under Law 14.182/2021. The risk of hindrances by the TCU, once the process is provided with supporting documents, calls for mitigation by the legal departments representing the Federal Government, BNDES and all other agents working on the privatization, to advance the issuance of a definitive standpoint of the Court concerning the economy of the privatization and its accounting lawfulness. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

3. **Extension of the current concession terms because of the MRE**: a subset of Eletrobras power plants covered by Law 13.203/2015, acquired the prerogative of extending the current terms of the concession, in return for a significant portion of the costs incurred with the MRE. However, as it coincides with this capitalization process, there are moderate risks of the vested right not being fully contemplated. The recommendation is that such right be duly contemplated in a specific clause of the new concession contracts. The impact of this risk on calculating the Total Value Added can be examined in the Financial Modeling.

VII.2. Water and Regulatory Aspects

1. **Reduction of the physical guarantees of the MRE**: if the physical guarantees of other MRE power plants are not revised, **there is a not negligible risk** that Eletrobras Group, because of the reduced physical guarantees to which it was subject, incurs financial costs associated with the sharing of the burdens and benefits of the centralized operation, at higher rates than other agents. The reduction in the Eletrobras physical guarantees improves the GSF to all parties but simultaneously reduces the participation of the power plants in the total energy allocated to them. The impact of the physical guarantees of the MRE not being revised will

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

be analyzed with the sensitivity of the base case, as mentioned in section VII.5, and the impact of this risk on the Value Added will be examined.

2. **Effects of thermoelectric plants by inflexibility**: although the contracting of thermoelectric plants object of Law 14.182/2021 has the powers to mitigate the seriousness of any future crisis related to scarce water resources, especially in the medium term, they will also have a strong contribution to the displacement of hydroelectric power plants, decreasing the GSF value. The impact of the schedule to implement thermoelectric plants with 70% inflexibility will be examined with the sensitivity analysis of the base case; as mentioned in section VII.5, thus the impact of this risk on the Value Added will be examined.
3. **Entry of renewables as from 2023**: the high volume of renewables, with a start-up in 2023, will have similar effects. These risks call for strategic positioning of the company, further to their commercial mitigation. The impact of the schedule to implement renewables from 2023 will be examined with the sensitivity analysis of the base case, as mentioned in section VII.5; thus, the impact of this risk on the Value Added will be examined.
4. **Dispatchability of the new electric matrix**: the "new" electric matrix, given the increased share of renewable sources, tends to be less dispatchable or more mandatory. This will require more thermoelectric plants, which will prevent relevant reductions of the marginal cost in the short term. The same will happen with tariffs, which may increase even after 2030, especially if the subsidies policy for renewable sources is maintained. The risk here is the maintenance of interventionism, with the application of unreasonable prices, which may affect the free prices. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.
5. **The displacement between PLD and contract prices**: an oversupply lead by subsidized renewable sources and inflexible thermal plants, associated with the prospective rising tariffs, will entail a GSF below 1.0, but contract prices further displaced from PLD, which calls for attention.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

However, because of what will happen with tariffs and market opening, it is more likely that the contract prices will be higher than PLD, which is an opportunity. This risk was considered in the GSF forecast, PLD and Forward curve, the entry assumptions of the Financial Modeling.

6. **Future change of the electric sector**: given the facts described in items 2 to 6, combined with the expected insertion of distributed generation, the electricity sector is likely to go through important changes in the next few years. The sector may not be the same, even between 2026 and 2030. The displacement of hydroelectric power plants, which is a risk, may be more permanent than desired. However, hydroelectric power plants will not lose importance. Disregarding a storage capacity of an average 280 GW is not likely. It is a "battery" of huge proportions, which only needs to be used. Thus, among the expected changes, flexibility, that is, the ability to respond quickly to operational needs of an increasingly less dispatchable power system, will arise as one of the main products of the hydroelectric power plants. The suggestion is a strategic standpoint towards this direction to arrive earlier in this new focus of the business. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3. Economic and Financial Risks

The economic and financial risks affect the Eletrobras balance in terms of financial stability and attractiveness in the short and long term, related to the business's illiquidity, counterparties, and attractiveness (capital allocation).

1. **Inherent risk of the business**: the change to the free market is expected to bring a higher exposure to Eletrobras or a higher correlation of its economic activity to the economic cycles from an increased inherent risk of the business. This risk would entail a direct negative impact on the calculation of the Value Added in this Study. According to section V.2 - Weighted Average Cost of Capital (WACC), this risk was addressed

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

through a more conservative cash flow forecast to incorporate the higher risk associated with the business in the financial flow.

2. **Economic activity level**: Market oscillations may cause an imbalance in the economy, where production costs will be higher than the price of products in the market, and this fact demotivates producers, of which part of the stabilization plans implemented until the '90s is a typical example. In the recent crisis, this occurred again, when several free-market consumers had to renegotiate payments with the generators and sellers.
   - This risk has medium to low chances, as these cycles are specific and widely spaced. In addition, the current scenario is based on a low base of economic cycle recovery.
   - The impacts in the company's liquidity may range from medium to high, as on occurrence of any such event, the liquidity and income of Eletrobras may be jeopardized.
   - Economic activity should be monitored to mitigate this risk, and an internal debt renegotiation policy must be in place. This policy sets the costs and payment terms granted to clients in the default portion. These costs passed on to defaulters must always be higher than the opportunity costs that Eletrobras bears in the financial market.
   - Lastly, the company must keep a pre-established liquidity level and open credit facilities with the financial market, established in its internal policies.
     - This topic will be addressed through variations in the load growth to simulate changes in demand levels, according to section VII.5.
3. **Credit risk of counterparties:** Credit risk comprises every possibility of default in a transaction, that is, the inability to predict that the parties' obligations will be fulfilled accurately. It is an ever-present risk in

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

commercial and financial negotiations. Specifically, as Eletrobras will sell its energy in the free market (ACL), it risks default on the energy buyer.

- If no mitigating system is adopted, the chances of this risk may range from medium to high. As an example, medium-size traders have already defaulted in the past.
- The impact of credit risk is high/medium, depending on the concentration of sales to a profile of high-risk clients/traders.
- The recommendation is to set a Risk Acceptance Criterion (CAR) to mitigate this risk, where each client/trader has its exposure limits. This procedure calls for the preliminary involvement of the Compliance Department and is managed by a Credit Department, which sets previous levels concerning the volume exposure period of each counterparty and monitors the economic-financial indices of the buying counterparty.
- There must also be a clear exposure policy for each buying counterparty to dilute the credit risk.
- Lastly, the company must keep a pre-established liquidity level and open credit facilities with the financial market.

VII.4. Commercialization Risks

Regarding the revenue associated with energy commercialization, we recommend considering some attention points on the energy commercialization risk.

The implemented commercialization strategies contemplate two business modalities:

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

1. The settlement and the PLD (for energy left as "hedge" and settled in the short term). It is worth noting that the PLD is volatile and highly dependent on the market scenario:
   - The demand of the system impacts the PLD. Increments/decreases in demand lead to a rise/reduction of the PLD.
   - In conclusion, the offer would have the opposite effect. However, this does not always happen. The generation offer at higher operating costs has less impact on PLD - generally, it concerns thermal power plants deployed at more critical moments. However, an increase in offer, which the system must absorb at nihil variable cost (as in the wind, photovoltaic, and inflexible thermal generation), produces a reduction in PLD (as it increases the generation of plants at zero cost).
   - It is even possible that the volume of energy produced by such sources, with "mandatory" dispatch (in the jargon, "non-dispatchable" energy), displaces the dispatch of hydroelectric power plants: if all the hydroelectric potential is not necessary to meet the load, these power plants do not generate, not because of lack of inputs (water), but lack of need (demand). This is a real risk, which must be addressed in the future by the applicable authorities.
   - The hydrological component still plays a significant role. Median or high hydrologies (close to or higher than, historical average) tend to raise the reservoirs and make up an "energy stock" that mitigates risks. On the other hand, low hydrologies (lower than historical average) may lead to the "consumption of hydroelectric energy inventory" and demand a more intense thermal dispatch, with higher variable costs, directly impacting the PLD.
   - Although the expansion forecast by the sectoral authorities points towards backups that eliminate price differences, the operation guidelines, local or even circumstantial restrictions may create imbalances leading to differences in prices. As these scenarios are

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

unpredictable and not pointed out in the official models and data, we elected only to indicate this possibility.

- Lastly, it is worth noting that the offer depends on expansion. The entry of new power plants (and their respective costs) may change the business environment completely, consequently affecting prices and revenues.

2. Sales of energy under long-term contracts. The forecast of this revenue depends on the prices of the contracts, which in turn depend on a series of factors, such as the commercial strategies of each agent, which in turn depend on a wide array of factors. Generally, we may mention.

- The insight of sellers and buyers in future energy prices, including the PLD (if the PLD rises, some sellers may be tempted to reduce contracts, if prices are not attractive, and merely settle their energy; in case of a drop in the PLD, some sellers may be pressed to sell at lower prices to close deals, even if at a disadvantage).
- The production costs, highly affected by economic scenarios - mainly the dollar and civil construction.
- The expansion of the system generation - i.e., the massive entry of renewables by 2025 (to preserve incentives) may lead to an offer glut and drop prices.
- The expanded access to the free market leads to the opposite effect, increasing demand and, consequently, the prices.

It should be noted that the impact of all such effects on the market is subjective and unpredictable. For this reason, we elected the statistical adjustment of prices based on historical data, which so far has resulted in assertive forecasts.

It is important to note that the Energy Reallocation Mechanism (MRE) makes the amount available for sale depend on all participating hydroelectric power plants, leading to the need to forecast the dispatch of the joint system. It is also important to note the negotiated amount. The limit amount that each plant may sell in the market is set by its physical guarantee. Further, suppose the plant has allocated energy below the contracted sales after considering the MRE effects. In that case, it must buy the

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

remaining "guarantee" at PLD-sensitive prices, which already present a risk given their volatility. It should also be noted that revisions of physical guarantees are expected (2022 and 2027) from the power plants that did not have the revision applied to Eletrobras plants. Amounts resulting from this revision will have a relevant impact on the distribution of energy allocated among the power plants.

Lastly, as previously mentioned, it is possible that the hydroelectric power plants do not generate the total physical guarantee, not for lack of water, but lack of demand, as most of it, will be served by non-dispatchable power plants.

Thus, the negotiated amount, like the PLD and market prices, is subject to the dispatch risks - which permeates the entire negotiation.

Thus, any offer/demand may significantly impact the dispatch of the system and its byproducts: the GSF, PLD and market prices - and consequently, revenue.

To mitigate the addressed risks, we recommend a sensitivity analysis, as described in section VII.5, of the result from the energy commercialization, addressing the following topics:

1. Offer
    - Expansion and revision of the physical guarantee: sensitivity to the scheduled entry of renewables and inflexible thermal plants, as well as the results of the revised physical guarantees.
    - Hydrologic availabilities: sensitivity to hydrological affluence.
2. Demand
    - Sensitivity to increase in demand.

VII.5. Sensitivity factors for the base case

From the Summary Analysis of Risks proposed herein, the risks may be segregated into 1. Attention points to be prudentially addressed by Eletrobras Management; 2. Risks incorporated into the Financial Model, according to Chapter VI - Definition of Assumptions; and 3. Risks analyzed in sensitivity cases.

Classification: Confidential

DocuSign Envelope ID: 5292E165-687B-41EA-9396-CEA9A0E86A3B

The latter, in turn, are those addressed in this section. They will be analyzed on two fronts: 1. Projection of new GSF, PLD curves and envelopments and price curve, incorporating new assumptions; and 2. Sensitivity of the commercialization strategies prepared based on these curves.

To address the risks (i) section VII.2 - 1 - Reduction of physical guarantees of MRE; (ii) section VII.2 - 3 - Entry of renewables as from 2023; (iii) section VII.3 - 2 - Economic activity level, the following GSF, PLD curve scenarios and envelopments and price curves are proposed:

- Scenarios in which the physical guarantees will not be revised in 2023 and 2028;
- The scenario in which the load rises at an annual rate of 3.1%, as forecast in the PDE 2030;

Subsequently, to address the Commercialization Risks in section VII.4, limit commercialization strategies will be simulated for each curve generated, consisting of (i) change in the Hedge percentage; and (ii) composition of the commercialization portfolio, thus simulating more conservative and more aggressive strategies. From all such scenarios, it is appropriate to always assess upper-risk levels above P50, according to the note on risk 1 – Intrinsic risk of the business, of section VII.3 - Economic and Financial Risks regarding the incorporation of intrinsic risks into the financial flow.

I. Glossary

Added Value (VA): It refers to the marginal outcome from the difference between the Capitalization Scenario and the Current Scenario in the present value for each cash generating unit (CGU).

ANEEL: National Agency of Electric Energy, independent authority linked to the Ministry of Mines and Energy, was created to regulate the Brazilian electricity sector.

BASE DATE: Refers to the Base Date considered to determine the Net Present Value, i.e., January 1, 2022.

Capitalization Scenario or Capitalization Flow: Cash flow after the capitalization of Eletrobras as determined by Law 14.182/2021, which replaces the current concession contracts with 30-year concession contracts, considering the power plants as independent energy producers.

Cash Generating Unit (CGU): Refers to the smallest identifiable group of assets that generate commercial returns. For this report, it refers to the analysis of each power plant (HPP, SHP) of the scope of analysis.

CPC: Abbreviation for Accounting Pronouncements Committee. Conceived from the union of efforts and communion of different accounting entities to ensure the international convergence of accounting standards.

CSLL: "Social Contribution on Net Income", federal income tax (after calculating the operating income).

Current Scenario or Current Flow: Cash flow considering the concession contracts under current legislation.

DECOMP: Model used to determine the power generation dispatch that minimizes the total operating cost over the planning period.

DESSEM: Model for scheduling the operation of hydrothermal systems at an interval up to half an hour, and a horizon of up to two weeks.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

EBIT: Acronym for "Earnings Before Interest and Taxes". Refers to the profit before financial charges (interest payments) and taxes are discounted, an indicator that reflects the company's income before interests and tax deductions.

EBITDA: Acronym for "Earnings Before Interest, Taxes, Depreciation, and Amortization".

EBT: Acronym for "Earnings Before Tax", which corresponds to the difference between revenues and expenses, excluding taxes.

FCFF: Acronym for "Free Cash Flow to Firm". Refers to a measure of financial performance that indicates the cash generated after costs, taxes, and investments. It is commonly used for calculating project profitability without leverage.

Financial Model: Financial-economic model produced by Upside to determine the Total Added Value (**VA_{total}**) and the Grant Bonus.

Fortran: programming language designed to solve various types of equations and mathematical operations.

Forward Price: Energy's price for future delivery, which depends on the purchased volume, on the price of the contract, and on the buyers/sellers' strategy.

GF: Physical guarantee

Grant bonus: Portion of the total Added Value allocated: (i) 50% deducted from required indemnities and revitalizations to the Federal Government, with payment in a single installment; and (ii) 50% to the Energy Development Account (CDE), with payment flow to be defined by the Energy Policy National Council (CNPE).

GSF: "Generating Scaling Factor", Refers to the ratio between the volume of energy generated by the MRE power plants and the total Physical Guarantee of these power plants, which is calculated monthly.

Hedge: instrument to secure prices of certain assets for future purchase or sale. Thus, the risks offered by fluctuations in the financial market are reduced. In this regard, the company can ensure the amount it wishes to pay or receive on a certain date.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

IR: "Income Tax", federal income tax (after calculating the operating income).

IRR: "Internal Rate of Return", based on the annual free cash flow balance (investments + pre-operating expenses – net income), less depreciation and cash inflows and outflows from financing.

IS: Income Statement for the Year.

Marginal Cash Flow: Refers to the difference, for each Cash Generating Unit (CGU), between the flow from the new concession contracts defined by Law 14182/2021 (Capitalization Scenario) and the pre-capitalization cash flow (i.e., before the effects of Law 14182/2021 or Current Scenario). The marginal cash flow discounted by the discount rate to be defined (WACC) will result in the Added Value for each CGU.

Matlab: high-performance interactive software aimed at numerical calculation.

MM: Million.

MRE: Portuguese Acronym for “Mecanismo de Realocação de Energia”, meaning **"**Energy Reallocation Mechanism", refers to the mechanism for sharing the risks associated with optimizing electricity resources of the National Interconnected System – SIN.

Neural Network: According to the definition presented in the public website from the Institute of Mathematical and Computational Science from the University of São Paulo (ICMC-USP), artificial neural networks are computational techniques that uses a mathematical model inspired by the intelligent organism’s neural structure that acquire knowledge through experience. Available at: <https://sites.icmc.usp.br/andre/research/neural/#intro>. Accessed on: 12/23/2021.

Newave: Model that estimates the future cost of energy and translates to DECOMP the impact of the use of water stored in the reservoirs.

NPV: "Net Present Value" is the sum of future free cash flows and a residual value, brought to the present value at a certain discount rate.

O&M: Operation and maintenance.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

ONS: “Operador Nacional do Sistema” [National System Operator], a Brazilian private non-profit entity in charge of coordinating and controlling the operation of the electricity generation and transmission facilities of the National Interconnected System.

OPEX: "Operational Expenditure". Designates the amount that shall be expended to maintain the capital assets of a certain company in operation, namely equipment and installations.

PIE: “Produtor Independente de Energia” [Independent Energy Producer], a regime under which revenue is obtained through contracts in a Free Trading Environment.

PIS/COFINS: "Social Integration Program and Contribution to Financing Social Security", federal taxes levied on gross revenue in the non-cumulative regime.

PLD: “Difference Settlement Price” (spot price), used to assign a value to the volumes of energy settled through the Electric Energy Trading Chamber–CCEE (difference between electricity contracted and electricity consumed or generated).

P-value: The p-value is defined as the probability of observing a test statistic value greater than or equal to the one actually found. The naming conventions P10, P25, P50, P75 and P90 used in this Report indicate this level of probability at 10%, 25%, 50%, 75% and 90% generally applied at a level of NPV.

REH: “Ratifying Resolution”, public consultation document published by ANEEL.

Relevant fact: Refers to the document published by Eletrobras on February 23, 2021, which comments on assumptions considered and results

R-Squared: A statistical measure that determines the proximity of the data to the fitted regression line – also known as the “coefficient of determination”, or the explanatory degree of a linear regression. The closer to 1, the better the statistical fit to the variable explained.

Total Added Value (VA_{total}): It refers to the sum of each added value for every power plant that is object of this Report analysis. It is discounted from the value the indemnities of Tucuruí HPP and Curuá-Una HPP.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Variable: Critical Variables are those that, when modified, produce significant behavior and performance shifts on the project. Consequently, they affect the project's Internal Return Rate (IRR), Shareholder's Return (Shareholder IRR), and so on. Non-critical Variables are those that do not significantly affect the results from the project. It can be used, though, as flags for other events that might influence the project's result.

WACC: Acronym for "Weighted Average Cost of Capital". It represents the discount rate to be used to determine the discounted cash flow available to the firm. Determined by the opportunity cost of shareholders and the cost of third-party capital, weighted by their amounts.

II. Disclaimer

Upside Finanças Corporativas Ltda. ("Upside") was contracted by Centrais Elétricas Brasileiras S.A. - Eletrobras ("Eletrobras" or "Company") to provide specialized services to support the decision of the senior management, which aims to define the grant amount in the possible privatization process of the Company, establishing scenarios, evaluating the positive and negative impacts related to the submission of Provisional Measure (MP) 1031/21 by the Ministry of Mines and Energy (MME) to the House of Representatives, as well as Relevant Fact published by Eletrobras on 02/23/2021, and possible regulatory alternatives, as provided for in the Auction Notice of Electronic Auction DSS 10/2021 ("Auction Notice") and its Exhibits (Exhibit I of this Report). This Economic and Financial Study Report - Calculation of the Grant Amount ("Report" or "Study") with the data forward by CNPE for the definition of the granting aggregated was prepared by Upside based on information and assumptions provided by the Company, as well as on public information and critical variables converged by Upside and Eletrobras ("Information"), without Upside's independent verification of such Information.

Upside used the exact Information presented or discussed with the Company and, in preparing the Report, it was considered that the Information reflects the Company's most accurate parameters and assessment of the business and the markets in which it operates. Upside adopted that the Information is true, accurate, complete, and sufficient and that no other information that could be relevant in the scope of the work was not made available to Upside; therefore, no evaluation, verification, or inference on the Information was performed, so Upside undertakes no responsibility for independent investigations into the Information.

This Report does not represent a proposal, request, advice, or recommendation from Upside about any investment or divestment decision, of any nature, present, or future ("Transaction").

Upside's analysis does not include legal, contractual, environmental, land, corporate, tax, accounting, fiscal, and/or technical audit services; thus, Upside will only

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

be responsible for the advisory services provided within its scope of work, as established in the Auction Notice (Exhibit I of this Report), not including the verification and criticism of any assumptions and other legal, contractual, environmental, land, corporate, engineering, tax, accounting, fiscal and/or technical data not expressly contracted. Eletrobras shall carry out its own independent analysis of the aspects not expressly contracted, directly or through specialized consultants.

The base date used in this Report is January 1, 2022 ("BASE DATE"), and the Report was concluded on December 28, 2021. This Report is based on Information made available to Upside until the date of its conclusion, considering the market, economic, and other conditions as they were presented and how they could be evaluated up to the completion date. Although future events and other outcomes may affect the conclusions presented in this Report, Upside has no obligation to update, revise, rectify, or revoke this Study, in whole or in part, because of any development or information made available after the completion date or for any other reason or subsequent event, unless expressly mentioned in the contract.

In addition, this Study may contain forward-looking statements, forecasts, estimates, and projections ("Forward-Looking Statements"). Upside does not undertake any responsibility regarding the Forward-Looking Statements contained in this Report, nor regarding their correctness, accuracy, completeness, and sufficiency, as well as the format they present. The financial calculations contained in this Report themselves may not result in an accurate sum due to rounding.

As the analysis and figures are based on forecasts of future income provided by or which data were provided by the Company, they do not necessarily suggest the achievement of actual financial income, which may be significantly more or less favorable than those indicated in the Report. If any of the premises and related variables listed does not materialize or if, in any case, the Information proves to be incorrect, incomplete, insufficient, or inaccurate, the conclusions of this Report may change substantially. Considering that these analyses are intrinsically and inevitably subject to uncertainties, being based on various events and factors beyond our control

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

and the control of the Company, Upside will not be held liable if future incomes are substantially different from those incomes presented in this Report.

All financial projections that have been and will be made for Eletrobras and made available by Upside have been or will be prepared in good faith, based on reasonably acceptable assumptions.

Although this Report contains a risk analysis, the treatment of identified risks or any suggestion, recommendation, assessment or critique of the risk mitigation strategy is not included in the scope of Upside, since they are not provided for in the Auction Notice (Exhibit I of this Report). The Company has its own risk analysis and management strategy, to which Upside did not have access, Upside performed its analysis for the sole purpose of supporting the analysis of attractiveness scenarios by Eletrobras. Moreover, Upside does not intend to exhaust the risks associated with Eletrobras' privatization process in this Report, but merely to identify them and, when necessary, consider them in the economic and financial modeling covered in this Study. Accordingly, the Company should base its decisions on its own risk analysis, or with the assistance of specialized third-party consultants. Therefore, under the terms and limitations of the Auction Notice (Exhibit I of this Report), Upside shall not be responsible for any treatment, management or mitigation of risks, which should be performed by Eletrobras.

Furthermore, the Auction Notice (Exhibit I of this Report) also does not provide for any definition, recommendation, suggestion, evaluation or critique of the energy trading strategy, which was defined and will be implemented by Eletrobras. In this regard, Upside used the energy trading guidelines determined by Eletrobras, without conducting any kind of gaging, critique or review of these guidelines, and the projections made are not intended to replicate specific trading strategies or subjective perceptions/expectations, which are impossible to predict. That having been stated, the modeling performed by Upside sought to estimate the value of energy trading based on concrete data available up to the BASE DATE. Hence, Upside is not responsible for the energy trading strategy adopted by Eletrobras.

It is important to note that, in the December 15th, 2021 Plenary Session of the Brazilian Federal Court of Auditors, available at the Official YouTube Channel of the referred Court, (https://www.youtube.com/watch?v=Tq2chFMol5U, accessed in 12/16/2021), during oral manifestation regarding case TC008.845/2018-2, in procedure with the objective of *"monitoring Eletrobras privatization, its sectorial impacts, for the consumer and for the Union, considering even the scenario in which the privatization is not carried out",* Minister Benjamin Zymler exposed the impossibility to predict what shall happen in a 30 years time frame – term of extension of the Eletrobras grants.

During his speech, the Minister highlighted that "*any study* [of economic-financial modeling, notably on the privatization of Eletrobras] *is not a mathematical equation in which the aim is to verify the value of the variable x*". Thus, it is not possible that the results of the economic-financial modeling are exact and precise, even when the studies use "*sophisticated methodologies*". The reason for this is that the studies use mathematical models that "assume that the future is a statistic projection of the past", i.e., "*are probabilistic methods that aim the future*", but yet, are subject to failure – not due to lack of diligence or knowledge of the analysts, but rather because of the limitation of the mathematical instruments available.

Thus, as recognized by Minister Benjamin Zymler, there is no instrument capable of predicting the future energy prices – which is the main variable of this Study. To conduct the necessary price projections, Upside has included in its Technical Team renowned specialists of the Brazilian electric sector, as listed in section III.2.2 – Qualifications of Specialist Professionals. Moreover, Upside has used the best methodology currently available.

The Report must be read and interpreted considering the restrictions mentioned herein; therefore, it does not constitute a judgment, opinion, or recommendation to any Interested Parties and third parties regarding the convenience, fairness of price, or opportunity of any Transaction. Upside, therefore, does not undertake and is not responsible for any damage or loss, direct or indirect, or loss of profits that may arise from this Report.

Economic and Financial Study

Calculation Amount of the Grant – Eletrobras

Complete report with the results and the detailing of the assumptions, methodology and risk factors used for the elaboration of the economic financial model

This Report is provided in the English and Portuguese languages. In the event of a conflict between the English text and the Portuguese text, the Portuguese version shall prevail.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

III. Initial Considerations

This Study is part of the process of Eletrobras' privatization. On February 23, 2021, the federal government delivered to the National Congress the Provisional Measure (MP) 1031/2021, to allow the National Bank for Economic and Social Development (BNDES) to proceed with studies that would structure the capitalization of Eletrobras.

After the regular procedure in both Houses of the National Congress, the House of Representatives approved Provisional Measure (MP) 1031/2021 on June 21, 2021, which was submitted for approval of the Brazilian Presidency. On July 12, 2021, such Provisional Measure was converted into Law 14182/2021, with vetoes by the Brazilian Presidency.

In the period between the publication of Provisional Measure 1031/2021 and the publication of Law 14182/2021, Eletrobras released the Auction Notice (Exhibit I of this Report) of Electronic Auction DSS 10/2021 ("Auction Notice") for *"hiring specialized services to support the decision of the senior management, which aims to define the value of the grant in the possible privatization process of the Company, establishing scenarios, evaluating the positive and negative impacts related to the submission of Provisional Measure 1031/21 by the Ministry of Mines and Energy (MME) to the House of Representatives, as well as the relevant fact published by Eletrobras on 02/23/2021, and possible regulatory alternatives, according to the conditions established in the Auction Notice"*.

In this context, according to Contract No. ECE-DSS-4588/2021 ("Contract"), entered into on July 7, 2021, Upside was hired by Eletrobras to calculate the value of the grant in the Company's privatization process, in support of the decision of the high management of Eletrobras.

That said, this chapter will expose the context of the work that resulted in this Report.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

III.1. Justification of the Works

Initially, it is observed that according to Law 14182/2021, the privatization of Eletrobras is subject to the granting of new generation concessions and attributes to the National Energy Policy Council (CNPE), chaired by the Minister of State for Mines and Energy (MME), the competence to calculate the Total Added Value and the consequent grant bonus.

Indeed, at an extraordinary meeting held on August 31, 2021, the CNPE determined, under CNPE Resolution 15/2021, that the grant bonus to be paid to the Federal Government will be R$ 23.2 billion. At the same time, it established that R$ 29.8 billion of the Total Added Value would be allocated to the Account for Energy Development (CDE, Portuguese acronym for “Conta de Desenvolvimento Energético”), as determined by Law 14182/2021. Subsequently, CNPE Resolution No. 30, of December 21, 2021, amended CNPE Resolution No. 15, changing to R$ 25.3 billion in grant bonus to be paid to the Federal Government, in addition to R$ 32.1 billion of the Total Added Value allocated to the CDE.

Nonetheless, while the calculation had not yet been determined, Eletrobras opted for an independent analysis through a specialized consulting firm for this scope, to add knowledge and experience so a better analysis of the capitalization proposal could be made, in order to support the Proposal of the Eletrobras Management Team that will be submitted to the General Meeting of Shareholders.

This hiring is justified because, as described in the Auction Notice (Exhibit I of this Report), good Corporate Governance is measured by the four pillars Corporate Responsibility, Accountability, Equity, and Transparency. Thus, the company must conduct its business diligently to perpetuate itself and must ensure its economic and financial viability, reduce negative externalities and increase the positive externalities of its business and transactions, considering, in its business model, the various capitals (financial, human, intellectual, etc.) of the company in the short, medium, and long term.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

It is noteworthy that, despite the BNDES having the competence to execute and monitor the privatization process (art. 1, Paragraph 3 of Law 14182/2021), Eletrobras is responsible for contracting the specialized technical services necessary to carry out the issue and public offering of shares, as well as adopting the other measures necessary to implement the capitalization, according to art. 1, paragraph 1, items III and IV, of CPPI Resolution 176, of April 27, 2021.

Therefore, executing the economic-financial modeling of the premises and methodology approved by Eletrobras is an adequate measure to the current legislation, as well as the Company diligence duties. That said, the history and main experiences of the consultancy advising Eletrobras and which prepared this Report are highlighted below.

III.2. About Upside

Upside was founded in June 2000 by Humberto Bizerril Gargiulo, previously an executive at large national and international financial institutions such as Unibanco, Banco Santander, Citibank, Lloyds, and Chase.

Upside was a pioneer in advising the largest agents in the electricity sector and has in its track record operations of great relevance, such as the funding and advisory services at auction for the Belo Monte HPP (11,233.1 MW), Substations and Transmission Lines of the Complex Madeira River Hydroelectric (2,300 Km), First Project Finance with China Development Bank in the country and Petrobras' Logum pipeline.

Since its foundation, Upside independently advises the most diverse investment decisions in the infrastructure area, promoting debt and equity structuring solutions with national and international sources.

During its more than 20 years of operation, Upside has already provided services to the main companies in the infrastructure sector, such as Ecovix, Duke Energy, Planova, CPFL, Eletronorte, Eletrosul, BR Distribuidora, Desenvix (currently

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Stratkraft Energias Renováveis), CEEE, Norte Energia, Chesf, Furnas, Sinop, State Grid, Engie Camargo Correia, GE.

With remarkable expertise in advising on Public Concession Auctions, Economic and Financial Analysis, Business Plans, Corporate and Structured Finance, Due Diligence, Project Finance, Issue of Technical Reports, structuring of public-private partnerships, Mergers and Acquisitions (M&A) and Valuation, Upside has a position with the largest banks in the sector in the Anbima Ranking of Project Financing from 2011 to 2019, occupying the 1st place as an Independent Financial Advisor.

In addition to being a pioneer in advising large agents in the infrastructure sector throughout the country, Upside advised, in total, R$ 11.76 billion in Valuation and M&A. Added to the other scopes of the company's work, the value of projects advised exceeds R$ 102.9 billion, divided into 135 transactions.

Upside is committed to the highest standards of integrity and business ethics and, convinced that the best path requires good practices and corporate governance, has invested in hiring a Compliance Officer and in the following management and internal control tools: Code of Conduct, Ethics Channel, Due Diligence of Business Partners, and Training in Business Ethics - Compliance.

III.2.1. Main Company Experiences

Table 1 below lists Upside's main experiences throughout its twenty-one (21) years of operation.

Table 1: Upside's Main Experiences

Contracting Party	Project	Description	Transaction Value	Year
Furnas	Tijoá Participações	Economic and financial evaluation of Tijoá Energia.	CONFIDENTIAL	2020
CEEE-GT	Lot 6 of the Transmission Auction (TA) ANEEL 001/2020	Financial advisory service at auction for granting a government service concession through a bidding process in the form of an auction.	191,950,000.00	2020
CEEPower and Brafer	Litoral Sul Transmissora de Energia (LSTE)	M&A advisory on the sale of LSTE to EDP Energias Renováveis.	405,000,000.00	2019

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

CES	HPP Sinop	Advisory in the long-term fundraising process (issue of simple debentures)	236,000,000.00	2018
State Grid	Canarana Transmissora de Energia	Advisory on ANEEL Transmission Auction and Advisory on Fundraising (BNDES)	180,980,000.00	2018
State Grid	Paranaita Ribeiraozinho Transmissora de Energia	Advisory on ANEEL Transmission Auction and Advisory on Fundraising (BNDES)	922,670,000.00	2018

III.2.2. Qualifications of Specialist Professionals

In alphabetical order:

Alexandre Akira Kariatsumari – Graduated in Civil Engineering from the State University of Campinas (Unicamp), graduating in MBA EAD Finance at Foundation for Research and Development in Administration, Accounting and Economics (Fundace) at FEA-RP/USP. He has experience in fixed assets valuation for Purchase Price Allocation (PPA), Impairment test, management and accounting purposes. He is currently a financial modeling analyst at Upside, assisting in the economic and financial valuation, fundraising processes and technical reports.

Edinaldo Paulo Tenório V. do Amaral – Graduated in Law from the Federal University of Pernambuco (UFPE), he took a course in Project Finance from the Brazilian Association of Infrastructure and Basic Industries (Abdib). He is currently a partner at Amaral, Paes de Andrade e Figueirêdo Advogados, and is specialized in public law, with experience in Administrative, Constitutional, Economic, and Regulatory Law. His expertise includes the structuring of concession projects and legal advisory for companies participating in public competitions.

Edvaldo Santana – Ph.D. in Production Engineering from the Federal University of Santa Catarina. Full Professor at UFSC from 1994 to 2013. Market Superintendent at ANEEL between 2000 and 2005. Officer at ANEEL for two terms of office between 2005 and 2013. CEO of ABRACE between 2016 and 2019. Vice President of

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Strategies and New Business at Electra Energy until March 2020. Lattes Curriculum: http://lattes.cnpq.br/7860414535351286

Gustavo Oshiro Henriques - Professional of the Execution Team. He has over ten (10) years of experience, and his curriculum includes activities related to corporate finance in Brazil, such as advisory, structuring, and fundraising via banks and capital markets, from which the operations of State Grid Brazil Holding and HPP Sinop stands out. Bachelor's in Economics from the University of São Paulo (USP), he has experience developing economic and financial models and tools for Project Finance, project evaluation and analysis. He coordinated the preparation of appraisal reports, financial due diligence, sectorial and macroeconomic technical notes. He led the participation in financial advisory services for infrastructure concession auctions.

Humberto Bizerril Gargiulo - Leadership Professional. With more than forty (40) years of experience, he has in his resumé, in the last five (5) years, activities related to Valuation of the following energy companies in Brazil: HPP Sinop, Transmissora Porto Alegrense de Energia (TPAE), Transmissora Delmiro Gouveia (TDG), Extremoz Transmissora Do Nordeste (ETN), Pantanal Transmissão S.A., Firminópolis Transmissão S.A., Caldas Novas Transmissão S.A., and Paineira Participações e Empreendimentos Ltda. (according to its shareholding in SHPs, WPPs, and HPPs). Prior to the last five (5) years, the professional coordinated the Valuation service of Rio Grande Estaleiro (for Ecovix), of Linha Verde Transmissora de Energia S.A. (LVTE), three (3) wind projects (for Cemig), TPP Barcarena (for Eletronorte), and confidential electric energy generation projects (for CPFL). Post-Graduated in Management Development by PDG and founder of Upside, he has experience in finance, accounting, and risk analysis. Bachelor's degree in law from the University of São Paulo, he has worked with Treasury, Capital Markets, and Corporate Finance in global financial groups such as Citibank, Lloyds, and Chase. Former Officer of Corporate Products at Unibanco, Executive Director of Structured Finance at Banco Santander and visiting speaker at IBMEC-SP and FGV-SP.

Leontina Pinto – Electrical Engineer from the Federal University of Rio de Janeiro – UFRJ (1979), Master's in Systems Engineering in Optimization (COPPE-

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

UFRJ, 1981), and Ph.D. in Applied Mathematics (IM/UFRJ, 1986). She was a researcher at the Centro de Pesquisas de Energia Elétrica CEPEL, a professor at COPPE/UFRJ and PUC/RJ. She is currently Executive Officer of Engenho Pesquisa, Desenvolvimento e Consultoria. With over 30 years of experience in the electric energy market, the expert has more than 300 published works. Among the main subjects of research are: system planning and reliability, optimal management of energy systems, the study of geomagnetic phenomena, models for risk analysis, models for forecasting climate scenarios, models for forecasting futures market, and energy trading scenarios. Lattes Curriculum: http://lattes.cnpq.br/9577413795829532

Lucas Pimentel – Lawyer, specialized in energy law, focused on acting on structuring electric energy generation projects and consulting advisory in energy law and regulatory law. Graduated in Law at the Federal University of Pernambuco. Post-Graduate at LLM in Business Law at Getulio Vargas Foundation – FGV. Former Coordinator of the Energy Law Commission of the Escola Superior de Advocacia de Pernambuco – ESA/PE. Secretary for Regulatory Affairs at the National Institute of Clean Energy – INEL.

Luiz Guilherme G. S. Hoelz - Bachelor of Business Administration, with a specialization in Finance, from Northeastern University, Boston, USA. He started his career at Itaú Unibanco in São Paulo and during his time in the United States he worked as a Trading Coordinator at BNY Mellon and as a Credit Research Analyst at the asset manager Gratham, Mayo, van Otterloo & Co. Today he is an Associate Financial Analyst at Upside, working with Economic and Financial Valuation, M&As and Debt Capital Markets.

III.3. Terms and Conditions of Hiring

Eletrobras published the Auction Notice (Exhibit I of this Report) for contracting specialized services aiming to define the grant value in the possible privatization process, to assist the Company's senior management in its decision-making. After winning the bid, Upside ("Contracted Party") entered into, on July 7, 2021, the contract

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

with Eletrobras ("Contracting Party"). Therefore, the main terms and conditions of this contract will be explained below.

III.3.1. Terms and Contractual Obligations

Although the Contract was entered into on July 7, 2021, there was a preceding condition linking the Contract's validity to the conversion of Provisional Measure 1031/2021 into law, according to clauses Three - Deadlines and Twenty - Condition Precedent of the Contract. Consequently, the term of effectiveness of the Contract began on July 12, 2021, the date of conversion of Provisional Measure 1031/2021 into Law 14182/2021.

Regarding the execution period, the Contract established ten (10) weeks, and the first meeting between Upside and Eletrobras, in which Eletrobras provided Upside with the operational guidelines for the work, took place on July 20, 2021. Therefore, in the week of July 12 to 16th, 2021, the provision of services had not yet started by the Contracting Party, thus the counting of the execution period started in the following week - from July 19 to 23rd, 2021.

Additionally, both parties have obligations arising from the contractual relationship that must be observed for the correct progress of the work and compliance with the established deadlines. Thus, according to Clause Nineteen of the Contract, Eletrobras' obligations are:

- 19.1. Upon faithful compliance with the agreed conditions, **ELETROBRAS** shall pay the **CONTRACTED PARTY** for the execution of the service.
- 19.2. Facilitate, in a timely manner for the **CONTRACTED PARTY**, the access to documents and/or information available which eventually becomes necessary for the execution of the services.
- 19.3. Provide the **CONTRACTED PARTY's** physical access to **ELETROBRAS** facilities.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- 19.4. Guide the **CONTRACTED PARTY** regarding the indication of possible sources of information which eventually become necessary for the execution of the service.
- 19.5. Appoint a responsible employee to monitor the execution of the Contract.
- 19.6. Notify the **CONTRACTED PARTY** about any irregularities in the execution of the subject matter.

III.3.1.1. Contractual addendum

After having elapsed the ten (10) weeks provided for in the term of execution of the services, the works had not yet been completed, due to delays arising from the supervening facts mentioned below:

1. Changes in legislative provisions: Following the conversion of PM 1031/2021 into Law 14182/2021, which occurred after the publication of the Auction Notice (Exhibit I of this Report) and the signing of the Agreement, the legal text applicable to the economic and financial model was substantially changed and, therefore, the scenario constructed in Law 14182/2021 added new specificities and a greater level of complexity in the assumptions. Among them, we can mention the GSF and PLD, determined by a mathematical optimization and prediction model in a complex calculation, which can exceed 24 hours to be updated, involving the forecast of several scenarios of hydrology, solar radiation, and anemometric forecast for the entire electricity system and the consequent optimization of variables. The extensive change in the most elementary assumptions of the optimization model required the adoption of a more fundamentalist analysis of the assumptions of the optimization model – and the consequent customization to the new values provided. It is worth noting that the results generated, considering the significant changes in the assumptions, are not systematically simulated as a simple or routine update. The coherence of the scenarios needs to be recursively analyzed considering the feasibility of the new configurations proposed to the system.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

2. Water crisis: The current water crisis is considered the worst in the last 91 years[1] ; it has already impacted the 2022 Gross Domestic Product (GDP) growth forecasts and is putting pressure on inflation[2]. The time frame for the end of this crisis is uncertain. Therefore, there is a demand to prepare many more scenarios than initially foreseen, and these are not usual scenarios, but rather ones capable of altering the nation's energy planning. At the time the Auction Notice (Exhibit I of this Report) was issued, rainfall expectations generated concern with the reservoir levels; however, there was still no concrete scenario of the severity and lack of predictability that this fact would take, the effects of which are still difficult to measure.

3. Publication of CNPE results and discussion of assumptions: Calculating the amount of the concession granting is a responsibility of the CNPE, and Upside was engaged to conduct an independent analysis to support Eletrobras' decision-making process. It is worth noting that the duration of the services depends on the publication of these assumptions, as they are essential for the execution of the services. Despite the services having started on July 19, 2021, the publication of the initial grant amounts and physical guarantees only occurred another six (6) weeks later, on September 1, 2021. After this publication, the results of the services provided during these six (6) weeks needed to be revised. This is because such publication once again changed the deck of assumptions of the predictive economic and financial models of hydrological risk, or Generation Scaling Factor (GSF) and Difference Settlement Price (PLD), which needed to be run and processed again. Subsequently, the published amounts needed to be critiqued and analyzed independently, which led to new runs of financial models. Also, throughout the services,

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

several meetings were held to discuss assumptions and, even after the ten (10) weeks of services initially planned, the aforementioned discussion had not ended. Lastly, in October 2021, CNPE was reviewing the calculations to publish new values and assumptions that would substantiate an Analysis of Advantages to be elaborated by the Contracted Party. This analysis, however, would not generate new sensitivities.

Considering the foregoing factors, in a request dated October 11, 2021, the Contracted Party requested an increase in the schedule time and fees stemming from the extension of the contractual term, with the following requests:

1. Extension of the contractual execution period for another eight (8) weeks and, in addition, another three (3) weeks after Eletrobras makes available the final CNPE data for the preparation and approval of the sensitivity analysis, i.e., 110% (one hundred and ten percent), considering the delay in the initially planned schedule, resulting from supervening facts, and the need to analyze the assumptions that are yet to be published by the CNPE; and

2. Increase in the contract value by 22.79% (twenty-two and seventy-nine hundredths percent), considering the actual increase in the amount of man-hours initially estimated, resulting from the events mentioned above, i.e., from factors exogenous to the Contracted Party's will.

The request was admitted and, on December 7, 2021, the Contracting Party and the Contracted Party entered into a contractual amendment establishing the schedule and price conditions listed above, in addition to extending the term of the Agreement for three (3) months, ending March 09, 2021.

III.3.2. Scope of Work

At first, it is highlighted that Upside's scope of work, according to the Auction Notice (Exhibit I of this Report), consists of supporting the decision of the high

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

management of Eletrobras, aiming to support the Company in the discussions on the value of the grant in the possible privatization process.

It is important to emphasize that, as stated in section III.1– Justification of the Works, the calculations of the grants were determined by CNPE, chaired by the MME, firstly at an extraordinary meeting held on August 31, 2021. Later they were reviewed and altered on December 21, 2021.

In these terms, the service provided by Upside consists of an independent analysis of the Contracting Party's cash flows, considering the current legislation related to the privatization process. The purpose is to provide technical support to Eletrobras management concerning economic and financial aspects so that the Company has greater reliability in the analysis of the calculation determined by CNPE, as well as to promote discussions related to said calculation, from a rational perspective and regarding the assumptions considered.

This Report presents, besides the content of the reports planned in the Public Notice (Appendix 1 from this Report) that were already forwarded to Eletrobras, the assessment of the data sent from CNPE for determining the aggregated value of the grants of the new concession contracts. They were defined on the terms of the legislation and regulation in effect. The data is going to be considered for the Analysis of the Advantages.

III.3.2.1. Auction Notice Guidelines

As established in the Auction Notice (Exhibit I of this Report), all methodologies, assumptions and variables used and necessary for the development of the services, which will be established based on the applicable legislation and regulations in force, as well as public information (not including private information), will be analised by Eletrobras, including, without limitation: (i) physical guarantee of hydroelectric power plants; (ii) hedge for hydrological risk (GSF) mitigation in the scenario of independent production exploitation regime; (iii) electrical losses; (iv) energy price; (v) quota

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

revenue; (vi) discount rate; (vii) risk premium; (viii) taxes; and (ix) business risk analysis.

According to the Auction Notice (Exhibit I of this Report), the projection of prices for energy commercialization will be based on market research for the concession period, along with a methodology commonly used in the market to project long-term prices.

Furthermore, according to instructions in the Auction Notice (Exhibit I of this Report), the calculation of the new Physical Guarantee of the hydroelectric power plants involved in the process will be developed using the methodology established in the current legislation, considering the base case (decks of the computational models involved in the calculation) and the specific assumptions considered by the Energy Research Company (EPE, from the Portuguese “Empresa de Pesquisa Energética”) for the calculation, both subject to the availability of public information (not private). It is noteworthy that, in the provision of services, the legislation and regulations in force throughout the Contract term will be considered.

In conclusion, as extracted from the Auction Notice (Exhibit I of this Report), the products for the provision of services are described in the following table:

Table 2: Products of the Provision of Services

ITEM	PRODUCT
1	Economic and financial model, prepared in Excel, unlocked, without hidden tabs, and with all available formulas, for calculating the grant amount, quantifying the financial impact using the discounted cash flow methodology. Input data are defined under Provisional Measure 1031/2021 and the relevant fact published by Eletrobras on 02/23/2021. Since these data are subject to change, the model should allow for appropriate variations. The model should predict, by power plant, the discounted cash flow of the current scenario of exploration by quota regime and independent production regime.
2	Tutorial for using and updating the economic and financial model for calculating the grant value of item 1.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

3	A complete report detailing the assumptions and methodologies used (which must take into account the terms of current legislation and regulations applicable to the case) to prepare the economic and financial model. In Portuguese and English.
4	Report with the analysis of attractiveness scenarios for Eletrobras considering the subject matter of Provisional Measure 1031/2021, observing the costs, risks (taking into account the applicable legislation in force, such as but not limited to ANA, ANEEL, etc.) and benefits associated with the change to free market, quantifying the financial impact using the discounted cash flow methodology. Explain the critical variables that influence the advantage, or not, under the change of operating regime for independent production, from the point of view of Eletrobras. In Portuguese and English.
5	a) Final revised model provided in product 1, considering the legislation, regulations, and final regulations issued on capitalization modeling. b) Final report that must evaluate, in addition to the abovementioned topics, the data that will be sent by the competent authority to define the Added Value to the grants of the new concession contracts under the terms of current legislation and regulations. In Portuguese and English.
6	Eight (8) executive meetings, with the preparation of specific material, within the scope of the previous items, with members of the Executive Board and Management Directors.

Source: Eletrobras Auction Notice (Exhibit I of this Report).

III.3.2.2. Definition of Power Plants

According to art. 1 of Law 14182/2021, the privatization of Eletrobras is subject to the granting of new concessions for Concession Contracts 007/2004-ANEEL-Eletronorte and 004/2004-ANEEL/Furnas. In addition, the Federal Government is authorized to provide new concession grants for concessions under the ownership or control, directly or indirectly, of Eletrobras, which have been extended under the terms of art. 1 of Law 12783/2013 (art. 2, item I, of Law 14182/2021), as well as for the Sobradinho HPP (art. 2, item II, of Law 14182/2021) and Itumbiara HPP (art. 2, item III, of Law 14182/2021).

As for the concessions mentioned in the articles above, it should be noted that the Concession Contract 007/2004-ANEEL-Eletronorte, of November 12, 2004, grants Centrais Elétricas do Norte do Brasil S.A. – Eletronorte the exploitation of the

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

hydroelectric potential of Tucuruí power plant and, through the Second Amendment to Concession Contract 007/2004-ANEEL-Eletronorte, of April 10, 2006, the Curuá-Una plant was included in this contract.

Also, pursuant to Concession Contract 004/2004-ANEEL-Furnas, dated on November 12, 2004, the state-owned company Furnas – Centrais Elétricas S.A. is the concessionaire of the Corumbá I, Estreito, Funil – RJ, Furnas, Marimbondo, Porto Colômbia, Itumbiara, and Mascarenhas de Moraes power plants.

Regarding the concession grants extended under Law 12783/2013, it is noted that the exploitation of the Coaracy Nunes power plant was granted to Eletronorte by Concession Contract 002/2012-ANEEL-Eletronorte, dated on May 7, 2012, and extended under the terms of the First Amendment 002/2012-ANEEL-Eletronorte, signed on December 4, 2012.

Also, regarding the grants of extended concessions, the Concession Contract 006/2004-ANEEL-CHESF, of November 12, 2004, grants Companhia Hidroelétrica do São Francisco - CHESF to explore the electric energy generation of Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Sobradinho, Funil, and Pedra.

Regarding the subject, the First Amendment to the Concession Contract 006/2004-ANEEL-CHESF, signed on December 4, 2012, extended the concession of the power plants of Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Funil, and Pedra, according to Provisional Measure (MP) 579/2012 – later converted into Law 12783/2013. The concession of HPP Sobradinho, in turn, was extended under the Third Amendment to the Concession Contract 006/2004/ANEEL/CHESF, of December 16, 2015, based on Law 12783/2013.

Therefore, the power plants that will be considered in this Study are: Boa Esperança (CHESF), Apolônio Sales (CHESF), Paulo Afonso I (CHESF), Paulo Afonso II (CHESF), Paulo Afonso III (CHESF), Paulo Afonso IV (CHESF), Luiz Gonzaga (CHESF), Xingó (CHESF), Sobradinho (CHESF), Funil (CHESF), Pedra

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

(CHESF), Coaracy Nunes (Eletronorte), Tucuruí (Eletronorte), Curuá-Una (Eletronorte), Corumbá I (Furnas), Estreito (Furnas), Funil – RJ (Furnas), Furnas (Furnas), Marimbondo (Furnas), Porto Colômbia (Furnas), Itumbiara (Furnas), and Mascarenhas de Moraes (Furnas).

Considering the above, the guidelines to be observed in the provision of services in reference are detailed below.

III.3.2.3. Commercialization Methods

During the execution of the services that comprise the scope of Upside, it will be necessary to consider the form of energy commercialization of each power plant subject matter of the analysis, for which the possible options are: (i) the Quota Regime; (ii) the guidelines established in Law 13182/2015; or (iii) the provisions applicable to the Independent Electric Energy Producer (IEEP).

In Quota Regime – governed by Law 12783/2013 –, the electric energy generator provides a Physical Guarantee of energy and power of the hydroelectric power plant and, in return, receives the Annual Generation Revenue (RAG, Portuguese acronym for “Receita Anual de Geração”). RAG is an amount in Reais (R$) subject to adjustments for unavailability or generation performance, composed by the regulatory costs of operation, maintenance, administration, remuneration, and amortization of the hydroelectric power plant, adjusted annually in July, in addition to being revised every 5 years. From the power plants subject matter of this Study, the following are under this energy commercialization regime: Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Funil, Pedra, Coaracy Nunes, Corumbá I, Estreito, Funil – RJ, Furnas, Marimbondo, and Porto Colômbia.

To provide resources for the implementation of electric energy projects, Law 13182/2015 authorized the state-owned companies Companhia Hidro Elétrica do São Francisco and Furnas Centrais Elétricas S.A. to participate, respectively, in the Northeast Energy Fund (FEN), and the Southeast and Midwest Energy Fund (FESC).

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The power plants subject matter of this work submitted to Law 13182/2015 are Sobradinho (CHESF) and Itumbiara (Furnas).

In summary, part of the revenue from contracts of power plants governed by this law entered into in the Free Contracting Environment (ACL, Portuguese acronym for “Ambiente de Contratação Livre") are destined to the FEN or FESC, according to specific conditions, not mentioned herein, under art. 10, Paragraphs 16 and 18, and art. 22, Paragraph 16, of Law 11943/2009 (amended by art. 5, Law 13182/2015). Also, by Law 13182/2015, as of 2030, in the case of Itumbiara (art. 10, Paragraphs 4 and 16), or 2032, for Sobradinho (art. 5, which amends art. 22, Paragraphs 3 and 4, of Law 11943/2009), the amounts of contracted energy shall be uniformly reduced at the rate of one-sixth each year and such reductions are subject to the allocation of physical guarantee quotas of energy and power (Quota Regime).

However, with the privatization of Eletrobras, the Sobradinho and Itumbiara regime, and the other power plants that are the subject matter of this Study will continue to be operated for independent production according to art. 3, item II, of Law 14182/2021.

Regarding the aforementioned regime, Law 9074/1996 (art. 11 and 12) grants special conditions for Independent Electric Energy Producers (IEEPs) based on cogeneration units. Under this law, IEEP is anyone who receives a concession or authorization to produce electric energy for the sale of all or part of the electric energy produced at their own risk and expense. As for the power plants subject matter of this analysis, the HPPs Tucuruí, Curuá-Una, and Mascarenhas de Moraes are considered IEEPs.

III.4. Structure of the Report

This Study aims to present (i) the detailing of the assumptions, the variables and methodology used to elaborate the financial-economic model; (ii) the attractivity scenarios analysis for Eletrobras, observing the costs, the risks and the benefits associated to the change to free market, quantifying the financial impact by using the

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

discounted cash flow methodology. It is also going to explain the critical variables that influences, or not, the Analysis of the Advantages under the transition from the exploration regime to independent production; and (iii) the data assessment that were sent from the competent authorities (CNPE) for determining the grants' aggregated value for the new concession contracts.

The Study starts in chapter IV- Legal and Regulatory Sensitivity Analysis by a risk analysis of legal issues, which examined the matters of extension of the granting, such as right of extension of the granting, hydrological risk, and other subjects, as well as the indication of their possible impacts on the cash flow to be developed.

The report then presents the methodology in chapter V, which will be discussed in terms of setting up the proposed financial flow in section V.1, preparation of the discount rate in section V.2, timely presentation of the physical guarantee values adopted in section V.3 and the energy forecast aspects in section V.4 of the projected values of GSF, PLD (Portuguese acronym for "Preço de Liquidação de Diferenças"), and price curve.

In chapter VI - Definition of Assumptions, the premises and variables used in this Study will be presented in order to define, for the Current Scenario and the Capitalization Scenario, the general assumptions of revenues, of costs and operating, macroeconomic, tax and fiscal expenses, and the sector charges applicable to the Cash Generating Units (CGU). This chapter closes displaying section VI.5, which presents, for the Base Case, the commercialization strategy and the different p-values of the curves elaborated from the methodologies discussed in the previous chapter.

Next, chapter VII - Summary Analysis of the Risks, using the methodology described in the section VII.10, consolidates and describes all the risks addressed in this Report and points out the directions for the sensitization of the analyses that will be done in the next chapter VIII – Results. Lastly, chapter VIII aims to set out and analyze the results achieved, particularly for the Base Case, but also the proposed convergence and sensitivity analyses. In section VIII.3, a pause in the Report is proposed, for an exercise on how the inflexibility of the thermal plants proposed by Law 14182/2021 indirectly affects the Total Added Value.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

As a final product of this analysis, in section VIII.5 – Risk rating, the results achieved from the sensitivity analyses are related to the Base Case to understand the quantitative effect – when calculated – of the risks identified in the previous chapter VII - Summary Analysis of the Risks. Thus, we seek to understand the map of risks involved in the possible capitalization of Eletrobras, which presumably can be considered by Company's Management. In conclusion, chapter IX – References presents the bibliography used in this Study.

IV. Legal and Regulatory Sensitivity Analysis

Although Upside is not directly engaged in the assessment of legal issues, analyzing certain aspects related to the capitalization model provided for in Law 14182 is relevant to indicate the risks associated with this scenario, considering the current legislation and regulation applicable, as per Terms of Reference, Exhibit I of the Auction Notice (Exhibit I of this Report). In this regard, within our analysis, we took into account the following issues:

- Extension of Eletrobras Grants. Form of extension of the Eletrobras HPP concession grants set forth in Law 14182/2021 and applicable regulatory regimes.
- Right to Extend Eletrobras Grants due to the MRE. Eletrobras acquired the right to extend HPP grants, as established in REN ANEEL 2919/2021 and REN 2932/21. Define which treatment will be given to the Tucuruí, Itumbiara, Mascarenhas de Moraes, and Sobradinho HPPs, considering that the extension of their concession grants was already expressly established before Law 14182/2021.
- Hydrological Risk – Impacts in case the expectation of modifications in the current settings of the Energy Reallocation Mechanism – MRE does not occur because of the entry into operation of new Thermoelectric Power Plants as provided for in Paragraph 1 of Art. 1 of Law 14182/2021, contracted with 70% inflexibility.
- Analysis of Other Points. Analysis of other regulatory and legal points that may impact the privatization of Eletrobras.

IV.1. Extension of Eletrobras Grant

Law 14182/2021, through art. 1, expressly provides for conditions, faculties, and requirements related to the privatization of Eletrobras and the extension, by the Federal Government, of certain HPP concessions currently linked to the company:

"Art. 1 The privatization of Centrais Elétricas Brasileiras S.A. (Eletrobras) will take place as provided for in Law 9491 of September 9, 1997, and in Paragraph

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

1 of this article and will be ***conditioned on the granting of new electric power generation concessions for Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP),*** *signed by the Federal Government and Furnas Centrais Elétricas S.A. (Furnas), under the rules and conditions established in this Law.*

Paragraph 1 The privatization of Eletrobras will be carried out in the form of capital stock increase, through the public subscription of ordinary shares with a waiver of the subscription right by the Federal Government, and ***the granting of new electric power generation concessions will be carried out for thirty (30) years, from the date of signature of the new agreements referred to in the caption of this article****, and the contracting of thermoelectric generation powered by natural gas will be carried out by the granting authority, in the form of a capacity reserve auction referred to in art. 3 and 3-A of Law 10848, of March 15, 2004, in the amount of one thousand megawatts (1,000 MW) in the Northeast Region in the metropolitan regions of the Federation units that do not have in their capital natural gas supply point on the date of publication of this Law, in the amount of two thousand five hundred megawatts (2,500 MW) in the North Region distributed in the state capitals or metropolitan region where it is feasible to use the existing proven national natural gas reserves in the Amazon Region, guaranteeing at least the supply to two capitals that do not have a natural gas supply point on the date of publication of this Law, in the amount of two thousand and five hundred megawatts (2,500 MW) in the Midwest Region in the State capitals or metropolitan regions that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for the delivery of one thousand megawatts (1,000 MW) of natural gas thermal generation in the year of 2026, two thousand megawatts (2,000 MW) in the year of 2027, and three thousand megawatts (3,000 MW) in the year of 2028, with a supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation of Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation do bid by the same correction discretion of Auction A-6 of 2019, and in the amount of two thousand megawatts (2,000 MW) in the Southeast Region, of which one thousand two hundred and fifty megawatts (1,250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of the Superintendence for the Development of the Northeast*

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *(Sudene) that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for delivery of natural gas thermal generation of one thousand megawatts (1,000 MW) in the year of 2029, for States that have a natural gas supply point on the date of publication of this Law, and one thousand megawatts (1,000 MW) in the year of 2030, of which two hundred and fifty megawatts (250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of Sudene that do not have a natural gas supply point on the date of publication of this Law, with supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation in Auction A-6 of 2019, with updating of this value until the date of publication of the specific auction notice by the same discretion of correction of the Auction A-6 of 2019, and the extension of the contracts of the Alternative Energy Sources Incentive Program (Proinfa) for twenty (20) years, as well as the contracting in Auctions A-5 and A-6 of at least fifty percent (50%) of the declared demand of the distributors, for hydroelectric power plants up to fifty megawatts (50 MW), at the maximum price equivalent to the ceiling established for the generation of Small Hydroelectric Plants (SHP) of Auction A-6 of 2019 for projects without grant, with updating of this value until the date of publication of the specific auction notice by the same correction discretion of Auction A-6 of 2019, as established in art. 20 and 21 of this Law.*
>
> *(Emphasis Added)*

According to the excerpts highlighted above, it is an essential condition for the privatization of Eletrobras: (i) granting of new generation concessions for Concession Contract 007/2004-Aneel-Eletronorte and the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), granted through Contract 004/2004-Aneel/Furnas; and (ii) that the new concession term is thirty (30) years from the signature date of the new concession contracts. Therefore, without the extension of these concession contracts for a new period of thirty (30) years from the signing of the corresponding concession contracts, it will not be possible to complete Eletrobras privatization process.

Art. 2 of Law 14182/2021, in turn, provides that the Federal Government is authorized to provide new authorization grants, also for thirty (30) years from the signature date of the new contract, to execute the privatization of Eletrobras, which includes grants already mentioned in Art. 1 of Law 14182/2021:

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *"Art. 2 For the promotion of the privatization referred to in this Provisional Measure, the Federal Government is authorized to grant, for thirty years, counted from the date of signature of the new contracts, new grants for electricity energy generation concessions under ownership or control, directly or indirectly, of Eletrobras:*
>
> *I - that have been extended under the terms of art. 1 of Law 12783, of January 11, 2013;*
>
> *II - achieved by the provisions of item II of § 2 of art. 22 of Law 11943, of May 28, 2009;*
>
> *III - achieved by the provisions of § 3 of art. 10 of Law 13182, of November 3, 2015;*
>
> *IV - granted through the Concession Contract 007/2004-Aneel-Eletronorte; and*
>
> *V - granted through Concession Contract 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP."*

In addition, according to art. 3 of Law 14182/2021, the privatization of Eletrobras is subject to the shareholders' approval, by shareholders' meeting, of the "*execution of the new electricity concession contracts referred to in art. 2, to replace the contracts in force on the date of publication of this Provisional Measure, with the alteration of the operating regime for independent production, on the terms set out in Law 9074, of July 7, 1995, including the conditions for the termination of the grants, the expropriation of the facilities and the indemnification*".

In other words, if the shareholders' meeting does not approve the execution of new concession contracts for all generation projects covered by the art. 2 of Law 14182/2021, the privatization of Eletrobras cannot occur.

Regarding the regulatory requirements for the renewal of concessions mentioned above, we highlight the following conditions brought by Law 14182/2021:

- the alteration of the exploitation regime of the generated energy to independent production, under the terms of the provisions of Law 9074, of 1995, including

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

what refers to the conditions for the extinction of the concessions, the transfer of installations and compensations (item III of Art. 4 of Law 14182/2021);

- the assumption of the hydrological risk management, considering that no renegotiation is allowed under the provisions of Law 13203, dated December 8, 2015 (item IV of Art. 4 of Law 14182/2021); and
- The Sobradinho and Itumbiara HPPs, which are subject to, respectively, the provisions of item II of Paragraph 2 of art. 22 of Law 11943/2009, and Paragraph 3 of art. 10 of Law 13182/2015, will preserve their respective legal obligations, observing the conditions and the validity of the current electric energy sales contracts referred to in those devices. The energy arising from the obligations established in the aforementioned legal provisions may not be subject to resale, commercialization, or assignment in the Free Contracting Environment (ACL), and its use shall be restricted to the consumers who are part of those electric energy sales contracts. Therefore, only electric energy unbound to the legal provisions mentioned above can be used for other purposes. (Paragraph 1 of Art. 4 of Law 14182/2021);

The generation plants of Eletrobras that must or may have their concessions renewed through the provisions of Law 14182/2021 are listed below:

Part of the generation plants that may have their concession grants renewed under Law 14182/2021 belongs to the quota system created by Law 12782/2013. By art. 5 of Law 14182/2021, CNPE is responsible for defining, through CNPE Resolution 15/2021, reviewed by CNPE Resolution 30/2021, the HPPs' gradual transition (or change to free market) from the quota system to the independent electric energy production model, which shall occur through the partial transition of twenty percent (20%) of the HPPs' physical guarantees each year, ending in five (5) years, from 2023 to 2027.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Thus, while the obligations bound to the quotas remain valid, in whole or in part, a large group of Eletrobras HPPs will maintain their obligations and remuneration bound to the quotas, which will only be 100% bound to the independent production model after the transition to free market end.

As such, during the transition, part of the physical guarantee of the plants will be under the quotas regime and another part will be under independent production. Accounting for the effects of coexistence in these two modalities is not trivial; therefore, several points need to be clarified, such as which methodology will be adopted by the CCEE to allocate the hydrological risk and how the hedge that is to be adopted by the new company will be distributed. These uncertainties pose risks to the privatization process.

IV.2. Right to Extend Eletrobras Grants due to the MRE

Under Law 13203/2015, Eletrobras HPPs whose concessions may be extended by Law 14182/2021 have the right to extend the terms of their concessions, as approved by ANEEL, to offset the costs associated with the GSF.

ANEEL published, among others, Approval Resolution 2919/2021 and REH 2932/21, providing for the extension of concession grants for hydroelectric power plants participating in the MRE. According to REN 895/2020, the extension benefit must be applied to HPPs whose holders express an interest in the extension within sixty (60) days after the approval of the respective extension, as noted:

> *Art. 7 ANEEL will authorize the extension of the grant of each MRE power plant with a grant in force on the publication date of Law 14052, of September 8, 2020, according to the deadlines established in the Approval Resolution, and will establish the necessary acts to the realization of the grants' extension.*
>
> *Paragraph 1 The application of the provisions of this article is subject to the request of the interested party within sixty (60) days from the date of publication by ANEEL of the period of extending the grant extension of each MRE power plant, according to Paragraph 9 of art. 6, as well as compliance with the conditions referred to in items I and II of the caption of art. 2-B of Law 13203, of 2015.*

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Supplementarily, Paragraph 1 of art. 1 of REH 2919/2021 and REH 2932/2021 identically establish how the holders of HPPs may request the extension of their grants:

> *Sole paragraph. To comply with the provisions of Paragraph 1, of art. 7, of ANEEL Normative Resolution 895, of December 1, 2020, the generation agent must complete the electronic form available at the following addresses:*
>
> *I - Authorization Grants: https://forms.office.com/r/eme4P7vtJT*
>
> *II - Concession Grants: https://forms.office.com/r/5TQETM8Bxe*

As seen above, there is no discussion regarding applying the right to extend Eletrobras HPPs' grants due to the compensation applicable to power plants participating in the MRE, according to Law 13203/2015. However, Law 14182/2021 is unclear how the extension of grants provided for in Law 13203/2015 will be applied to Eletrobras HPPs, which may also have their grants extended due to the privatization.

From the reading of art. 2 of Law 14182/2021, it can be assumed that the new concession contracts of the Eletrobras HPPs that may have their grants extended must expressly establish a concession period of thirty (30) years from their signature, regardless of the concession period existing before its signature:

> *Art. 2. In order to carry out the privatization referred to in this Law, the Federal Government is authorized to grant,* ***for the period provided for in paragraph 1, art. 1, of this Law, from the date of signature of the new contracts****, new grants of electric energy generation concessions under the direct or indirect ownership or control of Eletrobras, which: (emphasis added)*

Thus, if the extension of the concession grants of Eletrobras HPPs listed in REH 2919/2021 and REH 2932/2021 and/or benefited by Law 13203/2015 is implemented before the privatization of Eletrobras, which is expected, the extensions of the concessions listed in art. 2 of Law 14182/2021 shall be of thirty (30) years, regardless of the extension carried out by REH 2919/2021 and by REH 2932/2021.

However, in case the privatization occurs before the application of the extension of the concession grants of the Eletrobras HPPs listed in REH 2919/2021 and REH 2932/2021 and/or benefited by Law 13203/2015, even considering such event as a

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

remote possibility, we understand that the term of thirty (30) years should be increased by the respective extension resulting from Law 13203/2015.

This increase would exceed the limit of thirty (30) years of concession granting, provided for in art. 4 of Law 9074/1995, which is a contradiction and a legal limitation. However, we understand that its application is due, since the forecast of the extension is a right of the owners of projects that were affected by the MRE, it is provided for in a legislation subsequent to Law 9074/1995, and its subject is a specific topic (treatment of the MRE and applicable compensation).

In turn, it is understood that, for purposes of calculating the value of their grants by the CNPE, the extensions of grants of the hydroelectric power plants (HPPs) that occur through REH 2919/2021 and REH 2932/2021 and/or by Law 13203/2015 before the privatization of Eletrobras and the extension of its concession contracts through Law 14182/2021 should be taken into account, since such rights to prolong the grant and extend the concession contracts is already applicable to the respective HPPs under such conditions.

IV.3. Hydrological Risk and Reservoir Capacity

The financial risks associated with hydrological aspects are shared between centrally dispatched hydroelectric generation plants through the Energy Reallocation Mechanism - MRE, provided for in Law 9648/1998 and regulated by Decree 2655/1998 and Electric Energy Commercialization Rules established by the Electric Energy Commercialization Chamber (EECC), which defines MRE as follows:

> *The Energy Reallocation Mechanism (MRE) was conceived to share among its members the financial risks associated with the commercialization of energy by hydraulic power plants dispatched centrally and optimized by the ONS.*

Thus, a hydroelectric power plant that has generated less than its respective physical guarantee (PG), by decision of the system operator, may have the difference compensated, in whole or in part, by other hydroelectric power plants participating in

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

the MRE that have generated in greater volume. That is, the MRE is a form of sharing risks between hydroelectric power plants.

However, in recent years the generation “deficit” of the power plants participating in the MRE, in relation to the total of Physical Guarantees, has been proportionally high. This fact has resulted in the frequent application of the Physical Guarantees Adjustment Factor of the MRE power plants, known as GSF. In other words, the MRE's HPPs have, frequently, generated much less than their physical guarantees, resulting in financial implications.

For example, according to the Monthly Bulletin for Monitoring the Brazilian Electric System for July 2021, prepared by the Federal Government, the power plants participating in the MRE had a deficit equivalent to almost 30% concerning seasonal electric energy.

These generation deficits, which in practice form a hydrological risk, have intensified in recent years, especially in 2021, due to a sequence of periods with unfavorable hydrological regimes and the low volume presented in the reservoirs of the HPPs.

The set of hydroelectric power plants belonging to the MRE may be overvalued by Physical Guarantees, which requires an in-depth analysis by the Government.

Indeed, Eletrobras' HPPs, on average, had their Physical Guarantees reduced by around 7%, which seems reasonable. This significantly contributes to the improvement of the GSF for the set of MRE power plants. However, if, in 2023, the review process does not reach the other participants of the Mechanism, the Eletrobras power plants will be affected, as they will receive a smaller energy share when they produce less.

This is a risk with a non-negligible financial impact. It is recommended that Eletrobras study alternatives to mitigate this type of risk through interactions with the Government.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Part of the Eletrobras HPPs that will be subject to the grant of new concessions are currently part of the quota regime provided for in Law 12783/2013, which is not affected by the hydrological risk, since these generation differences are paid by consumers through distributors, as provided for in Art. 1, Paragraph 5 of Law 12783/2012:

> *Art. 1 As of September 12, 2012, the hydroelectric power generation concessions covered by art. 19 of Law 9074, of July 7, 1995, may be extended, at the discretion of the granting authority, once, for a period of up to thirty (30) years, in order to ensure continuity and efficiency in the provision of the service and the reasonableness of tariffs.*
>
> *(...)*
>
> *Paragraph 5 In the extensions referred to in this article, the hydrological risks, considered as the Energy Reallocation Mechanism - MRE, will be undertaken by the SIN distribution concessionaires and licensees, with the right to be transferred to the final consumer's tariff.*

Differently, Law 14182/2021 establishes that hydrological risks must be managed by the respective HPPs that will receive new concession grants:

> *Art. 4 These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*
>
> *(...)*
>
> *IV - the assumption of hydrological risk management, renegotiation is prohibited pursuant to Law 13203, of December 8, 2015.*

The exceptional character created by Law 12783/2012, which transferred the hydrological risk of the HPPs in the quota regime to captive consumers, ceases to exist, and the power plants subject matter of change to free market will undertake such risk, as it was before the aforementioned law.

Law 14182/2021, in its Paragraph 1 of art. 1 and art. 2, provides for the contracting of a series of generation projects in the coming years, mainly from thermal sources, which, along with renewable sources, will significantly alter the electric matrix:

Complete report with the results and the detailing of the assumptions, methodology and risk factors used for the elaboration of the economic financial model

Art. 20, Law 14182/2021. The granting authority will contract capacity reservation, referred to in arts. 3 and 3-A of Law 10848, of March 15, 2004, in the amount of one thousand megawatts (1,000 MW) in the Northeast Region in the metropolitan regions of the Federation units that do not have in their capital natural gas supply point on the date of publication of this Law, in the amount of two thousand five hundred megawatts (2,500 MW) in the North Region distributed in the state capitals or metropolitan region where it is feasible to use the existing proven reserves of national natural gas in the Amazon Region, guaranteeing at least the supply to two capitals that do not have a natural gas supply point on the date of publication of this Law, in the amount of two thousand and five hundred megawatts (2,500 MW) in the Midwest Region in the capitals of the States or metropolitan regions that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for the delivery of one thousand megawatts (1,000 MW) of natural gas thermal generation in the year of 2026, two thousand megawatts (2,000 MW) in the year of 2027, and three thousand megawatts (3,000 MW) in the year of 2028, with a supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation of Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation do bid by the same correction discretion of Auction A-6 of 2019, and in the amount of two thousand megawatts (2000 MW) in the Southeast Region, of which one thousand two hundred and fifty megawatts (1,250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of the Sudene that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for delivery of thermal generation using natural gas of one thousand megawatts (1,000 MW) in the year of 2029, for States that have a natural gas supply point on the date of publication of this Law, and one thousand megawatts (1,000 MW) in the year of 2030, of which two hundred and fifty megawatts (250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of Sudene that do not have a natural gas supply point on the date of publication of this Law, with supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation in Auction A-6 of 2019, with updating of this value until the date of publication of the specific auction notice by the same correction discretion of Auction A-6 of 2019.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Such contracts, as mentioned, are provided for in art. 1 of Law 14182/2021, which represents an obligation of the Federal Government to promote them as encouragement and guarantee to the privatization of Eletrobras.

As if the high contracting volumes were insufficient, Law 14182/2021 provides that contracted thermoelectric power plants must have 70% inflexibility. According to Regulation No. 20/GM/MME, which regulates art. 3-A of Law 10848/2004, the MME guidelines for contracting thermal plants in the capacity reserve modality consider, at most, an inflexibility of 30%, whose contracting must necessarily be associated with the declaration of the need to purchase energy from agents' distribution and marketing.

In addition, due to what was determined by the Provisional Measure 998, converted into Law 14120, of 2021, there is an unprecedent growth in requests for authorization grants of new projects from encouraging sources, in order to seek subsidies (discounts in the use of the grid) to which renewable sources are entitled. This volume of projects corresponds to substantially more than double the current amount of nowadays operating wind and solar energy plants. In addition, most of them would be in the northeast region. All this volume should start operating from 2023, a condition for obtaining the grant.

However, within this period, it is not possible to connect even one third (1/3) of this volume of MW to the transmission grid (as pointed out in section V.4.1.50), which would require new construction works, which new auctions would precede. Even if it was possible to connect all projects to the grid, it is necessary to consider the timely supply of equipment for all projects and obtain power purchase agreements for all projects made possible through grants.

Thus, it is reasonable to consider a shift in these projects' implementation schedule or extend terms for the obstacle course.

As a result of the energy volume that will be granted through the subsidies incentive and the inflexibility estimated for thermoelectric projects, a high surplus of electric energy is expected, which results in the tendency of not using hydroelectric power plants and, consequently, an increase in the risk linked to the MRE. However,

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

it is not expected to occur a large growth in the Difference Settlement Price – PLD due to this energy surplus in the market.

These impacts will directly affect the Eletrobras HPPs that will be subject to granting new concessions provided for in Law 14182/2021, which could hinder such projects' expected generation and profitability.

IV.4. Other risks implicit in the electric matrix

However, it should be noted that as of 2023, when subsidized renewables would be available, and as of 2026, with the highly inflexible and costly TPPs, the electricity system will have an oversupply, but with high tariffs, given the costs of subsidies and such thermoelectric plants.

For example, if the average tariff for consumers in group A (high voltage) is R$ 450/MWh and the purchased energy (generation) is equivalent to R$ 280/MWh, consumers, whether or not they have already migrated to the ACL, usually require, during the term of the PPA, a total cost, also, for example, 20% lower than their current tariff.

As the ACL's scope of action is purchased energy, its leeway would be R$ 290/MWh, which should be reduced by R$ 90/MWh, representing 20% of the final tariff. No scenario points to a reduction in regulated tariffs, at least in the next ten years.

It is important to add that the electric matrix, due to the growth in the participation of renewable sources, such as wind and solar, will become less and less dispatchable, especially from 2035 onwards. Important features arise from these issues.

The lower degree of dispatchability will require the use of firm energy sources, such as thermoelectric plants, including nuclear ones, which tends to increase or, at least, not let the short-term marginal costs and PLD fall. If this change in the matrix continues to be fostered by subsidies, even after 2035, regulated tariffs also tend to rise, or they would not fall as much as it would be desirable.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Even before that, and motivated by the shortage crisis in 2021, the government already authorized the simplified contracting of thermoelectric plants with costs above R$ 750/MWh in 5-year agreements, starting mid-2022. Therefore, the costs of the crisis will last at least until 2027. There are no great perspectives for tariff reductions.

Thus, the chances of long-term contract prices moving further away from the PLD are not negligible, even in a more distant scenario, such as after 2035.

Given some of these contradictions, such as oversupply and rising tariffs, the use of a mathematical model that for long has not responded to the reality of supply and demand relationship and the progress of distributed generation (DG), it is very likely that, even before 2030, the sector will be much different than today.

The outlook seems to be of changes towards decentralization, as in DG, with greater freedom of choice for consumers. This provides considerable advantages for “traders” with generation assets, such as Eletrobras. The dispersion of the market implies greater risks for the seller, which pure traders would not bear. The trade-off between risk and asset ownership is a form to balance the cost/revenue ratio in a freer environment.

In turn, the maintenance of subsidies, as provided for in at least two bills pending in the Brazilian Congress, will cause even greater increases in regulated tariffs, which would difficult the transition and raise its costs, lasting several years, maybe even after 2035.

IV.5. Analysis of Other Issues

Additionally, it is important to note that part of the Eletrobras HPPs that will be subject to new grants will migrate, albeit gradually, to the independent production system, in accordance with CNPE Resolution 15/2021. Such projects must sell their electric energy generated in accordance with their Physical Guarantees, especially in the Free Contracting Environment – ACL.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

However, considering the high volume of electric energy generated in accordance with the Physical Guarantees of all these projects, part of the electric energy generated may be subject to purchase and sale contracts with very short terms (one month, for example) to avoid settlement in the Short-Term Market – STM, especially in the early years.

In 2021, the sector managed to remedy the risk of default in the STM as a result of the injunctions that discuss the risk shared by the MRE, with the default being reduced to almost zero. However, one-time defaults may happen in some months, or new injunctions may arise, now due to the risk or damage caused by the water crisis, devastating the sector and leading to defaults in the STM.

In any case there are forms to mitigate the risks of default in the STM, and it is common for agents with surplus energy to sell it before closing the accounting for the respective month, as described above.

Therefore, we understand that the situation currently experienced is one of reducing defaults in the STM, which will reduce Eletrobras' risks in relation to its performance in the ACL and the possible settlement of surplus energy in the STM.

IV.5.1. Considerations regarding the possibility of challenging Law 14182/2021 to delay Eletrobras' capitalization process

Law 14182/2021, resulting from the conversion, by the National Congress, of Provisional Measure 1031/2021, conveys a complex plan for the privatization of Eletrobras, which reveals a reasonable potential impact on the electricity sector.

As previously mentioned, the privatization will be carried out through a capital increase, pursuant to Law 9491/97 and art. 1, paragraph 1, of Law 14182/2021, through the placement on the market of ordinary shares intended for public subscription, with a consequent waiver of the right to subscribe them by the Federal Government. Consequently, the capital goes public, with a resulting decrease in the Federal Government's shareholding so that it loses the majority control of the voting capital.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *The mentioned art. 1, in its "caption", conditions the implementation of privatization "on the granting of new electric energy generation concessions for Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), signed by the Federal Government and Furnas Centrais Elétricas S.A. (Furnas)".*

The new grants referred to in the provision will continue to integrate, the supply of energy for 30 years, pursuant to paragraph 1, and will be accompanied by the contracting of thermoelectric generation powered by natural gas, in addition to the contracting, in Auctions A-5 and A-6 of at least 50% of the declared demand of distributors, hydroelectric power plants up to 50 MW, at the maximum price equivalent to the cap established for the generation of a Small Hydroelectric Plant (SHP) of Auction A-6 of 2019 for projects without a grant, as specified in the provision.

The privatization process, as mentioned, has the potential to affect the electricity sector because, once the capitalization of the state-owned company begins, Law 14182/2021 provides for not only the mandatory signing of new concessions related to existing projects but, concomitantly, the purchase of electric energy from concessionaires, licensees and those authorized by the granting authority. Therefore, there is a risk that the auction processes may disrupt the privatization of Eletrobras due to the bureaucracy inherent to this asset-disposal mechanism, the natural complexity of its legal rules and for exposing themselves to judicialization.

Thus, the legal-regulatory risk of the privatization plan will be analyzed next, considering (i) the conditions for implementing the normative program, (ii) the risk of judicialization of the privatization policy of Eletrobras and (iii) the repercussion of the provision for establishing several related concession contracts on possible disruptions in the economic and financial balance, to subsidize the pricing of shares that market agents will subscribe.

IV.5.2. Conditions for implementing the normative privatization program and economic-financial balance

Art. 4 of Law 14182/2021 provides the conditions for the implementation of the concession grants referred to in art. 2, which in turn provides as follows:

> *Art. 2. In order to carry out the privatization referred to in this Law, the Federal Government is authorized to grant, for the period provided for in paragraph 1 of art. 1 of this Law, from the date of signature of the new contracts, new grants of electric energy generation concessions owned by or under the control of, directly or indirectly, Eletrobras, which:*
>
> *I - have been extended pursuant to art. 1 of Law 12783, of January 11, 2013;*
>
> *II - are achieved through item II of paragraph 2 of art. 22 of Law 11943, of May 28, 2009;*
>
> *III - are achieved through paragraph 3 of art. 10 of Law 13182, of November 3, 2015;*
>
> *IV – have been granted through Concession Contract 007/2004-Aneel-Eletronorte; and*
>
> *V – have been granted through Concession Contract 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP.*

From the date of signature of the grants of new concessions, Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, the Federal Government is authorized to provide other grants, not necessarily linked to the contracts referred to in art. 1, but for the same period of thirty years.

In order to formalize these new grants, art. 4 sets forth the necessary conditions for the economic viability of such a complex operation:

> *Art. 4. The conditions for the new grants of electric power generation concession referred to in art. 2 of this Law are:*
>
> *I - the payment by Eletrobras or its subsidiaries, as defined by the National Energy Policy Council (CNPE), to the Account for Energy Development (CDE),*

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

referred to in Law 10438, of April 26, 2002, corresponding to fifty percent (50%) of the added value to the concession by the new contracts;

II - the payment by Eletrobras or its subsidiaries, of the bonus for the grant of new electric power generation concession agreements corresponding to fifty percent (50%) of the added value to the concession by the new contracts, deducted of the following amounts:

a) expenses related to the revitalization of the water resources of the São Francisco River and Parnaíba River watersheds, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;

b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and for the navigability of the Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caption of art. 3 of this Law;

c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, which concession contracts are affected by this Law, pursuant to subparagraph c, item V, caption, art. 3 of this Law; and

d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Watershed of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;

III - the alteration of the operating regime for independent production, pursuant to Law 9074, of July 7, 1995, including as regards the conditions for the extinction of grants, the expropriation of facilities and indemnities; and

IV - the assumption of hydrological risk management, renegotiation being prohibited pursuant to Law 13203, of December 8, 2015.

Paragraph 1. The new generation concession contract for the power plants reached by item II of paragraph 2 of art. 22 of Law 11943, of May 28, 2009, and paragraph 3 of art. 10 of Law 13182, of November 3, 2015, will preserve the obligations set forth in art. 22 of Law 11943, of May 28, 2009, and art. 10 of Law 13182, of November 3, 2015, respecting the conditions and effectiveness of the current electric energy sales contracts referred to in the aforementioned articles, provided that the energy arising from the obligations established in art. 22 of Law 11943, of May 28, 2009, and art. 10 of Law 13182, of November 3, 2015, may not be subject to resale, sale or assignment in the Free Contracting Environment (ACL),

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *and its use shall be restricted to consumers who are part of the electric energy sales contracts referred to in the aforementioned articles.*
>
> *Paragraph 2. The provisions of art. 7 of Law 9648, of May 27, 1998, do not apply to new electric power generation concession agreements referred to in this article, and the quota referred to in item I of the caput of this article will be fully credited in favor of electric energy distribution concessionaires and licensees, for the purpose of reasonable tariffs in the Regulated Contracting Environment ([ACR [Portuguese acronym for Ambiente de Contratação Regulada]), distributed proportionally to the amounts discounted as a result of altering the operating regime for independent production referred to in item III of the caption of this article.*

If the privatization plan is implemented in the exact terms recommended by art. 1 of Law 14182, including the exercise of the option by the Granting Authority to contract the generations under the final wording of the caption of mentioned art. 1, an economic-financial equation will be established in relation to the expected average generation of Eletrobras HPPs, which will be considered in the calculation of the generation grant bonus.

If this privatization scenario does not occur in the terms considered by the CNPE for the calculation of the grant bonus, there may be an imbalance in the financial equation established as a premise for calculations referred to the bonus.

According to art. 5 of Law 14182/2021, it was designated to the National Energy Policy Council – CNPE, through CNPE Resolution 15/2021, the definition of the Total Added Value of new concessions, as well as the values referred to in items I and II of art. 4. These provisions address the installments that add to the financing of the concessions and which are also conditions to formalize the grant.

The first item provides for payment by Eletrobras or its subsidiaries, as defined by the CNPE, to the Account for Energy Development (CDE), referred to in Law 10438, of April 26, 2002, corresponding to 50% of the Total Added Value to the concession by the new contracts.

In addition, item II refers to the payment by Eletrobras or its subsidiaries of bonuses for the granting of new concession contracts, corresponding to 50% of the

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Added Value to the concession, deducted from the installments regarding (i) expenses related to the revitalization of water resources of the São Francisco River and Parnaíba River watershed, pursuant to subparagraph “a” of item V of the “caput” of art. 3 of this Law; (ii) expenses related to the development of projects in the Legal Amazon, aiming at structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River; (iii) expenses related to projects in the area of influence of the reservoirs of Furnas hydroelectric power plants, whose concession contracts are affected; and (iv) expenses to reimburse the economic value of the electric energy supply to the Integration Project of the São Francisco River with Hydrographic Watershed of Northern Northeast (PISF).

The economic-financial risk that can be noted in the model involves, therefore, payments for the values added of the concessions, determined based on the criteria defined by the CNPE and in compliance with the minimum conditions defined in the items of paragraph 1 of art. 5:

> *Art. 5. The CNPE shall be responsible for establishing the added value by new electric power generation concession contracts and for fixing values referred to in items I and II of the caption of art. 4 of this Law.*
>
> *Paragraph 1. For the calculation of the added value to the concession, the following will be considered:*
>
> *I - the change of the exploitation regime to independent production;*
>
> *II - the deduction of credits related to the reimbursement for proven expenses for the acquisition of fuel incurred until June 30, 2017, by concessionaires that were controlled by Eletrobras and holders of the concessions addressed in art. 4-A of Law 12111, dated December 9, 2009, which have been proven but not reimbursed due to the economic and energetic efficiency requirements addressed in paragraph 12 of article 3 of said Law, including monetary restatements, in which case the compensation will be limited to three billion, five hundred million reais (R$ 3,500,000,000.00);*
>
> *III - the termination of the electric power contracted under the provisions of article 1 of Law 12783, of January 11, 2013, to comply with the provisions of item III of the caption of art. 4 of this Law, gradually and uniformly, within a minimum period of five (5) years and a maximum period of ten (10) years; and*

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *IV - (VETOED).*
>
> *Paragraph 2. The calculation of the added value to the concession shall consider the adjustments referred to in subparagraph b of item II of the caption of art. 6 of Law 9491, of September 9, 1997, provided that they are relative to obligations recognized by the Federal Government with Eletrobras.*
>
> *Paragraph 3. The recognition of the credits in item II of paragraph 1 of this article shall imply their settlement.*
>
> *Paragraph 4. The Ministry of Mines and Energy and the Ministry of Economy shall be responsible for proposing the values that will be fixed in accordance with the provisions of the caput of this article.*

Thus, if the calculations of the Total Added Value made by the CNPE are not accurate in relation to the cost components set forth in the above provision, some risks would exist that deserve to be noted. For example: are price expectations compatible with the commercialization in the ACL? Were the risks and benefits of acting in the ACL duly considered?

In compliance with the regulatory determination provided for in the aforementioned art. 5 of the privatization plan, the National Energy Policy Council published CNPE Resolution 15, of August 31, 2021, in the Federal Official Gazette of September 2, 2021, thus establishing at sixty-two billion, four hundred and seventy-nine million, six hundred and fifty-six thousand, three hundred and seventy reais and ten cents (R$ 62,479,656,370.10) the Total Added Value to be granted due to the privatization of Centrais Elétricas Brasileiras S.A. - Eletrobras (art. 1).

In addition to defining the Total Added Value, the CNPE's resolution also established the complex methodology for calculation, refunds and adjustments (art. 1, sole paragraph) and the amount to be paid by Eletrobras or its subsidiaries as a bonus for the granting of new electric power generation concession contracts whose subject-matter is a set of HPPs listed in Exhibit I of CNPE Resolution 15/2021, in the amount of twenty-three billion, two hundred and eighteen million, four hundred and eighty-eight thousand, seven hundred and fifty-four reais and seventy-three cents (R$ 23,218,488,754.73).

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Another element to be considered in the risk matrix is that, in the event of imperfect compliance with charges and compulsory contracts for concessions and purchases of energy potential, pursuant to Law 10848/2004, established by the provision, there would be a fundamental change in the result originally pictured in the privatization plan, which may be questioned in the future, especially from a political point of view. Thus, the contracting of thermoelectric plants, SHPs or the extension of the terms of PROINFA contracts does not depend on Eletrobras, but its privatization was related to such events.

Considering this possibility, in theory, can be seen as a factor to be considered when setting the price of the participation quotas that will be released on the open market in the execution of the central stage of the privatization plan. However, as discussed below, the mere possibility does not seem to indicate a substantial encumbrance of the value of the securities, which could compromise the maximization of disposals of shareholding, since it is clear the possibility of inducing the market to understand the plan as a riskier disinvestment modality than it is, due to the risks and parameters weighed by the granting authority to precisely define the values and potentials to be delegated and contracted in the future.

In the change to free-market modality, taking into account the studies conducted by the Federal Government and BNDES, which will still be subject to an in-depth economic analysis by the TCU, it is certain that any regulatory and even infrastructural obstacles to implementing concessions and strengthening, among other sources, thermal plants, are deemed circumstances with a mere *possibility* of taking place. It is understood that the risk inherent to any type of contracting does not make them predictable or deprive them of their exceptional character.

According to MARÇAL JUSTEN FILHO ("**Teoria Geral das Concessões de Serviço Público**", São Paulo, Dialética, 2003, p. 400):

> *"(…) the extraordinary nature of the event can be affirmed from both a qualitative and a quantitative perspective. An extraordinary chance is verified when an anomalous and implausible event occurs after the agreement is formalized, producing a change in the original relationship between charges and benefits. When*

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

alluding to the anomaly of the event, reference is made to an event that strays away from predictability standards due to its qualitative or quantitative configuration."

The reason for preparing studies before formalizing and implementing the divestment plan is to predict, with the greatest accuracy available to the granting authority, the parameters necessary to guarantee the continuity of public interest services.

Hence, in principle, the mere possibility of the charges defined in the risk matrix as sufficient to ensure the soundness of the privatization and the contracts that condition is not being complied with, due to extraordinary reasons, as provided for in the privatization law, does not justify the significant encumbrance on the value of the securities placed on the market, to the point of restricting the interest of economic agents in the capitalization of Eletrobras.

IV.5.3. Considerations on litigation risks surrounding the privatization of Eletrobras

It should be noted, with regard to the sensitive aspects involving Law 14182/2021 and concerning the litigious aspect of the capitalization process of Eletrobras, that this law, upon the conversion of PM 1031/2021, was challenged before the Federal Supreme Court, through the filing of the Direct Action of Unconstitutionality (ADI, from the Portuguese term "Ação Direta de Inconstitucionalidade") 6938, in which various party groups appear as plaintiffs.

Among the complex constitutional issues raised in the ADI, the following stand out (i) the questions around the constitutionality of the entire normative structure of Law 14182/2021, based on the argument that the originally issued Provisional Measure lacked the constitutional premises of urgency and relevance of the matter; and (ii) the specific challenge to art. 1, paragraph 1, and arts. 20 and 21, whose declaration of unconstitutionality is requested alternatively to the invalidation of the entirety of the text.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

It should be noted, regarding item "ii" above and the subject matter of ADI 6938, that those provisions are the same that establish the controversy that will be herein examined regarding the definition of the risk matrix of the concessions under the public divestment plan and the possibility that the complexification of the supply network could lead to a break in the economic-financial balance of privatization, which would ultimately affect the market price of equity securities.

In order to focus on the argument to be discussed by the Supreme Court and which, more significantly, interests to the analysis now performed, it will be addressed how a possible granting of the secondary claim would affect the plan and composition of the price of securities.

Indeed, the current wording of art. 1, paragraph 1, as approved by the conversion project, was the result of improvement to the text sent by the Presidency of the Republic, to which 632 amendments were presented, in Parliament, including amendments that added, excluded and modified the text, and whose subjects, as claimed by the associations that filed the direct action, exceeded the thematic relevance defined by the text of PM 1031/2021 sent to the House of Representatives, as they deal with issues such as the debated obligation to extend concession contracts and the imposition of mandatory purchases of energy potential, without the corresponding budget provisions.

They argue, under the argument of thematic irrelevance, the inclusion of "budgetary long-tails" contained in the conversion law:

> *(i) the mandatory contracting of 8,000 MW of installed capacity of natural gas thermoelectric plants – 1,000 MW in the Northeast region, 2,500 MW in the North, 2,500 MW in the Midwest and 2,000 MW in the Southeast (art. 1, paragraph 1, combined with art. 20);*
>
> *(ii) the mandatory contracting of 2,000 MW or more of installed capacity of hydroelectric power plants with up to 50 MW of power – "small hydroelectric plants" (art. 1, paragraph 1, combined with art. 21);*

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *(iii) the authorization for the immediate construction of the Tucuruí Line, regardless of the environmental licensing process already in progress (art. 1, paragraphs 10 and 11).*

The entry of thermal plants, through the concessions provided for in art. 1, paragraph 1, and reproduced in art. 20, as stated in the ADI, would imply the artificial creation of a market reserve for thermoelectric plants powered by natural gas for fifteen years and the contracting of small hydroelectric power plants in auctions held until 2026.

Thus, the execution needs the established conditions to the granting authority and to Eletrobras itself by art. 1, paragraph 1 et seq. (arts. 4 and 5 of Law 14182/2021, *v.g.*), and it is an extremely important condition to ensure the soundness of the economic and financial balance mechanism, since the calculations of generating potential, operational inflexibility and subrogation of thermals to energy capacity are based on assumptions that identify, in the elements of art. 1, paragraph 1, the conditions that should guarantee national supply according to the average consumption per MWh in the regions affected by privatization.

In fact, the exact provision of art. 1, paragraph 1, combined with the authorization conferred to the Federal Government to grant, from the date of signature of the new contracts, new grants of electric energy generation concessions owned by or under the control of, directly or indirectly, Eletrobras, established in art. 2, is a core element of privatization itself.

The lengthy wording contrary to the good legislative technique, which is evidenced by the provision of art. 1, paragraph 1, appeared, due to its importance to privatization, as a drafting strategy undertaken by Congress, aimed at making the Legislative Branch's intention prevail in this privatization, as it virtually made the presidential veto unfeasible due to its content.

Art. 66, paragraph 2, of the Federal Constitution, provides for this as "the partial veto will only cover the full text of an article, paragraph, item or subparagraph", which made it impossible to veto fragments of art. 1, paragraph 1, or even the entirety of its text, under penalty of emptying the privatization.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

This circumstance was even emphasized by the author of the bill of conversion in Parliament, Congressman Elmar Nascimento (DEM-BA) when asked about the purpose of the deliberate lack of technique regarding the wording of the provision:

> *"(…) more or less. It is more or less more assured that the will of the congress will prevail in this matter."*[3]

These considerations reveal an important observation around the judicialization of the capitalization plan, consisting in the fact that the risk was already deemed materialized since the most relevant provision to privatization, currently, has already had its constitutionality challenged.

Thus, presuming that Law 14182/2021 is not declared unconstitutional in full – since the assessment of the existence of the premises authorizing the issuance of Provisional Measures is an act of a political-discretionary nature of the President of the Republic exceptionally reviewed by the Court –, a possible acceptance of the secondary claim made in the ADI would lead to the exact consequence that would result from the presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21 and the conditions addressed in arts. 2, 4, and 5.

ADI 6938 is currently in the stage of submittal of information by interested parties, after which it will be held under advisement by the Rapporteur, Justice Nunes Marques, to examine the preliminary injunctions filed by the plaintiff associations.

It is worth mentioning that, in addition to the complexity inherent to the privatization plan itself, there are various constitutional issues surrounding the subject. Thus, since the filing of the direct action in July, the injunction has not been examined so far. Federal Supreme Court Chief, Justice Luiz Fux, upon receiving the request at the time of assignment, deferred the examination to the Justice-Rapporteur, recognizing the exceptional complexity of the matter discussed.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

This injunction seeks to suspend the effects of Law 14182/2021 and, alternatively, of the mentioned provisions challenged on a secondary basis, which would bring forward the definitive remedy until the final judgment of the action. In consequence, the capitalization process as a whole would paralyze.

However, a critical point to be examined, and one that draws the Government's attention and the market, is the analysis of the privatization project by TCU.

On September 13, 2021, it was found that the Federal Government had already sent the first part of the studies to the Accounting Court, which would be subject to a taking of accounts reported by Justice Aroldo Cedraz.

Although the TCU no longer has the power to halt the effectiveness of Law 14182/2021, given that the opinion in Precedent 347/STF is superseded, which authorized it to decide on the unconstitutionality of acts by the Government, there is a possibility that the Court determine the suspension of the privatization, in case of evidence of possible litigation regarding the economicity of the project and complexity of the economic-financial balance, likewise ADI 6938.

In Case TC 000.350/2021-4, a request for examination of the record by Justice Aroldo Cedraz, rapporteur of the Eletrobras case at the TCU, imposed a sixty-day delay in the publication of the auction notice regarding the implementation of 5G technology by auction, and ultimately, voted against the proposal from the technical unit, which was in line with the Federal Government' agenda.

Such considerations lead us to believe that, under the privatization feasibility standpoint, the possibility of the TCU examining more sensitive aspects of the project subsist, and with possible delays in the initially expected schedule to offer the securities in the market, capitalization may be impacted in relation to the ratio between the amount defined for Eletrobras changing to the free market and the economicity of the mandatory concessions under Law 14182/2021.

Incidentally, although the postponement determined by Minister Aroldo Cedraz – the rapporteur of the privatization processing on Brazil's Court of Accounts (TC 008.845/2018-2) for inclusion in that Court's judgment agenda of 12/15/2021 –, has

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

not severely impacted the progress of the project, it is possible that the Court's understanding will constitute an important influencing factor to be considered on the pricing of shares of stock in the IPO, or even due to market orientation.

The aim of Proceeding 008.845/2018-2, mentioned above, which may be considered at this stage, is the process regarding the accompaniment of the privatization of Eletrobras and its sectorial impacts, for consumers and for the Federal Government, also considering the scenario of not carrying out the privatization.

At this point it is worth noting that certain specialized media outlets have reported points of the project that will possibly be questioned by the Rapporteur, including the studies of the power plants and the discounts provided for in the modeling, as well as alleged failures identified by the technical area of the TCU in the economic and financial modeling of the concession.

IV.6. Summary of assessments and notes

The privatization of Eletrobras presupposes the granting of new concessions to hydroelectric power plants generation projects considered of paramount importance for Eletrobras' operations, such as Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP). In addition to such projects, the Federal Government shall grant new electric energy generation concessions from other priority projects, as per the list presented in Art. 2 of Law 14182/2021.

The application of grant extension for Eletrobras' projects participating in the MRE and benefiting from the provisions of Law 13203/2015 should be taken into account, either to extend the grant term of such undertakings (if the extension is granted after the granting of new concession pursuant to Law 14182/2021) or for indemnity purposes.

The contracting of thermoelectric power plants with 70% inflexibility, as well as the institution of recovery programs for SIN HPPs reservoirs, may impact the electric

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

energy generation of Eletrobras HPPs, as such HPPs may have their electric energy generation reduced, further increasing the risk of an increase in the deficit in the MRE.

One of the elements to be considered in the risk matrix and which, in principle, is able to affect the pricing of shares, is the possibility of challenges if the thermal plants are not implemented in the exact terms of Law 14182/2021. The partial or imperfect fulfillment of the conditions calculated as necessary and indispensable for privatization may lead to future challenges. However, in practice, the construction schedule of these thermoelectric plants should consider the needs of the electric system, which, as it seems, would not require such power plants in the sites established by the law, nor on the dates set forth.

Although the possibility mentioned above can, in theory, be taken as a factor to be considered when setting the price of the quotas that will be released on the open market, in the execution of the core stage of the privatization plan, the mere possibility of the charges defined in the risk matrix as sufficient to ensure the soundness of the privatization and the contracts that condition is not being complied with, due to extraordinary reasons, as provided for in the privatization law, does not justify the significant encumbrance of the value of the securities placed on the market, to the point of restricting the interest of economic agents in the capitalization of Eletrobras, as highlighted in the reasoning.

Regarding the possible risk of commencement of litigation on the complex privatization plan, it should be stated that, at least in part, the risk level that may be envisaged was deemed consummated even before the works rtelated to the pricing of quotas taken to the market begun. This occured because when the project to convert Provisional Measure - PM 1031/2021 was approved by the Parliament, with the consequent enactment of Law 14182/2021, ADI 6839 was immediately filed before the Federal Supreme Court, in which the plaintiff parties question the main provisions that inform privatization.

Considering that the examination of the preliminary injunction requested in ADI 6839 has been deferred on some occasions, mainly due to the complexity of the constitutional issues addressed in the direct action, it is possible to understand that the

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

processing of this action for abstract control should not bring significant legal uncertainty to the market so that the inconvenience that the possibly aggravated risk could significantly burden Eletrobras' capitalization can be ruled out.

Assuming that Law 14182/2021 is not declared fully unconstitutional, possible granting of the secondary claim in the ADI would lead to the exact same consequence that would occur with a presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21 and the conditions addressed in arts. 2, 4, and 5.

However, as the legality and economy assessment of the privatization is pending examination by the Federal Accounting Court - TCU, which imposed hindrances to similar projects in the past, and given the opinion issued by the Justice reporting on the Eletrobras case, to some extent, the process may be impacted by its proceeding at the Court, which, in principle, could characterize an influencing factor to be considered on the pricing of securities when going public or even due to market orientation, assumptions that will be better evaluated after the ruling of the case in the TCU, that, even though scheduled for judgment on December 15, 2021, was suspended after a request for examination of the case records during the session.

V. Methodology

In this chapter, the methodology for determining the Marginal Cash Flow for calculating the Grant will be presented, as well as the critical variables of its formulation, in particular, the energy sales curves derived from the hydrological scenarios that calculate the GSF, PLD and forward curves. Figure 1 presents a block diagram of how the main topics of this analysis were systematized to arrive at the results of chapter VIII.

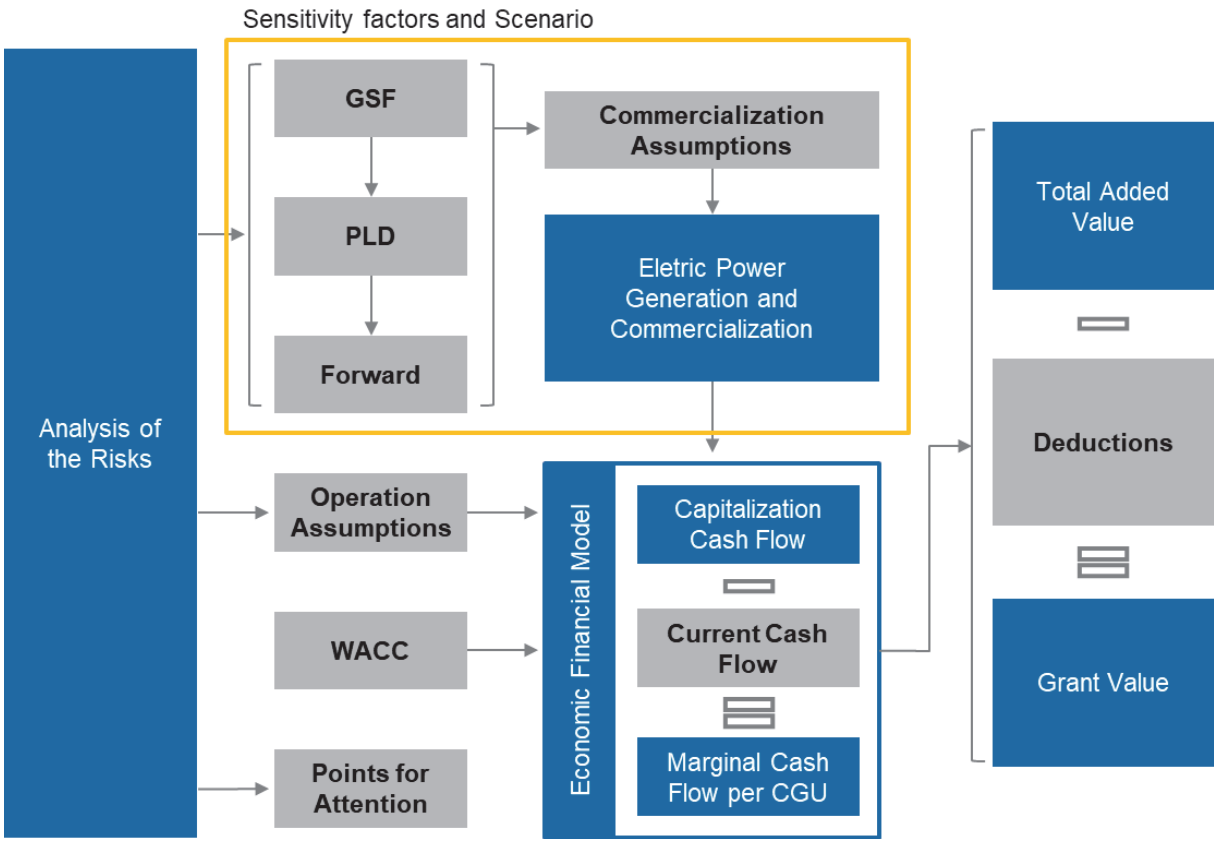

Figure 1: Methodological Flowchart

Source: Own elaboration.

As it will be discussed in chapter VII – Summary Analysis of the Risks, the risks taken into account throughout the Report will be addressed in 1. Points for attention, to be monitored by Eletrobras Management; 2. Assumptions and variables parameterized for the risk in the Financial Model, as stated in chapter VI – Definition of Assumptions**Definition of Assumptions**; and 3. Risks analyzed through sensitivity

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

cases and scenarios, perceived through major changes in the hydrology assumptions and variables, configuration and expansion of the future electrical system, energy prices and certain trading strategies.

Section V.4 – Pricing and Hydrological Risk Scenario presents how the future probabilistic scenarios of GSF and PLD will be projected based on climatological series, including (for example) assumptions about expansion of the system and climatic periodicities such as El Niño, La Niña, etc. These assumptions, associated with the electricity production costs of each submarket, make up the determinants of the neural network for the formation of projective energy trading price curves ("Forward curves").

Provided with GSF, PLD, and forward curves, it is possible to explore the application of several trading strategies that can best balance the risks and opportunities of exposure to the sale of energy on the short-term market and the free (non-regulated) contracting environment. These strategies were defined exogenously to the Financial Model.

In light of the foregoing, the set of assumptions (herein called "Operating Assumptions"), hydrological scenarios ("GSF" and "PLD" in the diagram), prices ("Forward"), trading strategies and discount rate comprise the Financial Model's external basic inputs, which was structured by a Marginal Cash Flow logic expounded in section V.1. This (the Marginal Cash Flow) is the outcome from the difference between the cash flow projection from the power plants (or CGUs – Cash Generating Units) considering the scenario in which Eletrobras' capitalization ("Capitalization Flow") against the scenario as it is today ("Current Flow").

Overcoming this phase of inputs, the Added Value of each CGU (or HPP) is calculated by net present value, which, when integrated, results in the Total Added Value. This amount, thereafter, must be deducted from the amounts determined in Law 14.182/2021 to, finally, reach the calculation of the Grant Amount.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

It is worth noting that adopting a single discount rate (WACC) for quota flows and in independent production rules out the discussion of this rate from the topic of "energy trading business risk" and ultimately allows for the application itself of the Marginal Cash Flow methodology, which will be further explained in section V.2.

In general, it is also worth noting that the risk analysis in this scope refers to the risks identified in the context of future flows projected when Eletrobras is capitalized. In this regard, despite permeating the entire conception of the Base Case, the risk analysis receives an *ex-post* contour in relation to its formulation, so much so that it will only receive an extended discussion after the presentation of the Study's basic assumptions and variables, in chapter VII. Even still, as will be seen, this analysis has a recursive character in the reformulation of the assumptions, which will be tested in different cases of sensitivity and end up affecting the Base Case at different levels.

Finally, this "dispersion" of possible values added formed by the "disruption" of the assumptions of the Base Case will compose the conclusion of the Risk Analysis, whereby each of the points raised will be rated as threats or opportunities, low or high, to provide a framework to support Eletrobras Management's decision making regarding the risks taken. This last topic will be covered in section VIII.5 – Risk rating which concludes this Report.

V.1. Marginal Cash Flow and Grant Determination

The Total Added Value of the capitalization (VA_{total}) can be understood as the sum of the individuals Values Added of each power plant by applying the cash-generating unit (CGU) concept with the discount from the indemnities of Tucuruí and Curuá-Una HPPs. A CGU is "the smallest identifiable group of assets that generates cash inflows, which are largely independent of cash inflows from other assets or other groups of assets" (CPC 01, item 6). From this derives the formula below:

$$VA_{total} = \sum VA_i - Indemnities$$

Where:

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

VA_{total} = Total Added Value

VA_i = Added Value for each CGU where i = 1, 2, 3... 18

The Added Value (VA), in turn, will be calculated by the Discounted Cash Flow method using the difference of the net present value of the free cash flows to the firm (FCFF) of the Capitalization Scenario ($FCFFc$) and the Current Scenario ($FCFFa$).

In the BASE DATE, the sum of the discounted cash flow for each period results in the Net Present Value (NPV), according to the following formula:

$$VA_{total} = \sum_{i=1}^{18} NPV_{FCFFc,i} - \sum_{i=1}^{18} VPL_{FCFFa,i} - Indemnities$$

Where:

VA_{total} = Total Added Value;

NPV_{FCFFc} = Net Present Value of Capitalization Scenario Flows;

NPV_{FCFFa} = Net Present Value of Current Scenario Flows;

The appropriate discount rate for remunerating these flows is the WACC (Weighted Average Cost of Capital), which reflects the weighted average cost of equity and cost of debt, and represents the minimum rate of return required for the sector evaluated without considering the project indebtedness flow.

Section V.2 - Weighted Average Cost of Capital (WACC) proposes the adoption of a single WACC to calculate both flows, the Capitalization Scenario and the Current Scenario. Therefore, it is presumed that the risks due to the change of the exploration regime in accordance with the new concession contracts will be accounted for along the cash flow of the Capitalization Scenario, excluding the need to project two cash flows.

In this case, the measurement of Added Value can be expressed through the Marginal Cash Flow, which is, the cash flow resulting from the difference between the Capitalization Scenario and the Current Scenario. This mathematical simplification is

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

relevant for reduce the number of assumptions considered and reducing the study to the most relevant and sensitive assumptions for determining the Added Value.

The cash flow under the quota system (Law 12783/2013) is determined as follows:

+ Annual Generation Revenue (RAG)
- Operating Expenses (OPEX)
- Capital Expenditure (CAPEX)
- Sectorial Charges
- Annual Generation Revenue Taxes

= $FCFF_{Quotas}$

And for the cash flow under the independent power production regime:

+ Power Sale
- Operating Expenses (OPEX)
- Capital Expenditure (CAPEX)
- Exposure to the STM
- Sectorial Charges
- Independent Power Producer Taxes[1]

= $FCFF_{IPP}$

Considering that the calculation of the Added Value will be given by the difference between the flows of the Capitalization Scenario and the Current Scenario, it is understood that, for the period in which there is a convergence between the two scenarios (period in which they would occur concurrently) some assumptions can be disregarded from the Marginal Cash Flow assuming that there is no change in its forecast from the change in the commercialization regime. These assumptions are Operating Expenses (OPEX) and Capital Expenditure (CAPEX).

Furthermore, it is understood that the sectorial charges and taxes applicable to the Marginal Cash Flow also refer to the marginal sectorial charges and taxes resulting from the difference between the two cash flows.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

If there is an understanding, however, that there may be a change in Operating Expenses or Capital Expenditure arising from the renewal of the concession contracts, the marginal variation of these must be implemented in the Marginal Cash Flow.

For the period in which there is no convergence of flows, which is, periods in which there will only be a cash flow determination for one of the two scenarios (Current Scenario or Capitalization Scenario), the complete cash flow must be considered.

It should be noted that, even for the period in which the commercialization system is the same between the two scenarios, there is Added Value, and the Marginal Cash Flow does not presume null values. This is due to the difference in energy traded between the regimes, as the new physical guarantee is applied to the Capitalization Scenario flow.

Thus, as the CGUs under analysis are, in the Current Scenario, under specific energy commercialization regimes and with different concession end dates, the Added Value for each CGU must be defined separately. The basic assumptions for the definition of the Added Value in each period are made according to Table 4 below.

Table 4: Treatment of Added Value for each CGU

HPP	Treatment

Source: Own elaboration.

The assumptions of the concessions are found in section VI.3 – General Assumptions of the Concessions, wherein the respective physical guarantees, termination of concessions, extensions and electricity trading regimes are detailed.

Table 4 shows that there are three blocks of power plants for calculating Added Value; from those, the treatment received by the power plants under the Law 12783/2013 represents the most common case. In it, there is a transition from the current quota regime to the flow at an independent producer. Figure 2, below, exemplifies the profile of this flow (of revenue only) for the case of the Paulo Afonso Complex HPP.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

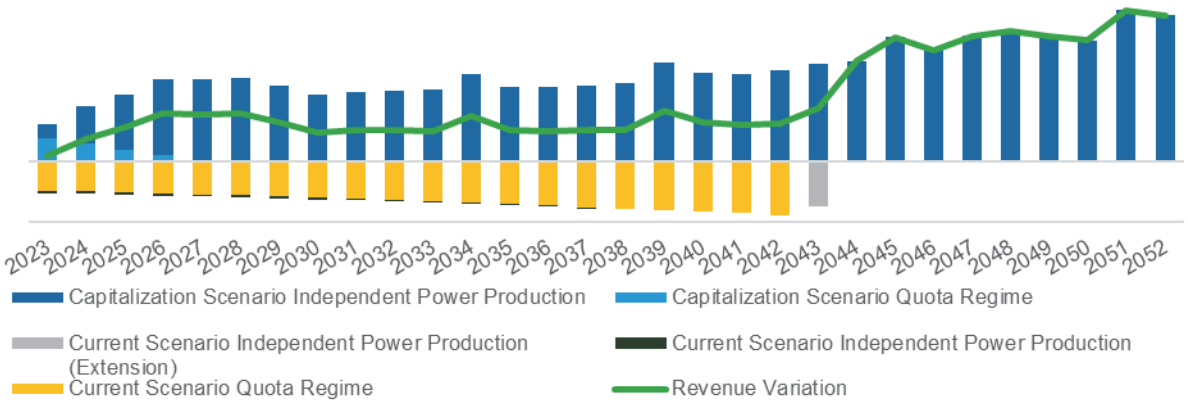

Figure 2: Treatment Added Value Paulo Afonso Complex

Source: Own elaboration.

The Second block refers to the Sobradinho and Itumbiara power plants, which fall under the transitional regime under Law 13182/2015. As detailed in section VI.4.2 – Revenues from power plants under law 13182/2015, the Sobradinho and Itumbiara plants, which are currently independent producers, would uniformly migrate to the quota system; however, they would return being independent producers due to the extension of the grant as a consequence of the hydrological risk renegotiation, as provided for in Law 14052/2020.

One can see in Figure 3 and Figure 4 that, for the plants in the second block, there is a slightly negative revenue difference at the start of the Added Value calculation, due to each plant's revised Physical Guarantee in the flow under the independent production regime, as described in section V.3 – Recalculation of physical guarantees. After the revenue difference returns to a positive level, because of the situation how the independent producer flow exceeds the current revenue flow under the quota regime. Both plants end the flows with considerably negative revenue differences, as their extensions go beyond the period of the contracts signed in the Capitalization Scenario.

Therefore, these flows from the additional period are considered to reduce the value of the Grant, as shown in Table 4. For the Sobradinho and Itumbiara HPPs, the

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Added Value of the last period is a negative value related to the negative flow of independent producer that the power plants would be entitled to in the Current Scenario, but which will not be considered in the Capitalization Scenario.

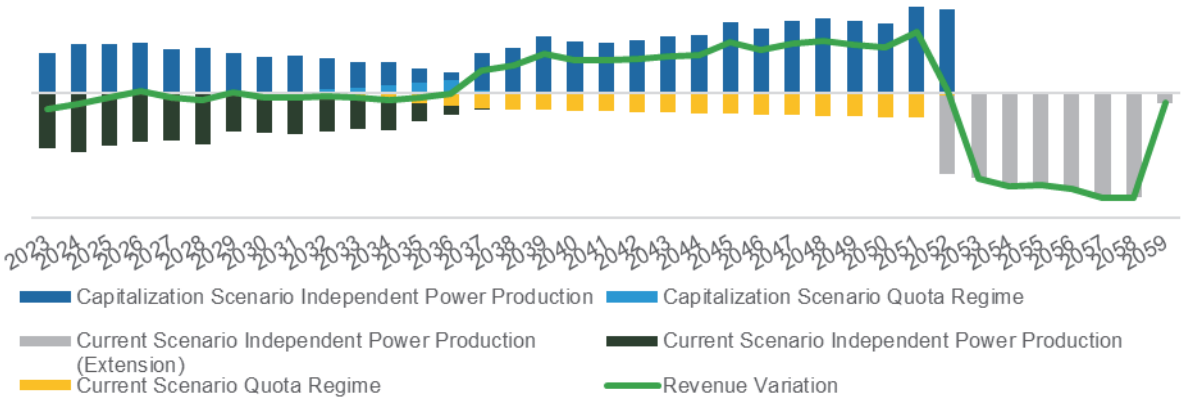

Figure 3: Added Value Treatment – Sobradinho

Source: Own elaboration.

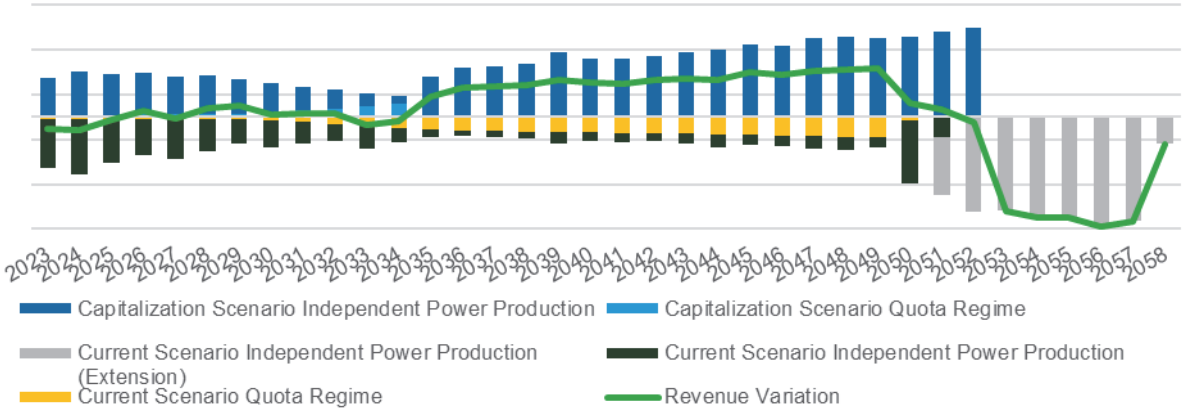

Figure 4: Added Value Treatment – Itumbiara

Source: Own elaboration.

The third block refers to generators that are under the independent production regime with free negotiation of their contracts, as described in section VI.4.3 – Revenue from independent energy producers. The revenue streams of these plants are shown

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

in Figure 5 for Tucuruí, Figure 6 for Curuá-Una, and Figure 7 for Mascarenhas de Moraes.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

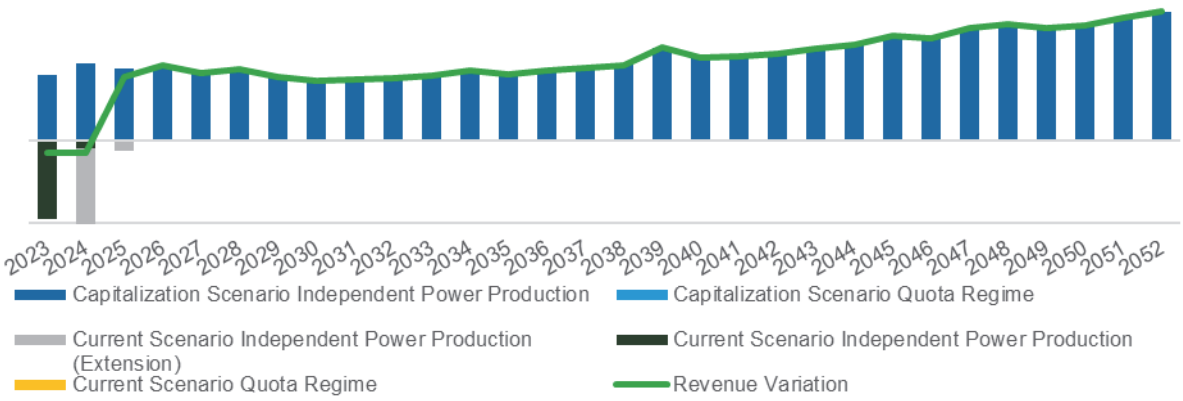

Figure 7: Added Value Treatment – Mascarenhas de Moraes

Source: Own elaboration.

For periods in which the Added Value is the difference between (i) the IPP's NPV for the Capitalization Scenario and (ii) the IPP's NPV for the Current Flow, it is going to be considered, as Marginal Cash Flow, the FCFF, which is the result of the difference of the reviewed and actual GF.

It should be noted that the analysis period for determining the Total Added Value is from January 2023 to January 2059. In other words, it is considered that the new concession contracts will be signed in December 2022 after the payment of the Grants, and these contracts will be effective until December 2052. The additional period (from January 2053 to January 2059) refers to the extension of the concession of the Sobradinho (until January 2059) and Itumbiara (until March 2058) HPPs, detailed in section VI.3 - General Assumptions of the Concessions.

It is important to stress that the profile of the marginal flow demonstrated are not suited to represent the financial flows regarding the scale and specific values once this is going to be presented in chapter VI – Definition of Assumptions. Instead, its purpose is to illustrate under the perspective of a methodological treatment the way which the marginal flow is evaluated for the different blocks of HPPs and their particular cases.

The Grant, on the other hand, will be provided as described by Art. 4 of Law 14182/21.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *"Art. 4. These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*
>
> *I - the payment by Eletrobras or its subsidiaries, as defined by the National Energy Policy Council (CNPE), to the Account for Energy Development (CDE), referred to in Law 10438, of April 26, 2002, corresponding to fifty percent (50%) of the added value to the concession by the new contracts;*
>
> *II - the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession agreements corresponding to fifty percent (50%) of the added value to the concession by the new contracts, deducted of the following amounts:*
>
> *a) expenses related to the revitalization of the water resources of São Francisco River and Parnaíba River watersheds, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;*
>
> *b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;*
>
> *c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, pursuant to subparagraph c, item V, caput, art. 3 of this Law; and*
>
> *d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Watersheds of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;"*

In this way, the Grant bonus to the CDE will be given as 50% of the calculated total Added Value, while the Grant bonus to be paid to the Federal Government will be given by the remaining 50% of the total Added Value deducted from the installments described in the legislation in accordance with section VI.9 – Deductions of the Grant bonus according to Law 14182/2021.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

V.2. Weighted Average Cost of Capital (WACC)

The WACC is the weighted average cost of capital and represents the minimum rate of return required by the project to allocate its equity capital and third-party capital.

It is determined by the opportunity cost of shareholders and the cost of third-party capital, weighted by their respective amounts, in accordance with the following formula:

$$WACC = K_d * w_d * (1 - T) + K_{and} * w_{and}$$

Where:

K_d = cost of third-party capital

w_d = proportion of third-party capital

T = effective tax rate on profit

K_{and} = cost of equity capital

w_{and} = proportion of equity capital

In this Study, the WACC of the project will be determined considering the costs from the financing sources available for the project, as well as the observed average leverage of companies operating in the same sector. Accordingly, the cost and the respective amount of the project's debt are going to be defined.

For the cost of equity capital, the Capital Asset Pricing Model (CAPM) methodology is going to be used, which is commonly used by the international financial literature to determine such cost, defined by the following formula:

$$K_{and} = R_f + \beta * (ERP)$$

Where:

K_{and} = cost of equity capital;

R_f = risk-free rate refers to the return obtained through risk-free investments;

β = coefficient representing the systematic risk of the business;

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

ERP = market equity capital risk premium

A problem to be addressed is the different levels of risk perceived between the quota system and the independent production system, in which the concessionaire is subject to GSF and commercialization risks, which would justify, for example, the use of two different discount rates for each of the flows.

However, a satisfactory proposal to address this problem is to incorporate the perceived risk into the projected cash flow. As explained in section V.4.1.8 - Median and Hydrological Curves, several envelopments associated with different climatological series will be prepared. These scenarios will be subsequently ordered in terms of Total Added Value so that the greater their associated p-values, the more conservative the scenarios generated will be. Hence, it can be concluded that adopting a lower and more conservative NPV would be equivalent to a bolder cash flow discounted at a higher discount rate. Strictly speaking, p-values above p50 already satisfy this choice criterion; for the purposes of this Study, we are using the 90% level p-value (p90), i.e. 90% probability of observing an NPV greater than or equal to the one found, given the distribution of possible hydrological scenarios (this matter is addressed in section V.4 – Pricing and Hydrological Risk Scenario and resumed in section V.4.3 – Application in the Financial Modeling).

In this regard, it should be noted that conservatism in the NPV does not necessarily comes from a worse or better hydrological scenario, but from the optimization condition of the trinomial GSF, PLD and energy trading price detailed in section V.4.3.

Similarly, it is postulated that the adjustment by the NPV p-values of the implicit power generation and commercialization business risk is an eminently financial-methodological character. Therefore, strictly speaking, the hydrological curves should be critiqued, above all else, based on the hydrological median (as defined in section V.4.1.8 – Median and Hydrological Curves), because it is based on such prospecting that a depreciation of the financial flow is calculated, stemming exclusively from the inclusion of the implicit risk of the business, since a single discount rate remains applied to the Current Scenario and Capitalization flows. The dispersion of hydrological

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

scenarios arising from the envelopes can be understood as an interval of coverage for possible changes in the value of the NPV, given a confidence criterion.

It is noted that the direct application of two discount rates for each of the flows to be analyzed, although theoretically justifiable, would find little consolidated support in the available literature for the isolated estimation of the additional risks undertaken when assuming the commercialization and generation risk.

Finally, it should be noted that, as explained in section V.1, an important development for the objectivity and simplicity of works using a single discount rate is making the Total Added Value feasible by the Marginal Cash Flow assessment method.

V.2.1. Definition of Beta (β)

The variable β represents the systematic risk of the business, defined as the covariance between the return of the chosen asset in relation to the market, divided by the variance of the market's return. This factor is estimated through changes in the asset price, over time, in relation to the Stock Exchange. However, as the project is not a publicly-traded company in this study, the representative beta value is defined as the average obtained from comparable companies.

For this Study, the β obtained must be the unlevered β, that is, the one disregarding the leverage level and capital structure of the group of companies similar to Eletrobras. Thereafter, β will be re-leveraged according to the capital structure to be defined in this section.

The unlevered β considered for this Study is 0.56, as shown in Table 5.

Table 5: Determination of unlevered beta.

Company	D/E	Levered β	Unlevered β
ELETROBRAS	70.36%	1.49	0.91
AES BRASIL	108.52%	0.56	0.31
CESP	22.24%	0.50	0.41
CEMIG	66.16%	1.34	0.92
COPEL	59.51%	0.94	0.66

Classification: Confidential

ENGIE	57.23%	0.62	0.43
EDP BRASIL	96.18%	0.58	0.33
CPFL	64.21%	0.70	0.48
		Average	**56**

Source: Economatica.

To re-leverage beta, the following formula must be followed:

$$\beta_{levered} = \beta_{unlevered} * \left[1 + \left(\frac{D}{E} * (1 - T)\right)\right]$$

Where:

D = percentage or total debt amount of the asset;

E = percentage or total value of the asset's equity capital;

T = effective marginal tax rate on profit;

$\beta_{unlevered}$ = unlevered beta;

$\beta_{levered}$ = levered beta.

To calculate $\beta_{levered}$, the capital structure for the asset in question must be determined, a topic that is going to be discussed in section V.2.4 – Optimal Capital Structure.

The effective tax rate on profit (T) will be the benchmark rate of 34%.

V.2.2. Risk-Free Rate, Market Premium and Country Risk, Brazilian and American Inflation

To define the cost of capital, the risk-free rate and the market risk premium must be estimated. The Risk-Free Rate (R_f) was calculated according to the daily average of the trading rate of Brazilian government debt securities (NTN-B) maturing in approximately ten (10) years in the period between 2011-2021.

For the Market Risk Premium (ERP), the United States Equity Risk Premium was used, according to values provided by DAMODARAN (2021).

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The adopted Long-term Brazilian Inflation (Π_{BRL}) forecast was provided by the BACEN expectation system.

Table 6 contains the data obtained for each of the named factors:

Table 6: Weighted Average Cost of Capital - Rates

Risk-Free Rate	Market Risk Premium	Brazilian Inflation
5.16%	4.72%	3.17%

Source: Own elaboration (with data from BACEN, FED, Ipea, and Aswath Damodaran).

V.2.3. Funding Costs (K_d)

To estimate the funding costs (K_d) for the project, we choose to use the Rating-*Based Default Spread* method. In this method, a risk spread is assigned over the risk-free rate (R_f), which is presented as a variable depending on the degree of interest coverage for a given level of leverage. That is, for each level of leverage, a level of interest coverage will be determined, which will be understood as a level of credit risk that should impact the level of the indebtedness spread on the risk-free asset, according to values provided by DAMODARAN in Table 7.

Table 7: Weighted Average Cost of Capital - Spreads

Interest Coverage Ratio			
>	≤	Rating	Spread
8.500	100,000.00	Aaa/AAA	0.69%
6.500	8.500	Aa2/AA	0.85%

Source: Aswath Damodaran.

As a reference, we considered the recent issues carried out by Eletrobras in order to understand the company's credit risk perspective regarding the risk pricing for Eletrobras. It is observed that the company's recent issues have an average spread of 1.03%. The spread over the risk-free rate used for Eletrobras is 1.71%.

Table 8: Weighted Average Cost of Capital - Issuances

Date	Company	Instrument	Index	Rate	Term (years)	Amount (R$ MM)

Source: Ministry of Economy.

V.2.4. Optimal Capital Structure

The capital structure will be estimated from the optimal capital structure, defined as the one that minimizes the cost of capital (WACC) and, therefore, maximizes the value of the respective cash-generating unit. Figure 8 represents the calculation of the

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

optimal capital structure with different levels of leverage with the respective financing costs. The optimal capital structure calculated for the study is 35%.

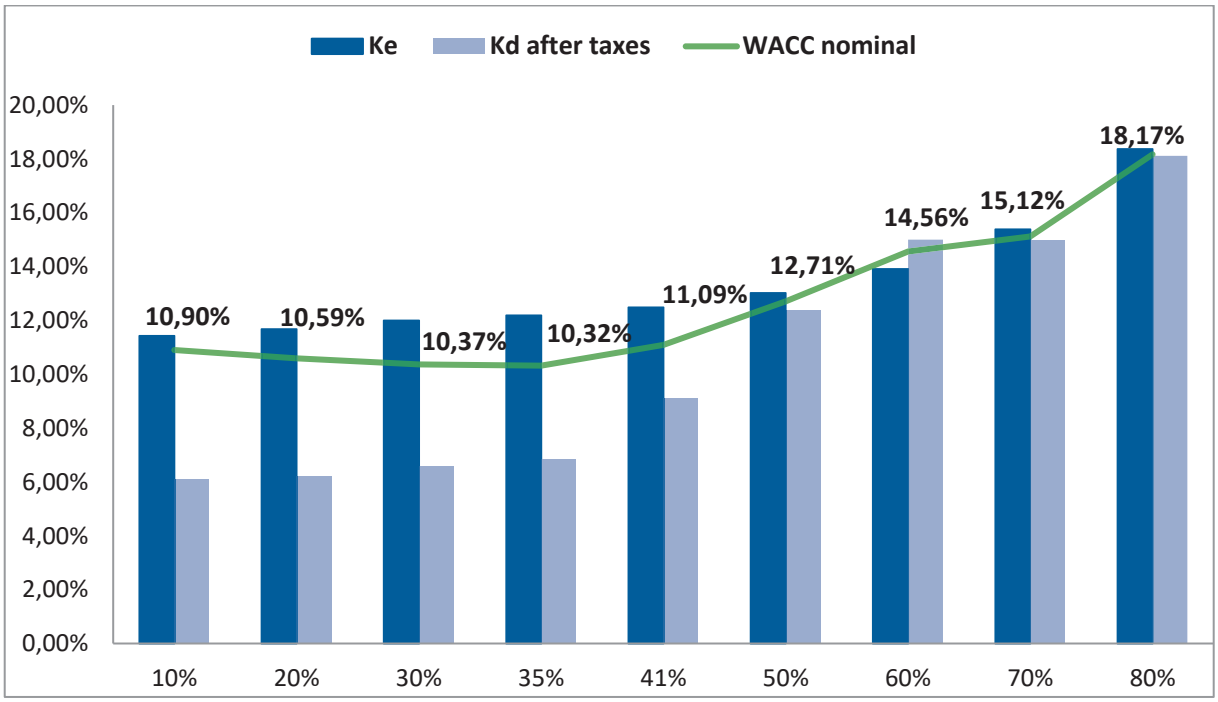

Figure 8: Weighted Average Cost of Capital – Optimal Capital Structure

V.2.5. WACC - Results

Thus, from defining all the parameters necessary for accounting the weighted average cost of capital, Table 9 is presented with the WACC value determined.

Table 9: Weighted Average Cost of Capital - WACC

Risk-Free Rate Scenario			NTN-B
Beta Scenarios			Market Average
Unlevered Beta	βu	Economatica	0.56
Re-levered Beta	βL		0.75

Source: Own elaboration.

This amount will be used as the basis for the project's discount rates, as the reference for determining the discounted cash flow, NPV and for calculating the grant bonus.

V.3. Recalculation of physical guarantees

According to Law 14182/2021, new concession contracts will be generated for the CGUs under analysis. A new physical guarantee must be determined in the case of new concession contracts and not renewals, extensions, and amendments to an existing contract.

MME Regulation No. 544, of August 31, 2021, determined the new values for the Physical Guarantees of the power plants; Table 10 summarizes the effects of the publication.

Table 10: Physical Guarantee Reviewed

Subsidiary	CGU (HPP)	Physical Guarantee (MW)	Physical Guarantee (13182/2015) (MW)	Physical Guarantee Revised (MW)
CHESF	Boa Esperança	132.9	3.0	136.2
	Paulo Afonso Complex	2,067.1	46.7	1,658.8
	Luiz Gonzaga (Itaparica)	891.0	20.1	727.0

	Itumbiara	-	964.3	948.9
	Mascarenhas de Moraes	289.5	-	299.8

Source: Own Elaboration with Data from MME Regulation No. 544.

According to the Auction Notice (Exhibit I of this Report), as to the calculation of the new Physical Guarantee of the power plants to be considered in the modeling, it should consider, as a reference, the methodology established in legislation in force, as well as the base case (decks of the computational models involved in the calculation) and/or the specific assumptions that the Energy Research Company will possibly consider for the calculation. Since Upside used the assumptions of the EPE itself, it was not necessary to calculate the new Physical Guarantees. In addition, during the provision of services, the official calculation of the grant was disclosed by the CNPE, in which the EPE assumptions were also used. For the results generated in the base case of this Study, it is presumed that the physical guarantees of the MRE power plants of this scope are going to have their physical guarantees exactly in accordance with MME Regulation No. 544, of August 31, 2021.

V.4. Pricing and Hydrological Risk Scenario

This section examines the three main price pillars in the Brazilian electricity sector:

- The PLD price (clearance), which is widely used by authorities as a reference - from fines fees to auction base price. It is calculated by the CCEE as the marginal cost of operating the system (limited by higher and lower

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

regulatory values). This is used for what is known as “clearance” of electricity surpluses and shortages resulting from market negotiations;

- The regulated price (distributor tariffs), made up of an array of contracts, charges, and mandatory contributions. In this case, the tariff has several components, including auction prices;
- The unregulated price (free market), resulting from bilateral negotiations.

Although it is non-intuitive, the PLD influences the entire market. For instance, if a generating agent expects a better result simply by using clearance as a selling market, consumers (“free” and “captive”) may be compelled to pay a higher price to “compete” with the PLD, whereby the generator will choose to trade the more attractive prices or simply deliver the energy to PLD clearance.

The product of this analysis will be the monthly curve of the GSF and PLD given the reference hydrological scenario (this scenario will be called the “hydrological median”), discussed in section V.4.1.8, and forward curves, as seen in section V.4.2.2, derived from this median. Based on this central curve, several curve envelopes (also called “hydrological curves”) will be simulated, which will be implemented in the Financial Model, as explained in section V.4.3 – Application in the Financial Modeling.

V.4.1. GSF and PLD projection

In the next sections, the method, critical analysis factors, and results of the GSF and PLD projections to be used in the construction of the projected Marginal Cash Flow will be demonstrated. This hydrological base scenario will be called the “hydrological median”; based on this central projection, the probabilistic scenarios of hydrological curves will be further studied.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

V.4.1.1. PLD

PLD prices are calculated by a set of long-term models (the chain of models) managed by the National System Operator (ONS) and by the Commercialization Chamber (CCEE).

As operating conditions and targets change frequently, the volatility of the PLD is very high.

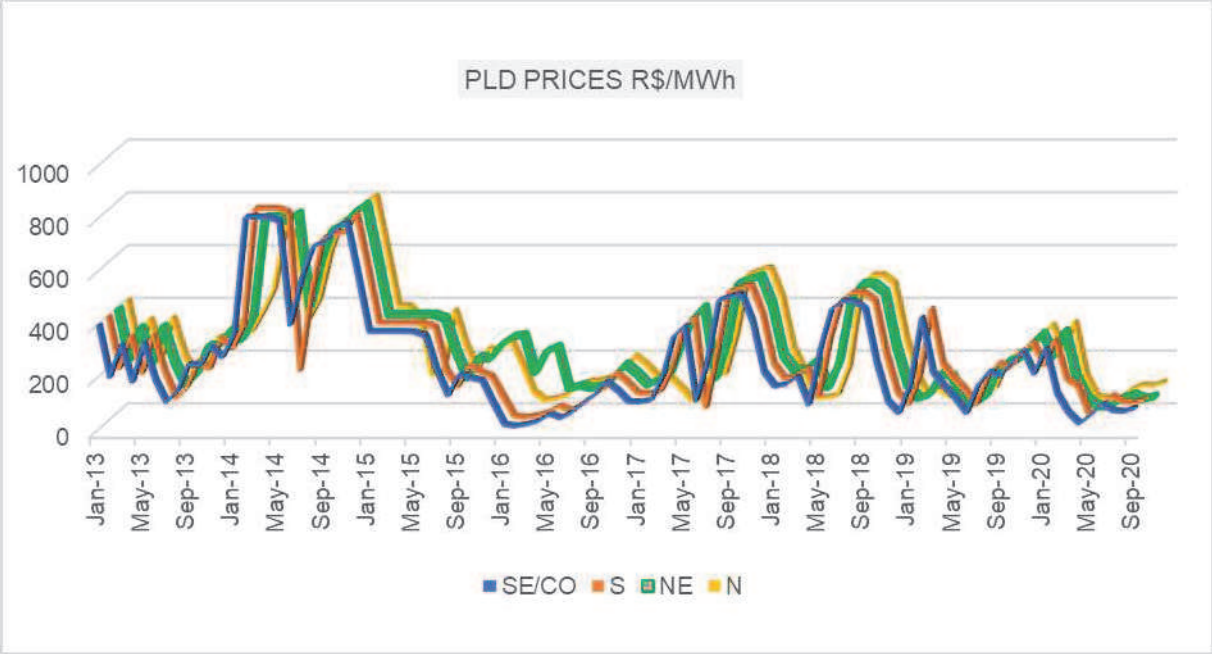

Figure 9: PLD Prices History. presents the historical behavior of the PLD, showing sudden (usually unexpected) "surges" that can last from 3 to 12 months. The use of reservoirs - deeply depleted - leaves the system with little (or no) protection against

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

weather events, such as droughts/floods or even weaker winds. Without our “batteries” (full reservoirs), prices fluctuate according to nature.

Figure 9: PLD Prices History.

Source: Own elaboration.

To simplify, it can be argued that PLD prices correspond to the marginal costs derived from the optimal functioning of the system. Therefore, we need to know:

- Future expansion (installed capacity) and the characteristics and locations of associated sources;
- The future availability of energy source (wind, water, radiation, gas, coal...);
- Future demand.

Granularity and location must meet the PLD assessment. Currently, the PLD is evaluated hourly.

V.4.1.2. Expansion

The expansion combines the generation and transmission projects already contracted, the expected evolution (such as the next auctions) and the long-term future

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

expectations derived from an optimization model compatible with the EPE tools. It is important to note that although our information is based on the PDE 2030 and PNE 2050 reports, we do not reproduce this data accurately. The reason is simple: since the publication of these works, the system and the market have undergone relevant changes – modernization, delays, laws etc.

We can summarize our survey regarding future expansion in the following steps:

1- Use the PDE 2030 and PNE 2050 as a basis
2- Compare the expansion of these documents with the current one: implement delays, new engagements
3- Implement new decisions (modernization, new laws, etc.)
4- From 2030 onwards (when there are no more new contracts, and it is necessary to expand to meet the load, use a model similar to the MDI (from EPE) to calculate the optimal expansion
5- Consolidate final expansion

Apart from of delays, expansion prices do not have a significant impact on the PLD because all units (except fossil and nuclear) operate with "zero fuel cost" (water, wind and sun are free, in theory, and O&M costs/tariffs are disregarded). On the other hand, fossil/nuclear costs are significant and have a high impact on marginal costs (for example, the dispatch - or the expected future dispatch - of a marginal thermal unit will define the marginal costs and, therefore, will impact the PLD).

Unit prices for fossil power plants fall into two categories:

- "availability price" - fixed price indexed by inflation, which will be paid independently of the factory dispatch;
- "variable price", or CVU, is usually specified under contract and indexed by some defined indicator. This indexing poses an important and sometimes overlooked problem. Its growth is generally higher than inflation rates and causes associated prices to significantly increase on a long-term basis.

The availability of power plants is not enough to meet the load if there is no energy source - in this case, water, wind and sun (so far). It is important to “forecast"

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

climatological inputs such as water input (for hydropower plants), wind velocity (for wind farms), and solar radiation (for solar/photovoltaic power plants).

A climatological model was used, which analyzes the climatic dynamics of each series (drainage basin, regional wind speeds, and solar irradiation) to “extract” periodicities and combine their projections into future scenarios.

For example, historical wind velocity records in Northeast Brazil could be broken down into their main periods: long-term Niños/Niñas variation, annual pattern, and intra-annual cycles (2-3 months). Our forecasting model "extends" these periodicities into the future, along with the associated variability, synthesizing realistic wind power production scenarios.

Figure 10, below, illustrates the hydrological inflow scenarios projected for each market (normalized by the long-term average). These scenarios will correspond to the water availability that can be used for hydroelectric generation.

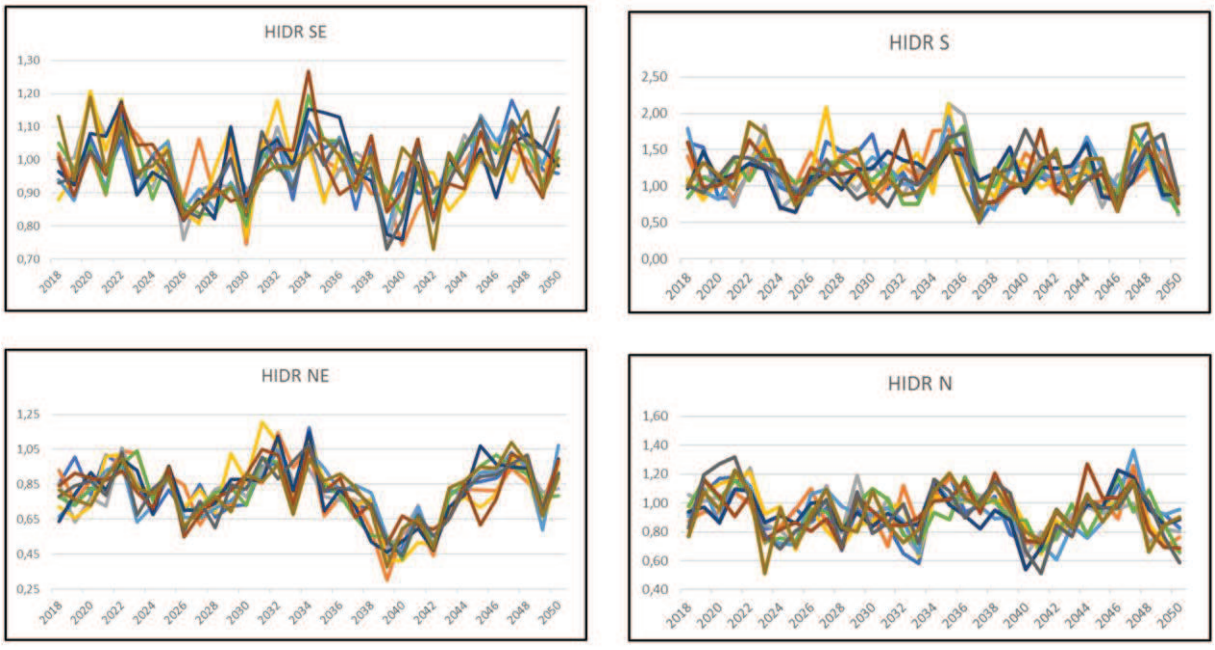

Figure 10: Entry scenarios for each submarket

Source: Own elaboration.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

COVID-19 has had a substantial impact on demand growth. Next year's progress is still unknown, and forecasts are challenging. However, most experts agree that the years ahead will not reach the exuberance of the past. Furthermore, efficiency will play an increasingly important role as distributed generation penetrates and more intelligent equipment emerges.

Even so, the growth of the Brazilian electric energy load is remarkable - even with frequent economic crises, past historical averages showed significant annual growth of 3-4%. In other words, approximately 2 GWmed (in physical guarantee) had to be incorporated into the country per year. Even with much more modest dynamics, the load still grows, and some unanticipated needs (such as peak power) will still lead to considerable expansion.

The expansion of the reference generation is calculated by the Energy Planning Authority (Energy Planning Company, PDE 2020-2030). It is essential to note that this benchmark expansion includes already contracted power plants (to be built under concessions or auction contracts) and planned inclusions but not yet contracted (approximately plants to begin to operate after 2026).

However not the entire expansion schedule develops as specified. Delays and inefficiencies are possible - and usually likely.

There is no official plan longer than 2030. Therefore, it is necessary to build a complementary expansion configuration based on credible assumptions, to be listed as follows.

From 2026 onwards, it is reasonable to presume that Brazil will still be growing and that the need for new plants will persist. However, there is not much information about the power plants that would be chosen to be built. A brief analysis of the Brazilian hydroelectric inventory (Eletrobras) shows that, given the total inventory of 72446 MW, only 18115 MW is viable (according to environmental restrictions). From that potential, only 5192 MW are actually under basic design - with actual conditions to be built.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Assuming a conservative hypothesis, we disregarded the construction of new power plants. The hydroelectric source will be expanded only through SHPs, including mandatory ones, according to Law 14120/2021.

The additions of fossil power plants would not be significant since renewable energies are spread throughout the country, and their price is very competitive. However, fossil energy will be attractive to provide reliability and mitigation of climate-related risks. Recent auctions (capacity, simplified) point to the inclusion of new thermal plants, already established by Law 14182. The importance of these power plants becomes even greater due to the required inflexibility: at least equal to 70%.

Nuclear power plants, in the other hand, are widely rejected by society, which fears adverse effects. The costs are not competitive, and, although defended by some specialists (Eletrobras herein included), they do not find consistent support either among the authorities or among the Brazilian population.

Renewable sources of energy – wind, solar, biomass, to name a few – are Brazil's best bets. This study assumes a proportionally distributed expansion, although changes (e.g., more photovoltaic than wind generators) have no impact on PLD forecasts, since they are all represented at zero cost in the operating models (as water, sunlight and wind are considered "free" fuels).

Figure 11 below shows the resulting basic expected expansion for the next few years by source (new thermal and renewable additions in search of incentives not yet included)

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

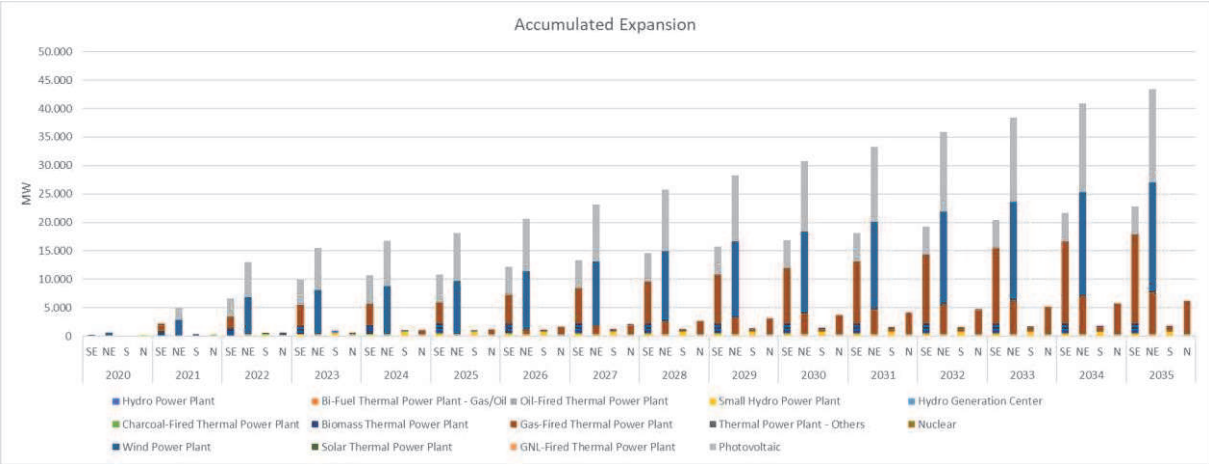

Figure 11: Expected Expansion by Source

Source: Own elaboration.

In addition, two important generation additions were considered:

- New renewable energies going into commercial operation – many new projects were expected, such as the deadline for receiving incentive subsidies (Law 14120, of March 1, 2021). The Law established that the "granting" (subsidy) must be issued by March 1, 2022; all subsidies were issued 36 months prior to the operation date.
- However, as concession deadlines approach and procedures (including connection authorizations)are processed at a sorely slow pace, it is more realistic to presume a deadline delay. Therefore, an operation date delay of six years was considered (until 2028).
- The Eletrobras Privatization Law (Law 14182 of July 12, 2021) establishes the construction of new thermoelectric power plants (gas-powered) associated with high inflexibility (minimum 70%) located in regions not yet served by gas supply. As a significant time was estimated to construct the necessary infrastructure, the perception of the professionals involved in this Report is that the entry dates were postponed for roughly two years.

Table 11 shows the new proposals for renewables and thermal additions for the period 2022-2030.

V.4.1.3. Physical Guarantee

The physical guarantee of Eletrobras' power plants was considered as approved by MME Ordinance 544 of August 31, 2021.

We considered the reduction of the physical guarantee of all other MRE plants being 2.0% (as of 2023) and an additional reduction of 1.5% (as of 2028).

It is important to point out that the renewable energies and inflexibility thermoelectric generators are "non-dispatchable" - in other words, their outputs are mandatorily used for load supply. This will produce a significant impact (reduction) in PLD, since their operating costs are defined as equal to zero in all evaluation models. Table 12 indicates the analytic expansion considered.

Table 12: Expansion of the Resulting Generation

Generation Expansion - Physical Guarantee (Average MW)

V.4.1.4. Demand Prospect (Load)

Future load scenarios are expected for a range of agents and models. The official forecasts, in general, are optimistic, based on the hypothesis of a fast economic recovery - and are seldom confirmed in real life.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

It was adopted a model based on Hilbert Spaces[4], described in the references, already implemented in several Brazilian distribution companies and used by the Electric Energy Commercialization Chamber (CCEE). This model breaks down the load and its drivers - such as economic indicators, temperatures, consumer behavior.

Figure 12 below shows the Load Forecast Platform, building a function capable of "translating" driver input variables (drivers) into future load scenarios. The model is applied both to markets (regulated and free) as well as for all distributors, covering the entire country. The platform derives from a load forecast function for each market and distributor, considering the specific regional characteristics (mining, industry, temperature dynamics, etc.).

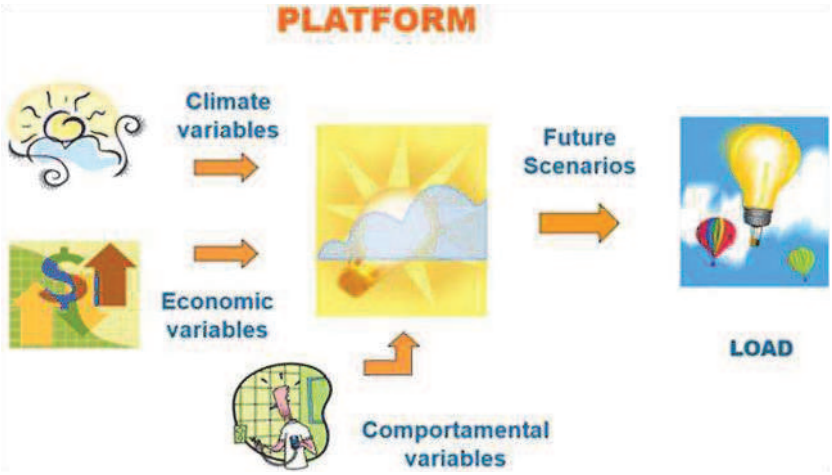

Figure 12: Load Forecast Platform

Source: Own elaboration.

The main algorithm may be described as:

- Use the Hilbert spatial model and historical records to build a transfer function and map possible input variables in loads;
- Make input variables projections;
- Use the function created to map the projected input variables in future load scenarios.

[4] See Witte et al. (2017)

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The main drivers (which will be given specific weights, according to the local load characteristics) are associated with economic indicators:

- Seasonality: the load follows a strong seasonality, according to its periodicity dynamics: high temperatures in the summer, vacations, industrial production peak (March and October).
- Evolution of the Brazilian GDP: higher production requires more energy. In addition, economic growth leads to higher yields, entailing higher consumption. It is positive feedback.
- Broad Consumer Price Index - IPCA index reflecting the inflation rate - sometimes seen by the consumer as a “gain”, a higher income. Part of the population also reacts to inflation with a “buy while you can” approach. Consumption grows.
- Exchange rate: produces the same response as the IPCA.
- United States of America GDP: The USA is still seen by many as the “world engine,” and the industrial activity (steel, ores, etc.) “feeds” American needs. It is interesting to point out that China’s trade would also be a good indicator, were any reliable information available.
- Selic tax: The Brazilian economy is fueled by credit. Better rates encourage consumption (in general) and electricity. As there are no credit volume projections, the interest rates (SELIC) may be used as an indicator.

Projections of the Brazilian input variables are obtained from the Brazilian Central Bank’s forecast data, while the US GDP is obtained from the Congressional Budget Office.

The efficiency impact is obtained from EPE Studies, summarized in Table 13 below – it is important to note that the term efficiency herein comprises the distributed generation and possible developments - such as micro-grids and prosumers (the new proactive rather than passive consumers).

V.4.1.5. Restrictions of the System transmission and connection

To define the restrictions of the electric energy transmission system and connection to the system, a deck of assumptions adopted by the National Electric System Operator - ONS, published in the Monthly Operation Program (PMO), was used.

As the main renewable energy production frontier is concentrated in the Northeast submarket, the energy export limits established by the ONS from that region to the Southeast region, the main consumer submarket, were considered as a restriction for expansion of the system and implementation of new non-dispatchable renewables projects, according to Table 15.

V.4.1.6. Chain of models

The Brazilian electric system is (still) dominated by huge reservoirs, capable of multi-year regulation. Therefore, the operating models must approach a long-term outlook (typically five years, divided into months). On the other hand, long-term models generally disregard small details like local grid or power plant restrictions.

As a result, the Brazilian operation is not based on a single model but a chain of models, shown in Figure 13:

- The long-term model (NEWAVE) has an annual outlook (in general, five years) and evaluates the water values at the end of each period (month);
- The short-term model (DECOMP) has a bimonthly outlook (generally divided into weekly stages and load levels) and evaluates the operation for each stage of time (dispatch and marginal costs).

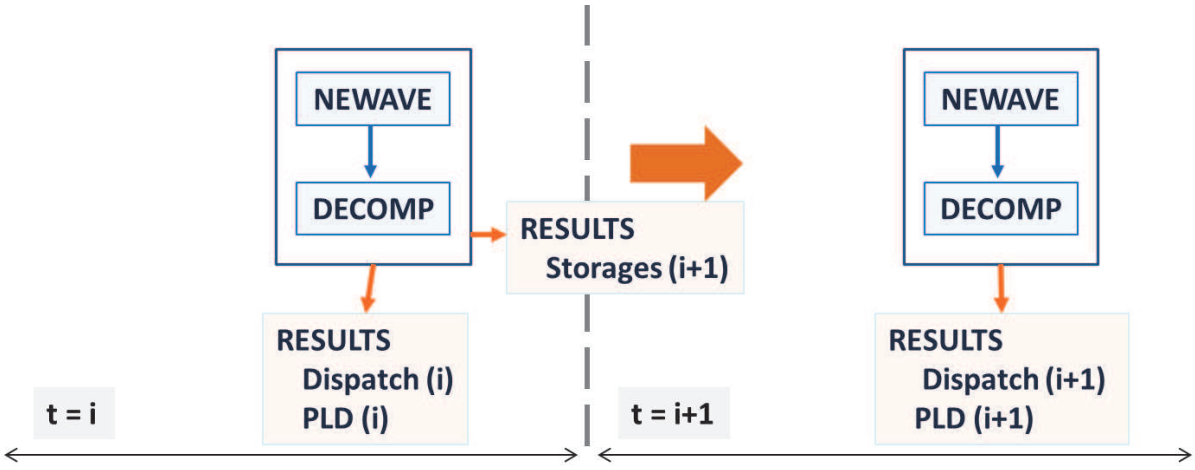

Figure 13: Representation of the chain of models

Source: Own elaboration.

The PLD prices are defined as the marginal operating costs of the system, limited by upper and lower regulatory thresholds. They are evaluated once a month by a chain of models specially designed for operating the Brazilian hydrothermal system and refined weekly.

The PLD is calculated by the Electric Energy Commercialization Chamber (CCEE)

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- Use the long-term operation model (annual) (NEWAVE) to calculate the value of water at the end of the next two months of operation.
- Upon knowing the value of water at the end of the next two months of operation, use the short-term operation model (weekly) (DECOMP).

Naturally, dispatch and associated marginal costs depend on two key factors: available energy and load to be covered. As in a long-term scenario, it is impossible to know the exact load values and (more importantly) availability; the operation model corresponds to a stochastic algorithm (probabilistic) for decisions under uncertainties, as shown in Figure 14.

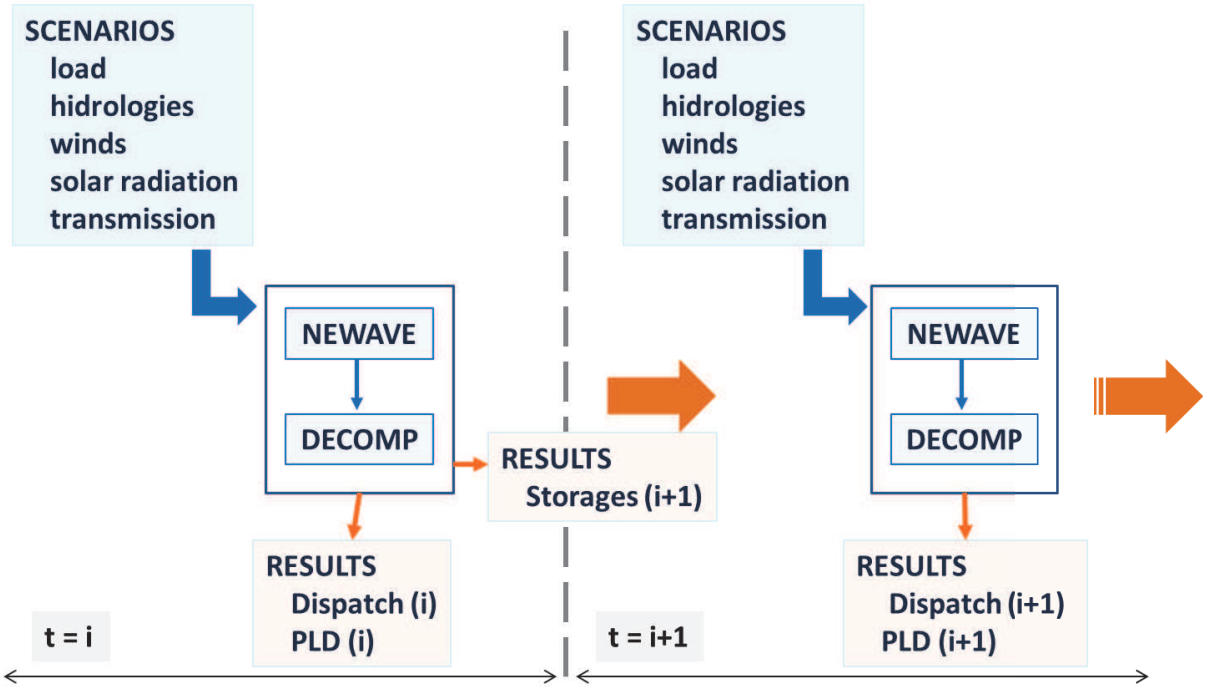

Figure 14: Operation model

Source: Own elaboration.

The DECOMP model seeks a weekly discretization, split into three "stages" (levels): load base, average and peak. However, this representation was acknowledged as unable to capture the system's needs and costs. This became a crucial issue, since the offer depends more on renewable generation due to uncertain and volatile resources and daily modulation.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Such variability (predictable or not) makes it impossible to rely on an “average” representation of this type of energy. However, both NEWAVE and DECOMP (long and medium/short term models) still express the renewable energy (SHP, wind, photovoltaic, by biomass) through monthly averages, obtained from a typical generation profile (which may not even be realistic).

On the other hand, NEWAVE and DECOMP do not represent the transmission system - only the main interchange lines are accommodated without any electrical modeling. It would be interesting to increase the accuracy of the daily operation, introducing some transmission restrictions (even where simplified).

The DESSEM model attempts to fill in these gaps, connecting the weekly dispatch calculated by NEWAVE/DECOMP and the daily pre-dispatch of the following day.

It is interesting to note that future scenarios are built through mathematical models at each PLD assessment - combined with the insights of the Operational Authorities (ONS, the National Electric System Operator).

The future long-term hydrological availability scenarios are calculated through auto-regressive models (NEWAVE) and, in the short term, through forecasting models (DECOMP). These models do not consider weather cycles (Niños, Niñas, etc.) or even climate change trends already noticeable in most Brazilian watershed. On the contrary, these models “tend” towards a long-term average in a few months, eliminating climate effects.

In addition, the wind, photovoltaic, and SHP alternatives are modeled by the “physical guarantee” - approximately a “worst-case” (admitted risk of 5%) calculated in the last years (number of years, depending on the source and available records). However, the generation available is more abundant than that. For example, in the Northeast region, the Photovoltaic and Wind alternatives are anticorrelated, as shown in Figure 15. The same anticorrelations may be found in Hydrologic flows in the Southeast and Wind Velocity in the Northeast.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

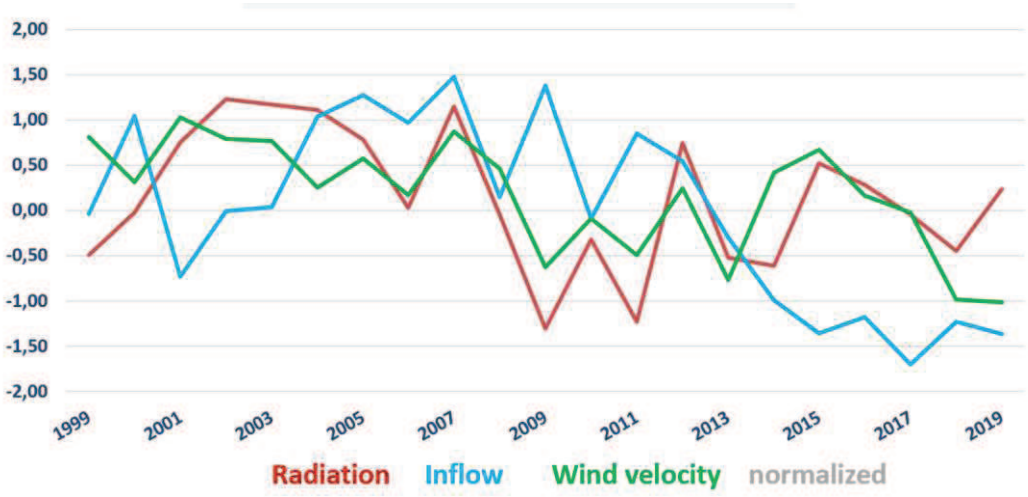

Figure 15: Photovoltaic and Wind alternatives

Source: Own elaboration.

These (anti)correlations are important risk mitigators: when there is no wind, the Sun may “make up” the shortage; an increase in the wind may offset a dry year, and so on. If such effects are not considered, the results of the simulated operation will be far from reality, and the PLD forecasts may be far from accurate[5].

V.4.1.7. Adjustment Methodology

Our methodology seeks to adjust the simulation of the chain of models for the price calculation while preserving the true reproduction of the official chain of models, however, adjusting the future scenarios to more realistic forecasts.

To this effect, we used a “chain-linked” model (jargon in the sector which at each month re-executes the chain of programs, simulating the “reaction” – or the calculation, of the models to the forecast scenario at each moment in time.

The chain-linked model can be summarized in the steps below and Figure 16.

[5] For further reference, see Macêdo et al (2007), Macêdo (2006) Pinto et al (2004), Pinto et al (2002), and Szcuzupak, Crombez (2014).

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

1. Climate availability forecasting (hydrologies, wind, solar radiation, etc.) each month. Calculation of reservoir producibility associated with level of the represented reservoirs.
2. Reproduction of the NEWAVE/DECOMP chain operation for the forecast scenarios.
3. Calculation of dispatch (and byproducts: PLD, GSF, etc.)
4. Correction of the storage status at month-end (considering the actual availabilities based on all climate variables and the effective productivity of the power plants for the observed reservoir levels).
5. Back to 1, to re-execute the chain for the next month.

The results exactly replicate the calculation of the official chain of models (those that calculate the optimal operation) while eliminating the trends of synthetic hydrologic series (too optimistic) and the flow x generation "over productivity".

We emphasize that – for greater efficiency and without loss of precision – the model chain was reprogrammed in a MATLAB environment. The results reproduce the programs in FORTRAN, using the same models and parameters.

V.4.1.8. Median and Hydrological Curves

The climatological scenarios used in this study are calculated through a projection of climatological periodicities and their impact on each submarket (taking into account events such as El Niño, La Niña, solar cycles, etc., as discussed in V.4.1.6. Based on the basic periodic series that generates the base hydrological scenario, or the hydrological median, a different noise is added for each scenario, creating the set of future occurrences. As the noises are drawn from an equiprobable distribution, the scenario distribution will also be equally probable.

The number of scenarios drawn was 100 scenarios with positive noise (or more optimistic) and 100 scenarios with negative noise probabilistically symmetrical to those, which, added to the hydrological median, add up to 201 hydrological curves. In our experience, tests show that this sampling has been sufficient to represent the state space with good precision in the convergence of the models (equal to or greater than 95% confidence). This ensures the compatibility with the NEWAVE/DECOMP chain and the reliability of the results produced.

Figure 17 and Figure 18 include the hydrological median and the change of the 200 hydrological curves for GSF and PLD. It is worth noting that the more conservative curves have lower GSF and higher PLDs, unlike the riskier curves, whose GSF is higher and PLD is lower. Each hydrological curve will be the basis for calculating the forward curves and for the Total Added Value.

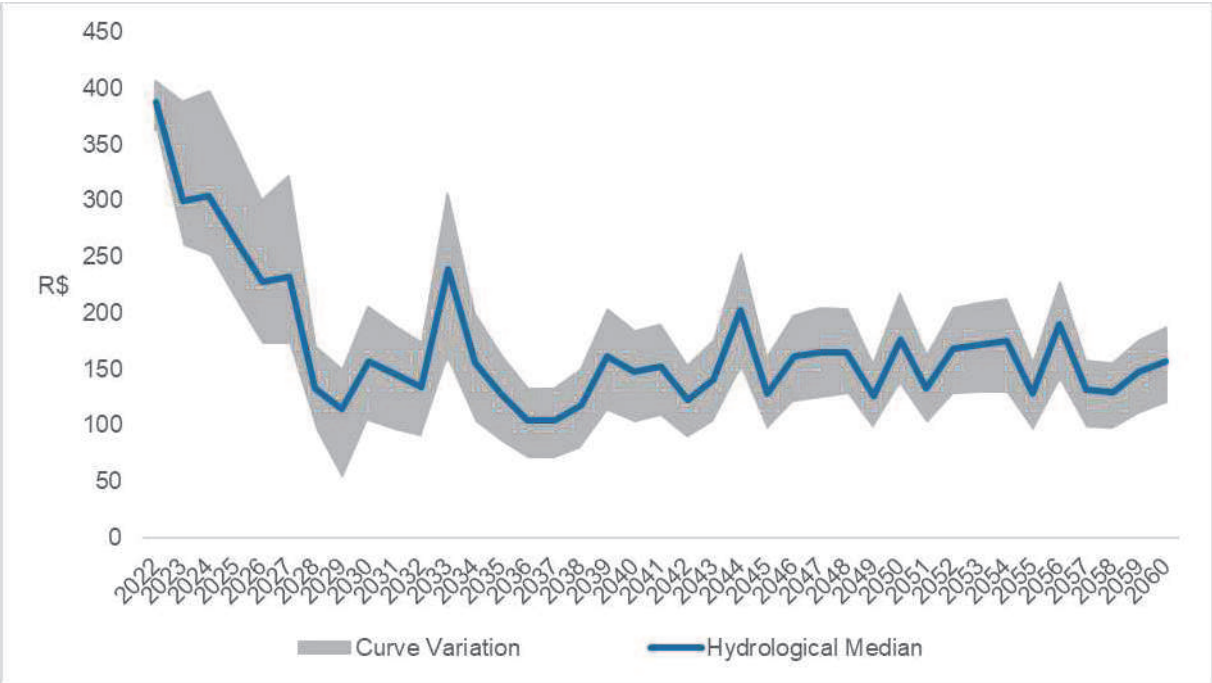

Figure 18: 201 PLD Hydrological Scenarios for the Base Case

Source: Own elaboration.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

It is interesting to note that for the hydrological median scenario:

- El Niño years (2027, 2033, etc.) generally bring air currents to the Southeast, causing a price increase. The La Niña years (2028, 2034, etc.) are associated with better (higher) inflows, leading to a recovery in the water reserves;
- Prices are very high and the GSF is low during 2021/2022, due to the continuation of the severe hydrological crisis;
- From 2023, the prices start to show a persisting reduction due to the entry of new renewable energy; GSF is still low, to the extent that the renewable energies start to displace the hydroelectric dispatch, as illustrated in Figure 19: Projection: Dispatch (Physical guarantee) x Demand;
- From 2028-2030, the entry of inflexible thermoelectric plants improves these effects, leading to lower PLDs and GSFs, as illustrated in Figure 19: Projection: Dispatch (Physical guarantee) x Demand;
- From 2030, the offer and demand start the adjustment process, with the PLD price tending to marginal costs and GSF close to generation of full physical guarantee.

It is important to see that the models do not show any PLD difference among submarkets. The main reasons are:

- A well-planned system will establish an expansion to "direct" the energy from cheaper sources to the loads. The price differences represent gridlocks, in general, the interchange limits that will be solved with backups soon to be built;
- This is exactly what Brazil experienced in 2020 and 2021. The transmission limits between the Northeast and the North, together with the entry of renewables and the decision to replenish the reservoirs in the North, lead to an excess availability in the Northeast and lack of stored energy in the South and Southeast;
- In addition, regional restrictions set by the ONS indicated minimum generation levels of submarkets, which contributed to the mandatory thermal generation, with consequent higher PLDs.

However, it is important to note that:

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- The current situation changed. The energy shortage affects all submarkets, which are equally vulnerable. PLD is equalized. This scenario will remain until the end of 2022. Moreover, there will be no differences in water storage. Therefore, there are no expected price differences;
- After 2022, a significant backup from the NE/SE will end the interchange limits - and will end the gridlock that caused the price differences;
- As to local and regional restrictions, ONS does not inform the future operational restrictions (from the BASE DATA on). For this reason, even if they exist (and may result in some differences), at this point, it is not possible to include any limits in the models and, consequently, forecast any difference.

Lastly, it is important to note that although the PLD prices are uniform throughout the submarkets, the forward prices may present differences. The reason is the composition of the sources in each submarket - e.g., higher amounts of wind and solar energy in the Northeast, hydrological prevalence in the North, etc. As production costs differ, the limiter (and consequently the energy sale price itself) will have different values for each submarket via the variable known as CPPS (Weighted Cost of Production by Submarket). It is worth recalling that negotiations usually have a "premium" for delivery in submarkets other than a generation, mitigating risks - whether existing or not - perceived by the agents.

Another analysis to be regarded is the impact on the GSF due to the expected load and expansion of power plants from “non-dispatchable” sources. Figure 19 shows the projection of the dispatch order against the system demand. Since inflexible SHPs, Biomass, Wind, Photovoltaic and Thermal cannot be dispatched, the demand is fulfilled with hydroelectric power plants. Until 2040, there will be no need for all the energy supply, that is, the generation will be less than its physical guarantee; this situations occurs not because of external solicitation or lack of water, but because of lack of demand.

Analyzing this situation, with the entry of renewable power plants and the inflexibility of thermoelectric power plants, it will be more unlikely that the system is going to need all the physical guarantee of the hydroelectric plants to meet demand. With restricted generation, hydroelectric plants can get their revenue affected.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

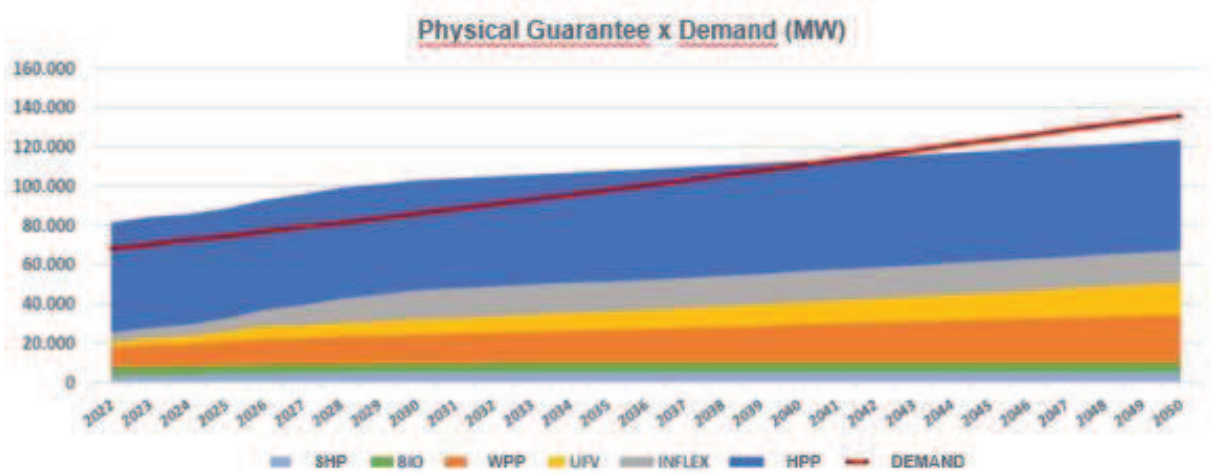

Figure 19: Projection: Dispatch (Physical guarantee) x Demand

Source: Own elaboration.

As this is a scenario with important implications for this Study, due to the inflexibility of thermoelectric plants, we propose an analysis of this variable and its impact on the Total Added Value in section VIII.3 – Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir releaseExcursus: Analysis of the variable inflexibility of thermals against risk of reservoir release (i.e. overflow). From the viewpoint of the risk of oversupply in the system as a whole and its direct impact on the GSF, the hydrological median already incorporates this assumption according to observations and analyses in this section.

V.4.2. Market Prices

This section presents the derivation of the projection of market prices for the Brazilian electricity sector, and makes intensive use of statistical nomenclature and concepts[6].

To prepare this, we used, as input, the PLD and CPPS variables explained below, applied to a neural network whose details are in the following sections.

[6] For readers interested in a more complete mathematical basis, we suggest Morettin et al. (2017a).

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

In general terms, historical market price data for the Brazilian electricity sector were taken and a function was derived that relates short-, medium- and long-term contracts (hence the 1, 3 and 5 year contracting strategy to be announced), with respect to PLD and the perceived production costs.

V.4.2.1. Weighted Production Cost per Submarket (CPPS)

The energy production costs of a submarket are defined as the division of the total project costs by the energy generated throughout the entire operation of the plant. In the long run, this equals the marginal cost of expanding the system. In this Study, this estimated cost curve will be called Weighted Cost of Production by Submarket, known by the Portuguese acronym “CPPS”.

To this effect, considering the experience of the professionals of this Study, a periodic survey (every six months) is made with investors in the sector to tabulate the production costs per source and submarket.

Table 16 shows the production costs for each source in the Southeast, obtained from a July 2021 prospective survey.

Table 16: Production Costs in the Southeast, in R$/MWh per source

Production Costs in the Southeast, in R$/MWh per source

Source: Own elaboration monitoring the implementation of ANEEL's Electric Power Generating Plants. Available at: < https://bityli.com/IKBkcj >. Accessed on 09/16/2021.

It is possible to notice a significant increase throughout 2020-2021, mainly due to the dollar appreciation (which strongly impacts equipment and inputs), increased civil construction (felt mainly by the hydroelectric power plants) and strong competition among investors to construct their projects before the expiry of the term for tax incentives, which is determined by the modernization of the sector.

The CPPS in Table 17 is obtained through the paying-in of production costs per submarket from all plants associated there to (paying the products between the physical guarantee of each plant and the production cost corresponding to its energy source in that respective submarket).

The dynamics of CPPS curves depend on several factors. However, it should be noted that for the expansion period, the dispute for equipment and infrastructure should increase production costs for wind and solar (dispute for the benefit), thermal (Law 14182/2021), and Small Hydros (mainly due to the dispute in civil construction).

V.4.2.2. Forward Curves

As stated by TCU Minister, Benjamin Zymler, during the oral manifestation about the Process 008845/2018-2 – currently ongoing with Eletrobras privatization's follow up object – it is not possible to predict what is going to happen in the next 30 (thirty) years horizon – the granting extension term. In other words, the results from the financial-economic modelling will not be exact and precise, as conveyed by the Minister, even when the most sophisticated methodologies are employed. This is because the used "probabilistic methods" are still subjected to a failure probability.

Therefore, there are not instruments capable of predict, with unequivocal certainty, the prices of the future energy – which is the main variable of this section. However, to perform the necessary price projections, Upside has included in its Technical Team renowned specialists of the Brazilian electric sector, as listed in section III.2.2 – Qualifications of Specialist Professionals. Moreover, Upside has used the best methodology currently available.

The prices of contracted energy for future delivery (called Forward Curves in the market term) depend on the contracted volume, the contract price and the buyers/sellers' strategy.

As it is normal in any market, the longer the contract horizon, the smaller the impact of momentary short-term price fluctuations (in our case, PLD). In our experience, longer term contracts, here treated as five years, nearly resemble CPPS. On the other hand, short term contracts – or one year for the purposes of this Study – are similar to PLD prices.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

For illustration purposes, Figure 20 explains our observation, showing BBCE (Brazilian Energy Exchange) prices for one, three, six and 12 months compared to PLD prices. It shows that the short-term prices fluctuate aiming to be equal to PLD, the limit of which (around R$ 180/MWh) from production costs. An exception is the pandemic period, with an imbalanced market and erratic prices - the generators sold their product at any possible price.

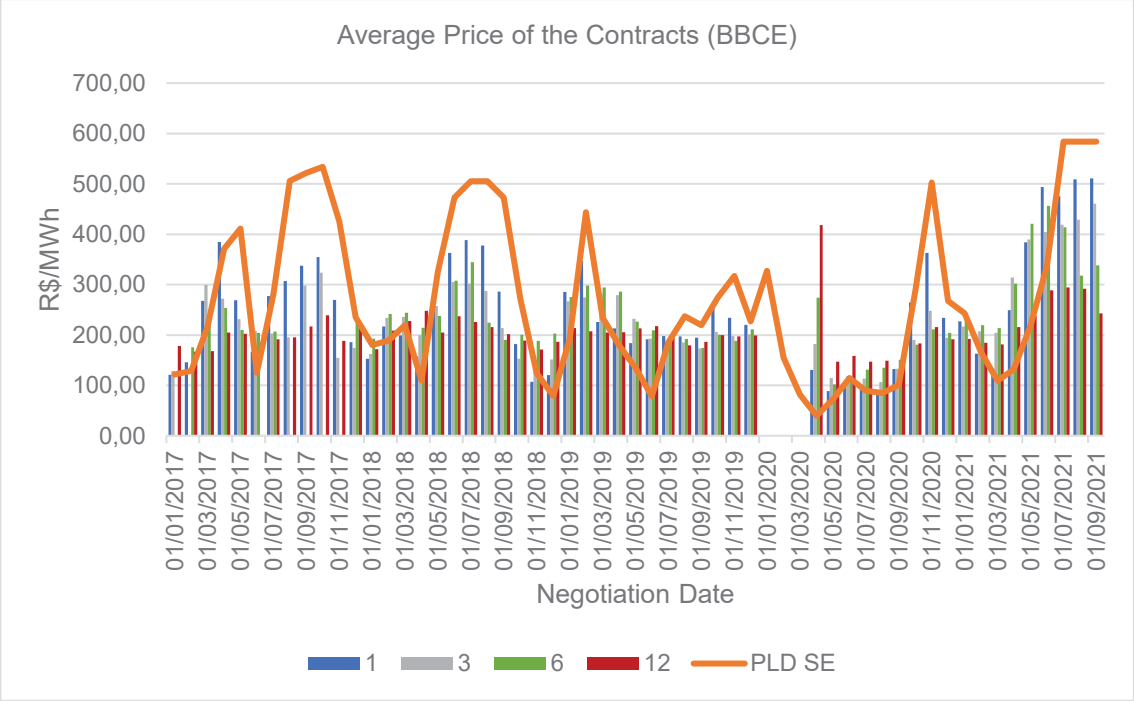

Figure 20: BBCE and PLD price comparison

Source: Own elaboration.

This study builds a forward price curve based on the observed historical data and some explanatory variables (which impact their behavior). We used the CPPS (since selling for long periods at prices below the cost of production price would harm the business) and the PLD (short-term driver, which affects not only the result but also the perception of the agents).

Interestingly, this forecast does not intend (nor could it) to replicate the specific strategies for commercialization or insights/subjective expectations, which are impossible to predict. On the contrary, we seek a model that can estimate the trading

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

value of this energy based on the concrete data available to us. As specified later in section VI.5 – Commercialization Assumptions, we nonetheless follow Eletrobras' request to approximate the timeliness of the sale of amounts of energy, to take into account not only the beginning of its duration, but also the advance with which the deal is closed. In this regard, we consider that the totality of energy to be sold is contracted, in equal amounts, during the first five months of the twelve previous months, at market prices associated with the months of each negotiation. Thus, the price of contracts will be the average of prices projected over the first five months of the twelve months before the beginning of the contract.

To do so, we use three abundant forward price histories of one-year, three-year and five-year durations from various trading companies and specialized institutions (Dcide, BBCE). It is important to compose historical data from several sources to eliminate any strategy trend associated with a single agent or a specific methodology for data processing.

It is also important to note that the monthly price is used as an average of the prices charged in each month, weighted by the amounts sold. It rules out any distortions associated with non-significant deals - e.g., selling a small amount associated with an anomalous price, i.e., one that deviates from the curve (higher or lower, an outlier or "point outside the curve").

The model was built based on two tools:

1- A neural network to build the function

Forward Price = ALFA * PLD + BETA * CPPS

The grid is relatively simple and can be presented in the Figure 21 below. Different functions were built for contracts with a duration of 1, 3, and 5 years.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

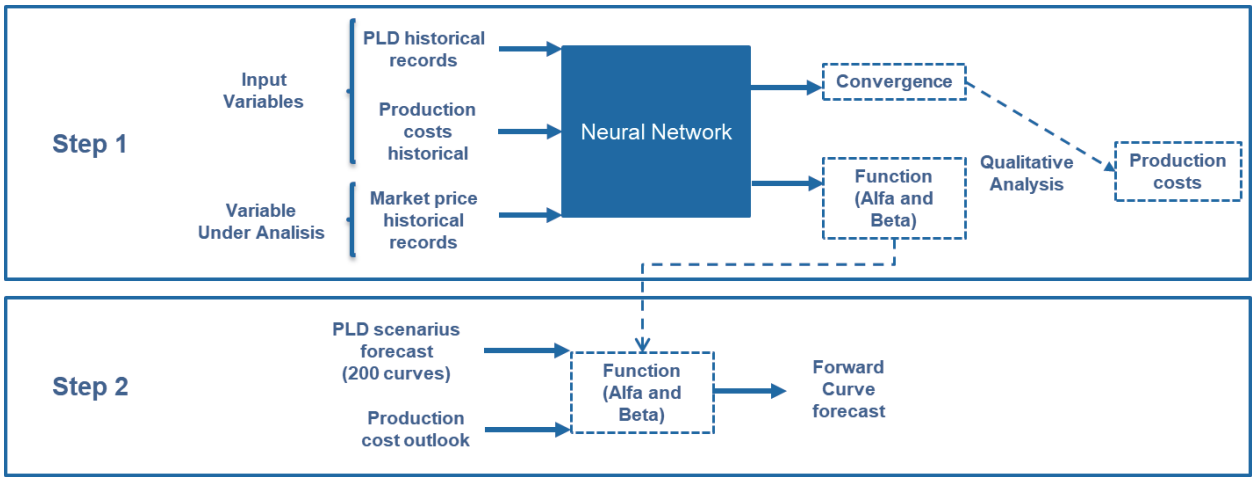

Figure 21: Neural network Diagram

Source: Own elaboration.

Table 18 shows the polynomials obtained. However, the neural network indicated an inconsistency: the forward curve variability is much lower than that of PLD. As a result, it detected a threshold where the market prices ceased to follow the PLD prices.

The analysis of the results obtained showed that this threshold corresponded to the historic CPPS. In other words, sellers (except for anomalous periods, such as the pandemic) did not sell their production below the cost price.

Based on this tested hypothesis and following the results of the mathematical model (explained by the empirical reality), we propose that, in practice, the market price expectation function has a lower limiter equal to the expected CPPS (Table 17), also called “mathematical hope or expectation” in probability theory (in this case, the mean itself for scenarios is equiprobable).

2- A linear regression statistical model, which confirms the function obtained from the neural network.

After obtaining the specific function for each type of contract, we used a linear regression model (also for each type of contract) to review the reliability of the resulting function. Table 18 shows the results of the model: the number of samples and

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

adherence, for each year, of approximately 95% - which may be deemed quite satisfactory, given the uncertainties we face in the Brazilian electric energy market.

For the composition of the prices of the forward curve, the CPPS and the PLD were considered according to Table 18, in which the forward price at a certain time is given by the PLD at the same time multiplied by Alpha plus the CPPS at that time multiplied by Beta. The relationships used present a satisfactory R-squared (adjustment coefficient).

Table 18: Forward Price Formation

Forward Price Formation				
	No. of Samples	Alfa	Beta	R^2
1 year	1328	1.0825	-	0.962
3 years	1175	0.6308	0.3692	0.947
5 years	372	0.1292	0.8708	0.968

Source: Own elaboration.

V.4.3. Application in the Financial Modeling

From the DESSEM model, materials were selected in a spreadsheet containing 200 envelopes of GSF and PLD curves (considered sufficient to cover future scenarios), plus the case of the hydrological median. To define the forward curves, we used the relationship between CPPS and PLD defined in section V.4.2, maintaining the assumption that the PLD is unique among the submarkets, as explained in section V.4.1.1. Forward curves are shown for each North, Northeast, Southeast submarkets, apart from the South submarket, where none of the plants studied here are located. All prices (PLD and forward) were generated on the base date of August 2021. The annual inflation adjustment of these prices is considered every January, according to the accumulated IPCA price index of the previous 12-month period.

Each of the 201 hydrological scenarios, including the hydrological median plus the 200 interrelated envelopes of GSF, PLD, and trading curves corresponds to a Total Added Value. These scenarios were generated and subsequently placed in descending order to select the minimum expected NPV levels for each p-value.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Therefore, the p-value levels eligible for the base scenarios will be those resulting from the accumulated cross-section from samples of 201 results.

As a matter of fact, the financial effect of applying the hydrological curves in the Financial Model involves a problem of optimizing the joint generation of the plants evaluated, in which the scenarios of (i) short-term market exposure; and (ii) energy sales in the free/regulated markets are weighted intertemporally by the difference in the availability of monthly physical guarantee in the Capitalization Scenario compared to the Current Scenario in MW-average . The implicit assumption for this equation is that generation follows the GSF.

As to this topic, the method to select each series should also be explained. Contrary to intuition, the curves do not follow any ordinality with one another. This is because the criterion was ordering by NPVs rather than ordering by hydrological curves, given the relevance of capturing the intertemporal effect jointly in the Total Added Value calculation. For example, a more unfavorable hydrological scenario may be associated with a higher NPV and vice versa. By the same token, as the evolution of the NPV is also non-linear regarding the hydrological scenarios, it may happen that the best or worst NPV scenarios are associated with the central envelopes of the hydrological forecasts. This causes the worst and best hydrological scenarios to alternate almost symmetrically as they converge to, or diverge from, the central branches of the hydrological scenarios (for illustration purposes, see Figure 31).

Furthermore, between sensitivity scenarios (to be discussed in the following sections) and trading scenarios, the hydrological curves that originated the NPV p-values do not maintain correlation with one another. In other words, a given NPV p-value can be associated with a hydrological curve in each scenario and a different curve in another scenario. Analyzing these curves to understand the effects of the application of different assumptions on the GSF or PLD between the sensitivity scenarios becomes an innocuous task.

In this regard, the hydrological curves work as a measure of dispersion of possible NPV scenarios, given the impossibility of applying a better NPV probability

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

distribution than the future hydrological scenarios themselves. This distribution is the one that without it the p-value selection logic for the NPV could not be applied.

In defense of the application of this logic, as discussed in section V.2 – Weighted Average Cost of Capital (WACC), we point out that it is precisely this hydrological risk (in this case, hydrological dispersion) that – associated with the trading risk – constitutes the main measurable business risk assumed in the Capitalization Scenario.

This is tantamount to stating that – as there are numerous critical variables still unknown, uncertain and unpredictable that may eventually affect the future cash flows of the Capitalization Scenario – the critical variables are reduced, for the sake of simplicity, to a dispersion of hydrological curves as representative to measure the probable (and measurable) dispersions of NPV.

Of these two findings, we repeat: (i) the non-cross-correlation of the hydrological curves with the NPV scenarios in different cases of trading and sensitivity; and (ii) ultimate purpose of the hydrological curves as a measure of the probability distribution of NPV; it is also derived that the only hydrological scenario suitable for comparisons and critical analyses on the GSF or PLD of that sensitivity scenario is the case of the hydrological median.

VI. Definition of Assumptions

This chapter will discuss the assumption of each cash-generating unit (CGU) split into: macroeconomic assumptions, tax and fiscal assumptions, general assumptions, investment assumptions, revenue assumptions, operational assumptions, amortization of value-added, and deductions from value-added according to Law 14182/2021.

VI.1. Macroeconomic Assumptions

The macroeconomic assumptions were defined based on the Focus Report of the Central Bank of Brazil, published on August 16, 2021. The project modeling used the IPCA, IGP-M, and Target Selic Rate forecasts.

The Broad Consumer Price Index (IPCA) is prepared by the National Consumer Price Index System (SNIPC) and is intended to measure inflation of a set of products and services (market basket) sold in the retail market related to families' consumption.

The Selic Rate is the base interest rate of the Brazilian economy. The Selic Rate, calculated in transactions performed in one day among the financial institutions that use federal bonds as security, influences all interest rates in Brazil. To align the effective Selic rate with the target Selic, the Central Bank trades bonds through the Special System for Settlement and Custody.

The Interbank Deposit Certificate (CDI) is the rate that grounds the yield from loans between financial institutions. As loans are made at Selic rates and received in CDI, these rates are closely related, and it is not possible to have a profit or loss in these transactions.

The General Market Price Index (IGP-M) is one of the versions of the General Price Index (IGP). It is measured by the Getúlio Vargas Foundation (FGV) and is composed of the Wholesale Market Price Index (IPA-M), Consumer Price Index (IPC-M) and the National Construction Cost Index (INCC-M). It is used as an adjustment index in the Brazilian market.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The indices used in this analysis are in accordance with Table 19 below.

Table 19: Macroeconomic Scenario

Index[7]	2020	2021	2022	2023	2024	2025	2026	2027
IPCA	4.52%	7.03%	3.89%	3.35%	3.18%	3.16%	3.16%	3.16%
IGP-M	23.14%	19.64%	5.10%	4.04%	3.96%	3.86%	3.86%	3.86%
CDI	2.76%	7.46%	7.50%	6.73%	6.53%	6.48%	6.48%	6.48%

Source: Focus Report (8/16/2021).

VI.2. Fiscal and Tax Assumptions

The fiscal and tax assumptions adopted are in conformity with the current Brazilian legislation. As Eletrobras is a company under a taxable income regime, the following rates considered must be extended to the Marginal Cash Flow Study. Table 20 below summarizes the rates:

Table 20: Taxes and Taxation Regime

Taxation Regime	Taxable income
Taxes on revenue	
Social Integration Program (PIS)	1.65%
Contribution to Social Security Financing (COFINS)	7.60%
Income Tax	
Social Contribution on Net Income (CSLL)	9.00%
Income Tax (IR)	15.00%
Additional Income Tax (AIR)	10.00%

Source: Own elaboration.

Social Integration Program (PIS): federal tax contribution of social nature, intended to fund unemployment compensation, bonus, and participation by employees

[7] After the last year of the Central Bank's expectation in 2025, the values were perpetuated.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

in the private or governmental companies in the revenue from agencies and entities. The Federal Tax is levied on gross sales at a 1.65% rate under the non-cumulative regime.

Contribution to Social Security Financing (COFINS): federal tax contribution of social nature, intended to fund the social security, which comprises essential areas such as the Social Security Institute, Social Assistance and the National Health System. It is levied on gross sales at a 7.60% rate under a non-cumulative regime.

Income Tax (IR): the tax under the income regime is calculated on the taxable base defined by the income before applicable taxes, which is, the net flow of revenues, tax on gross revenue, operational expenditures, and sectoral charges. This tax has a 25% rate. Because of the marginal flow, that is, the difference between the two flows, analyzed herein, the discount of the income tax surcharge (R$ 20,000.00 per month) should not be taken into account.

Social Contribution on Net Income (CSLL): federal tax contribution intended to fund social security. This contribution is levied at a 9.00% rate on the same taxable base from Income Tax (IR).

Non-taxable Financial Revenue on the tax base: Considering the flows were designed to result in the free cash flow to the firm (unlevered flow), it is calculated the cash flow adjusted for retainable cash, which consequently rules out the necessity to compute financial revenues on the Income Tax (IR) and CSLL tax bases.

It should be stressed that the calculation (cash flow) made to determine the Added Value is the Marginal Cash Flow; hence, the contribution of taxes is also marginal, in other words, the tax base is going to be equal to the difference in operating income obtained from the difference between the Capitalization Scenario and the Current Scenario. Thus there is no need to include the R$ 20,000.00 deduction per month to calculate the tax charge on the Additional Income Tax (AIR) , which is projected with the 10% rate on the tax base.

VI.2.1. SUDENE/SUDAM Benefit

The Superintendence for Development of Northeast Region (SUDENE) is intended to foster the development of productive activities through the management of tax incentives and benefits in the Northeast macro-region and vicinities (AL, BA, CE, MA, RN, PB, PE, PI, SE, and in part, MG and ES). Similarly, the Superintendence for Development of Amazon (SUDAM) applies the same benefits of SUDENE to attract or keep investments in the Legal Amazon region (MA, PA, AP, RR, RO, AC, AM, MT, TO).

For both superintendencies, there are three tax incentive plans:

I. Corporate Income Tax – IRPJ exemption;
II. 75% reduction in the IRPJ for new projects; and
III. IRPJ reinvestments.

The power plants in this study are classified in the second case, where energy infrastructure projects will benefit. The term of the 75% reduction in IRPJ is 10 years from the beginning of its effect. Table 21 shows the power plants with SUDENE and SUDAM tax incentives and their respective periods of effect.

The SUDENE/SUDAM benefit is being considered as free to the firm; that is, a 75% reduction in the IRPJ is recorded in the marginal flow and has a direct impact on the Total Added Value.

VI.3. General Assumptions of the Concessions

This section is going to both present the general assumptions of the concessions under the current regime and specify how it will occur the transition regime to determine the Added Value in each considered set of power plants.

Table 22, in line with Table 3: Concessions by CGU, presents the general characteristics of the cash-generating units (CGU) considered in this study.

Table 22: General data on the cash-generating units

Subsidiary	UGC (UHE)	Installed power (MW)	Physical Guarantee[8] (average MW)	Physical Guarantee[9] (13182/2015) (Mwaverage)	Physical guarantee Revised (MME 544/21) (Mwmed)	End of concession[10]	Extension of the Grant (days)[11]	Trading scheme

VI.4. Revenue Assumptions

According to the current energy commercialization regime, revenue assumptions were considered in three main blocks of power plants for detailing revenue.

1. Power plants under law 12783/2013 (Quota Regime). They include the following CGUs: Boa Esperança HPP, Paulo Afonso Complex (HPPs Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV), Luiz Gonzaga HPP, Xingó HPP, Funil-BA HPP, Pedra HPP,

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Coaracy Nunes HPP, Corumbá I HPP, Estreito HPP, Funil-RJ HPP, Furnas HPP, Marimbondo HPP, and Porto Colômbia HPP.

2. Power plants under law 13182/2015. They include the following CGUs: Sobradinho HPP and Itumbiara HPP
3. Independent power plants. They include the following CGUs: Tucuruí HPP, Curuá-Una HPP, and Mascarenhas de Moraes HPP.

The sections below will discuss the method to determine the revenue from each of these power plants.

VI.4.1. Revenues from power plants under law 12783/2013

These power plants were recently renewed, according to Law 12783/2013, under the quota regime. Under this regime, the generator does not bear the hydrological risks nor the financial income from Energy Reallocation Mechanism but earns a fixed monthly revenue (Annual Generation Revenue – RAG) adjusted each year by the IPCA index and revised every five years according to the physical guarantee quotas associated to each power plant.

Table 23 below shows the RAG amounts, and their components for each power plant analyzed in this report, as mentioned above. The data for the Current Flow were obtained through Approval Resolution 2,902/2021. The base date of the amounts below is July 2021.

Table 23: Generation Revenue from power plants under Law 12783/2013

Subsidiary	CGU (HPP)	Total RAG (REH 2,902/2021) (R$)
CHESF	Boa Esperança	77,072,301
	Paulo Afonso Complex	1,153,076,197

VI.4.2. Revenues from power plants under law 13182/2015

Itumbiara HPP and Sobradinho HPP are ruled by the special regime of Law 13182/2015, and under this law, energy is commercialized.

That Law sets out that 90% of Sobradinho's Physical Guarantee must be linked to electricity supply contracts in the unregulated trading environment (ACL) until February 2037, with a uniform reduction for the quota regime at the rate of one-sixth each year starting from February 2032. In the same period mentioned above, the uniform and annual reduction of contracts and any termination or permanent reduction of the amounts contracted in the ACL will be subject to the allocation of physical guarantee and power quotas under the terms of Law 12783/2013.

In the case of Itumbiara, the Law determines that 80% of the HPP's Physical Guarantee must be linked to energy supply contracts in the ACL until February 2035, with a uniform reduction at the rate of one-sixth each year starting from February 2030. In the same period mentioned above, the uniform and annual reduction of contracts and any termination or permanent reduction of the amounts contracted in the ACL will be subject to the allocation of physical guarantee and power quotas under the terms of Law 12783/2013.

Thus, Sobradinho HPP and Itumbiara HPP would move to the quota regime (Law 12783/2013) from 2032 and 2030, respectively. Consequently, the future RAG to be received by those power plants must be defined, as such value is not available in the Approval Resolution 2,902/2021, given that such power plants did not receive the revenue from allocation of physical guarantee quotas in the current cycle.

The RAG values for Sobradinho HPP and Itumbiara HPP were estimated according to the Impairment model of Eletrobras group for CHESF and Furnas subsidiaries, respectively. These values are summarized in Table 25.

Source: CNPE 30/2021.

The Value-Added calculation in this study is determined through the Marginal Cash Flow. Thus, for the entire period of free energy commercialization (ACL or ACR contracts), the new concession contract flow (Capitalization Scenario) will be the difference between the capitalization scenario cash flow, which comprises the revision of Physical Guarantee and the current scenario cash flow, which does not.

Additionally, both plants have the right to a 2,555-day extension of the grant due to the renegotiation of the hydrological risk, pursuant to Resolutions 2919/2021 and 2932/2021. Aside from the 2,555-day extension, Itumbiara also has a 395-day concession extension, pursuant to Dispatch 608/2016. In calculating the Added Value, the flows of the additional period are considered to reduce the value of the Grant, as detailed in section V.1 – Marginal Cash Flow and Grant Determination,

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

VI.4.3. Revenue from independent energy producers

As discussed in the previous section, for generators currently under the independent energy production with free negotiation of their contracts, the Added Value by the renewal of the concession contracts under Law 14182/2021 will result from the difference between the current and revised Physical Guarantee, according to Table 22 and V.1 - Marginal Cash Flow and Grant Determination. The value-added of such power plants will then be the cash flow from the Capitalization Scenario, intended for independent energy production, minus the cash from the Current Scenario, intended for the provision of public service, according to the energy commercialization assumptions defined in section VI.5 – Commercialization Assumptions.

VI.5. Commercialization Assumptions

In this section, is expatiate on how the prices applied to the Financial Model were formed from the forward curves in section V.4.2 - Market Prices and how the portfolios of five-, three- and one-year contracts were composed.

Noting the limitations of the scope of this Study (see chapter II – Disclaimer), without intending to fully formulate a trading strategy for the Company, we worked with the information received that Eletrobras tends to enter into its trading contracts early. Accordingly in agreement with the Company, we consider that contracts renewed in a given month are traded between the first five months of the previous twelve months in equal amounts of energy each month, i.e., the simple average of forward prices can be taken from those first five months. Thus, the basis for calculating the forward curves of this Study will indicate (for example) that a contract whose start-up period is January had its prices formed by the average of the forward prices (given by the statistical model in section V.4.2.2) from January to May of the previous year.

VI.5.1. Contracts Portfolio

Here, we could model several different models for the sale of energy. Following the short-, medium- and long-term rationale set forth in section V.4.2 - Market Prices,

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

we decided on the portfolio composition with one-, three- and five-year contracts, respectively.

It is always worth remembering that this is one of many possible portfolios; here we intend to seek the value of energy, and never replicate commercialization strategies that are unpredicted. Our intention here was simply to cover a wider range of possible contracts practiced on the market.

For the composition of the Base Case portfolio, we composed the mix of five-, three- and one-year contracts at the target ratio of 50%, 30% and 20%, respectively, of the energy sold in each period. The reason for the choice is the pursuit of a good risk vs. value compromise: five-year contracts guarantee stable revenue over the long term, but there is not always market demand for this; medium-term contracts (three years), most sought after by the consumer, have a satisfactory risk vs. price ratio. Finally, one-year contracts are for the surplus, and are subject to the volatility of the PLD (higher or lower). It is worth stressing that this portfolio composition do not aim to simulate commercialization strategies. It is understood, however, that when composing energy contracts of 5 years, there is less exposure to prices' volatility.

Different trading strategies were also considered, changing Hedge and contract portfolio; Table 27 summarizes the different trading strategies in this Study. The contract mix is treated by the Financial Model as a portfolio target to be achieved, according to the methodology described below.

Table 27: Trading strategies.

		Assumptions						
		BASE CASE						
Hedge		**20% until 2025 and 10% after**	**0%**	**10%**	**15%**	**20%**	**30%**	20% until 2025 and 10% after

	3 years	**30%**	30%	30%	30%	30%	30%	**30%**
	1 year	**20%**	20%	20%	20%	20%	20%	**40%**

Source: Own Elaboration.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

For the Independent Energy Producer regime, at the end of each contract cycle, the volume of the next new contract of the same duration is determined, according to the order in which the total amount of available energy of the respective submarket is filled, figuratively, like fulfill a glass in a pre-set priority contract order:

- Initially, 50% of the submarket energy is separated for five-year contracts, 30% for three-year contracts and 20% for one-year contracts, in that order;
- Any energy that does not fit into the longer duration contract is reallocated to the smaller cycles, changing the target ratio;
- The energy that does not behave within the aforementioned contract terms is settled at the current PLD;
- The curve resulting from this operation is a month-to-month percentage distribution of the volume of energy to be allocated to the aforementioned contracts, including PLD.

At a subsequent time, this percentage distribution is applied to the “physical guarantee curve available for trading” of each power plant in the respective submarket, which corresponds to the scaled net physical guarantee of the hedge and of losses, both in the Current Scenario and in the Capitalization Scenario.

As the distribution of plants in submarkets coincides with the distribution of plants among Eletrobras subsidiaries, this is equivalent to the realistic strategy that each subsidiary decides its portfolio composition based on the total negotiable physical guarantee and subsequently distributes these contracts among its plants. For the purposes of calculating the Added Value per CGU, it is considered that these contracts are distributed proportionally among the plants, hence the application of the percentage to each plant’s “physical guarantee curve available for trading”.

In the specific case of CHESF’s Capitalization Scenario, the amount of 85 MWaverage – referring to the availability of energy to the São Francisco River Integration Project (PISF), pursuant to Law 14182/2021, Article 6, Paragraph 6 – was apportioned among the plants in the Northeast in proportion to their Physical Guarantees. This volume of energy was also deducted from these plants to calculate the “physical guarantee curve available for trading”.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Accordingly, the final contract mix does not necessarily reach 50%, 30% and 20% for five, three and one-year contracts, respectively, with part of the energy to be settled in the PLD. Table 28 summarizes the average portfolio of each submarket under the Current Scenario and Capitalization Scenario for each trading strategy adopted. It is important to point out that this percentage varies monthly, and that the values are (once again) averages of the total time of the analysis horizon, already considering the weighting of physical guarantee period by period of all plants in the submarket. As these percentages depend exclusively on the volume and temporal distribution of physical guarantee to the independent production regime, they are constant between the Base Case and the sensitization scenarios to be discussed.

Source: Own Elaboration.

Finally, it is worth mentioning that the strategies outlined herein are exogenous to the Financial Model, in the sense that dynamic, iterative or predictive strategies seeking to maximize or establish a risk criterion assumed in the trading strategy to reach the Total Added Value were not studied. As explained above, the very composition of duration of the contracts and their target distribution already address a composition of risk versus price that is considered reasonable.

It is fact that, in practice, the universe of contract terms available to commercialization is way larger than those pointed out by the Study (only 5, 3 and 1 year). This allows Eletrobras to sell a contract, given the remaining time horizon for the commercialization of a given energy volume, without resorting to the PLD liquidation. Similarly, the target portfolio composition most certainly will not be constant over time. It will be subjected to an unknown punctual market equilibrium, Company strategy and risk appetite.

An important corollary of the portfolio composition criteria of “filling the glass” on the reasons and steps earlier indicated is that the financial flow is going to be subjected to a lower price variance in comparison to the case in which at every moment new contracts are simultaneously signed, keeping the prices updates as 50/30/20 proportions. This would generate a financial contract complexity that would be hard to calculate and, thereafter, to be audited, once that it would coexist period to period contracts with equal term that would be settle in different price levels. It is recognized, nevertheless, that the Company can resort to this practice on future.

If on one hand, however, it is stated that the variability of the price and average term of the portfolio is reduced in this framework of rules; on the other hand, nothing is

Classification: Confidential

asserted about the level of conservativism in terms of price levels, since, hypothetically, it is possible to close a higher price contract for a longer duration and, after a few years, the prices of lower contracts duration (which typically tend to be higher than their longer-duration contemporary counterparts) are closing at lower prices relative to that longer still active contract. This type of comparison was not addressed in this Report

VI.5.2. Prices and Contracts – Base Case

For the purpose of detailing the Base Case and the timeliness of this Report, this section will detail only the behavior of contract prices and energy allocation for the Base Case. Table 29 shows the annual average of PLD and of each type of contract by submarket in the hydrological median curve. Contract prices are calculated on a monthly basis and locked in by the Financial Model starting from the time it enters into effect, yet the prices are the same for the Current Scenario and for the Capitalization Scenario; what distinguish both flows is the amount of energy distributed for the Independent Producer regime.

Table 29: PLD prices and contracts for the Hydrological Median.

Hydrological Median (R$/MWh)										
		SE			NE			NO		
Year	PLD	5 years	3 years	1 year	5 years	3 years	1 year	5 years	3 years	1 year
2022	388.44	-	-	-	-	-	-	-	-	-
2023	300.04	215.76	299.21	390.39	180.02	284.06	390.39	195.80	290.75	390.39

For the Current Scenario and Capitalization Scenario, all energy at Independent Producers is apportioned by submarket and then by power plant. Figure 22, Figure 23 and Figure 24 illustrate the monthly allocation of energy in Independent Producer in five, three and one-year contracts and PLD for the Southeast, Northeast and North regions respectively, in the Current Scenario, whereas Figure 25, Figure 26 and Figure 27 illustrate this energy allocation for the Capitalization Scenario.

VI.6. Investment Assumptions

Given the marginal flow must be considered, as explained in section V.1 – Marginal Cash Flow and Grant Determination, the investment assumptions must be treated in marginal terms, that is, the differences between the investments under the current concession contracts and the new concession contracts.

Compared to the contract currently in effect, the investments in the extension period under the capitalization regime were extracted from the data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE. According to official letters DE.E.017.2021, DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The amounts accrue monthly in a straight-line (uniform) basis, from January of each year.

Investments presented by CHESF are detailed in Table 30.

Table 30: Investments by CHESF's CGU

Power plant	Period	CAPEX per period (R$ MM)
Boa Esperança	2042 to 2052	55.20
Paulo Afonso Complex	2042 to 2052	289.80

Source: Eletrobras.

The linear depreciation rate of 2.486% was calculated through the weighted average forecasted depreciation expensefor the 2022 period, according to the Impairment model of Eletrobras group, with analysis dated Sep/21. Despite its non-cash effect, its importance for analysis relies in (i) the tax savings caused by the deduction of the tax base in the marginal cash flow; and (ii) the calculation of the balance of fixed assets from these capitalizations at the end of the analysis horizon.

Due to difficulties in unitizing the CAPEX for initiating the depreciation expense, which takes place only after the effective conclusion of the capital investment, and given its low impact on the cash flow (equivalent to the product of the fixed asset balance, the monthly depreciation rate and the tax rate on the income), it was considered the simplification of applying the depreciation over the consolidated fixed asset balance of the previous month since the beginning of the first capital expenditure.

The remaining amounts from the balance of fixed assets at the end of the analysis were conservatively reverted by their historical residual book value without any adjustments for inflation.

VI.7. Operation Assumptions

This section will present the operational assumptions for the CGUs presented previously: administrative costs and expenses and operational expenditure, sectoral charges, working capital, and technical losses from energy generation.

For operating costs in the capitalization contract extension period compared to the contract currently in effect were considered the data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE, according to official letters DE.E.017.2021,

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021. For Tucuruí HPP were considered the impairment model with analysis dated Sep/21. The tables below show the operating costs and expenses for each power plant. However, these costs will only be projected for the period with no convergence or coexistence between both flows (Capitalization Scenario and Current Scenario). The convergence period presumed no change in costs and expenses.

Table 33: Operating Cost – CHESF.

Power plant	Opex for 2022 (R$ MM)	Period	OPEX for the Period (R$ MM)
Boa Esperança	55.20	2042 to 2052	55.20
Paulo Afonso Complex	289.80	2042 to 2052	289.80

Source: Eletrobras.

Eletronorte estimates for Coaracy Nunes HPP and Curuá-Una HPP were defined as nominal values considering the annual IPCA of 4.5%. For this Report, they will be recalculated to BASE DATE. The estimated operating cost of Tucuruí HPP is R$ 546,606,807.12, considering the base date of September 2021.

Table 35: Operating Cost - FURNAS

Power plant	(A) Values informed (R$ MM)	(B) Sectoral Charges (R$ MM)	(A - B) OPEX (R$ MM)
Estreito	192.03	100.44	91.59
Funil	62.06	31.04	31.02
Furnas	229.15	117.86	111.29

Corumbá	115.00	37.83	77.17

Source: Eletrobras.

CHESF estimates were defined from the base date of December 2020.

Table 36 below shows the sectoral charges applicable to each power plant. Thus, it should be stressed that for the Marginal Cash Flow, the sectoral charges will

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

only be calculated from the difference between the current contract and the future concession contracts determined by Law 14182/2021.

Table 36: Sectoral Charges

Charge	Amount	Reference base
CFURH	5.32 R$/MWh	Generated energy
ONS & CCEE	0.08%	Net Revenue
R&D	1.00%	Net Revenue
Inspection by ANEEL	0.40%	Net Revenue
TUST	6.98 R$/kWh.month	Physical Guarantee

Source: Own elaboration.

Regarding the Value-Added study, as the energy generation follows the GSF monthly, there is no settlement at Optimization Energy Tariff (TEO); this tariff is not considered, as there is no energy commercialization in the MRE context.

VI.8. Amortization of Added Value

The calculated AddedValue AddedTotal Added Value will be amortized throughout the new concession contract, that is, throughout 30 years as from BASE DATE.

Amortization of this value will affect the tax base calculated for the Marginal Cash Flow. By reducing the tax base, the lower amount expended to pay taxes affects the future cash flows, affecting the calculated Added Value. Therefore, an iterative calculation must be made until a null economic gain for the period under analysis is reached.

After verifying the Total Added Value based on the assumptions defined in this report and comparing the results published by CNPE, the advantage of the capitalization process will be analyzed and presented as results and awareness.

The analysis of the advantage will consider the annual payments to CDE, according to Exhibit III of CNPE Resolution no. 30, of December , 2021, then the Marginal Flow will be deducted from annual payments, and the Total Added Value resulting from this analysis will the advantage of implementing Law 14182 of July 2021, compared to the proposed base scenario.

VI.9. Deductions of the Grant bonus according to Law 14182/2021

According to item II, Article 4 of Law 14182/2021:

> *"II – the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession contracts correspond to fifty percent (50%) of the added value to the concession by the new contracts, deducted of the following amounts:*
>
> *a) expenses related to revitalizing the water resources of São Francisco River and Parnaíba River watersheds, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;*
>
> *b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;*
>
> *c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, according to subparagraph c, item V, caput, art. 3 of this Law; and*
>
> *d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Watersheds of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;"*

Therefore, the deductions from the bonus for the grant of new electric energy concession contracts payable to the Federal Government are determined at present value.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

It is understood that the amount destined to item a) of item II, Art. 4 of Law 14182/2021, is in agreement with Art. 6 of the same law.

> *"Art. 6 The obligation of electric energy generation concessionaires located in the Rio São Francisco watershed the concession contracts of which are affected by this Law, in compliance with the measure under subparagraph a, item V, caput of art. 3 of said Law is a contribution of three hundred and fifty million reais (R$ 350,000,000.00) for ten (10) years, adjusted by the IPCA published by the IBGE or another index that may replace it, as from the month of execution of the new concession contracts.*

It is understood that the amount destined to item b) of item II, Art. 4 of Law 14182/2021, is in agreement with Art. 7 of the same law.

> *"Art. 7 The obligation of the concessionaire executing Concession Contract no. 007/2004-Aneel-Eletronorte, subject to the provision in the caput of art. 1 of this Law, in compliance with the measure addressed in* ***subparagraph b, item V, caput of art. 3 of this Law*** *is the contribution of two hundred and ninety-five million reais (R$ 295,000,000.00) per year, for a term of ten (10) years, adjusted by the IPCA published by IBGE or another index that may replace it, as from the month of execution of the new concession contract, for application in the program for structural reduction of energy generation costs in the Legal Amazon and at least twenty percent (20%) in actions to ensure navigability of the Madeira River and ten percent (10%) in actions to ensure navigability of the Tocantins River.*

It is understood that the amount destined to item c) of item II, Art. 4 of Law 14182/2021, is in agreement with Art. 8 of the same law.

> *"Art. 8 The obligation of electric energy generation concessionaires located in the influence area of Furnas hydroelectric power plant reservoirs, the concession contracts of which are affected by this Law, to comply with the measure under* ***subparagraph c, item V, caput of art. 3*** *of said Law is a contribution of two hundred and thirty million reais (R$ 230,000,000.00) for ten (10) years, adjusted by the IPCA published by the IBGE or another index that may replace it, as from the month of execution of the new concession contracts.*

It is understood that the amount destined to item d) of item II, Art. 4 of Law 14182/2021, is in agreement with paragraph 6, Art. 6 of the same law.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

> *"Paragraph 6 In addition to the contribution specified in the caput of this article, the electric energy generation concessionaires located in the São Francisco River watersheds, the concession contracts of which are affected by this Law, shall make electric energy available at an annual amount of eighty-five average megawatts (85 Mwmed) for twenty (20) years as from publication date of this Law, for a price of eighty reais per megawatt-hour (R$ 80.00/MWh), adjusted by the IPCA or another index that may replace it, through a specific agreement, directly to the Federal Operator of the PISF installations."*

The availability of energy to the PISF, as detailed above, was addressed in the Financial Model for CHESF's power plants and prorated proportionally to each power plant's Physical Guarantee, as described in section V.4.3 – Application in the Financial Modeling. Despite the forecast of modulation of this energy, this was considered linearly in the financial flow.

Further to these amounts, due regard should be given to item II, paragraph 1 of Art. 5 of Law 14182/2021:

> *"Paragraph 1 The calculation of the added value to the concession will consider:*
>
> *[...]*
>
> *II – the deduction of credits related to refund for proven expenses with the acquisition of fuel incurred until June 30, 2017, by the concessionaires controlled by Eletrobras and holders of the concessions addressed in art. 4-A of Law 12111, dated December 9, 2009, that have been proven but not refunded as a result of the required economic and energetic efficiency addressed in paragraph 12 of article 3 of said Law, including adjustments for inflation, in which event the offset will be limited to three billion, five hundred million reais (R$ 3,500,000,000.00);"*

The composition of the deductions and revitalizations described in this section is included in Table 37, considering contributions made in January.

Table 37: Deductions and revitalizations according to Law 14182/2021

Present Value of the Flows of amounts in items a, b, and c of item II of Art. 4 of Law 14182/2021 (R$)	**5,925,726,527**

Real Discount Rate	**6.9%**
Base Date	**Jan/22**

Source: Own elaboration.

Further to these discounts, indemnity for non-depreciated and non-amortized assets must also be considered, as the current concession will have an early termination. The indemnity related to non-amortized and non-depreciated assets of Tucuruí HPP basic project is considering the estimated R$ 5,043,166,900.98 informed in the parameters published on the CNPE Resolution 30, of December 21st, 2021. The calculation method was based on its New Replacement Value ("VNR") provided for in NT EPE-DEE-RE-080/2021-R0, as explained by Eletrobras. The considered value of the indemnities of non-amortized and non-depreciated assets of Curuá-Una HPP was R$ 19,550,421.43, according to CNPE Resolution 30, of December 21st, 2021. The indemnities related to the power plants under Law 12783/2013 have a recorded balance in December 2012, adjusted by the IPCA until the BASE DATE of this report. According to the Official Letter 143/2021-DR/ANEEL, of July 8th, 2021, Mascarenhas de Moraes HPP is not going to be entitled to receive an indemnity.

VII. Summary Analysis of the Risks

In this section, the objective is to discuss the risk methodology used herein, explain the scope of this analysis, and point out the step-by-step process of consolidation of the main risk factors that are extensively highlighted in this Study, as well as others yet to be mentioned. In this chapter, a systematization of the risks is proposed in the groups (i) Legal Notes; (ii) Water and Regulatory Aspects; (iii) Economic and Financial Risks; and (iv) Trading Risks.

In each group, the risks will be (i) identified; (ii) described; (iii) analyzed in terms of chances of occurrence and impact. Some of these possible impacts have been addressed through sensitivity analyses compared to the Base Case so they can then be (iv) rated by risk level.

In this regard, due to its dependence on the analysis of sensitivity cases, this section can be taken as an introduction to section VIII – Results, when after assessing the impact of the results obtained in the sensitivity analysis of section VIII.4, the risks will be rated in section VIII.5 – Risk ratingRisk rating.

VII.1. Methodology, scope and main concepts

The risk analysis methodology is based on the works “A Guide to Project Management Body of Knowledge – PMBOK GUIDE” by the Project Management Institute – PMI, and “Modern Project Management”, by Dalton Valeriano, in addition to NBR ISO 10006, issued by the Brazilian Association of Technical Standards – ABNT, which deals with “Quality Management – Guidelines for quality in project management”.

According to Dalton Valeriano (“Modern Project Management”), *“Risk, according to the common understanding, is the possibility of occurrence of an undesirable result, as a consequence of any event”.* Also according to the author, risk is inherent to the project, due to the uncertainties surrounding it, and has two dimensions: *“the probability of its occurrence; and the impact on the project (the*

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

severity of the damage [herein referred to as Threat] *or the magnitude of the benefit* [herein referred to as Opportunity])".

Risk management, in its entirety, *"consists of systematic processes of identifying, analyzing and assessing risks, and establishing appropriate responses to them"*, which also *"can detect opportunities and determine how to take advantage of them"*. Therefore, it is recommended to develop processes related to risk management, with the aim of *"minimizing the impact of potentially negative events, and taking full advantage of opportunities for improvement"*, under the terms of NBR ISO 10006:2000, issued by the ABNT.

However, it is worth noting that the summary and analysis of risks performed by Upside has the outline established in the Contract and in the Auction Notice (Exhibit I of this Report), i.e., it refers only to the survey and analysis of risks that impact or could impact the attractiveness scenarios for Eletrobras, in the context of its privatization. Therefore, this concept was mentioned only as a reference for the next chapters, although risk management is not part of Upside's scope of work.

It is also important to mention that this Study does not include the analysis of budgetary risks, schedule of construction work of the power plants, operation, construction and other risks associated with technical engineering activities, even though we recognize the potentiality of their impacts on cash flow of the CGUs and, consequently, in the Added Value calculated herein.

Based on the technical team's expertise, initially the risks that impact or could impact the attractiveness scenarios for Eletrobras will be identified, as recommended by NBR ISO 10006:2000 in occasions on which significant decisions will be made. Under the terms of the PMBOK GUIDE, this process will involve identifying individual risks, as well as surveying their characteristics.

Subsequently, to support the analysis and (when possible) the development of mitigation strategies, as recommended by the PMBOK GUIDE, the possibilities of occurrence of risks will be identified, and then an analysis of such risks will be performed, qualitative and/or quantitative, on an as-needed basis.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Before quantifying the impacts arising from each risk, a qualitative analysis of the impacts will be performed to prioritize them, according to the potential effects on the project. Qualitative analysis is a method that uses description rather than numerical instruments to define the risk level. To apply this analysis, explanatory words or scales are used to describe the magnitude of potential consequences and the subjective likelihood of occurrence of these consequences. Scales can be adapted or adjusted according to circumstances, and different descriptions can be used for different risks.

In general, the analysis can be used: (i) when quantitative precision is not required; (ii) to carry out an initial risk assessment, before a subsequent, more detailed analysis; (iii) when the level of risk does not justify the time and resources needed to carry out a numerical analysis; and/or (iv) when numerical data are not available or are inadequate for a more quantitative analysis.

After the qualitative stage, wherein the degree of importance of the identified risks is determined with the objective to guide the quantification, a Semi-Quantitative Analysis will be developed. During this approach, part of these impacts will be analyzed qualitatively and assessed as (i) high, (ii) medium or (iii) low impacts. For impacts that receive quantitative treatment through sensitivity analysis, it is proposed that high, medium and low impacts are considered those (i) above 10%; (ii) between 10% and 5%; and (iii) below 5%, respectively. As mentioned above, positive impacts will be rated as Opportunities and negative impacts will be rated as Threats.

Also in this approach, because of the difficulty in using numerical methods, the likelihood will be judged by subjective probability, according to the expertise of the professionals involved in the Report, and qualified as either high, medium, or low.

The expected value of the risk results from the cross product of probability and impact, resulting in its final rating. This rating ranges from High to Low, as shown in Table 38.

Table 38: Impact versus Probability Product

Impact	Probability	Classification
Low	Low	Low

VII.2. Application in Financial Model

This Study is not intended to prepare a risk management and/or treatment plan for the Company. The goal is to assess the main points requiring attention identified in the aforementioned procedures and to survey the potential impacts on the Eletrobras capitalization process and the influence thereof on economic and financial modeling and analysis.

Thus, based on the identification, analysis and partial quantification, the following will be developed for the points requiring attention that represent risks: (i) ways to expand and seize opportunities; and (ii) responses to risks and threats. Among these, non-calculable legal notes and notes of a political and administrative nature will be kept as points requiring attention.

Other aspects that have a direct relation and/or interference in aspects related to concession terms, physical guarantee, GSF, and any other points that may influence the Company's strategy must be dealt with, according to the nature of each impact, in the economic and financial model, with: (i) Qualified incorporation of risk in the Base Case cash flow projection; or (ii) Base Case sensitization, in such a way that the impact of the Total Added Value is verified in an extreme or borderline way in the scope of the risk. The latter, in turn, will involve: (i) risk considerations in the assumptions on entry into operation, such as GSF and PLD; or (ii) changes in the formation of the trading price curve.

The expression "qualified incorporation in the Base Case" is understood to mean application of the risk assumption according to a reasonably conservative scenario. In other words, given a risk with low or remote probability, it can be judged by the non-application or partial application of a certain assumption sensitized to the risk.

For the sensitization scenarios, the borderline analysis of the risk scope should be understood as the limit of the possible risk coverage area, given a particular confidence level, considered sufficient confidence. That is to say, through this analysis,

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

it is possible to glimpse the maximum changes in Total Added Value for that particular aspect of risk.

Sensitivity analyses, however, do not seek to exhaust all predictable and unpredictable aspects of the impact of a given risk, but rather the specific impact of sensitization of a specific assumption that contemplates a relevant facet of that risk.

In the same way as negative impacts of a marketing and/or political nature, opportunities of such nature will be points requiring attention and will not be reflected in the financial model.

VII.3. Identifying and describing risks

In this section, all the risks identified in the Study are summarized and structured in groups: (i) Legal Notes; (ii) Water and Regulatory Aspects; (iii) Economic and Financial Risks; and (iv) Trading Risks. The risks will be identified for future reference in section VIII.5 and summarized inTable 39.

Table 39: Identification and Treatment of Risks.

Type	ID	identified Risks	Path Analysis
Legal (L)	J1	Risk of a Declaration of Unconstitutionality of Law 14182/2021 in ADI 6938	Point for attention
	J2	Risk of an Accounting and Legality Analysis by the Federal Court of Accounts	Point for attention
	J3	Extension of the terms of the current concession due to the Energy Relocation Mechanism (MRE)	Base Scenario considers the extension of REH 2902 and 2906
Water/Regulatory (R)	R1	Reduction of Physical Guarantees (“PG”) of the MRE	Sensitization: No Physical Warranty Review
	R2	Effects of thermoelectric plants due to inflexibility	Sensitization: Partial entry (50%) of the thermal plants provided for in Law 4182 Sensitization: Entry of Angra 3 and auctioned plants in the Simplified Competitive Procedure 001/2021
	R3	Entry of renewable power plants as of 2023	Sensitization: Entry of renewable energy and thermal energy in accordance with Law 14182
	R4	Dispatchability of the new energy matrix	Point for attention
	R5	Displacement between PLD and contract prices	Base Scenario evaluates the most likely scenario
	R6	Future transformation of the electricity sector	Point for attention

VII.3.1. Legal Notes

VII.3.1.1. Risk of Declaration of Unconstitutionality of Law 14182/2021 in Declaratory Action of Unconstitutionality – ADI 6938 (ID:J1)

Regarding the possible risk of commencement of litigation on the complex privatization plan, it should be noted that, at least in part, the risk level that may be envisaged was deemed consummated even before the works regarding the pricing of quotas taken to the market begun. Because when the project to convert Provisional Measure - PM 1031/2021 was approved by the Parliament, with the consequent enactment of Law 14182/2021, the ADI 6839 was filed immediately with the Federal Supreme Court, in which the plaintiff parties dispute the main provisions that establish the privatization. Presuming that Law 14182/2021 is not declared fully unconstitutional, possible granting of the second claim in the ADI would take to the same consequence that would occur with a presidential veto:

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21, and the conditions addressed in arts. 2, 4, and 5. Its correction goes through the departments of the Office of the General Counsel for the Federal Government working on the ADI at the Federal Supreme Court, which has under the specific procedure to judge this action, defended the constitutionality of Law 14182/2021. This risk must be deemed a point of attention and it was not considered in the Financial Modeling.

VII.3.1.2. Risk of Accounting Analysis and Legality by the Federal Accounting Court (ID: J2)

As the legality and economic assessment of the privatization is pending examination by the Federal Accounting Court - TCU, which imposed hindrances to similar projects in the past, and given the opinion issued by the Justice reporting on the Eletrobras case, to some extent, the process may be impacted by its handling at the Court. Although the TCU no longer has the power to halt the effectiveness of Law 14182/2021, given the superseded opinion in Precedent 347/STF, which authorized deciding on the unconstitutionality of acts by the Government, there is a possibility of the Court staying the privatization, in case of evidence of possible litigation regarding the economy of the project and complexity of the economic-financial balance, likewise ADI 6938. In Case TC 000.350/2021-4, a request for examination of the record by Justice Aroldo Cedraz, who reports on the background of the Eletrobras case at the TCU, imposed a sixty-day delay in the publication of the auction notice regarding the implementation of 5G technology by auction, and ultimately, voted against the proposal from the technical unit, which was in line with the Federal Government' agenda. Such considerations lead us to believe that, under the privatization feasibility standpoint, the possibility of the TCU examining more sensitive aspects of the project exist, and with possible delays in the initially expected schedule to offer the securities in the market, capitalization may be impacted as regards the ratio between the amount defined for Eletrobras changing to the free market and the economy of the mandatory concessions under

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Law 14182/2021. The risk of hindrances by the TCU, once the process is provided with supporting documents, calls for mitigation by the legal departments representing the Federal Government, BNDES and all other agents working on the privatization, to advance the issuance of a definitive standpoint of the Court concerning the economy of the privatization and its accounting lawfulness. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3.1.3. Extension of the current concession terms because of the MRE (ID: J3)

A subset of Eletrobras power plants covered by Law 13203/2015, acquired the prerogative of extending the current terms of the concession, in return for a significant portion of the costs incurred with the MRE. However, as it coincides with this capitalization process, there are moderate risks of the vested right not being fully comprised. The recommendation is that such right be duly contemplated in a specific clause of the new concession contracts. The impact of this risk in the calculation of the Total Added Value was considered in the Financial Model through the extensions of grants in accordance with Ratifying Resolution 2919/2021 and REH 2932/21.

VII.3.2. Water and Regulatory Aspects

VII.3.2.1. Reduction of the physical guarantees of the MRE (ID: R1)

If the physical guarantees of other MRE power plants will not be revised, **there is a not negligible risk** that Eletrobras Group, because of the reduced physical guarantees to which it was subject, incurs financial costs associated with the sharing of the burdens and benefits of the centralized operation, at higher rates than other agents. The reduction in the Eletrobras physical guarantees improves the GSF to all parties but simultaneously reduces the participation of the power plants in the total energy allocated to them. The impact of the physical guarantees

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

of the MRE not being reviewed will be analyzed with the sensitization of the scenario in which the physical guarantee reviews will not be carried out in 2023 and 2028 compared to the base case, as mentioned in section VII.4, in such a way that the impact of this risk on the Total Added Value will be verified.

VII.3.2.2. Effects of thermoelectric plants by inflexibility (ID: R2)

Although the contracting of thermoelectric plants object of Law 14182/2021 has the powers to mitigate the seriousness of any future crisis related to scarce water resources, especially in the medium term, they will also have a strong contribution to the displacement of hydroelectric power plants, decreasing the GSF value. The impact of the deployment schedule of thermoelectric plants with 70% inflexibility will be analyzed with the sensitization of the scenario of partial entrance (50%) of the thermoelectric plants provided for in Law 14182 of July 2021, and the entrance of Angra 3 and plants auctioned in Simplified Competitive Procedure 001/2021 compared to the base case, as mentioned in section VII.4, in such a way that the impact of this risk on the Total Added Value will be ascertained.

VII.3.2.3. Entry of renewables as from 2023 (ID: R3)

The high volume of renewables, with a start-up in 2023, will have similar effects. These risks demand for strategic positioning of the company, further to their commercial mitigation. The impact of the schedule to implement renewables from 2023 will be examined with the sensitivity analysis of the base case, as mentioned in section VII.4 – Sensitivity factors for the base caseVII.4; thus, the impact of this risk on the Total Added Value will be examined.

VII.3.2.4. Capacity of dispatch of the new electric matrix (ID: R4)

The "new" electric matrix, given the increased share of renewable sources, tends to be less dispatchable or more mandatory. This will require more thermoelectric plants, which will prevent relevant reductions of the marginal cost in the short term.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The same will happen with tariffs, which may increase even after 2030, especially if the subsidies policy for renewable sources is maintained. The risk here is the maintenance of interventionism, with the application of unreasonable prices, which may affect the free prices. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3.2.5. The displacement between PLD and contract prices (ID: R5)

An oversupply lead by subsidized renewable sources and inflexible thermal plants, associated with the prospective rising tariffs, will entail a GSF below 1.0, but contract prices further displaced from PLD, which calls for attention. However, because of what will happen with tariffs and market opening, it is more likely that the contract prices will be higher than PLD, which is an opportunity. This risk was considered in the GSF, PLD and Forward curve forecast, the entry assumptions of the Financial Modeling.

VII.3.2.6. Future change of the electric sector (ID: R6)

Given the facts described in items VII.3.2.2 to VII.3.2.6, combined with the expected insertion of distributed generation, the electricity sector is likely to go through important changes in the next few years. The sector may not be the same, even between 2026 and 2030. The displacement of hydroelectric power plants, which is a risk, may be more permanent than desired. However, hydroelectric power plants will not lose importance. It is not likely to disregard a storage capacity of an average 280 GW. It is a "battery" of huge proportions, which only needs to be used. Thus, among the expected changes, flexibility, which is, the ability to respond quickly to operational needs of an increasingly less dispatchable power system, will arise as one of the main products of the hydroelectric power plants. The suggestion is a strategic standpoint towards this direction to arrive earlier in this new focus of the

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

business. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3.2.7. TUST (ID: R7)

Changes in the Electricity Transmission Systems Usage Tariff (TUST) for the submarkets tend to a balance in the medium term and to be neutralized in the ACL; however, the effects thereof should be analyzed, since they impact generators and consumers in different ways. The new TUST is not yet defined; however, it is expected to increase the TUST of generators in export submarkets, such as the North and Northeast regions – since there are signs that no additional generation is needed –, and a decrease in the TUST of consumers in these same submarkets, since there are signs that more consumers will be attracted. The opposite effect occurs in the Southeast and Central-West submarkets, with a decrease for generators and an increase for consumers. Costs increase for exporting generators, but given the reduction in TUST for consumers, there is a margin for passing on such costs, whereas for importing submarkets, consumers will demand a price reduction, given an increase in the TUST. This risk must be deemed a point requiring attention and it was not considered in the Financial Model.

VII.3.2.8. Expansion of the Transmission Network (ID: R8)

The expansion of the transmission network, especially for the interconnection between the Northeast and other regions, warrants attention. For quite some time now, the Northeast has been the focus of increasing installed generation capacity, with over 100 GW of renewable sources under study and/or undergoing processes of issuing grants. According to Brazil's Energy Research Agency (EPE), as stated by its president at an event held in October 2021, the transmission capacity between the Northeast and South, Southeast and Central-West is – in his words – expected to quadruple by 2028. At the same event, EPE indicated that the use of Direct Current lines to carry energy from that region was under study. Irrespective of the technology chosen, transmission restrictions – which lead to substantial

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

changes in the locational signal – will be minimized even before 2028, which will greatly reduce the exposure of power plants in the North and Northeast. This risk must be deemed a point requiring attention and it was not considered in the Financial Model.

VII.3.3. Economic and Financial Risks

The economic and financial risks affect the Eletrobras balance in terms of financial stability and attractiveness in the short and long term, related to the business illiquidity, counterparties, and attractiveness (capital allocation).

VII.3.3.1. Inherent risk of the business (ID: E1)

The change to the free market is expected to bring a higher exposure to Eletrobras or a higher correlation of its economic activity to the economic cycles from an increased inherent risk of the business. This risk would entail a direct negative impact on the calculation of the Added Value in this Study. According to section V.2 - Weighted Average Cost of Capital (WACC), this risk was addressed through a more conservative cash flow forecast to incorporate the higher risk associated with the business in the financial flow.

VII.3.3.2. Economic activity level (ID: E2)

Market oscillations may cause an imbalance in the economy, where production costs will be higher than the price of products in the market, and this fact demotivates producers, of which part of the stabilization plans implemented until the '90s is a typical example. In the recent crisis, this occurred again, when several free-market consumers had to renegotiate payments with the generators and sellers.

- This risk has medium to low chances, as these cycles are specific and widely spaced. In addition, the current scenario is based on a low base of economic cycle recovery.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- The impacts in the company's liquidity may range from medium to high, as on occurrence of any such event, the liquidity and income of Eletrobras may be jeopardized.
- Economic activity should be monitored to mitigate this risk, and an internal debt renegotiation policy must be in place. This policy sets the costs and payment terms granted to clients in the default portion. These costs passed on to defaulters must always be higher than the opportunity costs that Eletrobras bears in the financial market.
- Lastly, the company must keep a pre-established liquidity level and open credit facilities with the financial market, established in its internal policies.
- This point will be addressed through increases in load growth (3.1% p.a. according to EPE and 3.6% p.a.) so as to simulate changes in the level of demand, according to section VII.4.

VII.3.3.3. Credit risk of counterparties

Credit risk comprises every possibility of default in a transaction, which is, the inability to predict that the parties' obligations will be fulfilled accurately. It is an ever-present risk in commercial and financial negotiations. Specifically, as Eletrobras will sell its energy in the free market (ACL), it risks default on the energy buyer.

- If no mitigating system is adopted, the chances of this risk may range from medium to high. As an example, medium-size traders have already defaulted in the past.
- The impact of credit risk is high/medium, depending on the concentration of sales to a profile of high-risk clients/traders.
- The recommendation is to set a Risk Acceptance Criterion (CAR) to mitigate this risk, where each client/trader has its exposure limits. This procedure calls for the preliminary involvement of the Compliance Department and is managed by a Credit Department, which sets previous levels concerning the volume

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

exposure period of each counterparty and monitors the economic-financial indices of the buying counterparty.

- There must also be a clear exposure policy for each buying counterparty to dilute the credit risk.
- Lastly, the company must keep a pre-established liquidity level and open credit facilities with the financial market.

VII.3.4. Commercialization Risks

Regarding the revenue associated with energy commercialization, we recommend considering some attention points on the energy commercialization risk.

The implemented commercialization strategies comprise two business modalities:

VII.3.4.1. Short Term – PLD (ID: C1)

The settlement to PLD (for energy left as "hedge" and settled in the short term). It is worth noting that the PLD is volatile and highly dependent on the market scenario:

- The demand of the system impacts the PLD. Increments/decreases in demand lead to a rise/reduction of the PLD.
- In conclusion, the offer would have the opposite effect. However, this does not always happen. The generation offer at higher operating costs has less impact on PLD - generally, it concerns thermal power plants deployed at more critical moments. However, an increase in offer, which the system must absorb at null variable cost (as in the wind, photovoltaic, and inflexible thermal generation), producing a reduction in PLD (as it increases the generation of plants at zero cost).
- It is even possible that the volume of energy produced by such sources, with "mandatory" dispatch (in the jargon, "non-dispatchable" energy), displaces the dispatch of hydroelectric power plants: if all the hydroelectric potential is not necessary to meet the load, these power plants do not generate, not because

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

of lack of inputs (water), but lack of need (demand). This is a real risk, which must be addressed in the future by the applicable authorities.

- The hydrological component still plays a significant role. Median or high hydrologies (close to or higher than, historical average) tend to raise the reservoirs and make up an "energy stock" that mitigates risks. On the other hand, low hydrologies (lower than historical average) may lead to the "consumption of hydroelectric energy stocked" and demand a more intense thermal dispatch, with higher variable costs, directly impacting the PLD.
- Although the expansion forecast by the sectoral authorities points towards backups that eliminate price differences, the operation guidelines, local or even circumstantial restrictions may create imbalances leading to differences in prices. As these scenarios are unpredictable and not pointed out in the official models and data, we elected only to indicate this possibility.
- Lastly, it is worth noting that the offer depends on expansion. The entry of new power plants (and their respective costs) may change the business environment completely, consequently affecting prices and revenues.

VII.3.4.2. Long Term – forward (C2)

Sales of energy under long-term contracts. The forecast of this revenue depends on the contract prices, which in turn depend on a series of factors, such as the commercial strategies of each agent, which in turn depend on a wide array of factors. Generally, we may mention.

- The insight of sellers and buyers in future energy prices, including the PLD (if the PLD rises, some sellers may be tempted to reduce contracts, if prices are not attractive, and merely settle their energy; in case of a drop in the PLD, some sellers may be pressed to sell at lower prices to close deals, even if at a disadvantage).
- The production costs, highly affected by economic scenarios - mainly the dollar and civil construction.
- The expansion of the system generation - i.e., the massive entry of renewables by 2025 (to preserve incentives) may lead to an oversupply and drop prices.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- The expanded access to the free market leads to the opposite effect, increasing demand and, consequently, the prices.

It should be noted that the impact of all such effects on the market is subjective and unpredictable. For this reason, we elected the statistical adjustment of prices based on historical data, which so far has resulted in assertive forecasts.

It is also important to note the negotiated amount. The limit amount that each plant may sell in the market is set by its physical guarantee. Further, suppose the plant has allocated energy below the contracted sales after considering the MRE effects. In that case, it must buy the remaining "guarantee" at PLD-sensitive prices, which already present a risk given their volatility. It is important to note that the Energy Reallocation Mechanism (MRE) makes the amount available for sale depend on all participating hydroelectric power plants, leading to the need to forecast the dispatch of the joint system. It should also be noted that revisions of physical guarantees are expected (2022 and 2027) from the power plants that did not have the revision applied to Eletrobras's plants. Amounts resulting from this revision will have a relevant impact on the distribution of energy allocated among the power plants.

Lastly, as previously mentioned, it is possible that the hydroelectric power plants do not generate the total physical guarantee, not for lack of water, but lack of demand, as most of it, will be served by non-dispatchable power plants.

Thus, the negotiated amount, like the PLD and market prices, is subject to the dispatch risks - which permeates the entire negotiation.

Therefore, any offer/demand may significantly impact the dispatch of the system and its byproducts: the GSF, PLD and market prices - and consequently, revenue.

To mitigate the addressed risks, we recommend a sensitivity analysis, as described in section VII.4, of the result from the energy commercialization, addressing the following topics:

- Offer

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- Expansion and revision of the physical guarantee: sensitivity to the scheduled entry of renewables and inflexible thermal plants, as well as the results of the revised physical guarantees.
- Hydrologic availabilities: sensitivity to hydrological affluence.
- Demand
- Sensitivity to increase in demand.
- increases in the price curve (CPPS and forward)

VII.4. Sensitivity factors for the base case

Based in the Summary Analysis of Risks proposed herein, the risks may be segregated into 1. Points for attention, to be prudently addressed by Eletrobras Management; 2. Risks incorporated into the Financial Model, per chapter VI –Definition of Assumptions according to its most likely scenario; and 3. Risks analyzed in cases of sensitivity.

The latter, in turn, are those addressed in this section. They will be analyzed on two fronts: 1. Projection of new GSF, PLD curves and envelopments and price curve, incorporating new assumptions; and 2. Sensitivity of the commercialization strategies prepared based on these curves.

To address the risks (i) section VII.3.2.1 – Reduction of the physical guarantees of the MRE (ID: R1); (ii) section VII.3.2.2 – Effects of thermoelectric plants by inflexibility (ID: R2); (iii) section VII.3.2.3 – Entry of renewables as from 2023 (ID: R3); (iv) VII.3.2.5 – The displacement between PLD and contract prices (ID: R5); and (v) section VII.3.3.2 – Economic activity level (ID: E2), the following GSF, PLD and price curves scenarios and envelopments are proposed:

- Scenarios in which the physical guarantees will not be revised in 2023 and 2028;
- Expansion scenario according to the schedule defined in Law 14182, of July 2021 and Law14120, of March 2021;
- Scenarios with the partial entry (50%) of thermal plants expected in Law 14182, of July 2021;

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

- The scenario of entry of Angra 3 and power plants auctioned in the Simplified Competitive Procedure 001/2021;
- The scenario in which the load rises at an annual rate of 3.1%, as forecast in the PDE 2030;
- The scenario in which the load rises at an annual rate of 3.6%;
- Scenario with maximum premium of R$ 10,00 on the Northeast Region price curve;
- Scenario with maximum premium of R$ 20,00 on the Northeast Region price curve;
- Scenario with single CPPS for all submarkets; and
- Scenarios with variations from 10% to 14% above and below in the CPPS.

Additionally, given the current scenario that predicts a significant entry of thermal and renewable power plants inducing to an oversupply of energy, it is expected HPPs will need to overflow. Therefore, it was also considered a hypothetical scenario in which the thermal plant inflexibility is altered so the risk of overflowing is not greater than 10%, according to the absorbing capacity of the system.

Subsequently, to address the Commercialization Risks in section VII.3.4, different commercialization strategies will be simulated for each curve generated, consisting of (i) change in the Hedge percentage; and (ii) composition of the commercialization portfolio, so more conservative and more aggressive strategies are being considered. From all such scenarios, it is appropriate to always assess upper-risk levels above P50, according to the note on risk VII.3.3.1 – Inherent risk of the business (ID: E1), of section VII.3.3 – Economic and Financial Risks regarding the incorporation of intrinsic risks into the financial flow.

VIII. Results

In this section, we will expound the results obtained from the economic and financial modeling. The analysis of the results is structured into four topics: (i) Convergence Analysis; (ii) Base Case; (iii) Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir release and (iv) sensitivity analysis.

In total, it was considered 1407 Total Added Values for each of the 15 scenarios of this Study, resulting in 21105 values. Upon these values, it is going to be presented only the results from P10, P25, P50, P75 and P90, in accordance with the ordination defined in section V.4.3 – Application in the Financial Modeling.

In the first topic, we address the convergence assumptions and results for the Material Fact Scenario and the CNPE-15/2021 Scenario. In the next part, we present the results of the baseline scenario according to the assumptions addressed in section VI – Definition of Assumptions. Section VIII.3 deals with the scenario with variable inflexibility of thermals vis-à-vis risk of reservoir release, and the last part details each sensitization analysis conducted in this Study.

VIII.1. Convergence Analysis

In possession of the Studies carried out by Eletrobras and CNPE: the Material Fact and CNPE Resolution 15/2021 and 30/2021, respectively. The convergence analysis is based on the recalculation of the Total Added Value using, not the assumptions of this Study, but rather the assumptions presented in the Material Fact and those put forward by the Concession Granting Authority as provided for in CNPE Resolution 15/2021 and later Resolution 30/2021 to validate the results obtained, support Eletrobras' decision making in the capitalization process, and apply a consistency and accuracy test to the financial model of this Study.

The convergence analysis must use the assumptions published by the latest CNPE Resolution on the subject matter. Considering that the special session of Brazil's Court of Accounts (TCU) – which will analyze the process that deals with the first phase

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

of the capitalization of Eletrobras –has not yet taken place, it is worth mentioning that the decision may change the parameters previously defined by the CNPE.

It is important to emphasize that, even though the most recent CPNE (Resolution 30/2021) calculations had been analyzed as a new scenario in the convergence analysis, as well as for the elaboration of the Analysis of the Advantages, they did not generate new sensitivities.

VIII.1.1. Material fact scenario

The Material Fact published by Eletrobras on 02/23/2021 discloses changes to Provisional Measure MP 1031/21, sent by the Ministry of Mines and Energy (MME) to the Chamber of Deputies [Brazil's lower house of Congress].

VIII.1.1.1. Assumptions

The main informations included in the Relevant Fact published by Eletrobras are:

- The inclusion of the 30-year extension of the Tucuruí hydroelectric power plant (Concession Agreement 007/2004-Aneel-Eletronorte), of the subsidiary Centrais Elétricas do Norte do Brasil S.A. ("Eletronorte"), which is currently under the 'independent producer' regime (not under a quota regime);
- Obligation to contribute funds for the revitalization of the water resources of the drainage basins in the area of influence of the reservoirs at the hydroelectric power plants of Furnas Centrais Elétricas S.A. (Furnas) (R$ 230 million in 10 years), whose concession contracts are affected by the aforementioned MP, and for structural reduction of energy generation costs in "*Amazonia Legal*" (R$ 295 million in 10 years), directly by Eletrobras or indirectly through its subsidiary Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), in addition to

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

the revitalization of the water resources of the São Francisco River basin (R$ 3.5 billion in 10 years, which was already foreseen in the PL);

- New revenue sharing between the Federal Government (through the payment of grant bonus) and the CDE – Energy Development Account (through the payment of annual quotas in 30 years); and
- The forecast for the creation of a special class preferred share, owned exclusively by Brazil's Federal Government, pursuant to the provisions of §7 of art. 17 of Law 6404 of December 15, 1976, which will give the power of veto in corporate resolutions provided for in the aforementioned Provisional Measure ("Golden Shares").

Other assumptions that were considered are those used by the Ministry of Mines and Energy in its preliminary calculations of possible grant amounts at the time the document was generated, i.e., the assumptions will be subsequently reviewed and may be revised. These assumptions are detailed below:

- Losses + GSF: 10%;
- Price/MW: R$ 155 between 2022 and 2029, and R$ 167 from 2030 to 2051;
- Period of change to free market: 5 years;
- WACC: 7.2%;
- Considering the review of the physical guarantee of the current concessions; and
- CCC Credit according to the Financial Information on 09/30/2020 Eletrobras.

It is worth noting that the rationale adopted in the PL remains the same, in the sense that all financial obligations provided for in the aforementioned PM will be deducted from the Added Value arising from the change of regime and the conceding of new concession grants.

VIII.1.1.2. Results

As a result of the Material Fact, Eletrobras arrived at preliminary amounts of the Added Value shown in Table 40.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Table 40: Preliminary Amounts Material Fact

Preliminary Amounts (R$ Billions)	
Revitalizations and Amazônia Legal	8.75
CCC Credit	2.50
50% Federal Revenue (grant)	25.50
50% CDE Revenue (grant)	25.50
Total	61.25

Source: Material Fact published on 02/23/2021.

To validate the Financial Model and contribute toward the analysis of the figures disclosed, the Added Value was calculated using the same assumptions as the Material Fact. The values obtained, along with a convergence analysis, are shown in Table 41.

Table 41: Convergence Analysis for Material Fact.

Upside Model vs. Material Fact	
Added Value before Indemnity	66,491,114,048
Indemnity – Tucuruí	5,103,744,550
Total Added Value	**61,387,369,498**
CCC Credits	2,906,498,547
CDE grant	**29,240,435,475**
Rebates Law 14182/2021	5,845,317,867
Federal Government Grant	**23,395,117,609**
Material Fact Calculated	**61,250,000,000**
Difference	**-0.22%**

Source: Own Elaboration.

Aware of the difference between the result obtained from the financial model and the result presented in the Material Fact itself, they point out that the model used in this Study is consistent in the calculation of Total Added Value and that – based on the assumptions considered – the published result is also coherent.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

VIII.1.2. CNPE scenario 15/2021

Brazil's National Energy Policy Council (CNPE), chaired by the Minister of Mines and Energy (MME), is responsible for calculating the Total Added Value and the consequent grant bonus. That having been said, the CNPE determined – in accordance with CNPE Resolution 15/2021, that the grant bonus to be paid to the Federal Government will be R$ 23.2 billion. At the same time, it established that R$ 29.8 billion of the Total Added Value would be allocated to the Energy Development Account (CDE), as determined by Law 14182/2021.

The parameters and assumptions considered in calculating the Total Added Value were presented by the MME on 08/27/2021.

VIII.1.2.1. Assumptions

The methodology used to calculate the Added Value was the Discounted Cash Flow.

To calculate the bonus amount for the granting of new concession contracts, the following indemnities for investments were considered: (i) not yet amortized, referring to the Basic Projects of HPPs; (ii) pegged to reversible assets of hydroelectric projects not yet amortized or not depreciated, whose concessions were extended or not, pursuant to art. 1 of Law 12783 of January 11, 2013, whose criteria and procedures for calculating these investments were defined in ANEEL Resolution 596 of December 19, 2013, pursuant to art. 2 of Decree 7850 of November 30, 2012.

The calculation made by the CNPE considered the revision of the Physical Guarantee of New Energy according to Ordinance MME 544 of August 31, 2021, already considered in the Base Case as indicated in Table 22: General data on the cash-generating units in section VI.3 – General Assumptions of the Concessions. Table 42 summarizes the parameters of fees, charges, and compensation considered in the model.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Table 42: Fees, Charges, Compensation, Other.

Parameter	Amount
Weighted Average Cost of Capital – WACC	7.31%
Social Integration Program (PIS)/ Contribution for the Financing of Social Security (COFINS)	9.25%
Income tax / Social contribution on net income (CSLL)	34.00%
Electric Energy Services Inspection Fee (TFSEE)	0.40% on power
Research and Development (R&D)	1.00% on net operating revenue (NOR)
Financial offset for the use of water resources (CFURH)	7% of the energy produced
Use of Public Asset (UBP)	0.00%

Source: CNPE Resolution 15/2021.

Additionally, electrical losses of 3.5% and an estimate of the new indemnity replacement value for non-depreciated and non-amortized assets of the basic project of the Tucuruí Hydroelectric Power Plant at R$ 5,103,744,550.00 were considered. Table 43 summarizes Energy prices on the Free Market and Hedge Market (Hydrological Risk).

Table 43: Energy Price on the Free Market and Hedge Market (Hydrological Risk)

Period	Energy prices	Hedge (1-GSF)
2022–2025	233 R$/MWh	19.50%
2026	207 R$/MWh	14.70%
2027	181 R$/MWh	10.00%
>2028	155 R$/MWh	5.20%

Source: CNPE Resolution 15/2021.

The extensions of the grants, due to the renegotiation of the hydrological risk, were considered in accordance with ANEEL Resolution 2919/2021, except for the Itumbiara Hydroelectric Power Plant, the extension of which was approved by ANEEL Dispatch 608/2016. The approval of the extension of the grants for the Tucuruí, Itumbiara (2nd period) and Mascarenhas de Moraes Hydroelectric Power Plants was not yet available.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The assumptions for termination of contracts for energy from Eletrobras plants are:

- Termination of contracts for electricity from the quotaholder plants will be 20% per year, starting on January 1, 2023, following the schedule in Exhibit II of CNPE Resolution 15 of August 31, 2021.
- Energy from the Tucuruí, Curuá-Una and Mascarenhas de Moraes Hydroelectric Power Plants may be traded starting from the signing of new concession contracts, since these plants are not currently classified as quotaholders.
- However, for the Sobradinho and Itumbiara Hydroelectric Power Plants, the free (unrestricted) use of energy must comply with the rules established in Law 11943 of May 28, 2009 and Law 13182 of November 3, 2015.

Finally, the CNPE considered characteristics of the programs/projects in its Study, namely:

- Revitalization of the São Francisco River and Parnaíba River Basins. Annual contributions of R$ 350,000,000.00, adjusted for inflation according to the General Consumer Price Index (IPCA), or by another index that supersedes it, starting from the month of signing of the new concession contracts, for 10 years. Start of obligation: 2023.
- Reduction of generation costs in “Amazônia Legal” and navigability of the Madeira and Tocantins Rivers. Annual contributions of R$ 295,000,000.00, adjusted for inflation according to the IPCA, or by another index that supersedes it, starting from the month of signing of the new concession contracts, for 10 years. Start of obligation: 2023.
- Revitalization around the area of influence of the Furnas HPP reservoirs. Annual contributions of R$ 230,000,000.00, adjusted for inflation according to IPCA, or by another index that supersedes it, starting from the month of signing of the new concession contracts, for 10 years. Start of obligation: 2023.
- Supply of electricity in a mean annual amount of 85 MW, as from January 01, 2023, for a period of 20 years at the price of R$ 80.00/MWh, on the base date

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

of January 01, 2022, to be annually adjusted for inflation according to the IPCA, or by another index that supersedes it, through a specific contract directly with the Federal Operator of the installations of the Project for the Integration of the São Francisco River with Drainage Basins of the Northern portions of the Northeast Regions (PISF).

VIII.1.2.2. Results

As stated in section III.1 – Justification of the Works, according to CNPE Resolution 15/2021, the bonus for the granting of new electricity generation concession contracts to be paid to the Federal Government will be R$ 23.2 billion, and payment to the CDE will total R$ 29.8 billion, as determined by Law 14182/2021. Table 44 summarizes the granting value and Added Value published by the CNPE.

Table 44: Added and grant amount.

Results (R$)	
Total Added Value	62,149,426,264.33
Federal Government Granting	23,805,611,331.58
CDE grant	29,621,463,858.48

Source: CNPE Resolution 15/2021.

Similar to the Material Fact of section VIII.1.1, the CNPE's 15/2021 assumptions were considered in the economic-financial model, to arrive at an analytical comparative basis of the results of CNPE Resolution 15/2021. The values obtained by the convergence model and analysis are shown in Table 45.

Table 45: Convergence Analysis for CNPE 15/2021.

Upside vs. CNPE model	
Added Value before Indemnity	67,253,170,814
Indemnity - Tucuruí	5,103,744,550
Total Added Value	**62,149,426,264**
CCC Credits	2,906,498,547
CDE grant	**29,621,463,858**
Rebates Law 14182/2021	5,815,852,527

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Federal Government Grant	**23,805,611,332**
Calculated CNPE	**62,479,656,370**
Difference	**0.53%**

Source: Own Elaboration.

Just as the convergence analysis of the Material Fact, since the results obtained with the CNPE assumptions are similar, the accuracy of the Financial Model is considered to be supported.

VIII.1.3. CNPE Scenario 30/2021

On December 22, 2021, it was published CNPE Resolution 30/2021, that altered the CNPE Resolution 15/2021 and establish the Total Added Value by the new concession contracts according to the Law 14182/2021

After the analysis and considerations made by the TCU, the calculation of the Total Added Value, the financial model and specific assumptions were reviewed and adjusted by CNPE. This Resolution established the Total Added Value of R$ 67,052,502,399.86 to be granted given Eletrobras privatization. From this total value, R$ 25,379,079,917.76 is going to be paid to the Federal Government and R$ R$ 32,073,001,926.43 is going to be paid to CDE – Energetic Development Account.

VIII.1.3.1. Assumptions

The main assumptions changes in relation to the CNPE Resolution 15 are based on the update of price curves, Grant extensions and indemnities. The remaining assumptions were not altered.

46 details the new prices adopted by CNPE.

Table 46: Energy Prices

Period	Energy Prices

Tucuruí HPP	5,043,166,900.98
Curuá-uma HPP	19,550,421.43

Source: CNPE Resolution 30/2021.

Finally, the Grant extensions as a result of the Hydrological Risk Repatriation were updated in 518 days for Tucuruí HPP, and in 395 days for Itumbiara HPP, on the first period and 2555 days on the second period, in accordance with ANEEL Resolution n. 2919 and n. 2932.

VIII.1.3.2. Results

As presented results, CNPE found the preliminary Total Added Value results showed up onTable 48.

Table 48: Total Added Value and Grant Value

Results (R$)	
Total Added Value	67,052,502,399.86
Grant to the Union	25,379,079,917.76
Grant to CDE	32,073,001,926.43

Source: CNPE Revolution 30/2021.

Similarly, to convergence analysis performed previously, the assumptions from the CNPE 30/2021 were also inputted in financial-economic model to get an analytical

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

comparative base of the results. The values obtained from the Financial Model and the convergence analysis are shown on Table 49.

Table 49: Convergence Analysis for CNPE 30/2021.

Upside Model vs CNPE 30/2021	
Added Value before Indemnities	73,504,469,722
Tucuruí Indemnity	5,043,166,901
Curuá-Una Indemnity	19,550,421
Total Added Value	**68,441,752,400**
CCC Credit	2,906,498,547
Grant to CDE	**32,767,626,926**
Abatement – Lei 14.182/2021	5,815,852,527
Grant to the Union	**26,951,774,399**
CNPE 30 Calculation	**67,052,502,400**
Difference	**-2.03%**

Source: Own Elaboration.

Even though the convergency was not as precise as the earlier ones, but given that the model used in this Study treats commercialization and prices scenarios in a different way compared to the model adopted by CNPE Resolution 30/2021, when applying the published assumptions, the convergence analysis was close enough to ensure the precision of the Financial Model.

VIII.2. Base case

As defined in the chapters V – Methodology and VI – Definition of Assumptions, the methodology and assumptions considered in this Study were applied to calculate the Added Value of the Base Case for each of the 200 envelopes, plus the hydrological base scenario and for each trading strategy. Figure 30 shows the hydrological median scenario for the Base Case.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

The 201 GSF and PLD curves sensitize the hydrological risks, and each one generates a Total Added Value; the results obtained were then ordered for the purpose of obtaining the p-values shown in Table 50. One can see that the ordering is from the highest to the lowest Total Added Value, i.e., the most conservative curve in terms of hydrological risks does not necessarily bring a conservative result in financial terms; Figure 31 depicts the NPV for each hydrological p-value, pre-ordering the values.

Taking a more conservative stance, the result adopted for the purpose of analysis and comparisons is the value obtained by p90 through the trading strategies of the base case; for this scenario, the Added Value considered is R$ 64.357 billion. It is noteworthy that the values shown in Table 50 are pre-rebates and indemnities.

VIII.3. Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir release

When hydroelectric plant reservoirs are full, it is common for them to release water, i.e., to discharge water from the reservoirs without generating energy. Having stated the foregoing, this section proposes a brief pause in the presentation of the results to test a change in the inflexibility of thermal plants so that the reservoir release risk of hydroelectric plants is no more than 10%.

Since, in practice, it is not possible to change the inflexibility of thermal plants, this scenario is only theoretical and does not represent a suggestion or value judgment. However, as in the next few years there is a forecast of massive increase in thermal and renewable power plants, probably above the load growth, it is possible that the

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

hydroelectric plants will be displaced in such a way that their reservoirs are full, necessitating reservoir release. In other words, this scenario proves to be necessary since it is not beneficial – from the viewpoint of hydroelectric power plants – for them to have limited production to the point where it is necessary to release water from reservoirs, in addition to being an ideal scenario that society supports without impacting the consumer price so much.

Table 52 shows has the maximum inflexibility that can be absorbed by the system without the risk of reservoir release exceeding the 10% threshold.

Table 52: Maximum inflexibility so that the risk of reservoir release does not exceed the 10% threshold.

Figure 32 compares the GSF expectation (average value) for the Base Case and for the thermal inflexibility scenario of the Law described in Table 52 (corresponding to a maximum reservoir release likelihood equal to 10%). One can see that after the recovery of the reservoirs (2022/2024), the new scenario of inflexibility leads to GSF levels nearly always greater than 1 – the “waiving” of generation by thermoelectric plants allows a more intensive use of hydroelectric plants, which may return to contribute to the energy supply. In other words, the requirement of inflexibility at 70% makes the system sub-optimal, replacing the hydroelectric generation available at low cost with more expensive thermoelectric plants.

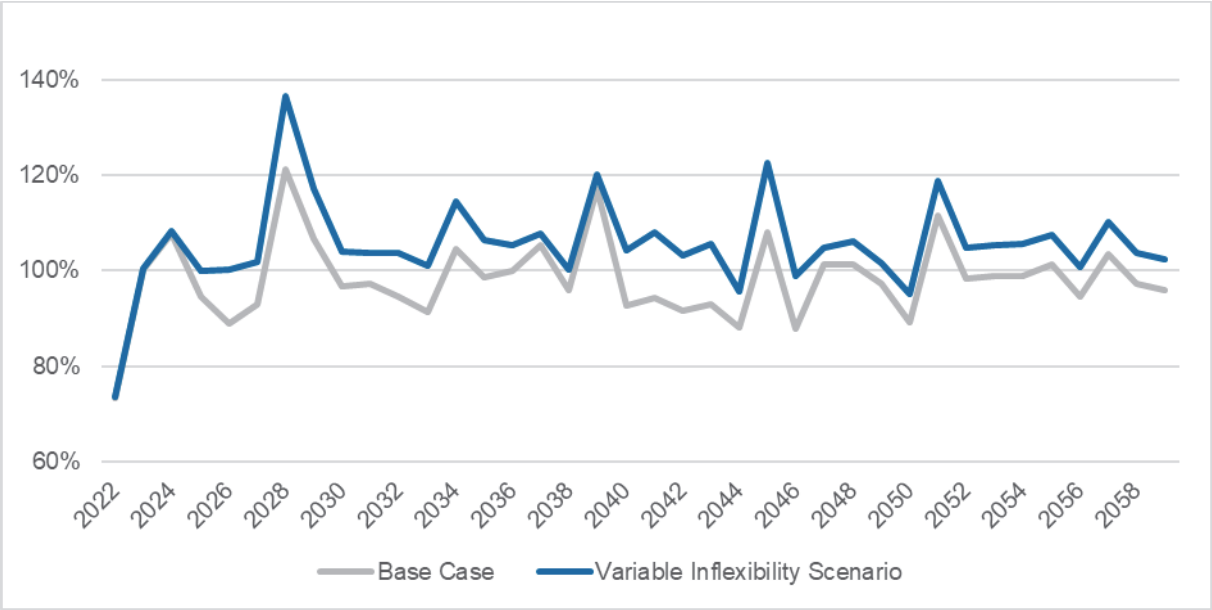

Figure 32: Comparison of GSF with the Base Case in the hydrological median curve.

Source: Own Elaboration.

Finally, Figure 33 compares the PLD of the base case and the scenario associated with reduced inflexibilities described previously. It worth noting that the PLD for the scenario of less intensive use of thermoelectric power is higher. This does not mean that the costs are higher; on the contrary, as the use of fossil fuels is reduced, their costs will be lower. What occurs is that now the cost of thermal generation is reflected in the PLD – as opposed to the mandatory inflexibility scenario, where costs are divided among consumers. In other words, the base scenario (70% mandatory inflexibility) leads to a higher cost, but disregarded by the calculation of the economic sign, the reduced inflexibility scenario leads to a lower cost, but more appropriately incorporated into the calculation of marginal costs.

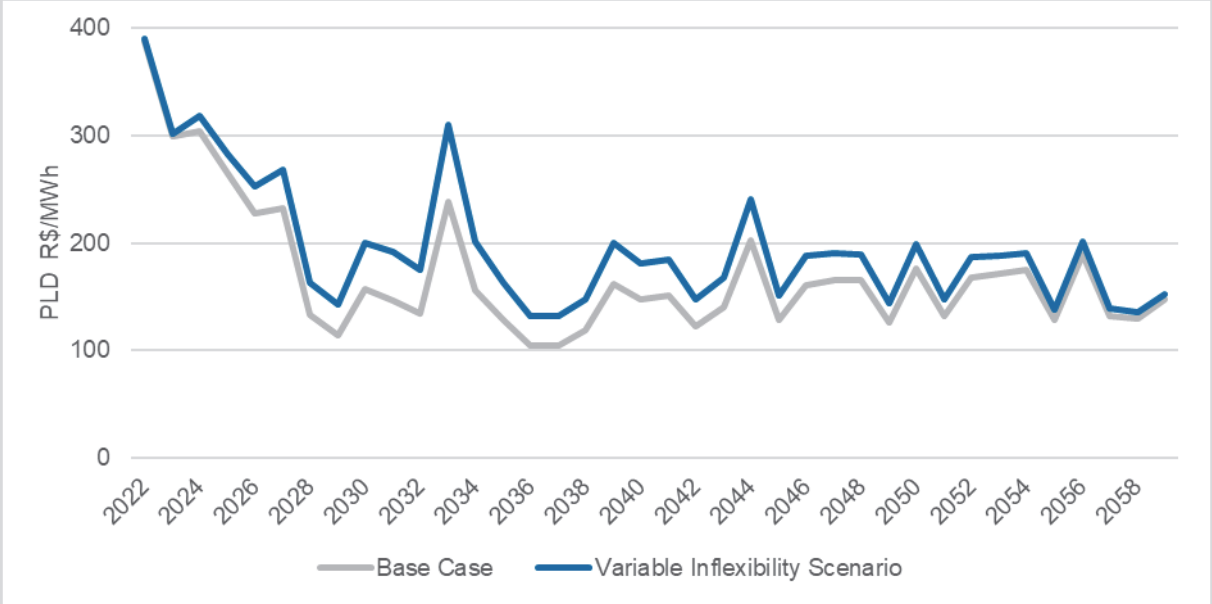

Figure 33: Comparison of PLD with the Base Case in the hydrological median curve. Source: Own Elaboration.

The 70% inflexibility is set forth in Law 14182, which increases the negotiating power of entrepreneurs in thermoelectric plants. However, associating inflexibility – in real terms – with a given level of reservoir release, even though it is an extremely complex task in terms of system operation, represents a test of how the reallocation of energy in water sources interferes in the Total Added Value of capitalization of Eletrobras. This test, however, alters the thermoelectric feasibility equation, which may increase costs for consumers. Table 53 includes the results obtained in this scenario/exercise, and Figure 34 shows the hydrological median scenario.

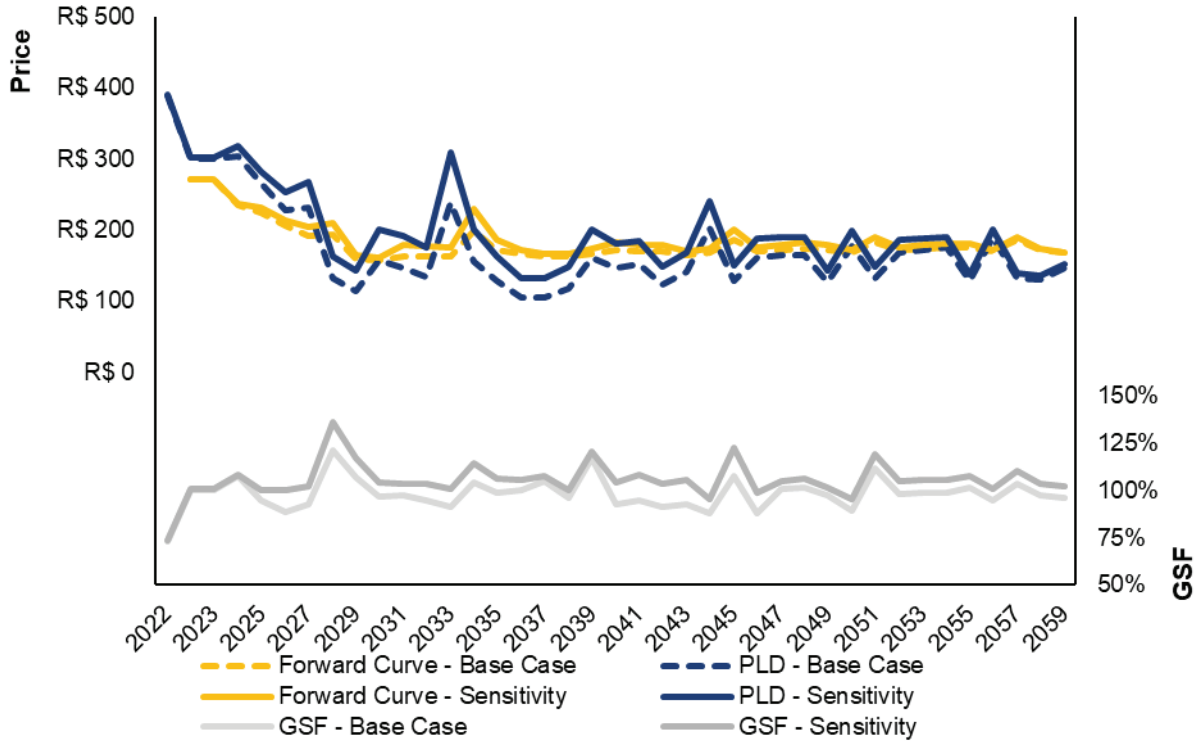

Figure 34: GSF, PLD and forward curve compared to the Base Case in the hydrological median curve.

Source: Own Elaboration.

Compared to the results of the Base Case, section VIII.2 – Base case, the resulting Total Added Value is considerably higher. The result is coherent since, due

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

to the fact that inflexibility is reduced, hydroelectric plants are dispatched less frequently, thus increasing the GSF. However, since the Total Added Value is significantly higher, one can see that, to reach a 10% risk of reservoir release, it was necessary to aggressively reduce the inflexibility of the thermal plants, as shown in Table 52. In other words, it is understood that – given the current scenario of the Brazilian energy sector – part of the hydroelectric plants will inevitably be displaced to the point where the releasing water from their reservoirs becomes necessary, which can be understood as a suboptimal point of the electrical system.

Figure 35 graphically displays the dispersion of the NPV's p-values for this sensitivity case, as shown in green, in relation to the Base Case. It is also exhibited in blue the dispersion of the NPV's p-value for the base case. For each scenario, the inferior limit of each area below represents the NPV's P90, and the superior limit represents the NPV's P10.

VIII.4. Sensitivity analysis

According to section VII.4 – Sensitivity factors for the base case, the risks that could be considered in the model, were sensitized in this Study in the form of scenarios. In this section, the results of such sensitization will be presented.

Each scenario generated allows us to analyze and understand the impact on Total Added Value starting from the change of the PLD, GSF, and forward price curves. Therefore, 201 price curves and NPVs were generated for each scenario, and their results were ordered in the same way for the Base Case for the purpose of comparison.

For each scenario, the hydrological median is shown, which should serve as a parameter for analyzing the impact of that sensitivity, according to the notes in section V.2 – Weighted Average Cost of Capital (WACC).

VIII.4.1. No review of Physical Guarantees

This sensitivity assumes that there will be no revision of the PGs of the other MRE plants in 2023 and 2028. In this scenario, the impact is not high, but is it not negligible either, and the likelihood that a review of the PGs will not take place is low, given that the government has control over the decisions. However, it is estimated that there will be great pressure for the review of the PGs not to be carried out – or for any changes to be merely marginal, since the simple recalculation of the PGs of the Eletrobras HPPs, although not surprising, triggered noise at companies and associations. Additionally, it is possible for 2022 and 2023 to be years of political uncertainty, which can affect strategic decisions, such as the one that changes the value of the entire hydroelectric complex. Table 54 summarizes the results obtained and Figure 36 shows the hydrological median scenario of this sensitization.

As shown in section VII.3.2.1 – Reduction of the physical guarantees of the MRE (ID: R1), given the reduction of PGs submitted to the Eletrobras plants, the non-review of PGs of the other plants of the MRE could impact the reduction of the Added Value, since their plants would suffer proportionally higher financial costs than the other agents. This expectation was verified in the results obtained since they are inferior to the results of the Baseline Scenario, as graphically demonstrated on Figure 37.

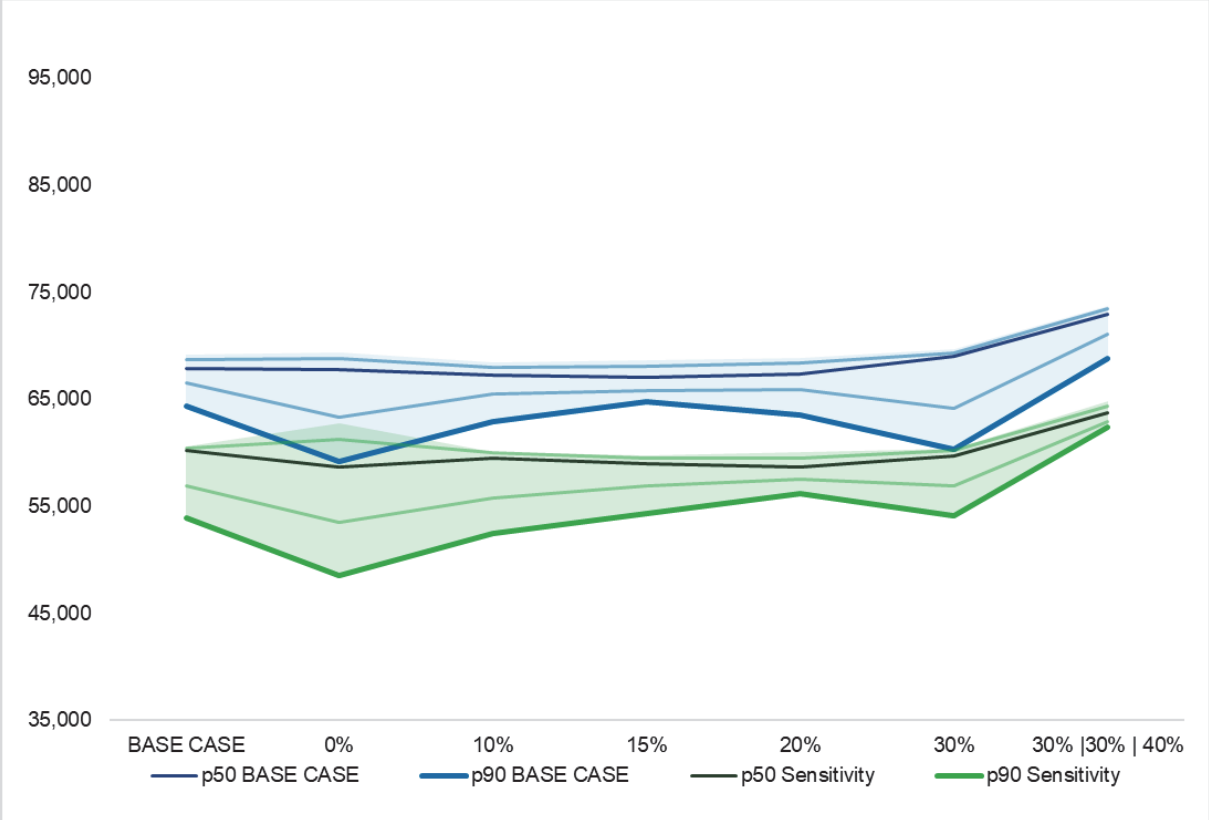

Figure 37: Results without physical guarantee revision (values in R$ millions).

VIII.4.2. Entry of renewables and thermals pursuant to Law 14182/2021

Here, the scenario in which thermal and renewable plants come into operation pursuant to Law 14182 of July 2021 was sensitized.

It is considerably unlikely that the 8,000 MW of thermoelectric plants provided for in Law 14182/2021 will be built according to the outlined schedule, in which the first

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

plants would enter into operation in 2026. The stages of planning, designing and building the infrastructure for transporting natural gas and electricity are not trivial, and there is still no news on how this will happen, at least in the electricity sector. If 2022 and part of 2023 are taken for planning, projects and auctions, there would be less than three years for the start of operations of the first plants. Furthermore, the outlook for the price of natural gas is uncertain, which increases the chances of a shift in the schedule. As the price of electricity has already been set by law, the increase in input costs – which represents more than 50% of the product's value – may (for example) make the financing equation difficult, especially in the Project Finance modality. Table 55 details the proposed schedule for the entry of thermal and renewable plants for the Base Case, where the addition of thermal plants was shifted two years with regard to the schedule under Law 14182.

Table 55: Proposal for renewables and thermal additions (Base Case).

ADDITIONAL RENEWABLE CAPACITY + INFLEXIBLE THERMALS					
Year	**WIND**	**UFV**	**THERMALS N**	**THERMALS NE**	**THERMALS SE**

Source: Own Elaboration.

Likewise, it is even more difficult for all renewable energy projects, which participate in an unprecedented race, to be successful in terms of starting commercial operations as from 2023. There are more than 100,000 MW of projects submitted to ANEEL. According to the EPE president, when speaking at ENASE/2021, only in 2022 would the Studies with alternatives for energy flow be presented; so, because of that

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

alone, it is very likely that only the complexes for which connection to the network is viable will be authorized. As for the others, the future holds a certain regulatory void in store. According to the aforementioned Law, those who do not obtain the concession grant or do not enter into operation after 2023 lose the right to subsidies associated with the discount for the use of the network; however, it is more likely that, politically speaking, a longer period will be given for the implementation of the projects – with subsidies.

Table 56 summarizes the results obtained and Figure 38 shows the hydrological median scenario of this sensitization.

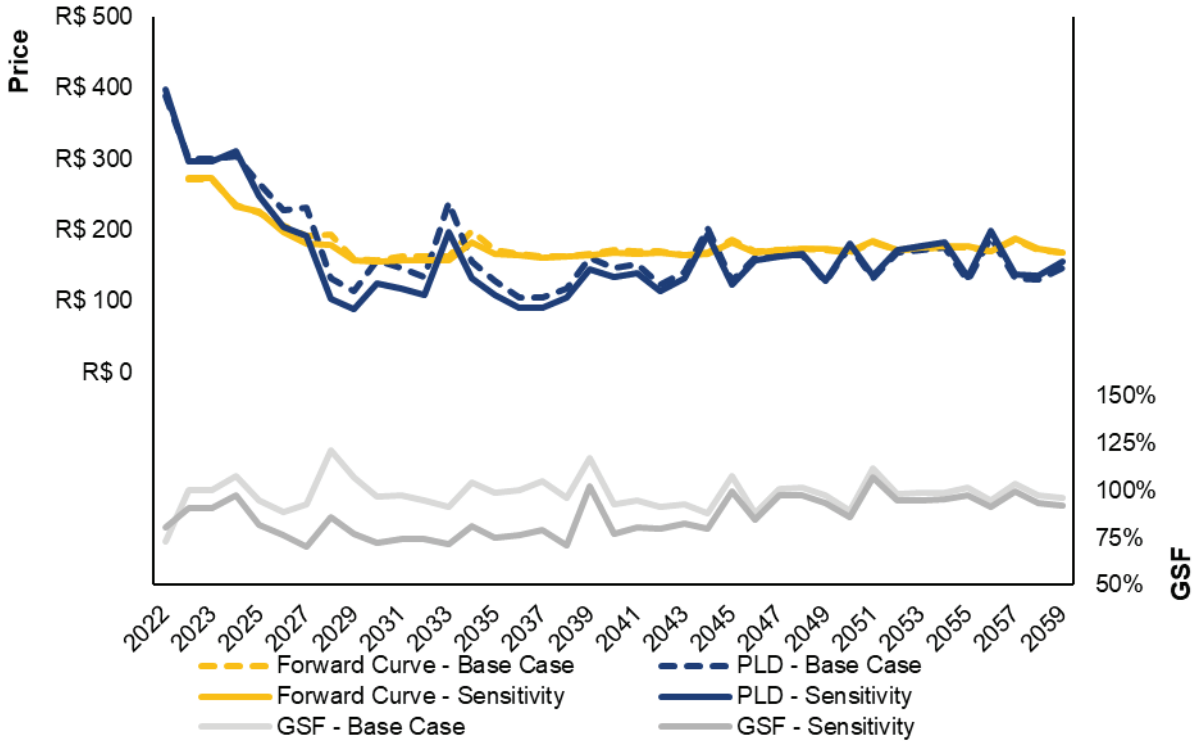

Figure 38: GSF, PLD and forward curves compared to the hydrological median.

Source: Own Elaboration.

According to section VII.3.2.2 – Effects of thermoelectric plants by inflexibility (ID: R2), the entry of thermoelectric power plants, as provided for in Law 14182, will displace the hydroelectric power plants, reducing the GSF. One can see the high impact of the entry of thermal and renewable energy by the difference in the results compared to the values of the Base Case in , which considers a two-year delay; the inequality indicates that the hydroelectric plants will be intensely impacted by the entry of thermal and renewable energy, so that its production will be restricted until the load grows to the point where the hydroelectric plants are activated again, increasing the GSF.

VIII.4.3. Partial entry (50%) of the thermal plants provided for in Law 14182/2021

To address the same risks associated with scenario VIII.4.2 – Entry of renewables and thermals pursuant to Law 14182/2021, but instead of a delay in the schedule, the entry of half of the thermal plants provided for in Law 14182 of July 2021 is considered. Table 57 shows the schedule and installed quantity, in which, for this scenario, half of the thermal capacity will be considered. As stated before, the price of natural gas tends to be uncertain, or very volatile, which increases risks and costs and may discourage potential stakeholders. This hinders the implementation of the entire installed capacity provided for in the Law.

In contrast to scenario VIII.4.2 – Entry of renewables and thermals pursuant to Law 14182/2021, when considering the entry of half of the thermals, the Total Added Value increases compared to the Base Case, as demonstrated on Figure 41. With an effect not unlike the delay in the Law's schedule, the partial entry also favorably meets the risk of water resource scarcity in the short and medium term, with a contribution slightly above the Base Case scenario. However, the probability of shifting the entire schedule is greater than the probability of partial deployment of the plants.

VIII.4.4. Entry of Angra 3 and auctioned plants in the Simplified Competitive Procedure 001/2021

To quantify the impact of the Angra 3 nuclear power plant and the recent Simplified Competitive Procedure on the Total Added Value, this scenario was also sensitized, as shown in Table 59.

There have already been several decisions made by different levels of government, such as the CNPE and the MME, which report on the continuity of the construction of Angra 3, the entry into operation of which will reportedly be in 2026 or 2027. It is a very likely scenario, even if there is a change of government in 2023. As for Simplified Competitive Procedure 001/2021, roughly 750 MW-average were

Classification: Confidential

Similar to scenario VIII.4.2VIII.4.2 – Entry of renewables and thermals pursuant to Law 14182/2021Entry of renewables and thermals pursuant to Law 14182, the entry of Angra 3 displaces the hydroelectric plants, reducing the GSF, which contributes to the reduction of the Total Added Value. As exhibited on Figure 43, below, the results shows that the NPV's p-values are little dispersed between themselves.

VIII.4.5. Load growth at an annual rate of 3.1% as forecast by EPE

Unlike the Study exposed in section V.4.1.4 – Demand Prospect (Load), the 2030 PDE, published by EPE, estimates a load growth rate of 3.1% a year; such scenario sensitizes this change considering the load growth according to what was published, and its results are shown in Table 60. It is a very difficult perspective to be practiced, especially at the beginning of the cycle, i.e., between 2022 and 2025. It is not known for how long the political scenario, which is currently unstable, will affect decisions to expand the industry and electricity-intensive segments. Moreover, the prospects for GDP growth – in worldwide terms – are not good either, which would be another obstacle to the growth of electricity consumption in Brazil as well.

As would be intuitive, an increase in demand should increase the Total Added Value. However, in the short and medium term, with an increase in the load above the volume that the plants are able to offer, plus the expectation of a reduction in PG in 2023 and 2028, it is necessary for the thermal plants to be activated by the hydroelectric plants to meet the demand, which justifies the reduction in results compared to the Base Case, portraited on Figure 45, by the sensitivity P90 line below the Base Case P90 line.

VIII.4.6. Load growth at an annual rate of 3.6%

As seen in section VIII.4.5 – Load growth at an annual rate of 3.1% as forecast by EPE, a greater growth in demand resulted in a decrease in Total Added Value and, to understand the behavior of Total Added Value vis-à-vis load growth, it was also sensitized by a growth of 3.6%. As explained in section VIII.4.5, in practice, it is reasonable to conclude that this growth is unlikely to happen; however, the results obtained do not diverge much from the Base Case, i.e., even in an unlikely scenario in which demand grows more aggressively, the Total Added Value does not evolve in the same way. Thus, the load growth adopted for the Base Case, in addition to being the most plausible rate, is also a growth rate that optimizes the calculation of Added Value.

Even with a high load growth, the change in Total Added Value varies little compared to the Base Case. It is understood that in the short and medium term, the impact on the dispatchability of hydroelectric plants is similar, while in the long term, this loss is better compensated. Therefore, it can be inferred that the growth adopted for the Base Case, in addition to being a more likely growth, is also an optimal rate for the capitalization scenario. The little variability in relation to the base case is shown on Figure 47.

VIII.4.7. Maximum premium of R$ 10.00 on the Northeast price curve

To mitigate the risks of the trading price and price differences between submarkets – in which the Northeast region has more attractive prices – three scenarios were sensitized: the sensitization of this section and the two following sections, VIII.4.8 and VIII.4.9. This considers a maximum premium of R$ 10.00 in the price curve of contracts in the Northeast Submarket, which is the region with the lowest prices. Due to its more attractive price, the Northeast (NE) region is motivated to sell in other submarkets, unlike the southeast region, which has higher prices, so the premium is limited to the prices of the region with the highest prices and is understood as a risk premium of energy trading in another submarket. Table 62 shows the results obtained and Figure 48 depicts the hydrological median scenario of this sensitization.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

VIII.4.9. Single CPPS for all submarkets

The third scenario that sensitizes of the risks discussed in section VIII.4.7 – Maximum premium of R$ 10.00 on the Northeast price curve, adopts the same CPPS, per Table 17: Weighted Production Cost per Submarket (CPPS), so that the forward price curve is the same for all submarkets. This sensitization considers a scenario where prices naturally converge to a common market value; the results are presented in Table 66 and Figure 52 shows the hydrological median scenario of this sensitization.

Given that the common CPPS adopted is a weighting of the Base Case cost, the consolidated Total Added Value did not vary significantly, as exhibited on Figure 53, that compares the NPV's p-values, but the changes between subsidiaries are noteworthy, as shown in Table 63, which compares the results with the p90 curve of the Base Case. There was a balance between the subsidiaries in such a way that, because they have higher CPPS, the plants in the North and Southeast regions had

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

their prices reduced after the weighting, and those in the Northeast region, since they had the lowest CPPS, had their prices increased, thereby increasing the NPV of their respective plants.

VIII.4.10. Changes in CPPS at 10% and 14% higher and lower

To sensitize CPPS oscillations and different possibilities of projections for the weighted cost of production – which guide the calculation of the forward price curve both in the equation and in the lower limit of the price curve –, four scenarios were inserted with changes of 10% and 14% (higher and lower) of the CPPS curve as requested by Eletrobras; Table 68 shows the results obtained in each sensitization. Figure 54 through Figure 57, below, show the hydrological median scenario of each sensitization in the CPPS.

Changes that reduce the CPPS reduce the price curve, which in turn decreases the Added Value. The opposite operation is also valid: an increase in the CPPS implies an increase in the Added Value. As one can see, changes in the cost of production significantly impact the result of Total Added Value, i.e., its volatility must be observed since any decrease in the cost of production reduces the economic value of the business; for example: such a scenario can be seen if there is a massive entry of power plants that run on renewable energy sources, whose cost is low, together with a delay longer than the one considered in the schedule of entry of thermal plants, per Law 14182. Table 69 compares the p90 values of the four scenarios of changes in the CPPS.

Table 69: Results of each CPPS sensitization compared to the Base Case

VIII.5. Risk rating

In this section, as discussed in chapter VII, the risks and sensitivities considered will be rated according to their impact and probability and then distributed in a matrix according to the methodology defined in section VII.1 – Methodology, scope and main concepts0

Methodology, scope and main concepts. Each risk summarized in this Study is identified by an identification number (ID), as categorized in Table 39 on page 156.

Table 70 shows the rating of risks and sensitivities in the disciplines of NPV variation compared to the Base Case (ΔNPV), Threat/Opportunity (T/O), Probability (P), Impact (I) and Consolidation between Probability and Impact (PxI). Table 71 shows how the sensitivities were arranged. The risks shown here must always be understood as being in comparison with the Base Case, and not in absolute terms.

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Source: Own Elaboration.

According to section VII.1 – Methodology, scope and main concepts of the Risk Analysis and Synthesis, the threats were for the sensitivities; the impact was measured from the difference of the Added Value compared to the Base Case. Thus, changes up to 5% were considered low impact, changes between 5% and 10% were considered medium impact, and for changes above 10%, the impact was estimated as high. In the case of risks that were not treated as sensitization, the impact was rated

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

according to the assessment of the experts involved in the Report, from the viewpoint of potential effects to Eletrobras.

Impacts that decrease Total Added Value or that bring losses to capitalization were rated as “Threat”, while impacts that increase Total Added Value or that result in an advantage to capitalization were rated as “Opportunity”.

The probability of each risk and sensitization was rated according to the expected occurrence, as explained in sections VII.3 – Identifying and describing risksIdentifying and describing risks and VIII.4 – Sensitivity analysisVIII.4Sensitivity analysis.

Risks for which it is not possible to measure their impact and/or probability, or whose probability is remote, were rated as “Imprecise/Remote”. However, there are risks that are already rated as Threat or Opportunity despite the Impact or Probability being imprecise.

It is worth noting that a high impact on the NPV or probability does not necessarily represent a considerable threat or opportunity, as it is the combination of these that results in the risk rating. The sensitization scenarios also stress the model according to the assumptions of the respective scenario, but they are unlikely to be ascertained in practice in the same way in which they were sensitized, i.e., they should be understood as extreme impacts.

Table 71 organizes the risks identified into Opportunity and Threat, which will subsequently be presented in a risk matrix. The rating – divided into: high, medium-high, medium, medium-low and low – is made by calculating the Impact vs. Probability of each risk/sensitization. Risks rated as “imprecise” occupy this position because they do not present specific values of impact and/or probability.

Table 71: Risk rating x level

	Classification	ID	Risk/Sensitization	I	P
THREATS	High	R1	Sensitization: No Physical Guarantee Review	High	High
		C1	Short-term (PLD)	High	High

T/O	Inaccurate/ Remote	R6	Future transformation of the electricity sector	-	-

Source: Own Elaboration.

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

With the exception of risks J1, J2 and R6, which have inaccurate/remote impacts and probabilities, Figure 62 distributes the risks according to their respective rating. One can see that a good part of the risks is distributed in the Medium/High area of the diagram; therefore, it is inferred that the most relevant risks for capitalization are considered and analyzed in this Study. Following the size scale, each element of the chart in which a number is contained refers to how many risks occupy that position.

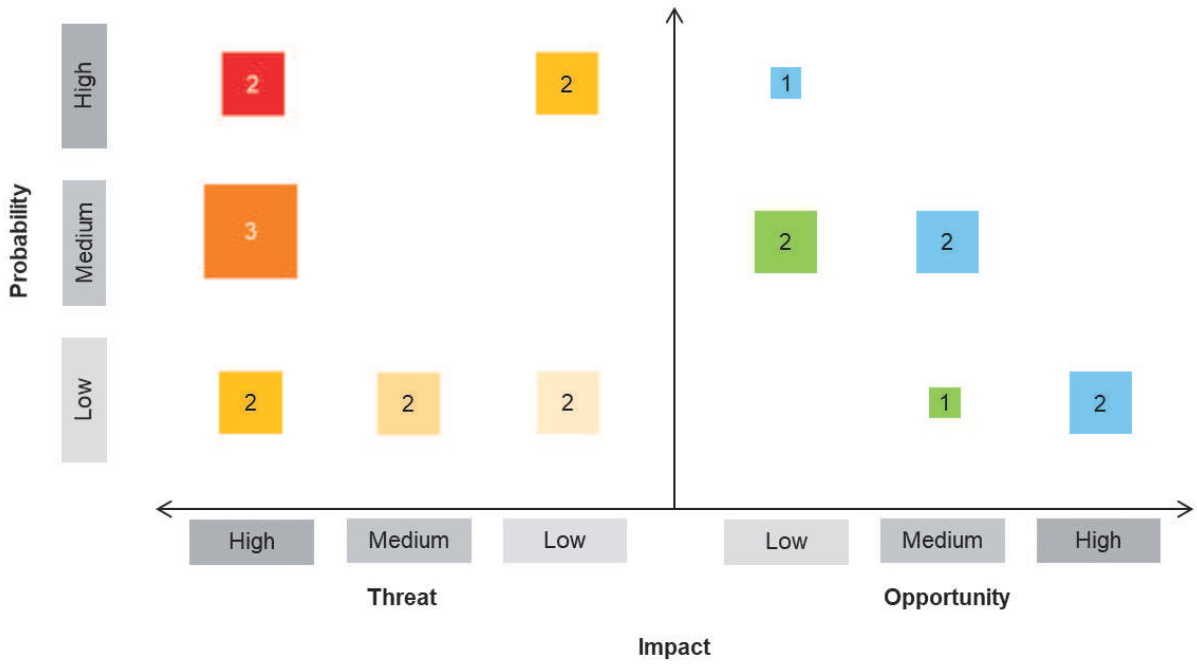

Figure 62: Dispersion Matrix by Rating.

Source: Own Elaboration.

As can be seen, a good part of the risks is part of the operating structure of the electricity sector. And it is exactly these risks that are rated in the categories high/high; high/medium; medium/high; high/low or low/high, as shown in Table 60.

Of these, Company Management should pay close attention to those whose management can initiate on the short-term, such as the review of physical guarantees of other MRE plants, the expansion schedule of renewable energy plants, and the inflexibility of the Thermoelectric Plants provided for in Law 14182/2021, in addition to

Classification: Confidential

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

the expansion of transmission. These are cases that create or remove value from companies, but under which Eletrobras – both now and in the future – has a reasonable bargaining power.

It should be noted that it is normal for the imposed (or exogenous) increase in the offer, and the transmission restrictions or the intensification of the locational signal, to affect the Company's value. But Eletrobras has everything that a major power generating/trading company needs to mitigate these risks, which is ownership of mature assets and in different submarkets.

Thus, it is recommendable that – at least with regard to the trading activity – the strategies be joint strategies (of the companies as one), to minimize the risks and costs of undesirable exposures in a very volatile price market that is vulnerable to interventions.

EDITAL DE PREGÃO ELETRÔNICO DSS N° 10/2021

A Centrais Elétricas Brasileiras S.A. - **ELETROBRAS** torna público que, nos termos da Lei nº 13.303/2016, do Regulamento de Licitações e Contratos, doravante denominado "Regulamento", e da Lei n. 10.520/2002, fará realizar licitação, na modalidade Pregão Eletrônico, sob o regime de empreitada por **PREÇO GLOBAL**, modo de disputa **ABERTO**, critério de julgamento **MENOR PREÇO** para contratação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, conforme condições estabelecidas no Edital.

1 – DISPOSIÇÕES PRELIMINARES

1.1. O presente pregão eletrônico será realizado em sessão pública, por meio da Internet, mediante condições de segurança – criptografia e autenticação – em todas as suas fases, disponível no sítio **www.gov.br/compras.**

1.2. Os licitantes ou seus representantes legais deverão estar previamente credenciados junto ao órgão provedor do sistema eletrônico antes da data de realização do pregão.

1.3. Os trabalhos serão conduzidos por empregado das Centrais Elétricas Brasileiras S.A. – **ELETROBRAS**, denominado pregoeiro, mediante a inserção e monitoramento de dados gerados ou transferidos para o aplicativo **"COMPRASNET"** e realizados de acordo com a legislação indicada no preâmbulo deste Edital.

2 – OBJETO

2.1. Constitui objeto da presente licitação a contratação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, de acordo com as especificações técnicas constantes do Termo de Referência (Anexo I).

2.2. Em caso de discrepância existente entre as especificações deste objeto descritas no Comprasnet e as especificações constantes deste Edital, prevalecerão as últimas.

3 – CONDIÇÕES DE PARTICIPAÇÃO

3.1. Poderá participar qualquer pessoa física ou jurídica legalmente estabelecida no País e que atenda às exigências deste Edital.

3.2. Não poderão participar as pessoas, físicas ou jurídicas, que tenham sofrido:

a) penalidade de suspensão temporária de participação em licitação e impedimento de contratar, prevista no inciso III do artigo 87 da Lei n. 8.666/1993 ou no inciso III do artigo 83 da Lei n. 13.303/2016, desde que aplicada pela **ELETROBRAS**;

Rua da Quitanda, nº 196 - 5ºandar
CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

b) penalidade de impedimento de licitar e contratar, prevista no artigo 7º da Lei n. 10.520/2002 ou no artigo 47 da Lei n. 12.462/2011, aplicada por qualquer órgão ou entidade integrante da Administração Pública federal;

c) penalidade de declaração de inidoneidade, prevista no inciso IV do artigo 87 da Lei n. 8.666/1993, aplicada por qualquer órgão ou entidade integrante da Administração Pública nacional, ou a prevista no artigo 46 da Lei n. 8.443/1992, aplicada pelo Tribunal de Contas da União;

d) penalidade de proibição de contratar com o Poder Público prevista nos incisos do artigo 12 da Lei n. 8.429/1992;

3.3. Para os fins desta licitação, os impedimentos referidos neste Edital serão verificados perante o Cadastro Nacional de Empresas Inidôneas e Suspensas (CEIS), Cadastro Nacional de Empresas Punidas (CNEP), ambos mantidos pelo Executivo Federal, e outros sistemas cadastrais pertinentes que sejam desenvolvidos e estejam à disposição para consulta, conforme o caso.

3.4. Também estarão impedidas de participar da Licitação empresas que, na data do certame, estejam cumprindo sanção de proibição de participar de licitações e celebrar contratos administrativos nos termos das leis nº 12.529/2011, 9.605/98, e 12.527/11.

3.5. Também não poderão participar Sociedades integrantes de um mesmo grupo econômico, assim entendidas aquelas que tenham diretores, sócios ou representantes legais comuns, ou que utilizem recursos materiais, tecnológicos ou humanos em comum, exceto se demonstrado que não agem representando interesse econômico em comum participando da presente licitação;

3.6. Serão impedidas de participar, também, as pessoas, físicas ou jurídicas, referidas no artigo 38 da Lei nº 13.303/2016.

3.7. Também NÃO poderão participar deste certame:

a) Pessoa física ou jurídica que participe da elaboração de estudos, incluindo, sem se limitar, consultoria econômico-financeira ou assessoria para qualquer entidade que, direta ou indiretamente, tenha interesse no processo de capitalização da Eletrobras, objeto da MP 1.031/2021 e legislação subsequente.

b) A vedação se estende a seus dirigentes e gerentes, controladores, acionistas titulares de participação no capital, responsáveis técnicos ou subcontratados, sociedades controladas direta ou indiretamente, fundo de investimento, comercializadoras de energia e/ou entidade de previdência complementar nos quais a pessoa jurídica possua participação do capital, ou seja, administrador/gestor da qual seja patrocinadora, conforme o caso, o que deverá ser comprovado mediante declaração nos termos do modelo 3 do anexo 3 do Edital.

3.8. Não será admitida a participação de cooperativas na presente licitação.

3.9. Não será permitida a participação de empresas reunidas em consórcio.

3.10. O licitante poderá participar do procedimento licitatório por intermédio de sua matriz/sede ou filial, desde que cumpra as condições exigidas para habilitação e credenciamento, em relação ao estabelecimento com o qual pretenda participar do certame.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

3.11. O CNPJ do estabelecimento que participar do certame, matriz/sede ou filial, deverá ser o mesmo a constar no contrato com a **ELETROBRAS** e nas Notas Fiscais/Faturas emitidas, quando do fornecimento ou execução dos serviços contratados. Dessa forma, não será admitida a emissão de Notas Fiscais/Faturas por CNPJ de estabelecimento diverso daquele participante da Licitação.

3.12. Este pregão é de âmbito nacional.

4 - PROPOSTA FORMAL DE PREÇOS

4.1. As propostas deverão ser apresentadas de acordo com o modelo anexado ao Edital (Anexo II), devidamente preenchido.

4.2. As propostas deverão incluir todos os custos e despesas, tais como: custos diretos e indiretos, tributos, encargos sociais, trabalhistas e previdenciários, seguros, taxas, lucro, uniformes, alimentação, transporte, e outros necessários ao cumprimento integral do objeto.

4.3. O prazo de validade das propostas será de 60 (sessenta) dias, contados da data prevista para abertura da sessão, podendo vir a ser prorrogado mediante solicitação da **ELETROBRAS** e aceitação do licitante.

4.4. As propostas deverão conter a razão social, endereço, telefone, número do CNPJ, banco, agência, conta corrente e praça de pagamento, nome e telefone do representante da empresa.

5 - CRITÉRIO DE JULGAMENTO DAS PROPOSTAS

5.1. As propostas serão avaliadas pelo critério de **MENOR PREÇO**, levando-se em conta o valor **GLOBAL** constante na proposta de preços apresentada pelo licitante e as condições estabelecidas neste Edital e em seus anexos.

6 - DOCUMENTAÇÃO DE HABILITAÇÃO

6.1. Serão exigidos os seguintes documentos para a habilitação:

a) inscrição no Registro Público de Empresas Mercantis, a cargo da Junta Comercial da respectiva sede, no caso de empresário individual;

b) ato Constitutivo, Estatuto ou Contrato Social em vigor, devidamente registrado na Junta Comercial da respectiva sede, acompanhado de documentos comprobatórios da eleição/nomeação de seus administradores, em se tratando de Sociedades Empresárias ou Empresa Individual de Responsabilidade Limitada (EIRELI);

c) inscrição do ato constitutivo em cartório de Registro Civil de Pessoas Jurídicas do local de sua sede, no caso de sociedades simples, acompanhada de prova da indicação de seus administradores;

d) documento de autorização, devidamente arquivado, quando se tratar de empresa ou sociedade estrangeira em funcionamento no país;

e) atestado, emitido por pessoa jurídica de direito público ou privado, que comprove a experiência na execução do objeto desta licitação, limitada às parcelas técnica ou economicamente relevantes, conforme descrito abaixo:

- experiência em avaliação econômico-financeira (*valuation*) de empresas do segmento de geração de energia elétrica de médio ou grande porte (maior ou igual a 500 MW), no Brasil, nos últimos 5 (cinco) anos a partir de indicação de trabalhos prestados a outras empresas, com todos os detalhes pertinentes, tais como: nome da empresa, período, escopo detalhado do trabalho realizado contendo inclusive, o prazo de seu desenvolvimento.

e.1) Não será reconhecido o atestado que informe apenas execução parcial do objeto.

e.2) O(s) atestado(s) deverá(ão) ser entregue(s) em papel timbrado, contendo o nome, o endereço e o telefone de contato do(s) atestador(es), ou qualquer outra forma de que a **ELETROBRAS** possa valer-se para manter contato com a(s) empresa(s) declarante(s);

e.3) O(s) atestado(s) deverá(ão) ser firmado(s) por representantes formais da empresa emissora e explicitar claramente em seu corpo ou em documento complementar anexado, a conclusão integral dos serviços e a satisfação do contratante com a adequação dos resultados obtidos ao escopo. O(s) atestado(s) deverá(ão) mencionar explicitamente o serviço executado, de modo a não restar dúvidas sobre o trabalho realizado.

e.4) É permitida a apresentação de atestados de capacidade técnica emitidos em nome de outra empresa da qual a licitante seja subsidiária integral e/ou de subsidiária integral pertencente a licitante, desde que pertencente à mesma atividade econômica;

e.5) Somente devem ser aceitos atestados de capacidade técnica expedidos após a conclusão do contrato ou, tratando-se de prestação de serviços contínuos, se decorrido, no mínimo, um ano do início de sua execução, exceto se houver sido firmado para ser executado em prazo inferior.

f) Balanço patrimonial e demonstrações contábeis referentes ao último exercício social, exigíveis **na forma da lei**, comprovando patrimônio líquido de, no mínimo 10% do valor da proposta do licitante, **OU** índices de liquidez geral (LG), liquidez corrente (LC), e solvência geral (SG) superiores a 1 (um), que deverão ser calculados da seguinte forma:

LG = ativo circulante + realizável a longo prazo/passivo circulante + passivo não circulante;
LC = ativo circulante/ passivo circulante;
SG = ativo total/ passivo circulante + passivo não circulante;

g) certidão negativa de feitos sobre falência da sede do interessado.

g.1) O licitante em recuperação judicial ou extrajudicial poderá participar da presente licitação, desde que atenda às condições para comprovação da capacidade econômica e financeira previstas neste edital.

h) Declaração de ausência dos impedimentos do artigo 38 da Lei nº 13.303/2016, conforme Modelo 1, Anexo III do edital.

i) Declaração, conforme "Modelo 2", Anexo III deste edital, de que irá dispor, na data da assinatura do contrato, das categorias de profissionais, em quantidade compatível para a execução do objeto, de acordo com o item 10 do Termo de Referência, Anexo I do Edital.

PE- 10/2021

j) Declaração, conforme "Modelo 3", Anexo III deste edital, de que não se enquadra no impedimento previsto no item 3.7 do edital.

6.2. Microempresas e empresas de pequeno porte deverão atender a todas as exigências de habilitação previstas neste edital.

6.3. Os documentos exigidos nas alíneas "a", "b" e "c" do item 6.1 deverão estar acompanhados de todas as suas alterações ou da respectiva consolidação, quando for o caso, e deles deverá constar, entre os objetivos sociais, a execução de atividades da mesma natureza do objeto desta licitação.

6.4. Se a documentação de habilitação não estiver completa e correta ou contrariar qualquer dispositivo deste Edital e seus Anexos, o pregoeiro considerará o licitante inabilitado, devendo instruir o processo, se for o caso, com vistas a possíveis penalidades.

6.5. A apresentação de qualquer documento com falsidade material ou intelectual sujeitará o licitante à aplicação da sanção de suspensão temporária do direito de participar de licitação, de acordo com os critérios do artigo 96 do Regulamento, além das demais cominações legais.

7 - PROCESSAMENTO DO PREGÃO ELETRÔNICO

7.1 - Credenciamento

7.1.1. Antes da sessão pública, para acesso ao sistema eletrônico, os interessados em participar do pregão deverão dispor de chave de identificação e senha pessoal e intransferível, no provedor COMPRASNET.

7.1.2. Os licitantes ou seus representantes legais deverão estar previamente credenciados perante o provedor do sistema eletrônico.

7.1.3. O credenciamento junto ao provedor do sistema implica responsabilidade legal do licitante ou de seu representante legal e a presunção de sua capacidade técnica para realização das transações inerentes ao Pregão Eletrônico.

7.1.4. O uso da senha de acesso pelo licitante é de sua responsabilidade exclusiva, incluindo qualquer transação efetuada diretamente ou por seu representante, não cabendo ao provedor do sistema ou à **ELETROBRAS,** promotora da licitação, responsabilidade por eventuais danos decorrentes do uso indevido da senha, ainda que por terceiros.

7.1.5. A perda da senha ou a quebra de sigilo deverão ser comunicadas imediatamente ao provedor do sistema para imediato bloqueio de acesso.

7.2 - Participação

7.2.1. A participação no pregão eletrônico dar-se-á por meio de conexão ao sistema eletrônico COMPRASNET, bem como pela digitação da senha pessoal e intransferível do representante credenciado e subsequente encaminhamento da proposta de preços, e os documentos de habilitação exigidos neste edital, exclusivamente por meio eletrônico, observados a data e o horário limite estabelecidos.

CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

7.2.2. Como requisito para participação no pregão, o licitante deverá manifestar, em campo próprio do sistema eletrônico, que cumpre plenamente os requisitos de habilitação e que sua proposta está em conformidade com as exigências do instrumento convocatório.

7.2.3. O licitante será responsável por todas as transações que forem efetuadas em seu nome no sistema eletrônico, assumindo como firmes e verdadeiras suas propostas e lances, inclusive os atos praticados diretamente ou por seu representante, excluída a responsabilidade do provedor do sistema ou do órgão ou entidade promotora da licitação por eventuais danos decorrentes de uso indevido da senha, ainda que por terceiros;

7.2.4. Caberá ao licitante acompanhar as operações no sistema eletrônico durante a sessão pública do pregão, ficando responsável pelo ônus decorrente da perda de negócios diante da inobservância de quaisquer mensagens emitidas pelo sistema ou, ainda, em razão de desconexão.

7.3 - Recebimento das Propostas e dos Documentos de Habilitação:

7.3.1. O licitante deverá observar as datas e horários limites previstos para entrega e abertura da Proposta, juntamente com os documentos de habilitação, atentando também para a data e horário para início da disputa.

7.3.2. Todas as referências de tempo no Edital, no Aviso e durante a sessão pública observarão **obrigatoriamente** o horário de Brasília – DF e, dessa forma, serão registrados no sistema eletrônico e na documentação relativa ao certame.

7.3.3. O licitante, no momento da elaboração e envio de sua Proposta, deverá enviar, obrigatoriamente, através de campo próprio do Sistema, as declarações de inexistência de fato superveniente, de que o mesmo não emprega menor, e de que não possui, em sua cadeia produtiva, empregados executando trabalho degradante ou forçado, as quais somente serão visualizadas pelo pregoeiro na fase de habilitação.

7.3.4. Os licitantes poderão deixar de apresentar os documentos de habilitação que constem do SICAF, assegurado aos demais licitantes o direito de acesso aos dados constantes dos sistemas.

7.3.5. Na elaboração de sua proposta, o licitante deverá levar em conta as seguintes condições:

a) O(s) preço(s) unitário(s) e total(is), do(s) item(ns) constante(s) da(s) Planilha(s) de Preços, deverá(ão) ser em moeda nacional, com 2 (duas) casas decimais;

b) Para cada item da Planilha de Preços deverão ser consideradas todas as operações auxiliares ou complementares necessárias à sua completa execução;

c) Os preços devem incluir todos os impostos e taxas vigentes na legislação, discriminados por item, incidentes sobre materiais e serviços que façam parte da licitação.

7.3.6. As microempresas e empresas de pequeno porte, no ato de envio de sua Proposta, em campo próprio do Sistema, deverão declarar que atendem aos requisitos do artigo 3º da Lei Complementar nº 123/2006, para fazer jus aos benefícios previstos na referida Lei.

7.3.6.1. A não entrega da Declaração indicará que a microempresa, ou empresa de pequeno porte, optou por não utilizar os benefícios previstos na Lei Complementar n. 123/2006.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

7.3.6.2. A apresentação das declarações referidas nos itens 7.3.3 e 7.3.6 do presente Edital com falsidade material ou intelectual sujeitará os licitantes à aplicação da sanção de suspensão temporária do direito de participar de licitação, de acordo com os critérios do artigo 96 do Regulamento, além das demais cominações legais.

7.3.6.3. O licitante deverá encaminhar sua Proposta preenchendo o campo específico no sistema COMPRASNET.

7.3.7. O preenchimento da proposta, bem como a inclusão de seus anexos, no sistema COMPRASNET, é de exclusiva responsabilidade do licitante, não cabendo à ELETROBRAS qualquer responsabilidade.

7.3.8. Até a data e hora definidas para abertura da sessão pública, o licitante poderá retirar ou substituir a proposta e os documentos de habilitação anteriormente inseridos no sistema.

7.4 - Sessão Pública:

7.4.1. No horário previsto no Edital a sessão pública será aberta pelo pregoeiro.

7.4.2. Se por algum motivo a sessão de disputa não puder ser realizada na data e horário previstos, os participantes deverão ficar atentos à nova data e ao novo horário que serão disponibilizados no endereço eletrônico **www.gov.br/compras**, opção "**informações do pregão**".

7.4.3. O pregoeiro verificará as Propostas apresentadas, desclassificando aquelas que não estejam de acordo com os requisitos estabelecidos no Edital.

7.4.4. A desclassificação da Proposta será sempre fundamentada e registrada no sistema, podendo os participantes acompanhar o resultado da análise em tempo real.

7.4.5. As Propostas classificadas pelo pregoeiro serão ordenadas pelo sistema, automaticamente, e só estas participarão da etapa de lances.

7.4.6. O pregoeiro, então, dará início à fase competitiva do certame, em que os licitantes poderão ofertar lances exclusivamente pelo sistema eletrônico.

7.4.7. Os lances deverão ser formulados sobre o **PREÇO GLOBAL** do item, conforme Planilha de Preços – Anexo II.

7.4.8. Os lances serão registrados no sistema, de forma sucessiva, em valores distintos e decrescentes, observado o modo de disputa adotado.

7.4.9. Cada licitante será imediatamente informado do recebimento do seu lance e do valor consignado no registro.

7.4.10. Não poderá haver desistência dos lances ofertados, sujeitando-se o licitante desistente às penalidades previstas no item 11 deste Edital.

7.4.11. Será permitido ao licitante oferecer lance superior ao menor lance registrado no sistema, desde que inferior ao último por ele ofertado e diferente de qualquer lance válido.

7.4.12. O licitante somente poderá oferecer valor inferior ou maior percentual de desconto ao último lance por ele ofertado e registrado pelo sistema, observado, quando houver, o intervalo

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

PE- 10/2021

mínimo de diferença de valores ou de percentuais entre os lances, que incidirá tanto em relação aos lances intermediários quanto em relação ao lance que cobrir a melhor oferta.

7.4.13. Não serão aceitos mais de um lance de mesmo valor, prevalecendo aquele que for recebido e registrado em primeiro lugar.

7.4.14. Durante o transcurso da sessão, os participantes serão informados, em tempo real, do valor do menor lance registrado. O sistema não identificará o autor dos lances aos demais licitantes.

7.4.15. Durante a fase de lances, o pregoeiro poderá excluir, justificadamente, lance cujo valor for considerado inexequível.

7.4.16. No caso de desconexão do pregoeiro, no decorrer da etapa competitiva, o sistema eletrônico poderá permanecer acessível aos licitantes para a recepção dos lances. O pregoeiro, assim que possível, dará continuidade à sua atuação no certame, sem prejuízo dos atos realizados.

7.4.17. Quando a desconexão do sistema eletrônico para o pregoeiro persistir por tempo superior a dez minutos, a sessão pública será suspensa e reiniciada somente decorridas vinte e quatro horas após a comunicação do fato aos participantes, no sítio eletrônico utilizado para divulgação.

7.5 - Modo de Disputa

7.5.1. Modo de disputa aberto:

7.5.1.1. Será adotado o modo de disputa aberto, em que os licitantes apresentarão lances públicos e sucessivos, com prorrogações, conforme o critério de julgamento adotado, estabelecido no subitem 5.1.

7.5.1.2. O intervalo mínimo de diferença de percentuais entre os lances será de 0,1% (um décimo porcento). O intervalo incidirá tanto em relação aos lances intermediários quanto em relação ao lance que cobrir a melhor oferta.

7.5.1.3. A etapa de envio de lances durará 10 (dez) minutos e, após isso, será prorrogada automaticamente pelo sistema quando houver lance ofertado nos últimos dois minutos do período de duração da sessão pública.

7.5.1.3.1. A prorrogação automática da etapa de envio de lances será de dois minutos e ocorrerá sucessivamente sempre que houver lances enviados nesse período de prorrogação, inclusive quando se tratar de lances intermediários.

7.5.1.3.2. Na hipótese de não haver novos lances na forma estabelecida nos subitens 7.5.1.3 e 7.5.1.3.1, a sessão pública será encerrada automaticamente.

7.5.1.4. Encerrada a sessão pública sem prorrogação automática pelo sistema, nos termos do disposto no subitem 7.5.1.3.1, o pregoeiro poderá, assessorado pela equipe de apoio, admitir o reinício da etapa de envio de lances, em prol da consecução do melhor preço, mediante justificativa.

7.6 - Direito de Preferência para microempresas e empresas de pequeno porte

7.6.1. Encerrada a etapa de lances, o pregoeiro deverá verificar se ocorre o empate ficto em favor de microempresa ou empresa de pequeno porte, assegurando, se for o caso, o direito de preferência, observando-se o seguinte:

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Eletrobras

DSS
Rua da Quitanda, nº 196 - 5ºandar
CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

a) o empate ficto ocorrerá quando as ofertas apresentadas pelas microempresas e empresas de pequeno porte sejam iguais ou até 5% (cinco por cento) superiores ao menor preço;

b) ocorrendo o empate, a microempresa ou a empresa de pequeno porte melhor classificada, poderá, no prazo máximo de 5 (cinco) minutos, contado do envio da mensagem automática pelo sistema, apresentar proposta de preço inferior àquela considerada vencedora do certame, situação em que, atendidas as exigências habilitatórias, deve ser adjudicado o objeto em seu favor.

c) se a microempresa ou empresa de pequeno porte melhor classificada não exercer o direito de preferência, deverão ser convocadas as remanescentes que porventura se enquadrem na situação de empate, na ordem classificatória, para o exercício do mesmo direito;

d) no caso de equivalência dos valores apresentados pelas microempresas e empresas de pequeno porte que se encontrem em situação de empate, deve ser realizado sorteio entre elas para que se identifique aquela que primeiro pode apresentar melhor oferta.

7.6.2. Caso a microempresa ou empresa de pequeno porte mais bem classificada, deixe de apresentar, no prazo citado, nova proposta de preço inferior àquela considerada vencedora do certame ou apresente proposta de preço inaceitável ou deixe de atender às exigências habilitatórias, o pregoeiro convocará, dentre as empresas remanescentes que porventura se enquadrem na hipótese do subitem 7.6.1, na ordem classificatória, a próxima microempresa ou empresa de pequeno porte mais bem classificada para o exercício do mesmo direito de preferência.

7.6.3. O procedimento previsto no subitem 7.6.2 será adotado, sucessivamente, até a apuração de uma proposta que atenda ao Edital ou até que não haja microempresa ou empresa de pequeno porte que se enquadre na hipótese do subitem 7.6.1.

7.6.4. Na hipótese de não-contratação nos termos previstos nos subitens 7.6.2 e 7.6.3, o objeto licitado será adjudicado em favor da proposta originalmente vencedora do certame, desde que sua proposta seja aceitável e ele apresente os documentos de habilitação, tudo de acordo com o presente Edital.

7.6.5. O disposto no subitem 7.6.1 somente se aplicará quando a melhor oferta inicial não tiver sido apresentada por microempresa ou empresa de pequeno porte.

7.7 - Encaminhamento da Proposta e dos documentos complementares

7.7.1. Encerrada a etapa de lances, se a proposta atender aos critérios de aceitabilidade de preços, o licitante detentor da melhor oferta, após solicitação do pregoeiro, encaminhará por meio do sistema eletrônico:

a) em até 2 (duas) horas, os documentos complementares de habilitação e a proposta final, decomposta em Planilha de Preços, conforme modelo do Anexo II do presente Edital, com os preços adequados ao seu último valor ofertado.

7.7.2. É de responsabilidade do licitante confirmar junto à **ELETROBRAS** o recebimento dos documentos de habilitação e proposta final, não cabendo à **ELETROBRAS** a responsabilidade pelo desconhecimento de tais informações.

7.7.3. O sistema permite o envio de apenas 1 (um) arquivo, de forma que, caso haja necessidade de encaminhar dois ou mais, estes deverão ser compactados, preferencialmente, no formato ".zip" e enviados em arquivo único.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

7.7.4. O prazo referido na alínea "a" do item 7.7.1 poderá ser prorrogado por decisão fundamentada do pregoeiro, se considerar necessário, ou após análise de justificativa apresentada pelo licitante.

7.8 - Aceitabilidade da proposta

7.8.1. Os documentos remetidos por meio da opção "Enviar Anexo" do Sistema COMPRASNET poderão ser solicitados em original ou por cópia autenticada a qualquer momento, em prazo a ser estabelecido pelo pregoeiro.

7.8.1.1. Os originais ou cópias autenticadas, caso sejam solicitados pelo pregoeiro, deverão ser entregues no endereço abaixo:

CENTRAIS ELÉTRICAS BRASILEIRAS - ELETROBRAS
DEPARTAMENTO DE PLANEJAMENTO DE AQUISIÇÕES E CONTRATAÇÕES
Endereço: Rua da Quitanda, 196/5º andar – Centro
CEP: 20.091-005 - Rio de Janeiro - RJ

Ref.: PREGÃO ELETRÔNICO Nº 10/2021

7.8.2. O pregoeiro examinará a proposta primeira classificada, decidindo motivadamente a respeito da sua aceitabilidade.

7.8.3. O pregoeiro deverá avaliar se a proposta do licitante vencedor da etapa de lances atende às especificações técnicas, demais documentos e formalidades exigidas no Edital, sob pena de desclassificação, podendo ser subsidiado pela unidade de gestão técnica no que se referir ao atendimento das questões técnicas relacionadas ao objeto da licitação ou de documentos com informações de ordem técnica que podem impactar a sua execução.

7.8.4. O pregoeiro deverá negociar com o licitante autor da melhor proposta condições mais vantajosas, que poderão abranger os diversos aspectos da proposta, desde preço, prazos de pagamento e de entrega, sem que lhe caiba, a pretexto da negociação, relativizar ou atenuar as exigências e condições estabelecidas no Edital e nos seus documentos anexos.

7.8.4.1. A negociação deve ser motivada pelo pregoeiro e, quando envolver aspectos técnicos, pelo gestor da unidade técnica.

7.8.4.2. A negociação deverá ser feita com os demais licitantes, segundo a ordem inicialmente estabelecida, quando o preço do primeiro colocado, mesmo após a negociação, permanecer acima do orçamento estimado.

7.8.4.3. Se depois de adotada a providência referida em 7.8.4.2 não for obtido valor igual ou inferior ao orçamento estimado para a contratação, será revogada a licitação.

7.8.4.4. A negociação será realizada por meio do sistema e poderá ser acompanhada pelos demais licitantes.

7.8.5. O valor global da proposta, após a negociação, não poderá superar o orçamento estimado pela **ELETROBRAS**, sob pena de desclassificação do licitante.

PE- 10/2021

7.8.6. O pregoeiro poderá desclassificar as propostas que apresentem preços manifestamente inexequíveis, assim considerados aqueles que, comprovadamente, forem insuficientes para a cobertura dos custos decorrentes da contratação pretendida.

7.8.7. A inexequibilidade dos valores referentes a itens isolados da planilha de custos, desde que não contrarie instrumentos legais, não caracterizará motivo suficiente para a desclassificação da proposta.

7.8.8. A análise de exequibilidade da proposta não deverá considerar materiais e instalações a serem fornecidos pelo licitante em relação aos quais ele renuncie à parcela ou à totalidade da remuneração, desde que a renúncia esteja expressa na proposta.

7.8.9. O pregoeiro poderá realizar diligências para aferir a exequibilidade ou qualquer outro aspecto da proposta.

7.8.10. O pregoeiro poderá exigir do licitante a demonstração da exequibilidade da sua proposta, cabendo-lhe, conforme o caso, verificar ou requisitar que lhe sejam apresentados:

a) acordos coletivos, convenções coletivas ou sentenças normativas em dissídios coletivos de trabalho;

b) informações junto ao Ministério da Economia (ou órgãos equivalentes);

c) consultas a entidades ou conselhos de classe, sindicatos ou similares;

d) pesquisas em órgãos públicos ou empresas privadas;

e) verificação de outros contratos que o proponente mantenha com a Administração Pública ou com a iniciativa privada;

f) pesquisa de preço com agentes econômicos dos insumos utilizados, tais como: atacadistas, lojas de suprimentos, supermercados e fabricantes;

g) verificação de notas fiscais dos produtos cotados na proposta e anteriormente adquiridos pelo proponente;

h) levantamento de indicadores salariais ou trabalhistas publicados por órgãos de pesquisa;

i) estudos setoriais;

j) consultas às Secretarias de Fazenda Federal, Distrital, Estadual ou Municipal;

k) análise de soluções técnicas escolhidas e/ou condições excepcionalmente favoráveis que o licitante disponha para a prestação dos serviços.

7.8.11. Qualquer licitante poderá requerer motivadamente que se realizem diligências para aferir a exequibilidade e a legalidade das propostas, devendo apresentar as provas ou os indícios que fundamentam a suspeita.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

7.8.12. Se a proposta do licitante vencedor da etapa competitiva de lances não for aceitável, o pregoeiro examinará as propostas subsequentes, na ordem de classificação, verificando o seu atendimento até a apuração de uma proposta que atenda os termos do Edital e desta verificando as condições habilitatórias. Constatado o atendimento das exigências fixadas no Edital, o licitante será declarado vencedor.

7.8.13. Somente serão desclassificadas as propostas que contenham vícios insanáveis.

7.8.13.1. São considerados sanáveis defeitos relacionados a documentos que declaram situações pré-existentes ou concernentes aos seus prazos de validade.

7.9 - Habilitação

7.9.1. Havendo necessidade, o pregoeiro suspenderá a sessão para a realização de diligências, com vistas ao saneamento de erros ou falhas que não alterem a substância das propostas, observado o disposto no subitem 7.8.13, informando via chat do sistema a nova data e horário para a sua continuidade, que não se dará em prazo inferior a 24 (vinte e quatro) horas a contar da data da comunicação.

7.9.2. Sendo aceitável a proposta, o pregoeiro deverá analisar a documentação de habilitação do licitante que a tiver formulado, para verificação de suas condições habilitatórias. Constatado o atendimento das exigências fixadas no Edital, o licitante será declarado vencedor sendo-lhe adjudicado o objeto do certame.

7.9.3. No julgamento da habilitação e das propostas, o pregoeiro poderá sanar erros ou falhas que não alterem a substância das propostas, dos documentos e sua validade jurídica, mediante despacho fundamentado, atribuindo-lhes validade e eficácia para fins de habilitação e classificação.

7.9.4. Se o licitante desatender às exigências habilitatórias, o pregoeiro examinará a documentação do licitante subsequente, e assim, sucessivamente, até a apuração de documentação que atenda os termos do Edital, cujo licitante será declarado vencedor.

7.9.5. Os licitantes são responsáveis pela fidelidade e legitimidade das informações e dos documentos apresentados em qualquer fase da licitação.

8 - RECURSOS

8.1. Declarado o vencedor do pregão**,** durante a sessão pública, qualquer licitante poderá manifestar imediata e motivadamente a intenção de recorrer, no prazo de 2 (duas) horas em campo próprio do sistema, quando deverá ser concedido a ele o prazo de 3 (três) dias para apresentação das razões do recurso a contar da disponibilização da decisão, ficando os demais licitantes desde logo intimados para apresentar contrarrazões em igual número de dias, que devem começar a correr do término do prazo do recorrente, sendo-lhes assegurado vista imediata dos autos.

8.1.1. O pregoeiro pode não conhecer o recurso já nesta fase em situação excepcional e restrita, caso a manifestação referida no item 8.1 seja apresentada fora do prazo ou por pessoa que não represente o licitante ou se o motivo apontado não guardar relação de pertinência com a licitação. É vedado ao pregoeiro rejeitar o recurso de plano em razão de discordância de mérito com os motivos apresentados pelo licitante.

8.2. Apresentadas as razões e contrarrazões, o pregoeiro disporá de 5 (cinco) dias úteis,

PE- 10/2021

prorrogáveis por iguais períodos, para reavaliar sua decisão e dar os seguintes encaminhamentos, conforme o caso:

a) se acolher as razões recursais, deverá retomar a sessão pública para, revista a decisão nela tomada, dar prosseguimento à licitação, garantindo, depois de nova declaração de vencedor, o direito à interposição de recurso, inclusive por parte de licitante que tenha sido impedido de participar da licitação, que teve sua proposta desclassificada ou que foi inabilitado;

b) se não acolher as razões recursais, deverá produzir relatório e encaminhar o recurso para a autoridade competente, para decisão definitiva, que deve ser produzida em 5 (cinco) dias úteis, prorrogáveis por iguais períodos. Nesta última hipótese, a autoridade competente deverá tomar a decisão definitiva sobre o recurso.

8.3. Na hipótese da alínea "a" do item 8.2. deste Edital, a decisão de acolhimento do recurso deverá ser publicada no sítio eletrônico da **ELETROBRAS**, estabelecendo-se o prazo de 2 (dois) dias úteis para a retomada da sessão pública.

8.4. A decisão definitiva sobre o recurso deverá ser publicada no sítio eletrônico da **ELETROBRAS**.

8.5. O acolhimento de recurso importará a invalidação apenas dos atos insuscetíveis de aproveitamento.

8.6. A falta de manifestação imediata e motivada do licitante importará a decadência do direito de recurso e a adjudicação do objeto da licitação pelo pregoeiro ao vencedor.

8.7. Entende-se por manifestação motivada da intenção de recorrer a indicação sucinta dos fatos e das razões do recurso, sem a necessidade de indicação de dispositivos legais ou regulamentares violados ou de argumentação jurídica articulada.

8.8. As razões do recurso poderão trazer outros motivos não indicados expressamente na sessão pública.

9 - DUE DILIGENCE DE INTEGRIDADE

9.1. O licitante estará sujeito à análise de integridade prevista no item 5 do artigo 71 do Regulamento de Licitações e Contratos da **ELETROBRAS**, disponível no sítio eletrônico www.eletrobras.com.

9.2. A análise de integridade, prevista no item anterior, se fará com base no "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras", que deverá ser preenchido pelo licitante diretamente no sítio eletrônico www.eletrobras.com.

9.2.1. O "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras" preenchido terá validade de doze meses, não havendo necessidade de novo preenchimento por parte do licitante caso tenha preenchido o referido formulário em um período inferior ao estabelecido. Ainda assim, caso entenda necessário, a Eletrobras poderá solicitar novamente seu preenchimento.

9.2.2. Após o preenchimento do "Formulário de Due Diligence de Fornecedores do Sistema Eletrobras" no sítio eletrônico referido em 9.2, o licitante deverá encaminhá-lo assinado, eletrônica ou digitalmente, pelo Representante Legal, para o endereço eletrônico pregao_eletronico@eletrobras.com.

CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

9.2.3. O não preenchimento do "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras" pelo licitante poderá acarretar a desclassificação do licitante declarado vencedor.

9.3. A análise de integridade, na hipótese prevista no item 5 do artigo 71 do Regulamento de Licitações e Contratos, é condição indispensável para a homologação da licitação.

9.4. As empresas Eletrobras reservam-se o direito de utilizar a documentação referente à integridade elaborada por outra empresa Eletrobras, desde que tenha a validade prevista no item 9.2.1.

10 - ADJUDICAÇÃO E HOMOLOGAÇÃO

10.1. Se não houver recurso, a declaração de vencedor realizada pelo pregoeiro equivale e faz as vezes da adjudicação, cabendo a homologação à autoridade competente. Se houver recurso, a autoridade competente deverá realizar a adjudicação e homologação da licitação no mesmo ato.

10.2. A homologação da licitação está sujeita à análise de integridade, conforme artigo 71 do Regulamento de Licitações e Contratos da Eletrobras, disponível no sítio eletrônico www.eletrobras.com/pt/Paginas/Fornecedores.aspx.

10.3. Na fase de homologação, a autoridade competente poderá:

a) homologar a licitação;

b) revogar a licitação por razões de interesse público decorrentes de fato superveniente que constitua óbice manifesto e incontornável;

c) anular a licitação por ilegalidade, salvo as situações em que:

c.1) o vício de legalidade for convalidável; ou

c.2) o vício de legalidade não causar dano ou prejuízo à empresa ou a terceiro; ou

c.3) o vício de legalidade não contaminar a totalidade do processo de licitação, caso em que deve determinar ao pregoeiro o refazimento do ato e o prosseguimento da licitação.

10.4. O vício de legalidade será convalidável se o ato por ele contaminado puder ser repetido sem o referido vício, o que ocorre, dentre outros casos, com vícios de competência e tocantes às formalidades.

10.5. A revogação ou anulação da licitação, depois da etapa competitiva de lances, dependerá da concessão de prazo de 5 (cinco) dias úteis para que os licitantes interessados ofereçam manifestação.

10.6. A revogação ou anulação da licitação, ainda que parcial, deverá ser motivada, abordando-se todos os fundamentos apresentados pelos licitantes que ofereceram manifestação.

11- CONTRATAÇÃO

11.1. A **ELETROBRAS** convocará o licitante vencedor para assinatura do Contrato em prazo de até 10 (dez) dias úteis prorrogáveis por igual período. A recusa injustificada do licitante vencedor em assinar o instrumento contratual, dentro do prazo e condições estabelecidos, caracterizará o descumprimento total da obrigação assumida, sujeitando-o às penalidades legalmente estabelecidas.

11.2. Ocorrendo o previsto no item 11.1, a **ELETROBRAS** poderá revogar a licitação ou convocar os licitantes remanescentes, atendida a ordem de classificação, para negociação e possível adjudicação do objeto da licitação e homologação pela autoridade superior.

11.3. Todas as disposições sobre o Contrato estão previstas na Minuta do Contrato, documento anexado ao Edital, o qual contém cláusula suspensiva para o início da execução e vigência (Anexo IV).

11.4. É vedada a contratação de pessoa jurídica na qual haja administrador ou sócio com poder de direção que tenham relação de parentesco com:

I - detentor de cargo em comissão ou função de confiança que atue na área responsável pela demanda ou pela contratação; ou

II - autoridade hierarquicamente superior no âmbito da Eletrobras.

11.4.1. Para comprovação do preenchimento do requisito constante do item 11.4, o licitante vencedor deverá, como condição para a contratação, apresentar Declaração conforme Modelo 04 do Anexo III do Edital.

11.5. Para assinatura do contrato, será necessário o **cadastro dos Representantes legais no portal de assinaturas Certisign** (https://www.portaldeassinaturas.com.br/Home/Cadastro).

11.5.1 Caso a assinatura do contrato seja por procurador, o licitante deverá apresentar o instrumento de Procuração.

12 - PENALIDADES

12.1. O licitante que se comportar com má-fé estará sujeito, garantido o contraditório e a ampla defesa, à penalidade de suspensão temporária de participação em licitação e impedimento de contratar com a **ELETROBRAS**, por prazo não superior a 2 (dois) anos, de acordo com os critérios do artigo 96 do regulamento.

12.2. O licitante estará sujeito à multa, garantido o contraditório e a ampla defesa, nas seguintes hipóteses e nos seguintes percentuais, calculados sobre o valor da sua proposta:

a) não assinar o contrato, quando convocada dentro do prazo de validade de sua proposta, ou não mantiver a proposta – multa de 15% (quinze por cento);

b) deixar de entregar documentação exigida neste Edital – multa de 5% (cinco por cento);

c) apresentar documentação falsa – multa de 25% (vinte e cinco por cento);

d) comportar-se de modo inidôneo – multa de 25% (vinte e cinco por cento);

PE- 10/2021

e) fizer declaração falsa – multa de 25% (vinte e cinco por cento);

f) cometer fraude fiscal – multa de 25% (vinte e cinco por cento).

12.2.1. Ocorrendo mais de uma infração, as multas serão cumulativas até o limite de 25% (vinte e cinco por cento).

12.2.2. As penalidades referentes à inexecução do Contrato estão estabelecidas na Minuta de Contrato, Anexo IV deste Edital.

12.2.3. Nenhuma sanção será aplicada sem o devido processo administrativo.

13 - ATOS LESIVOS À ELETROBRAS

13.1. Com fundamento no artigo 5º da Lei nº 12.846/2013, a **LICITANTE** estará sujeita às sanções estabelecidas no item 14, observados o contraditório e a ampla defesa, e sem prejuízo das demais cominações legais, no caso dos atos lesivos à **ELETROBRAS**, assim definidos:

a) Prometer, oferecer ou dar, direta ou indiretamente, vantagem indevida a agente público, ou a terceira pessoa a ele relacionada, atuando em nome da **ELETROBRAS**;
b) Comprovadamente, financiar, custear, patrocinar ou de qualquer modo subvencionar a prática dos atos ilícitos previstos na Lei nº 12.846/2013, atuando em nome da **ELETROBRAS**;
c) Frustrar ou fraudar, mediante ajuste, combinação ou qualquer outro expediente, o caráter competitivo da presente licitação;
d) Impedir, perturbar ou fraudar a realização de qualquer ato do presente procedimento licitatório;
e) Afastar ou procurar afastar licitante, por meio de fraude ou oferecimento de vantagem de qualquer tipo;
f) Fraudar a presente licitação;
g) Criar, de modo fraudulento ou irregular, pessoa jurídica para participar da presente licitação;
h) Dificultar atividade de investigação ou fiscalização de órgãos, entidades ou agentes públicos, ou intervir em sua atuação, inclusive no âmbito das agências reguladoras e dos órgãos de fiscalização do sistema financeiro nacional, no âmbito da presente licitação.
i) comprovadamente, utilizar-se de interposta pessoa física ou jurídica para ocultar ou dissimular seus reais interesses ou a identidade dos beneficiários dos atos praticados.

13.2. As sanções indicadas no subitem 13.1 deste Edital se aplicam quando a **LICITANTE** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

13.3. Ademais, ainda que não se enquadre na definição legal presente no parágrafo único do art. 1º da Lei nº 12.846/2013, a **LICITANTE** compromete-se a não cometer os atos lesivos listados nesta cláusula junto a outros agentes públicos, durante a execução das atividades que concernem o âmbito do contrato firmado com a **ELETROBRAS**.

13.4. A **LICITANTE** compromete-se a não realizar quaisquer ações ou omissões que constituam prática ilegal ou de corrupção, nos termos da Lei nº12.846/2013, Decreto nº 8.420/2015, Lei nº.13.303/2016 e Decreto nº8.945/2016, ou de quaisquer outras leis ou regulamentos aplicáveis.

14 - RESPONSABILIZAÇÃO ADMINISTRATIVA

14.1. Caso a **LICITANTE** pratique qualquer ato lesivo previsto no art. 5º da Lei nº 12.846/2013, estará sujeita às sanções administrativas previstas no art. 6º da referida lei, a seguir descritas, sem prejuízo da garantia a ampla defesa e ao contraditório:

a) multa, no valor de 0,1% (um décimo por cento) a 20% (vinte por cento) do faturamento bruto do último exercício anterior ao da instauração do processo administrativo, excluídos os tributos, a qual nunca será inferior à vantagem auferida, quando for possível sua estimação;
b) publicação extraordinária da decisão condenatória.

14.1.1. Na hipótese da alínea 'a' do item anterior, caso não seja possível utilizar o critério do valor do faturamento bruto da pessoa jurídica, a multa será de R$ 6.000,00 (seis mil reais) a R$ 60.000.000,00 (sessenta milhões de reais).

14.2. A **ELETROBRAS** deve levar em consideração na aplicação das sanções aqui previstas o estabelecido no artigo 7º e seus incisos da Lei n. 12.846/2013.

14.3. Caso os atos lesivos apurados envolvam infrações administrativas ao Regulamento de Licitações e Contratos das empresas Eletrobras ou às disposições referentes à Lei nº.13.303/2016, e tenha ocorrido a apuração conjunta, a **LICITANTE** também estará sujeita a sanções administrativas previstas na Lei nº.13.303/2016 e no Regulamento de Licitações e Contratos da Eletrobras que tenham como efeito restrição ao direito de participar em licitações ou de celebrar contratos com a administração pública, a serem aplicadas mediante Processo Administrativo de Responsabilização (PAR).

14.4. As sanções referenciadas no subitem 14.1 deste Edital serão aplicadas fundamentadamente, isolada ou cumulativamente, de acordo com as peculiaridades do caso concreto e com a gravidade e natureza das infrações.

14.5. A decisão administrativa proferida pela autoridade julgadora ao final do PAR será publicada no Diário Oficial da União e no site da **ELETROBRAS**.

14.6. A **LICITANTE** sancionada administrativamente pela prática de atos lesivos contra a **ELETROBRAS**, nos termos da Lei nº 12.846/2013, publicará a decisão administrativa sancionadora, cumulativamente:
a) em meio de comunicação de grande circulação na área da prática da infração e de atuação da licitante ou, na sua falta, em publicação de circulação nacional;
b) em edital afixado no próprio estabelecimento ou no local de exercício da atividade, em localidade que permita a visibilidade pelo público, pelo prazo mínimo de 30 (trinta) dias;
c) em seu site eletrônico, pelo prazo de trinta dias e em destaque na página principal do referido site.

14.7. A aplicação das sanções previstas neste item não exclui, em qualquer hipótese, a obrigação da reparação integral do dano causado.

14.8. A publicação a que se refere o item 14.6 será efetuada a expensas da pessoa jurídica sancionada.

14.9. O processamento do PAR não interfere no seguimento regular dos processos administrativos específicos para apuração da ocorrência de danos e prejuízos à **ELETROBRAS** resultantes de ato lesivo cometido pela **LICITANTE**, com ou sem a participação de agente público.

14.10. O PAR e a sanção administrativa obedecerão às regras e aos parâmetros dispostos em legislação específica, notadamente, na Lei nº 12.846/2013 e no Decreto nº 8.420/2015, inclusive suas eventuais alterações, sem prejuízo ainda da aplicação do ato de que trata o art. 21 do Decreto nº 8.420/2015.

14.11. Na esfera administrativa, a responsabilidade da pessoa jurídica não afasta a possibilidade de sua responsabilização na esfera judicial.

14.12. As disposições deste item se aplicam quando a **LICITANTE** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

14.13. Não obstante o disposto nesta Cláusula, a **CONTRATADA** está sujeita a quaisquer outras responsabilizações de natureza cível, administrativa ou criminal, previstas neste edital e na legislação aplicável, no caso de quaisquer violações.

15 - DOS ESCLARECIMENTOS E DA IMPUGNAÇÃO DO EDITAL

15.1. Cidadãos e agentes econômicos podem pedir esclarecimentos e impugnar o edital, exclusivamente pelo endereço eletrônico **PREGAO_ELETRONICO@ELETROBRAS.COM**, no prazo de **até 5 (cinco) dias úteis** antes da data fixada para a abertura da sessão pública, devendo o gestor da unidade de licitações responder à impugnação, motivadamente, em **até 3 (três) dias úteis**.

15.2. Somente terão validade esclarecimentos prestados por intermédio do pregoeiro, que os disponibilizará no sítio **www.gov.br/compras**, através da opção "consultar mensagens" e www.eletrobras.com

15.3. O licitante, através de consulta permanente ao sítio acima indicado, deverá manter-se atualizado quanto a quaisquer **alterações** e **esclarecimentos** sobre o Edital, não cabendo à **ELETROBRAS** a responsabilidade por desconhecimento de tais informações, em face de inobservância do licitante quanto ao procedimento apontado neste item.

15.4. Todos os pedidos/impugnações e suas respectivas respostas serão devidamente publicados no sítio eletrônico da **ELETROBRAS**.

15.5. Somente serão consideradas as impugnações encaminhadas até às 18h:00min do último dia para sua interposição.

15.5.1. O dia de abertura da licitação não é computado para a contagem dos prazos indicados em 15.1.

15.5.2. Os pedidos de esclarecimentos serão respondidos antes da sessão de abertura da licitação.

15.6. Não serão prestados esclarecimentos por telefone.

15.7. Acolhida a impugnação contra o Edital, será designada nova data para a realização do certame, exceto quando, inquestionavelmente, a alteração não afetar a formulação das propostas.

15.8. Aplica-se, no que couber, quanto aos pedidos de esclarecimento e impugnação, o disposto no artigo 39 do Regulamento de Licitações e Contratos da **ELETROBRAS**.

16 - DISPOSIÇÕES FINAIS

16.1. Os licitantes serão responsáveis pela fidelidade e legitimidade das informações e dos documentos apresentados, em qualquer época.

16.2. A **ELETROBRAS** poderá promover alterações nos termos deste Edital, havendo reabertura do prazo para a apresentação das propostas, quando tais alterações afetarem a formulação das propostas.

16.3. A **ELETROBRAS** poderá revogar a licitação por razões de interesse público decorrentes de fato superveniente que constitua óbice manifesto e incontornável, ou anulá-la por ilegalidade, de ofício ou por provocação de terceiros, salvo quando for viável a convalidação do ato ou do procedimento viciado, observado o disposto no art. 62 da lei 13.303/2016.

16.4. Os recursos destinados à contratação correrão por conta do orçamento da **ELETROBRAS**.

16.5. Fica eleito o foro da cidade do Rio de Janeiro, com exclusão de qualquer outro, para dirimir qualquer questão oriunda da presente licitação.

16.6. Fazem parte integrante deste Edital os seguintes Anexos:

ANEXO I - TERMO DE REFERÊNCIA

ANEXO II - MODELO PARA A PROPOSTA – Planilha de Preços

ANEXO III - MODELOS DE DECLARAÇÕES

ANEXO IV - MINUTA DE CONTRATO

A data de assinatura deste Edital é a data da última assinatura eletrônica/digital da autoridade competente da ELETROBRAS, conforme protocolo de assinaturas anexo a este Edital.

Renata da Cunha de Carvalho

1. Perfil da Eletrobras

As Centrais Elétricas Brasileiras S.A ("Eletrobras" ou "Companhia"), se constituiu com Lei n.º 3.890-A, de 11 de junho de 1962, sob a forma de sociedade por ações de capital misto. Tem como atribuição a promoção de estudos, projetos de construção e operação de usinas de geração, linhas de transmissão e distribuição de energia elétrica, bem como a celebração dos atos de comércio decorrentes dessas atividades, como a comercialização de energia elétrica.

A Eletrobras é também responsável pela administração de programas de governo voltados para o desenvolvimento do setor elétrico, como o Programa Nacional de Conservação de Energia Elétrica ("Procel"), o Programa Nacional de Universalização do Acesso e Uso da Energia Elétrica ("Luz para Todos") e o Programa de Incentivo às Fontes Alternativas de Energia Elétrica ("Proinfa").

Além disso, a Eletrobras exerce importante papel na integração energética da América Latina, sendo o Governo responsável pelos projetos binacionais como Itaipu e interligações fronteiriças com Argentina (Estação Conversora de Uruguaiana) e Paraguai (estação Conversora de Rivera) além de promover um papel de apoio em pesquisas de interesse do setor elétrico, realizado através do Centro de Pesquisas de Energia Elétrica ("Cepel").

A Eletrobras, em 31 de julho de 2020, aprovou o seu Plano Estratégico das Empresas Eletrobras 2020-2035. O novo Plano Estratégico 2020-2035, além de definir uma nova identidade empresarial (Propósito, Visão e Valores), estabeleceu um conjunto de diretrizes e objetivos voltados para o crescimento e modernização da Eletrobras e alinhados às novas tendências do setor de energia.

Em 31/12/2020, a Eletrobras atingiu a capacidade instalada de 50.648,2 MW em empreendimentos de Geração, o que representa 29% dos 174.412,68 MW instalados no Brasil. Do total da Eletrobras, 61,2% é composto de empreendimentos de propriedade integral do Sistema Eletrobras, 23,1% de empreendimentos realizados por meio de SPEs e 15,7% de empreendimentos em propriedade compartilhada, incluindo metade da capacidade de Itaipu Binacional (7.000 MW).

Aproximadamente 97% da capacidade instalada total da Eletrobras provêm de fontes com baixa emissão de gases de efeito estufa (GEE), contribuindo de forma decisiva para que a matriz elétrica brasileira seja uma das mais limpas e renováveis do mundo. Em 31/12/2020, do total de capacidade instalada alavancada em empreendimentos com baixa emissão de GEE no Brasil, 53% ou 70,2 GW pertenciam à Eletrobras.

Do total da capacidade instalada das Empresas Eletrobras, em 31/12/2020, cerca de 91% correspondiam à fonte por hidrelétricas, 4% por fonte nuclear, 3% por fontes térmicas, 1% por fontes eólicas e menos que 1% por fonte solar.

Em 31 de dezembro de 2020, a malha de Linhas de Transmissão (LTs) das Empresas Eletrobras atingiu um total de 76.128,54 km, sendo 9.127,41 km corporativas não renovadas; 57.303,17 km corporativas sob Regime de O&M, renovadas pela Lei 12.783/13; e 9.697,96 km correspondem à proporção de suas participações acionárias em empreendimentos realizados pela Companhia por meio de SPEs.

Considerando apenas as linhas com nível de tensão igual ou maior que 230 kV, ou seja, as tensões de ±800, 750, ±600, 525/500, 345 e 230 kV, a Eletrobras é responsável por 70.091,89 km, o que representa 43,54% do total de Linhas de Transmissão do Brasil nas referidas tensões. A partir do 4º trimestre de 2020, a extensão das linhas em corrente contínua da Eletrobras passou a ser

PE- 10/2021

contabilizada por polo e não mais por trecho, de forma a compatibilizar com a apuração efetuada pelo Ministério de Minas e Energia (MME).

Por essa nova metodologia, o total de linhas em quilômetros registrado em 2019 foi ajustado para 74.524,26 km, em 2020, sendo 8.318,35 km corporativas não renovadas; 55.819,83 km corporativas sob Regime de O&M, renovadas pela Lei no 12.783/13; e 10.386,08 km correspondentes à proporção de suas participações acionárias em empreendimentos realizados pelas Empresas Eletrobras por meio de SPEs.

No exterior, a empresa atua prioritariamente em projetos de integração regional e de geração de energia renovável no continente latino-americano.

Plano Diretor de Negócios e Gestão 2021 a 2025

Em dezembro de 2020, o Conselho de Administração da Eletrobras aprovou o novo Plano Diretor de Negócios e Gestão para o período de 2021 a 2025 ("PDNG 2021-2025"), o qual contempla metas e iniciativas para o alcance dos objetivos estratégicos, mantendo o alinhamento com a Identidade Empresarial da Eletrobras – Missão, Visão 2035 e Valores, atualizados com a aprovação do seu Plano Estratégico das Empresas Eletrobras 2020-2035, em 31 de julho de 2020, bem como apresenta algumas atualizações em relação ao PDNG 2020-2024.

O novo Plano Diretor de Negócios e Gestão para o período de 2021 a 2025 ("PDNG 2021-2025") deriva-se de um arcabouço de diretrizes, objetivos, iniciativas estratégicas e indicadores de atuação do Plano Estratégico 2020-2035 e é uma evolução do PDNG anterior (o PDNG 2020-2024), conforme descrito a seguir:

*Pesquisa a ser aplicada em 2021 com meta para 2022. ** Metas estratégicas por razão não serão divulgadas.

No PDNG 2021-2025 estão previstos investimentos que totalizam R$ 41,1 bilhões, dos quais R$ 38,3 bilhões representam investimentos corporativos e R$ 2,8 bilhões em SPE.
O cenário aprovado para esse quinquênio prevê majoritariamente investimentos em projetos existentes e/ou em contratação, com exceção apenas para negócios que foram considerados estratégicos para a Companhia.

Do total de investimento previsto, destaca-se o empreendimento corporativo da Usina Nuclear de Angra 3 que totaliza R$ 15,3 bilhões, representando 37% de todo o investimento no quinquênio.

2. Justificativa da Contratação

A boa Governança Corporativa é medida por quatro pilares: Responsabilidade Corporativa, Prestação de Contas, Equidade e Transparência. Os negócios da Empresa devem ser conduzidos com o objetivo de perenizar a organização, zelando pela viabilidade econômico-financeira da mesma, reduzindo externalidades negativas dos seus negócios e operações, aumentando as externalidades positivas, levando sempre em consideração no seu modelo de negócios, os diversos capitais (financeiro, humano, intelectual, etc.) da empresa no curto, médio e longo prazos.

Assim, em 23 de fevereiro de 2021, o governo federal entregou ao Congresso Nacional a Medida Provisória (MP) nº 1.031, que trata da capitalização da Eletrobras.

A edição da Medida Provisória visa permitir que o Banco Nacional de Desenvolvimento Econômico e Social (BNDES) comece os estudos que estruturarão a capitalização da Eletrobras. O texto traz modificações em relação ao projeto de lei apresentado em 2019.

Justamente em virtude das incertezas e indefinições que pairam sobre o processo de capitalização é que a companhia optou pelo auxílio de uma consultoria especializada, esperando somar esforços, conhecimento e experiência para uma melhor análise da proposta de capitalização da Companhia em busca de trazer insumos importantes para tomada de decisão do Conselho de Administração da Eletrobras.

3. Objeto

Serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias. Particularmente, no que tange à descotização, a proposta autoriza a comercialização dessa energia a preços de mercado, desde que haja a capitalização da Eletrobras.

Item	Produtos	Estimativa de horas para a atividade	Estimativa de quadro de profissionais
1	Modelo econômico-financeiro, em Excel, desbloqueado, sem abas ocultas e com todas as fórmulas disponíveis, para cálculo do valor da outorga, quantificando o impacto financeiro utilizando a metodologia de fluxo de caixa descontado. Os dados de entrada estão definidos conforme a MP 1.031/2021 e o fato relevante publicado pela Eletrobras de 23/02/2021. Considerando que estes dados estão sujeitos a mudanças, o modelo deverá permitir as variações adequadas. O modelo deverá prever, por usina, o fluxo de caixa descontado do cenário atual de regime de exploração por cota e do regime de produção independente.	600	1 Gerente do Projeto 1 analista pleno 1 analista de finanças sênior

energia, receita de cotas, taxa de desconto, prêmio de risco, tributos, análise de risco do negócio, etc.

b) A projeção de preços para comercialização de energia deverá ser fundamentada em pesquisa de mercado para o período de concessão em conjunto com utilização de metodologia comumente usada no mercado para projeção de preços de longo prazo.

Sobre o cálculo da nova Garantia Física das usinas hidrelétricas envolvidas no processo, a proponente deverá realizar, partindo da consideração, como referência, da metodologia estabelecida em legislação vigente, assim como do caso base (*decks* dos modelos computacionais envolvidos no cálculo) e/ou das premissas específicas que possivelmente serão considerados pela Empresa de Pesquisa Energética para o cálculo.

4. Requisitos Obrigatórios

A Proponente deverá apresentar comprovação de experiência e qualificação técnica compatível com o objeto da presente contratação.

5. Condições de Prestação de Serviço

Os trabalhos serão realizados remotamente. O preço deve contemplar gastos com tributos, impostos. Ressalta-se que nenhum ônus ou despesas gerais incorridas pela contratada durante a execução dos serviços de consultoria será reembolsado pela Eletrobras.

Será de responsabilidade da Contratada toda e qualquer despesa necessária à execução dos serviços ora citados, tais como passagens aéreas e terrestres, deslocamentos, táxis, hospedagem, alimentação, telefonemas, horas extras, dentre outros, bem como de todos os impostos incidentes na prestação dos serviços. A Eletrobras não reembolsará nenhuma despesa incorrida pela contratada.

Apresentar à ELETROBRAS a relação dos profissionais que serão colocados à disposição da ELETROBRAS para a prestação dos serviços.

Comunicar e submeter à aprovação da ELETROBRAS todas as substituições de profissionais, inclusive as provisórias.

O contratado deverá levar em consideração que os trabalhos a serem desenvolvidos, objeto do presente TR, deverão levar em conta a legislação e regulamentação vigentes não somente na data da contratação, mas também durante todo o período de vigência do contrato, incluindo, mas não se limitando a alterações que possam ocorrer ao longo do processo legislativo de tramitação do texto da MP 1.031/2021 até a sua conversão lei.

6. Prazo e Cronograma de Execução

A execução dos serviços contratados deverá ocorrer em até 10 (dez) semanas após a assinatura do contrato, conforme cronograma a seguir:

Profissionais de liderança

1. Pelo menos 1 profissional com mais de 10 anos de experiência, apresentando em seu currículo, nos últimos 5 anos, atividades relacionadas a projetos de valuation de empresas de energia no Brasil ou no exterior.

Profissionais da equipe de execução

2. Pelo menos 1 profissional com mais de 5 anos de experiência apresentando em seu currículo atividades relacionadas a projetos relacionados ao mercado de energia brasileiro, notadamente no que se refere a projeção de preços e comercialização de energia, cálculo de garantia física de usinas hidrelétricas, regulação do setor elétrico brasileiro relativa à geração de energia;

3. Pelo menos 1 profissional com mais de 3 anos de experiência apresentando em seu currículo atividades relacionadas a projetos relacionados a finanças corporativas no Brasil.

Critérios de comprovação

- Experiência profissional: apresentação de carteira de trabalho, CV atestado pelo proponente, contrato social, contrato de prestação de serviço, referências de contatos de clientes, e atestados ou certidões contendo os seguintes dados: local de execução, nome do contratante e da pessoa jurídica contratada, nome(s) do(s) responsável(is) técnico(s), seu(s) título(s) profissional(is) e número(s) de registro(s), se a profissão exigir; descrição técnica indicando os serviços e quantitativos executados, assim como o período. Tais documentos poderão ser apresentados alternativamente.

A Contratada deverá apresentar a documentação dos profissionais em até 10 (dez) dias corridos após a assinatura do contrato.

11. Termo de confidencialidade

Considerando a natureza das atividades, a contratada se compromete que no momento da contratação, a CONTRATADA, bem como sua equipe técnica, sócios, diretores e outras pessoas envolvidas na execução dos serviços que constituem o objeto do contrato, assinarão Termo de Confidencialidade e não divulgação das informações a que, eventualmente, possam ter acesso no curso da execução dos serviços.

12. Obrigações específicas da Contratada

12.1. Apresentar à **ELETROBRAS** equipe composta por profissionais devidamente qualificados, experientes e com expertise necessária para a realização dos serviços, conforme exigido pelo Termo de Referência.

12.2. Comprovar a qualificação dos profissionais alocados nos serviços por meio da apresentação de documentações e currículos que comprovem a experiência exigida no item 10 do Termo de Referência, até 10 dias após assinatura do contrato.

12.3. No caso de necessidade de substituição de profissional, deverá realizá-la em tempo hábil de forma a submetê-la à **ELETROBRAS**, de forma a não comprometer o andamento e o resultado dos trabalhos.

12.4. Transferir para o domínio da **ELETROBRAS** todas as informações e documentações produzidas por ocasião do término da vigência deste Contrato.

12.5. A **CONTRATADA** não poderá atuar em conflito de interesses com a **ELETROBRAS**.

12.6. Apresentar por escrito, esclarecimentos sobre seus relatórios, quando solicitados pela **ELETROBRAS**.

12.7. É vedado à **CONTRATADA** subscrever ações no aumento de capital por subscrição pública previsto na Medida Provisória 1.031/2021.

MODELO PARA A PROPOSTA - PLANILHA DE PREÇOS

(SUBITEM 4.1)

(A proposta deve ser assinada e rubricada em todas as suas folhas pelo representante legal da empresa ou por seu procurador. O modelo de proposta deste anexo tem por objetivo facilitar o trabalho das empresas interessadas, admitindo-se adaptações e acréscimos desde que não seja ocultada ou retirada qualquer informação contida no modelo.)

Produtos (conforme Termo de Referência, Anexo I do Edital)		**Preço por Produto (R$)**	**(%) Preço global**
1	Modelo econômico-financeiro, em Excel, desbloqueado, sem abas ocultas e com todas as fórmulas disponíveis, para cálculo do valor da outorga, quantificando o impacto financeiro utilizando a metodologia de fluxo de caixa descontado. Os dados de entrada estão definidos conforme a MP 1.031/2021 e o fato relevante publicado pela Eletrobras de 23/02/2021. Considerando que estes dados estão sujeitos a mudanças, o modelo deverá permitir as variações adequadas. O modelo deverá prever, por usina, o fluxo de caixa descontado do cenário atual de regime de exploração por cota e do regime de produção independente.		49%
2	Tutorial de utilização e atualização do modelo econômico-financeiro para cálculo do valor da outorga do item 1.		3%
3	Relatório completo com o detalhamento das premissas e metodologias utilizadas (as quais devem levar em conta os termos da legislação e regulamentação vigentes aplicáveis ao caso) para a elaboração do modelo econômico-financeiro. Nos idiomas português e inglês.		5%

CONTRATO QUE ENTRE SI CELEBRAM CENTRAIS ELÉTRICAS BRASILEIRAS S.A. – ELETROBRAS E....., PARA A PRESTAÇÃO DE SERVIÇOS ESPECIALIZADOS NO SUPORTE À DECISÃO DA ALTA ADMINISTRAÇÃO QUE VISE DEFINIR O VALOR DA OUTORGA NO POSSÍVEL PROCESSO DE PRIVATIZAÇÃO DA COMPANHIA

A **CENTRAIS ELÉTRICAS BRASILEIRAS S.A.** - **ELETROBRAS**, doravante denominada **ELETROBRAS**, sociedade de economia mista, constituída na forma da Lei nº 3.890-A, de 25 de abril de 1961, com sede na cidade de Brasília, Distrito Federal, e escritório central na Rua da Quitanda, nº 196- 24º andar, Rio de Janeiro, Estado do Rio de Janeiro, inscrita no Cadastro Nacional de Pessoas Jurídicas sob o nº 00001180/0002-07, Inscrição Municipal nº 92.405-7, Inscrição Estadual nº 77.410.805, devidamente autorizada pelo Memorando nº ..., de .../.../2021, neste ato representada por seus Diretores, abaixo assinados, em conformidade com o item 1.2 da Resolução 506/2020, de 17/08/2020 e com o artigo 49, inciso VII, do seu Estatuto Social, e

a**.....**, doravante simplesmente designada **CONTRATADA**, empresa com sede na ....., na cidade ....., Estado ....., inscrita no Cadastro Nacional da Pessoa Jurídica do Ministério da Fazenda sob o nº ....., neste ato representada por seu representante legal, nome....., nacionalidade....., estado civil....., profissão....., identidade..... e CPF....., abaixo assinado, de conformidade com os poderes que lhe são conferidos e que constam do seu Contrato Social/Estatuto Social, em consonância com o Edital de Pregão Eletrônico DSS Nº 10/2021, cujo Aviso foi publicado no Diário Oficial da União do dia 25 de maio de 2021, têm entre si, justo e contratado, o que se contém nas cláusulas e condições que se seguem:

CLÁUSULA PRIMEIRA

OBJETO

Constitui objeto deste Contrato a prestação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, conforme disposto no Edital de Licitação e seus Anexos.

CLÁUSULA SEGUNDA

VALOR DO CONTRATO

2.1. Como contrapartida à execução do objeto do presente Contrato, a **ELETROBRAS** deve pagar à **CONTRATADA** o valor total de _____, de acordo com as parcelas definidas no item 3 e no cronograma definido no item 6 do Termo de Referência, anexo I do edital, sendo que

CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

o recurso financeiro destinado ao pagamento está definido no orçamento da **ELETROBRAS**, na Requisição de Compra nº 3000234919.

CLÁUSULA TERCEIRA

PRAZOS

3.1. O prazo de execução do objeto desta contratação é de até 10 (dez) semanas, contados a partir da data da última assinatura do instrumento contratual pela autoridade competente da ELETROBRAS, respeitados os prazos das parcelas definidas no item 3 e no cronograma definido no item 6 do Termo de Referência, anexo I do edital, e o prazo de vigência é de 5 (cinco) meses, também contados a partir da data da última assinatura do instrumento contratual pela autoridade competente da ELETROBRAS.

3.2. Caso o presente contrato seja assinado antes da conversão da MP 1.031/2021 em lei, os prazos de execução do objeto e de vigência serão contados somente a partir da data de conversão da referida medida provisória em lei, conforme o disposto na cláusula vinte - **CONDIÇÃO SUSPENSIVA DO CONTRATO.**

CLÁUSULA QUARTA

DA FUNDAMENTAÇÃO LEGAL E PEÇAS CONSTITUTIVAS DO CONTRATO

4.1. O presente **CONTRATO** será regido por suas cláusulas, que devem ser fundamentadas nas disposições da lei nº 13.303/2016, no Regulamento de Licitações e Contratos da **ELETROBRAS** e na legislação civil.

4.2. A contradição involuntária entre, por um lado, o instrumento de contrato ou documento equivalente, e, de outro, as condições licitadas, configuradas pelo edital e seus documentos anexos, ou ao termo de dispensa ou contratação direta, e as propostas apresentadas pela contratada, resolvem-se em prol das condições licitadas, preservado o princípio da boa-fé objetiva.

CLÁUSULA QUINTA

EXECUÇÃO DO CONTRATO

5.1. O Contrato deve ser executado fielmente pelas partes de acordo com as cláusulas e condições avençadas, as normas ditadas pela Lei n. 13.303/2016 e pelo Regulamento de Licitações e Contratos da **ELETROBRAS**, neste instrumento denominado "Regulamento", respondendo cada uma das partes pelas consequências de sua inexecução total ou parcial.

5.1.1. A **CONTRATADA** é responsável pelos danos causados direta ou indiretamente à **ELETROBRAS** ou a terceiros em razão da execução do Contrato, não excluindo ou reduzindo essa responsabilidade a fiscalização ou o acompanhamento pela **ELETROBRAS**.

5.1.2. A fiscalização da execução do presente Contrato deve ser realizada por fiscal técnico e fiscal administrativo, formalmente designados pelo gestor da Unidade Técnica e pela autoridade competente da **ELETROBRAS**, respectivamente, e consiste na verificação do cumprimento das

PE- 10/2021

obrigações contratuais por parte da **CONTRATADA**, com a alocação dos recursos, pessoal qualificado, técnicas e materiais necessários.

5.1.3. Os serviços da **CONTRATADA** estarão, permanentemente, sujeitos à fiscalização geral da **ELETROBRAS**, que a exercerá por meio de representantes credenciados, cujo pleno exercício de suas funções a **CONTRATADA** facilitará.

5.1.4. O gestor do Contrato pode suspender a sua execução em casos excepcionais e motivados tecnicamente pelo fiscal técnico do Contrato, devendo comunicá-la ao preposto da **CONTRATADA**, indicando:

a) o prazo da suspensão, que pode ser prorrogado, se as razões que a motivaram não estão sujeitas ao controle ou à vontade do gestor do Contrato;

b) se deve ou não haver desmobilização, total ou parcial, e quais as atividades devem ser mantidas pela **CONTRATADA**;

c) o montante que deve ser pago à **CONTRATADA** a título de indenização em relação a eventuais danos já identificados e o procedimento e metodologia para apurar valor de indenização de novos danos que podem ser gerados à **CONTRATADA**.

5.1.5. Constatada qualquer irregularidade na licitação ou na execução contratual, o gestor do Contrato deve, se possível, saneá-la, evitando-se a suspensão da execução do Contrato ou outra medida como decretação de nulidade ou rescisão contratual.

5.1.6. As partes contratantes não são responsáveis pela não execução, execução tardia ou parcial de suas obrigações, desde que essa falta resulte, comprovadamente, de fato necessário, cujo efeito não era possível evitar ou impedir. Essa exoneração de responsabilidade deve produzir efeitos nos termos do parágrafo único do artigo 393 do Código Civil Brasileiro.

5.1.7. No caso de uma das partes se achar impossibilitada de cumprir alguma de suas obrigações, por motivo de caso fortuito ou força maior, deve informar expressa e formalmente esse fato à outra parte, no máximo até 10 (dez) dias consecutivos contados da data em que ela tenha tomado conhecimento do evento.

5.1.8. A comunicação de que trata o item 5.1.7 deve conter a caracterização do evento e as justificativas do impedimento que alegar, fornecendo à outra parte, com a maior brevidade, todos os elementos comprobatórios e de informação, atestados periciais e certificados, bem como comunicando todos os elementos novos sobre a evolução dos fatos ou eventos verificados e invocados, particularmente sobre as medidas tomadas ou preconizadas para reduzir as consequências desses fatos ou eventos, e sobre as possibilidades de retomar, no todo ou em parte, o cumprimento de suas obrigações contratuais.

5.1.8.1. O prazo para execução das obrigações das partes, nos termos desta Cláusula, deve ser acrescido de tantos dias quanto durarem as consequências impeditivas da execução das respectivas obrigações da parte afetada pelo evento.

5.1.9. Na hipótese prevista no item 5.1.7 desta Cláusula, a **CONTRATADA** deve submeter à **ELETROBRAS**, por escrito, todas as medidas que lhe parecerem oportunas, com vistas a reduzir ou eliminar as dificuldades encontradas, bem como os custos envolvidos. A **ELETROBRAS** compromete-se a manifestar-se, por escrito, no prazo máximo de 10 (dez) dias consecutivos, quanto à sua aprovação, recusa ou às disposições por ela aceitas, com seus custos correlatos.

PE- 10/2021

5.1.10. A não utilização pelas partes de quaisquer dos direitos assegurados neste Contrato, ou na Lei em geral, ou no Regulamento, ou a não aplicação de quaisquer sanções, não invalida o restante do Contrato, não devendo, portanto, ser interpretada como renúncia ou desistência de aplicação ou de ações futuras.

5.1.11. Qualquer comunicação pertinente ao Contrato, a ser realizada entre as partes contratantes, inclusive para manifestar-se, oferecer defesa ou receber ciência de decisão sancionatória ou sobre rescisão contratual, deve ocorrer por escrito, preferencialmente nos seguintes e-mails:

E-mail ELETROBRAS - _____

E-mail CONTRATADA -_____

5.1.12. As partes estão obrigadas a comunicarem uma a outra, com 5 (cinco) dias de antecedência, qualquer alteração nos respectivos e-mails. No caso de falha ou problema técnico, as partes devem comunicar, uma a outra, em até 5 (cinco) dias.

CLÁUSULA SEXTA

RECEBIMENTO DO OBJETO

6.1. A **ELETROBRAS**, por meio do agente de fiscalização técnica, deve receber o objeto do presente Contrato, parcialmente, em até 10 (dez) dias corridos, a contar da comunicação da **CONTRATADA** para a **ELETROBRAS**, relativo à entrega de cada produto, conforme definido no item 3 e no cronograma de execução indicado no item 6 do Termo de Referência, anexo I do edital, representando aceitação da execução da etapa.

6.2. Caso verifique o descumprimento de obrigações por parte da **CONTRATADA**, o agente de fiscalização técnica ou administrativa deve comunicar ao preposto deste, indicando, expressamente, o que deve ser corrigido e o prazo máximo para a correção. O tempo para a correção deve ser computado no prazo de execução de etapa, parcela ou do Contrato, para efeito de configuração da mora e suas cominações.

6.3. Realizada a correção pela **CONTRATADA**, abrem-se novamente os prazos para os recebimentos estabelecidos no item 6.1 desta Cláusula.

6.4. O agente de fiscalização técnica encaminhará o Termo de Aceite Técnico, referente ao item 6.1, devidamente assinado, para o agente de fiscalização administrativa, que ficará responsável pela conferência dos valores contratados, encaminhamento do Termo à **CONTRATADA** e respectiva autorização para faturamento.

6.5. O recebimento definitivo, relativo à integralidade do **CONTRATO**, representa a aceitação integral do **CONTRATO** e a liberação da **CONTRATADA** no tocante a vícios aparentes.

6.6. O recebimento definitivo, de responsabilidade do agente de fiscalização técnica, será realizado no prazo de até 15 (quinze) dias úteis, contados da entrega do Produto Final.

CONDIÇÕES DE FATURAMENTO E PAGAMENTO

7.1. O pagamento é condicionado ao recebimento parcial, conforme Cláusula Sexta, e deve ser efetuado mediante a apresentação de Nota Fiscal/Fatura pela **CONTRATADA** à unidade de gestão de contrato da **ELETROBRAS**, que deve conter o detalhamento do objeto executado, o número deste Contrato, a instituição e agência bancária, e a conta corrente na qual deve ser depositado o respectivo pagamento.

7.1.1. Os pagamentos se darão conforme entrega e recebimento dos produtos estipulados nos itens 3 e 6 do Termo de Referência, anexo I do edital e quantificados na Planilha de Preços, anexo II do edital, observado o disposto na Cláusula Sexta deste Contrato.

7.2. As Notas Fiscais/Faturas correspondentes aos serviços efetivamente prestados deverão ser emitidas em conformidade com a legislação do município onde a **CONTRATADA** esteja estabelecida, observado o disposto no item 7.4.

7.2.1. Nos casos em que a **CONTRATADA** se enquadre nas hipóteses de obrigatoriedade de emissão de Nota Fiscal de Serviços Eletrônica (NFS-e), as notas fiscais, correspondentes aos serviços efetivamente prestados, deverão ser enviadas, obrigatoriamente em PDF, até o 2° (segundo) dia útil após a autorização da **ELETROBRAS** para faturamento, para o seguinte endereço: **faturamento-dssg@eletrobras.com**, com cópia para o agente de fiscalização administrativa.

7.2.2. Nos casos em que a **CONTRATADA,** com a devida comprovação, não se enquadrar nas hipóteses de obrigatoriedade de emissão de Nota Fiscal de Serviços Eletrônica (NFS-e), deverá apresentar, em duas vias, as notas fiscais/faturas, correspondentes aos serviços efetivamente prestados, sem conter rasuras de qualquer natureza, até o 2° (segundo) dia útil após a autorização da **ELETROBRAS** para faturamento.

7.2.3. A **CONTRATADA** deverá enviar as notas fiscais/faturas, nos casos especificados no item 7.2.2, para o endereço abaixo:

Centrais Elétricas Brasileiras – ELETROBRAS
Departamento de Gestão de Contratos Corporativos - DSSG
Rua da Quitanda, 196, 5º andar (Ed. Mario Bhering)
Centro – Rio de Janeiro – RJ
CEP: 20.091-005

7.2.4. O CNPJ das notas fiscais deve ser aquele que consta no preâmbulo do contrato e deve se referir ao estabelecimento que participou da licitação.

7.3. Caso a **CONTRATADA** emita documento fiscal autorizado por outro município que não o do Rio de Janeiro, a **ELETROBRAS**, nos termos do Decreto Municipal do Rio de Janeiro nº 28248, de 30 de julho de 2007, regulado pela Resolução SMF nº 2515, de 30 de julho de 2007, antes de efetuar o pagamento mensal, verificará a situação cadastral da **CONTRATADA** junto ao Cadastro de empresas Prestadoras de Outros Municípios – CEPOM da Secretaria Municipal de Fazenda da Prefeitura do Rio de Janeiro, através do sítio http://dief.rio.rj.gov.br/cepom.

7.4. De acordo com a instrução fornecida pela Secretaria Municipal de Fazenda da Prefeitura do Rio de Janeiro, com base no resultado da consulta supracitada, ressalvadas as exceções constantes no artigo 3º da Lei Complementar Federal nº. 116, de 31 de julho de 2003, a **ELETROBRAS** deverá fazer ou não a retenção na fonte da quantia equivalente ao ISS dos serviços faturados bem como providenciar, nos termos da legislação vigente, o devido recolhimento.

7.5. Para o efetivo pagamento à **CONTRATADA** deve haver manifestação da **ELETROBRAS**, através do agente de fiscalização administrativa, conforme descrito no item 6.4., informando o aceite dos serviços e a respectiva autorização para faturamento. As Notas Fiscais/Faturas emitidas e apresentadas pela **CONTRATADA** à revelia do agente de fiscalização administrativa serão devolvidas pela **ELETROBRAS**.

7.6. O prazo para pagamento dos serviços é de, no máximo, 15 (quinze) dias, a contar do ateste da Nota Fiscal/Fatura pela unidade de gestão de **CONTRATO** da **ELETROBRAS**.

7.6.1 A partir do recebimento da Nota Fiscal/Fatura emitida pela **CONTRATADA**, a unidade de gestão de **CONTRATO** da **ELETROBRAS** disporá de 03 (três) dias úteis para efetuar a análise e o respectivo ateste ou, no mesmo prazo, devolvê-la motivadamente à **CONTRATADA**, observado o disposto nos item 7.5 e 7.7.

7.7. As faturas que apresentarem erros ou cuja documentação suporte esteja em desacordo com o contratualmente exigido devem ser devolvidas à **CONTRATADA** pela unidade de gestão de **CONTRATO** da **ELETROBRAS** para a correção ou substituição. A **ELETROBRAS**, por meio da unidade de gestão de **CONTRATO**, deve efetuar a devida comunicação à **CONTRATADA** dentro do prazo fixado no item 7.6.1.

7.7.1. Depois de apresentada a Nota Fiscal/Fatura, com as devidas correções, o prazo previsto no item 7.6 deve começar a correr novamente do seu início, sem que nenhuma atualização ou encargo possa ser imputado à **ELETROBRAS**.

7.8. A **ELETROBRAS** pode reter ou glosar os pagamentos, sem prejuízo das sanções cabíveis, se a **CONTRATADA**:

a) não produzir os resultados, deixar de executar, ou não executar com a qualidade mínima exigida as atividades contratadas; ou

b) deixar de utilizar materiais e recursos humanos exigidos para a execução do serviço, ou utilizá-los com qualidade ou quantidade inferior à demandada; ou

c) não arcar com as obrigações trabalhistas e previdenciárias dos seus empregados, quando dedicados exclusivamente à execução do Contrato.

7.9. Havendo controvérsia sobre a execução do objeto, quanto à dimensão, à qualidade e à quantidade, o montante correspondente à parcela incontroversa deverá ser pago no prazo previsto no item 7.6 e o relativo à parcela controvertida deve ser retido.

7.10. É vedado o pagamento antecipado.

7.11. É permitido à **ELETROBRAS** descontar dos créditos da **CONTRATADA** qualquer valor relativo à multa, ressarcimentos e indenizações, sempre observado o contraditório e a ampla defesa.

7.12. Quando da ocorrência de eventuais atrasos de pagamento provocados exclusivamente pela **ELETROBRAS**, o valor devido deve ser acrescido de atualização financeira, desde a data do vencimento até a data do efetivo pagamento, com base na variação acumulada *pro rata die* da Taxa Referencial - TR.

CLÁUSULA OITAVA

ALTERAÇÕES INCIDENTES SOBRE O OBJETO DO CONTRATO

8.1. A alteração incidente sobre o objeto do Contrato deve ser consensual e pode ser quantitativa, quando importa acréscimo ou diminuição quantitativa do objeto do Contrato, ou qualitativa, quando a alteração diz respeito a características e especificações técnicas do objeto do Contrato.

8.1.1. A alteração quantitativa sujeita-se aos limites previstos nos § 1º e 2º do artigo 81 da Lei nº 13.303/2016, devendo observar o seguinte:

a) a aplicação dos limites deve ser realizada separadamente para os acréscimos e para as supressões, sem que haja compensação entre os mesmos;

b) deve ser mantida a diferença, em percentual, entre o valor global do Contrato e o valor orçado pela **ELETROBRAS**, salvo se o fiscal técnico do Contrato apontar justificativa técnica ou econômica, que deve ser ratificada pelo gestor do Contrato;

8.1.2. A alteração qualitativa não se sujeita aos limites previstos nos §§ 1º e 2º do artigo 81 da Lei nº 13.303/2016, devendo observar o seguinte:

a) os encargos decorrentes da continuidade do Contrato devem ser inferiores aos da rescisão contratual e aos da realização de um novo procedimento licitatório;

b) as consequências da rescisão contratual, seguida de nova licitação e contratação, devem importar prejuízo relevante ao interesse coletivo a ser atendido pela obra ou pelo serviço;

c) as mudanças devem ser necessárias ao alcance do objetivo original do Contrato, à otimização do cronograma de execução e à antecipação dos benefícios sociais e econômicos decorrentes;

d) a capacidade técnica e econômico-financeira da **CONTRATADA** deve ser compatível com a qualidade e a dimensão do objeto contratual aditado;

e) a motivação da mudança contratual deve ter decorrido de fatores supervenientes não previstos e que não configurem burla ao processo licitatório;

f) a alteração não deve ocasionar a transfiguração do objeto originalmente contratado em outro de natureza ou propósito diverso.

8.1.3. As alterações incidentes sobre o objeto, observadas as disposições do art. 94 do Regulamento de Licitações e Contratos da **ELETROBRAS**, serão realizadas mediante termo aditivo e devem ser:

a) instruídas com memória de cálculo e justificativas de competência do fiscal técnico e do fiscal administrativo da **ELETROBRAS**, que devem avaliar os seus pressupostos e condições e, quando

for o caso, calcular os limites;

b) as justificativas devem ser ratificadas pela autoridade da unidade de gestão de contratos da **ELETROBRAS**; e

c) submetidas à área jurídica e, quando for o caso, à área financeira da **ELETROBRAS**;

CLÁUSULA NONA

EQUILÍBRIO ECONÔMICO FINANCEIRO DO CONTRATO

9.1. O equilíbrio econômico-financeiro do Contrato deve ocorrer por meio de:

a) reajuste: instrumento para manter o equilíbrio econômico-financeiro do contrato diante de variação de preços e custos que sejam normais e previsíveis, relacionadas com o fluxo normal da economia e com o processo inflacionário, devido ao completar 1 (um) ano a contar da data da proposta, ou

b) revisão: instrumento para manter o equilíbrio econômico-financeiro do Contrato diante de variação de preços e custos decorrentes de fatos imprevisíveis ou previsíveis, porém com consequências incalculáveis, e desde que se configure álea econômica extraordinária e extracontratual, sem a necessidade de periodicidade mínima.

9.1.1. A revisão deve ser precedida de solicitação da **CONTRATADA**, acompanhada de comprovação:

a) dos fatos imprevisíveis ou previsíveis, porém com consequências incalculáveis;

b) da alteração de preços ou custos, por meio de notas fiscais, faturas, tabela de preços, orçamentos, notícias divulgadas pela imprensa e por publicações especializadas e outros documentos pertinentes, preferencialmente com referência à época da elaboração da proposta e do pedido de revisão; e

c) de demonstração analítica, por meio de planilha de custos e formação de preços, sobre os impactos da alteração de preços ou custos no total do Contrato.

9.1.2. A revisão que não for solicitada durante a vigência do Contrato considera-se preclusa com a prorrogação ou renovação contratual ou com o encerramento do Contrato.

9.1.3. A criação, a alteração ou a extinção de quaisquer tributos ou encargos legais, bem como a superveniência de disposições legais, quando ocorridas após a data da apresentação da proposta, com comprovada repercussão nos preços contratados, implicarão a revisão destes para mais ou para menos, conforme o caso.

9.1.4. O reajuste dos preços será efetuado pela variação do Índice de Preços ao Consumidor Amplo – IPCA, do Instituto Brasileiro de Geografia e Estatística – IBGE, na periodicidade anual. O número índice base será o do mês da data limite para a apresentação da proposta e a variação se dará

PE- 10/2021

pelo quociente obtido através da divisão do número índice do mês do primeiro aniversário da proposta pelo número índice do mês base.

9.1.4.1. A **CONTRATADA,** para obter direito à correção, deverá pleiteá-la por meio de correspondência à **ELETROBRAS**, preferencialmente explicitando a forma de aplicação do índice e o valor reajustado.

9.1.4.2. Após a análise do pleito pela **ELETROBRAS**, sendo devida a correção, a mesma será formalizada por meio de Apostila, a qual será o documento autorizativo para o pagamento.

CLÁUSULA DEZ

FORMALIZAÇÃO DAS ALTERAÇÕES CONTRATUAIS

10.1. As alterações contratuais incidentes sobre o objeto e as decorrentes de revisão contratual devem ser formalizadas por termo aditivo firmado pela mesma autoridade que firmou o Contrato, salvo regra de alçada da Eletrobras, devendo o extrato do termo aditivo ser publicado no sítio eletrônico da **ELETROBRAS**.

10.1.1. A decisão sobre o pedido de aditivo contratual deve ser feita no prazo máximo de 60 (sessenta) dias, contados a partir da solicitação. O prazo é suspenso quando se realizar diligência para requerer comprovações ou informações complementares.

10.1.2. Não caracterizam alteração do Contrato e podem ser registrados por simples apostila, dispensando a celebração de termo aditivo:

a) as atualizações, as compensações ou as penalizações financeiras decorrentes das condições de pagamento previstas no Contrato;

b) a correção de erro material havido no instrumento de Contrato;

c) as alterações na razão ou na denominação social da **CONTRATADA**;

d) as alterações na legislação tributária que produzam efeitos nos valores contratados, na hipótese do item 9.1.3 do presente Contrato;

e) renovações contratuais, sejam por extensão do prazo de execução ou prorrogação do prazo de vigência.; e

f) a variação do valor contratual para fazer face ao reajuste de preços e repactuação previstos no próprio contrato.

10.1.3. Os aditivos contratuais ou apostilamentos devem ser firmados dentro da vigência do respectivo contrato. Se o encerramento da vigência do contrato ocorrer em dia não útil ou sem expediente, os aditivos ou apostilamentos podem ser firmados no dia útil subsequente.

CLÁUSULA ONZE

RESCISÃO

11.1. O inadimplemento contratual de ambas as PARTES autoriza a rescisão, que deve ser formalizada por distrato. Aplica-se a teoria do adimplemento substancial, devendo as partes contratantes ponderar, no que couber, antes de decisão pela rescisão:

a) impactos econômicos e financeiros decorrentes do atraso na fruição dos benefícios do empreendimento;

b) riscos sociais, ambientais e à segurança da população local decorrentes do atraso na fruição dos benefícios do empreendimento;

c) motivação social e ambiental do empreendimento;

d) custo da deterioração ou da perda das parcelas executadas;

e) despesa necessária à preservação das instalações e dos serviços já executados;

f) despesa inerente à desmobilização e ao posterior retorno às atividades;

g) possibilidade de saneamento dos descumprimentos contratuais comprovados;

h) custo total e estágio de execução física e financeira do CONTRATO;

i) empregos diretos e indiretos perdidos em razão da paralisação do CONTRATO;
j) custo para realização de nova licitação ou celebração de novo CONTRATO;

k) custo de oportunidade do capital durante o período de paralisação.

11.2. O descumprimento das obrigações trabalhistas ou a não manutenção das condições de habilitação pela **CONTRATADA** pode dar ensejo à rescisão contratual, sem prejuízo das demais sanções.

11.3. Na hipótese do item 11.2 desta Cláusula, a **ELETROBRAS** pode conceder prazo para que a **CONTRATADA** regularize suas obrigações trabalhistas ou suas condições de habilitação, sob pena de rescisão contratual, quando não identificar má-fé ou a incapacidade da **CONTRATADA** de corrigir a situação.

11.4. O CONTRATO pode ser rescindido pela **ELETROBRAS** caso seja constatada violação das Leis Anticorrupção ou do Programa de Integridade (*Compliance*) das Empresas Eletrobras, por parte da **CONTRATADA**, condicionada à prévia manifestação fundamentada da Diretoria de Compliance ou equivalente.

11.5. A rescisão contratual, quando promovida pela **ELETROBRAS**, deve seguir o processo administrativo preceituado no artigo 97 do Regulamento.

CLÁUSULA DOZE

SANÇÕES ADMINISTRATIVAS

12.1. Pela inexecução total ou parcial do Contrato, a **ELETROBRAS** poderá, garantida a prévia defesa, de acordo com o processo administrativo preceituado no artigo 97 do Regulamento, aplicar ao contratado as sanções de advertência ou suspensão temporária de participação em licitação e impedimento de contratar com a **ELETROBRAS** por prazo não superior a 2 (dois) anos, que podem ser cumuladas com multa.

12.1.1. Na forma prevista no art, 96 do Regulamento, poderão ser aplicadas sanções administrativas à **CONTRATADA** na ocorrência de qualquer das hipóteses abaixo:

a) dar causa à inexecução parcial ou total do contrato;

b) deixar de entregar a documentação exigida para o certame, salvo na hipótese de inversão de fases prevista;

c) não manter a proposta, salvo se em decorrência de fato superveniente, devidamente justificado;

d) não celebrar o contrato ou não entregar a documentação exigida para a contratação, quando convocado dentro do prazo de validade de sua proposta.

e) ensejar o retardamento da execução ou da entrega do objeto da licitação sem motivo justificado.

f) apresentar documentação falsa exigida para o certame ou prestar declaração falsa durante a licitação ou a execução do contrato;
g) fraudar a licitação ou praticar ato fraudulento na execução do contrato;

h) comportar-se com má-fé ou cometer fraude fiscal;

i) praticar atos ilícitos visando a frustrar os objetivos da licitação.

12.1.1.1. A sanção de suspensão, referida no inciso III do artigo 83 da Lei nº 13.303/2016, deve observar os seguintes parâmetros:

a) se não se caracterizar má-fé, a pena base deve ser de 6 (seis) meses;

b) caracterizada a má-fé ou intenção desonesta, a pena base deve ser de 1 (um) ano e, no mínimo, de 6 (seis) meses, mesmo que aplicadas todas as atenuantes do Item 12.1.2 desta Cláusula.

12.1.1.2. As penas bases definidas no item 12.1.1.1 desta Cláusula podem ser qualificadas nos seguintes casos:

a) em 1/2 (um meio), se a **CONTRATADA** for reincidente;

b) em 1/2 (um meio), se a falta da **CONTRATADA** tiver produzido prejuízos relevantes para a ELETROBRAS.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

12.1.2. As penas bases definidas no item 12.1.1.1 desta Cláusula podem ser atenuadas nos seguintes casos:

a) em 1/4 (um quarto), se a **CONTRATADA** não for reincidente;

b) em 1/4 (um quarto), se a falta da **CONTRATADA** não tiver produzido prejuízos relevantes para a **ELETROBRAS**;

c) em 1/4 (um quarto), se a **CONTRATADA** tiver reconhecido a falta e se dispuser a tomar medidas para corrigi-la; e

d) em 1/4 (um quarto), se a **CONTRATADA** comprovar a existência e a eficácia de procedimentos internos de integridade, de acordo com os requisitos do artigo 42 do Decreto n. 8.420/2015.

12.1.2.1. Na hipótese do item 12.1.2 desta Cláusula, se não caracterizada má-fé ou intenção desonesta e se a **CONTRATADA** contemplar os requisitos para as atenuantes previstos nas alíneas "a", "b", "c" e "d" do item 12.1.2, a pena de suspensão deve ser substituída pela de advertência, prevista no inciso I do artigo 83 da Lei n. 13.303/2016.

12.1.3. A **CONTRATADA** estará sujeita à multa:

a) de mora, por atrasos não justificados no prazo de execução de 0,5% (cinco décimos por cento) do valor da parcela do objeto contratual em atraso, por dia de atraso, limitada a 10% (dez por cento) do valor do Contrato.

b) compensatória, pelo descumprimento parcial do **CONTRATO**, referente ao não atendimento de cláusula contratual (inadimplemento parcial), no montante de até 10% (dez por cento) do valor do **CONTRATO**.

c) compensatória, pelo descumprimento total do Contrato, no montante de 25% (vinte e cinco por cento) do valor do Contrato.

12.1.4. Se a multa moratória alcançar o seu limite e a mora não se cessar, o Contrato pode ser rescindido, salvo decisão em contrário, devidamente motivada, do gestor do Contrato, fundamentada no item 11.1 do presente Contrato.

12.1.5. Se a multa for aplicada em decorrência de inadimplemento parcial, o percentual deve ser apurado em razão do valor da obrigação inadimplida.

12.1.6. Caso a multa não cubra os prejuízos causados pela **CONTRATADA**, a **ELETROBRAS** pode exigir indenização suplementar, valendo a multa como mínimo de indenização, na forma do preceituado no parágrafo único do artigo 416 do Código Civil.

12.1.7. A multa pode ser descontada da garantia, dos pagamentos devidos à **CONTRATADA** em razão do Contrato em que houve a aplicação da multa ou de eventual outro Contrato havido entre a **ELETROBRAS** e a **CONTRATADA**, aplicando-se a compensação prevista nos artigos 368 e seguintes do Código Civil.

CLÁUSULA TREZE

PUBLICIDADE E CONFIDENCIALIDADE

13.1. Quaisquer informações relativas ao presente Contrato, somente podem ser dadas ao conhecimento de terceiros, inclusive através dos meios de publicidade disponíveis, após autorização, por escrito, da **ELETROBRAS**. Para os efeitos desta Cláusula, deve ser formulada a solicitação, por escrito, à **ELETROBRAS**, informando todos os pormenores da intenção da **CONTRATADA**, reservando-se, à **ELETROBRAS**, o direito de aceitar ou não o pedido, no todo ou em parte.

CLÁUSULA QUATORZE

ATOS LESIVOS À ELETROBRAS

14.1. Com fundamento no artigo 5º da Lei nº 12.846/2013, a **CONTRATADA** estará sujeita às sanções estabelecidas na Cláusula Quinze deste contrato, observados o contraditório e a ampla defesa, e sem prejuízo das demais cominações legais, no caso dos atos lesivos à **ELETROBRAS**, assim definidos:

a) Prometer, oferecer ou dar, direta ou indiretamente, vantagem indevida a agente público, ou a terceira pessoa a ele relacionada, atuando em nome da **ELETROBRAS**;
b) Comprovadamente, financiar, custear, patrocinar ou de qualquer modo subvencionar a prática dos atos ilícitos previstos na Lei nº 12.846/2013, atuando em nome da **ELETROBRAS**;
c) Fraudar o presente contrato;
d) Criar, de modo fraudulento ou irregular, pessoa jurídica para celebrar o presente contrato;
e) Obter vantagem ou benefício indevido, de modo fraudulento, de modificações ou prorrogações deste contrato, sem autorização em lei, no ato convocatório da licitação ou neste instrumento contratual;
f) Manipular ou fraudar o equilíbrio econômico-financeiro deste contrato;
g) Dificultar atividade de investigação ou fiscalização de órgãos, entidades ou agentes públicos, ou intervir em sua atuação, inclusive no âmbito das agências reguladoras e dos órgãos de fiscalização do sistema financeiro nacional, no âmbito do objeto do presente Contrato;
h) Comprovadamente, utilizar-se de interposta pessoa física ou jurídica para ocultar ou dissimular seus reais interesses ou a identidade dos beneficiários dos atos praticados.

14.2. As sanções indicadas no item 14.1 desta Cláusula se aplicam quando a **CONTRATADA** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

14.3. Ainda que não se enquadre na definição legal presente no parágrafo único do art. 1º da Lei nº 12.846/2013, a **CONTRATADA** compromete-se a não cometer os atos lesivos listados nesta cláusula junto a outros agentes públicos, durante a execução das atividades que concernem o âmbito do contrato firmado com a **ELETROBRAS**.

14.4. A **CONTRATADA** compromete-se a não realizar quaisquer ações ou omissões que constituam prática ilegal ou de corrupção, nos termos da Lei nº12.846/2013, Decreto nº 8.420/2015, Lei nº.13.303/2016 e Decreto nº8.945/2016, ou de quaisquer outras leis ou regulamentos aplicáveis.

CLÁUSULA QUINZE

DA RESPONSABILIZAÇÃO ADMINISTRATIVA

15.1. Caso a **CONTRATADA** pratique qualquer ato lesivo previsto no art. 5º da Lei nº 12.846/2013, estará sujeita às sanções administrativas previstas no art. 6º da referida lei, a seguir descritas, sem prejuízo da garantia a ampla defesa e ao contraditório:

a) multa, no valor de 0,1% (um décimo por cento) a 20% (vinte por cento) do faturamento bruto do último exercício anterior ao da instauração do processo administrativo, excluídos os tributos, a qual nunca será inferior à vantagem auferida, quando for possível sua estimação;
b) publicação extraordinária da decisão condenatória.

15.1.1 Na hipótese da alínea 'a' do item anterior, caso não seja possível utilizar o critério do valor do faturamento bruto da pessoa jurídica, a multa será de R$ 6.000,00 (seis mil reais) a R$ 60.000.000,00 (sessenta milhões de reais)."

15.2. A **ELETROBRAS** deve levar em consideração na aplicação das sanções aqui previstas o estabelecido no artigo 7º e seus incisos da Lei n. 12.846/2013.

15.3. Caso os atos lesivos apurados envolvam infrações administrativas ao Regulamento de Licitações e Contratos das empresas Eletrobras ou às disposições referentes à Lei nº.13.303/2016, e tenha ocorrido a apuração conjunta, a **CONTRATADA** também estará sujeita a sanções administrativas previstas na Lei nº.13.303/2016 e no Regulamento de Licitações e Contratos da Eletrobras que tenham como efeito restrição ao direito de participar em licitações ou de celebrar contratos com a administração pública, a serem aplicadas mediante Processo Administrativo de Responsabilização (PAR).

15.4. As sanções referenciadas no item 15.1 desta Cláusula serão aplicadas fundamentadamente, isolada ou cumulativamente, de acordo com as peculiaridades do caso concreto e com a gravidade e natureza das infrações.

15.5. A decisão administrativa proferida pela autoridade julgadora ao final do PAR será publicada no Diário Oficial da União e no site da **ELETROBRAS**.

15.6. A **CONTRATADA** sancionada administrativamente pela prática de atos lesivos contra a **ELETROBRAS**, nos termos da Lei nº 12.846/2013, publicará a decisão administrativa sancionadora, cumulativamente:

a) em meio de comunicação de grande circulação na área da prática da infração e de atuação da pessoa jurídica contratada ou, na sua falta, em publicação de circulação nacional;
b) em edital afixado no próprio estabelecimento ou no local de exercício da atividade, em localidade que permita a visibilidade pelo público, pelo prazo mínimo de 30 (trinta) dias;
c) em seu site eletrônico, pelo prazo de trinta dias e em destaque na página principal do referido site.

15.7. A aplicação das sanções previstas nesta Cláusula não exclui, em qualquer hipótese, a obrigação da reparação integral do dano causado.

15.8. A publicação a que se refere o 15.6 será efetuada a expensas da pessoa jurídica sancionada.

15.9. O processamento do PAR não interfere no seguimento regular dos processos administrativos específicos para apuração da ocorrência de danos e prejuízos à **ELETROBRAS** resultantes de ato lesivo cometido pela **CONTRATADA**, com ou sem a participação de agente público.

15.10. O PAR e a sanção administrativa obedecerão às regras e aos parâmetros dispostos em legislação específica, notadamente, na Lei nº 12.846/2013 e no Decreto nº 8.420/2015, inclusive suas eventuais alterações, sem prejuízo ainda da aplicação do ato de que trata o art. 21 do Decreto nº 8.420/2015.

15.11. Na esfera administrativa, a responsabilidade da pessoa jurídica não afasta a possibilidade de sua responsabilização na esfera judicial.

15.12. As disposições desta Cláusula se aplicam quando a **CONTRATADA** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

15.13. Não obstante o disposto nesta Cláusula, a **CONTRATADA** está sujeita a quaisquer outras responsabilizações de natureza cível, administrativa e, ou criminal, previstas neste Contrato e, ou na legislação aplicável, no caso de quaisquer violações.

CLÁUSULA DEZESSEIS

DO PROGRAMA DE INTEGRIDADE (COMPLIANCE)

16.1. A **CONTRATADA** é responsável por conhecer e cumprir, no que couber, os princípios e padrões do Programa de Integridade (*Compliance*) da **ELETROBRAS** que se encontra disponível para consulta no site www.eletrobras.com.

16.2. Cabe à **CONTRATADA** apresentar a "Declaração de Integridade dos Representantes ou Fornecedores de Bens ou Serviços", Anexo II deste contrato, confirmando estar ciente dos termos e condições do Programa de Integridade (*Compliance*) das Empresas Eletrobras.

16.3. CONTRATADA deverá ter preenchido, previamente à assinatura do contrato, o "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras", disponível no site da Eletrobras.

16.4. A **CONTRATADA** está ciente que a **ELETROBRAS** poderá analisar informações públicas sobre sócios, diretores, dirigentes e administradores das empresas licitantes, a fim de assegurar o cumprimento do Programa de Integridade (Compliance) das Empresas Eletrobras.

16.5. A **CONTRATADA** se compromete a cumprir a legislação anticorrupção a qual esteja submetida e que lhe é aplicável.

16.6. A **CONTRATADA** estará sujeita, durante a vigência do contrato, à avaliação de risco de integridade prevista no Programa de Integridade (*Compliance*) da **ELETROBRAS**, podendo ser requisitados esclarecimentos adicionais. Nestes casos, a **CONTRATADA** se compromete a prestar os esclarecimentos solicitados e apresentar documentos que comprovem as informações disponibilizadas em prazo máximo de 05 (cinco) dias úteis, sempre que necessário.

16.7. Entendendo que é papel de cada organização fomentar padrões éticos e de transparência em suas relações comerciais, a **ELETROBRAS** incentiva a **CONTRATADA**, caso ainda não possua,

a elaborar e implementar programa de integridade próprio, observando os critérios estabelecidos no Decreto nº 8.420/2015.

16.8. A **CONTRATADA** se compromete a acionar o Canal de Denúncias da Eletrobras, que funciona 24 (vinte e quatro) horas por dia, 07 (sete) dias por semana através do telefone 0800 377 8037, bem como através do link: http://www.canaldedenuncias.com.br/eletrobras/), caso venha a ter conhecimento de atitudes ilícitas ou suspeitas, bem como se compromete a divulgar entre os seus funcionários a utilização do referido Canal de Denúncias, quando necessário.

CLÁUSULA DEZESSETE

DECLARAÇÕES

17.1. A **CONTRATADA** declara e garante que nem a **CONTRATADA**, diretamente ou por intermédio de qualquer subsidiária ou afiliada, e nenhum de seus diretores, empregados, ou qualquer pessoa agindo em seu nome, realizou ou realizará qualquer ato que possa consistir em violação às proibições descritas na Lei Contra Práticas de Corrupção Estrangeiras de 1977 dos Estados Unidos da América (United States Foreign Corrupt Practices Act of 1977, 15 U.S.C. §78-dd-1, et seq., as amended), doravante denominada FCPA, incluindo pagamento, oferta, promessa ou autorização de pagamento de dinheiro ou algo de valor, direta ou indiretamente, a (i) qualquer empregado, oficial de governo ou representante de, ou qualquer pessoa agindo oficialmente para ou em nome de (A) uma entidade de governo, uma de suas subdivisões políticas ou uma de suas jurisdições locais; (B) um órgão, conselho, comissão, tribunal ou agência, seja civil ou militar, de qualquer dos indicados no item anterior, independentemente de sua constituição; (C) uma associação, organização, empresa ou empreendimento controlado ou de propriedade de um governo; ou (D) um partido político (os itens A a D doravante denominados conjuntamente AUTORIDADE GOVERNAMENTAL); (ii) um oficial legislativo, administrativo ou judicial, independentemente de se tratar de cargo eletivo ou comissionado; (iii) um oficial de, ou indivíduo que ocupe um cargo em, um partido político; (iv) um candidato a cargo político; (v) um indivíduo que ocupe qualquer outro cargo oficial, cerimonial, comissionado ou herdado em um governo ou qualquer um de seus órgãos; ou (vi) um oficial ou empregado de uma organização supranacional (por exemplo, Banco Mundial, Nações Unidas, Fundo Monetário Internacional, OCDE) (doravante denominado OFICIAL DE GOVERNO); ou a qualquer pessoa enquanto se saiba, ou se tenha motivos para crer que qualquer porção de tal troca é feita com o
propósito de, no âmbito do presente contrato:

a) Influenciar qualquer ato ou decisão de tal (tais) OFICIAL(IS) DE GOVERNO em seu ofício, incluindo deixar de realizar ato oficial, com o propósito de assistir a ELETROBRAS, a CONTRATADA ou qualquer outra pessoa a obter ou reter negócios, ou direcionar negócios a qualquer terceiro;

b) Assegurar vantagem imprópria;

c) Induzir tal (tais) OFICIAL(IS) DE GOVERNO a usar de sua influência para afetar ou influenciar qualquer ato ou decisão de uma AUTORIDADE GOVERNAMENTAL com o propósito de assistir a ELETROBRAS, a CONTRATADA ou qualquer outra pessoa a obter ou reter negócios, ou direcionar negócios a qualquer terceiro;

d) Fornecer um ganho ou benefício pessoal ilícito, seja financeiro ou de outro valor, a tal (tais) OFICIAL(IS) DE GOVERNO.

17.2. A CONTRATADA, inclusive seus diretores e empregados e todas as pessoas agindo em seu nome, com relação a todas as questões afetando a **ELETROBRAS** ou seus negócios, se obrigam a (i) permanecer em inteira conformidade com o FCPA, e com qualquer outra legislação antissuborno, anticorrupção e de conflitos de interesses aplicável, ou qualquer outra legislação, regra ou regulamento de propósito e efeito similares, abstendo-se de qualquer conduta que possa ser proibida a pessoas sujeitas ao FCPA; e (ii) observar, no que for aplicável, o Programa de Integridade (Compliance) das Empresas Eletrobras.

CLÁUSULA DEZOITO

OBRIGAÇÕES DA CONTRATADA

18.1. Cumprir fielmente todas as cláusulas e condições estabelecidas neste Contrato, bem como no edital e seus anexos,independentemente de transcrição, sendo certo que o não cumprimento sujeitará a **CONTRATADA** às penalidades previstas no Contrato.

18.2. Manter, durante a execução deste Contrato, em compatibilidade com as obrigações por ela assumidas, todas as condições de habilitação e qualificação exigidas na licitação.

18.3. Não ceder, transferir a terceiros, no todo ou em parte, bem como não sub-rogar os direitos e obrigações decorrentes deste Contrato.

18.4. Responder pelos encargos trabalhistas, sociais, previdenciários, tributários, comerciais e demais resultantes da prestação dos serviços objeto deste contrato.

18.5. Responsabilizar-se pelo comportamento dos profissionais componentes da sua equipe técnica, e substituir quaisquer deles cuja permanência na equipe venha a ser considerada indesejável, a critério da **ELETROBRAS**.

18.6. Responder pelas indenizações, danos e prejuízos causados a empregados da **ELETROBRAS**, bem como a terceiros, por culpa ou por consequência de imperícia, negligência ou imprudência de pessoas por ela designadas para o cumprimento do objeto deste Contrato, resguardado o direito da **CONTRATADA** ao contraditório e à ampla defesa.

18.7. Pagar pontualmente aos empregados, que sejam disponibilizados para os serviços objeto desta contratação, sem qualquer ônus adicional para a **ELETROBRAS**, e atender prontamente aos demais encargos decorrentes das leis trabalhistas, da previdência social, de seguros e acidentes de trabalho e quaisquer adicionais e direitos de seus empregados, sendo todos os recolhimentos feitos em seu nome.

18.8. A **CONTRATADA** não poderá divulgar dados, informações ou programas relacionados ao objeto a que se refere o presente Contrato, devendo ser mantido sigilo absoluto em relação a todas as bases de dados, acessadas ou que venham a ser geradas na prestação do serviço.

18.9. Manter sigilo sobre todas as informações fornecidas pela **ELETROBRAS** postas à sua disposição para a execução dos serviços, e não reproduzir ou copiar, total ou parcialmente, qualquer documento que lhe seja entregue por meio físico ou eletrônico, exceto nas necessidades decorrentes dos serviços objeto do Contrato.

18.10. Todos os tributos, despesas e quaisquer ônus de natureza federal, estadual ou municipal, relativos aopresente Contrato e decorrentes da legislação brasileira em vigor nesta data ficarão a cargo exclusivo da **CONTRATADA**, que também se responsabilizará por seus recolhimentos e pelo cumprimento de todas as obrigações e formalidades legais perante as autoridades competentes.

18.11. A **CONTRATADA** é responsável por conhecer o "Código de Conduta Ética e Integridade das Empresas Eletrobras" e o "Guia de Conduta para Fornecedores da Eletrobras", disponíveis no site da Eletrobras (http://eletrobras.com/pt/Paginas/Fornecedores.aspx), além dos princípios e padrões do Programa de Integridade (*Compliance*) das Empresas Eletrobras, cuidando para que suas disposições sejam observadas, no que couber, por todos os seus diretores, empregados, prepostos ou qualquer pessoa agindo em seu nome alocados para os serviços ou fornecimento de bens, objeto deste Contrato, ao longo de toda a sua execução.

18.12. A **ELETROBRAS** poderá solicitar documentos específicos relativos ao Contrato, realizar diligências na **CONTRATADA**, bem como conversar com o responsável pela auditoria interna da **CONTRATADA** (ou responsável por atividades correlatas) - desde que com a prévia anuência da **CONTRATADA** e diante da existência de indícios de fraude, que serão submetidos à **CONTRATADA** para conhecimento e manifestação - para monitorar e verificar sua conformidade com as disposições contidas no "Guia de Conduta para Fornecedores da Eletrobras", no "Código de Conduta Ética e Integridade das Empresas Eletrobras", no "Formulário de Due Diligence", disponibilizado no endereço a seguir: https://extranet.eletrobras.com/sites/pdd/SitePages/Formulario.aspx?isdlg=1, que deverá ser preenchido e assinado pela **CONTRATADA**, além das leis anticorrupção aplicáveis e do Programa de Integridade (*Compliance*) das Empresas Eletrobras, sendo a **CONTRATADA** responsável por manter em sua guarda todos os arquivos e registros evidenciando tal conformidade, assim como disponibilizá-los à **ELETROBRAS** dentro de 05 (cinco) dias a contar de sua solicitação.

18.13. Designar preposto para representá-la durante a execução do Contrato, o qual deverá apresentar-se à **ELETROBRAS** comprovando formalmente a condição de representante da **CONTRATADA** para tal encargo.

18.14. O não cumprimento de qualquer das condições estabelecidas sujeitará a **CONTRATADA** às penalidades previstas no contrato.

18.15. Cumprir e obedecer a política corporativa de segurança da informação estabelecida pela **ELETROBRAS.**

18.16. Notificar à **ELETROBRAS**, por escrito, quaisquer fatos que possam por em risco a execução do presente objeto;

18.17. Notificar prontamente à **ELETROBRAS** qualquer divulgação ou uso não autorizado de informações que porventura tomar conhecimento, adotando todas as medidas recomendadas pela **ELETROBRAS** para remediar qualquer divulgação ou uso.

18.18. Providenciar junto aos órgãos competentes e manter atualizadas todas as licenças e alvarás necessários à execução dos serviços.

18.19. Comunicar a imposição de penalidade que acarrete o impedimento de contratar com a **ELETROBRAS**.

18.20. Refazer, exclusivamente às suas custas e dentro do prazo fixado pela **ELETROBRAS**, os serviços executados com vícios ou defeitos, sem que tal fato possa ser invocado para justificar modificações no preço e nos prazos inicialmente pactuados.

18.21. Reparar todos os danos e prejuízos causados à **ELETROBRAS** em razão da prestação dos serviços, decorrentes de suas culpa ou dolo, não restando excluída esta responsabilidade pela presença da fiscalização.

18.22. Obedecer às instruções e aos procedimentos estabelecidos pela **ELETROBRAS** para a execução deste **CONTRATO**.

18.23. Apresentar à **ELETROBRAS** equipe composta por profissionais devidamente qualificados, experientes e com expertise necessária para a realização dos serviços, conforme exigido pelo Termo de Referência e indicado em sua Proposta.

18.23.1. No caso de necessidade de substituição de profissional, deverá submetê-la à **ELETROBRAS** em tempo hábil, de forma a não comprometer o andamento e o resultado dos trabalhos.

18.24. Comunicar à **ELETROBRAS**, em cada caso, sujeito à confirmação de recebimento, qualquer fato que exija sua manifestação ou providência, sem prejuízo da eventual adoção de medidas urgentes com vistas ao cumprimento do objeto do contrato.

18.25. Transferir para o domínio da **ELETROBRAS** todas as informações e a documentação produzidos por ocasião do término da vigência deste Contrato.

18.25.1. Nos termos do art. 80, da Lei nº 13.303/2016, os direitos patrimoniais e autorais de projetos ou serviços técnicos especializados desenvolvidos pela passam a ser propriedade da ELETROBRAS, sem prejuízo da preservação da identificação dos respectivos autores e da responsabilidade técnica a eles atribuída.

18.26. A **CONTRATADA** não poderá atuar em conflito de interesses com a **ELETROBRAS**.

18.27. Apresentar por escrito, esclarecimentos sobre seus relatórios, quando solicitados pela **ELETROBRAS**.

18.28. A **CONTRATADA**, bem como sua equipe técnica, sócios, diretores, profissionais e outras pessoas envolvidas na execução dos serviços que constituem o objeto do presente Contrato deverão assinar **Termo de Confidencialidade**, contido no Anexo I deste Contrato, comprometendo-se a manter em sigilo todas as informações não públicas fornecidas pela **ELETROBRAS**.

CLÁUSULA DEZENOVE

OBRIGAÇÕES DA ELETROBRAS

19.1. Mediante o fiel cumprimento das condições ajustadas, a **ELETROBRAS** deverá pagar à **CONTRATADA** pela execução do serviço.

19.2. Facilitar, em tempo hábil para a **CONTRATADA,** o acesso a documentos e/ou informações de que disponha, porventura necessários à execução dos serviços.

19.3. Disponibilizar o acesso físico da **CONTRATADA** às dependências **ELETROBRAS**.

19.4. Orientar a **CONTRATADA** com relação à indicação de possíveis fontes de informação, porventura necessárias para a execução do serviço.

19.5. Designar empregado responsável para acompanhar a execução do Contrato.

19.6. Notificar a **CONTRATADA** sobre qualquer irregularidade verificada na execução do objeto.

19.7. Exercer permanentemente gestão e fiscalização da execução do objeto contratado, registrando ocorrências relacionadas à execução do objeto e determinando as medidas necessárias para a regularização dos problemas observados.

CLÁUSULA VINTE

CONDIÇÃO SUSPENSIVA DO CONTRATO

20.1. A presente contratação será realizada com base na Medida Provisória 1.031/21. Porém, como a MP ainda se encontra em tramitação nas duas casas do Congresso Nacional, seu conteúdo pode sofrer modificações, ou mesmo a MP não ser convertida em Lei, hipótese esta, inclusive, prevista em seu artigo 16.

20.2. O presente contrato tem condição suspensiva, estando o início da prestação do Serviço condicionado à convolação da MP 1.031 em lei. Dessa forma, em caso de não aprovação ou prescrição da MP 1.031, o que ocorrer primeiro, o contrato deverá ser rescindido, sem nenhum ônus para ambas as partes.

CLÁUSULA VINTE E UM

PROTEÇÃO DE DADOS PESSOAIS

21.1. Em cumprimento à Lei nº 13.709/2018 - Lei Geral de Proteção de Dados – LGPD, no desenvolvimento de quaisquer atividades relacionadas com a execução do Contrato celebrado, as Partes devem observar o regime legal da proteção de dados pessoais, comprometendo-se a proteger e tratar os dados coletados estrita e necessariamente para a execução do Contrato.

21.2. As partes são solidariamente responsáveis por eventuais incidentes de segurança de informação, nos termos da legislação vigente, mas a CONTRATANTE garante, no âmbito deste Contrato, o seu direito de regresso contra o Contratado, caso fique comprovado não ter sido ela a dar causa ao evento.

21.3. As partes obrigam-se a:

PE- 10/2021

a)Tratar e usar os dados pessoais coletados para os fins a que se destinam, mantendo-os registrados, organizados, conservados e disponíveis para consulta.

b)Realizar o compartilhamento dos dados apenas e somente nos casos em que o seu titular tenha dado o consentimento inequívoco, ou nas situações legalmente previstas;

c) Tratar os dados de modo compatível com as finalidades para as quais tenham sido coletados e pelo mínimo de pessoas possível, devendo ser as mesmas identificáveis de plano.

d)Conservar os dados apenas durante o período necessário à execução das finalidades contratuais ou pelo prazo necessário ao cumprimento de eventual obrigação legal, garantindo a sua efetiva confidencialidade;

e)Implementar medidas técnicas e administrativas necessárias para proteger os dados contra alteração, perda, ou ainda difusão, acesso ou destruição - acidental ou intencionalmente – não autorizados, bem como contra qualquer outra forma de tratamento ilícito.

f) Informar, no prazo de até 24 horas, a outra Parte caso haja alguma suspeita ou incidente de segurança concreto envolvendo dados pessoais, devendo prestar toda a colaboração necessária a qualquer investigação que venha a ser realizada.

g)Garantir o exercício, pelos titulares dos dados, dos respectivos direitos de informação, acesso, revogação, oposição e portabilidade;

h)Assegurar que todas as pessoas que venham a ter acesso a dados pessoais no contexto do Contrato cumpram as disposições legais aplicáveis em matéria de proteção de dados pessoais, não cedendo ou divulgando tais dados pessoais a terceiros, nem deles fazendo uso para quaisquer fins que não os estritamente consentidos pelos respectivos titulares.

CLÁUSULA VINTE E DOIS

FORO

22.1. As partes contratantes elegem o foro da cidade do Rio de Janeiro, para solução de qualquer questão oriunda do presente Contrato, com exclusão de qualquer outro. E por estarem assim justas e contratadas, as partes assinam o presente Contrato.

A data de assinatura deste contrato é a data da última assinatura eletrônica/digital da autoridade competente da ELETROBRAS, conforme protocolo de assinaturas anexo a este contrato.

Efetuados os preenchimentos devidos, o presente Contrato está de acordo com a Minuta aprovada pelo Jurídico.

CENTRAIS ELÉTRICAS BRASILEIRAS S.A. – ELETROBRAS

XXXXXXXXXX, sociedade [limitada/anônima], organizada sob as leis [=], com sede na [=], Cidade do [=], Estado do [=], inscrita no Cadastro Nacional da Pessoa Jurídica do Ministério da Fazenda sob o nº [=], neste ato representada na forma de seus documentos societários, que integram o presente **TERMO DE CONFIDENCIALIDADE** como **Anexo x**, por [=], ao final nomeado(s) e assinado(s), com firma devidamente reconhecida, doravante denominada simplesmente **PARTE INTERESSADA**;

> [***NOTA**: Anexar a este instrumento, como Anexo x, conforme o caso, (i) estatuto ou contrato social ou, se fundo de investimento, regulamento do fundo e estatuto ou contrato social do administrador; (ii) ato societário de eleição da administração, incluindo dos signatários deste instrumento ou da procuração; e (iii) instrumento de procuração*.]

CONSIDERANDO QUE:

A **PARTE INTERESSADA** irá promover discussões, receber informações e manter tratativas para subsidiar execução de serviços técnicos, a ser realizado em conformidade com o Edital de pregão eletrônico nº. xxxxxx, para a realização do objeto deste contrato.

A fim de viabilizar a execução dos serviços objeto do Edital de pregão eletrônico nº. xxxxxx, a ELETROBRAS disponibilizará à **PARTE INTERESSADA** informações confidenciais relativas aos negócios, à operação e/ou ao patrimônio da ELETROBRAS e das empresas objeto da contratação, incluindo o acesso pela **PARTE INTERESSADA** às outras informações confidenciais adicionais que entenda pertinentes;

A ELETROBRAS deseja proteger as **Informações Confidenciais** de divulgação para terceiros e de seu uso não autorizado e exige, para franquear acesso às **Informações Confidenciais**, que a **PARTE INTERESSADA** preste certas declarações e garantias e se obrigue, por si e por todos os seus **REPRESENTANTES**, a manter a confidencialidade dessas **Informações Confidenciais**;

A **PARTE INTERESSADA** compromete-se, por meio deste **TERMO DE CONFIDENCIALIDADE**, a observar e submeter-se às regras e condições abaixo descritas:

a - DEFINIÇÕES

1.1. O termo "**Informação Confidencial**" significa, para fins deste **TERMO DE CONFIDENCIALIDADE**, toda e qualquer informação de natureza operacional, econômica, técnica, contábil, comercial, ambiental, jurídica ou de qualquer outra natureza, revelada, fornecida ou comunicada, seja verbalmente ou por escrito, em forma eletrônica ou não, incluindo, sem limitação, textos, fotografias, desenhos, gráficos, projetos, estudos, documentos, mapas, planos, especificações, diagramas, padrões, procedimentos, técnicas, direitos, relações comerciais,

knowhow, tecnologia, composição de preços, inventos, segredos de comércio, contratos, instrumentos, relatórios, interpretações, previsões, registros ou qualquer outro documento relativo à ELETROBRAS e/ou às empresas objeto da contratação, fornecido ou disponibilizado à **PARTE INTERESSADA** ou a seus **REPRESENTANTES**, por qualquer meio.

1.1.1. Todas e quaisquer análises, compilações, previsões, estudos ou outros documentos elaborados pela ELETROBRAS, pela **PARTE INTERESSADA**, ou por seus **REPRESENTANTES** com base nas **Informações Confidenciais** descritas no item 1.1 acima serão também considerados como **Informação Confidencial** para os fins do presente instrumento.

1.1.2. A ELETROBRAS não prestou, nem prestará, qualquer declaração ou garantia, explícita ou implícita, com relação à exatidão ou abrangência das **Informações Confidenciais,** e a **PARTE INTERESSADA** reconhece que a ELETROBRAS não terá qualquer responsabilidade relacionada à **Informação Confidencial**, incluindo por eventuais erros ou omissões.

1.2. O termo **REPRESENTANTES**, quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, deverá incluir qualquer diretor, conselheiro, administrador, empregado, preposto a qualquer título, auditor, advogado, consultor, representantes autorizados, ou outros assessores, da ELETROBRAS, das empresas objeto da contratação, da **PARTE INTERESSADA** e/ou de suas respectivas **AFILIADAS**, conforme o caso, que tenham acesso à **Informação Confidencial**, nos termos deste **TERMO DE CONFIDENCIALIDADE**.

1.3. O termo **AFILIADA,** quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, significa, conforme o caso, todos os eventuais controladores diretos ou indiretos da ELETROBRAS, das empresas objeto da contratação e/ou da **PARTE INTERESSADA,** bem como qualquer outra entidade que seja direta ou indiretamente controlada pela ELETROBRAS e/ou pela **PARTE INTERESSADA**, ou por seu(s) controlador(es).

1.3.1. Para fins deste **TERMO DE CONFIDENCIALIDADE**, controle acionário deverá ser entendido segundo o significado atribuído no artigo 116 da Lei 6.404, de 14 de dezembro de 1976, conforme alterada e em vigor.

1.4. O termo **PARTE DIVULGADORA** significa, no âmbito deste **TERMO DE CONFIDENCIALIDADE**, a ELETROBRAS, as empresas objeto da contratação e/ou suas respectivas **AFILIADAS**, a depender de quem for detentor da respectiva **Informação Confidencial** divulgada, e o termo **PARTE RECEPTORA** significa a **PARTE INTERESSADA,** que recebe tal **Informação Confidencial** (quando em conjunto, **PARTES**).

ª - DO OBJETO

O presente **TERMO DE CONFIDENCIALIDADE** tem por objeto assegurar, e comprometer a **PARTE INTERESSADA** com, durante todo o prazo previsto na Cláusula 3ª abaixo, o sigilo, a confidencialidade e o acesso restrito de todas e quaisquer **Informações Confidenciais** relacionadas ao serviço objeto da contratação pelo do Edital de pregão eletrônico nº. xxxxxx, sem

PE- 10/2021

prejuízo de qualquer outra proteção assegurada à **PARTE DIVULGADORA** por normas de propriedade industrial ou intelectual.

ª - DO PRAZO

As obrigações previstas neste **TERMO DE CONFIDENCIALIDADE** permanecerão vigentes pelo período de 5 (cinco) anos contados da assinatura do presente **TERMO DE CONFIDENCIALIDADE**, independentemente das negociações continuarem ou da segregação patrimonial da Eletronuclear e da Itaipu Binacional ser consumada, ou da conversão da MP 1.031/2021.

ª - DAS OBRIGAÇÕES

4.1. Em decorrência do compromisso de sigilo firmado neste **TERMO DE CONFIDENCIALIDADE**, a **PARTE INTERESSADA** obriga-se por si e por seus **REPRESENTANTES** a:

Manter toda e qualquer **Informação Confidencial** como confidencial e, exceto conforme disposto na Cláusula 7ª abaixo, não revelar qualquer **Informação Confidencial** sob qualquer forma, assegurando a cautela razoável que a **PARTE INTERESSADA** normalmente exerce em relação à preservação de suas próprias informações confidenciais, utilizando-as exclusivamente para os fins previstos neste **TERMO DE CONFIDENCIALIDADE**, ressalvado, no entanto, que a **PARTE INTERESSADA** poderá revelar a **Informação Confidencial** a seus **REPRESENTANTES** que (a) necessitem conhecer a **Informação Confidencial** exclusivamente para os fins de avaliação da **operação de segregação patrimonial**, (b) sejam previamente informados acerca da natureza confidencial da **Informação Confidencial**, e (c) concordem, por escrito, em agir de acordo com os termos deste **TERMO DE CONFIDENCIALIDADE**; e

Enviar, imediatamente, notificação por escrito à ELETROBRAS informando a respeito de qualquer má utilização, revelação não autorizada, esbulho ou apropriação indébita das **Informações Confidenciais** que lhe forem reveladas, ou qualquer violação deste **TERMO DE CONFIDENCIALIDADE** que chegue ao seu conhecimento.

ª - DA DEVOLUÇÃO DE INFORMAÇÕES CONFIDENCIAIS

5.1. Caso a **PARTE INTERESSADA** não prossiga na execução dos serviços objeto do do Edital de pregão eletrônico nº. xxxxxx ou, a qualquer momento, mediante requerimento da **PARTE DIVULGADORA**, a **PARTE INTERESSADA** obriga-se e compromete-se a devolver ou destruir todas as **Informações Confidenciais** recebidas, dentro do prazo de 10 (dez) dias úteis a contar da interrupção dos serviços ou do requerimento da **PARTE DIVULGADORA**, sem retenção de cópias e com a devida confirmação escrita de eventual destruição pela **PARTE RECEPTORA**.

ª - DAS PENALIDADES

A **PARTE INTERESSADA** reconhece e concorda que o descumprimento de qualquer obrigação estabelecida neste **TERMO DE CONFIDENCIALIDADE** sujeitará a **PARTE INTERESSADA** a uma

PE- 10/2021

multa não compensatória no valor de 25% do valor da contratação devida à ELETROBRAS, adicionalmente à responsabilização da **PARTE INTERESSADA** por perdas e danos, incluindo danos indiretos, causados à **PARTE DIVULGADORA**, que deverá ser integralmente indenizada pela **PARTE INTERESSADA**, sem prejuízo da adoção pela **PARTE DIVULGADORA** lesada de todas as medidas jurídicas cabíveis para assegurar a total proteção de suas **Informações Confidenciais**. Adicionalmente, a **PARTE INTERESSADA** assegura que fará com que seus **REPRESENTANTES** observem os termos deste **TERMO DE CONFIDENCIALIDADE** e será responsável por qualquer descumprimento deste **TERMO DE CONFIDENCIALIDADE** por qualquer de seus **REPRESENTANTES**.

ª - DA EXCEÇÃO À CONFIDENCIALIDADE

7.1. Os termos e condições deste instrumento não se aplicam:

às informações que porventura foram, comprovada e legitimamente, obtidas pela **PARTE INTERESSADA** antes da assinatura deste **TERMO DE CONFIDENCIALIDADE** e não representem quebra por qualquer pessoa de qualquer obrigação de confidencialidade anterior aos termos deste **TERMO DE CONFIDENCIALIDADE**;

se a **PARTE DIVULGADORA** concordar previamente e por escrito em disponibilizar a terceiros determinada informação, observados os limites expressamente consentidos pela **PARTE DIVULGADORA** com relação à divulgação para tais terceiros;

à revelação obrigatória por força da legislação vigente, regulamento ou ato normativo de caráter mandatório, por exigência de qualquer autoridade governamental ou órgão regulador, ou em caso de decisão judicial, arbitral ou administrativa que determine a disponibilização de **Informação Confidencial**, devendo, entretanto, a **PARTE INTERESSADA** (i) divulgar somente a parcela da **Informação Confidencial** exigida para o cumprimento da respectiva obrigação, e (ii) envidar seus melhores esforços para que seja assegurado tratamento confidencial às **Informações Confidenciais** divulgadas;

se a informação houver sido expressamente identificada pela **PARTE DIVULGADORA** como não sendo informação de natureza privilegiada e confidencial; e

se, no momento da revelação, as informações já forem de domínio público em geral ou que, a partir desse momento, tenham se tornado de domínio público através de publicação ou procedimento equivalente que não constitua violação deste **TERMO DE CONFIDENCIALIDADE**.

Na hipótese de ocorrência do disposto na alínea (c), a **PARTE INTERESSADA** deverá imediatamente, antes de proceder a qualquer divulgação da **Informação Confidencial**, notificar a ELETROBRAS sobre tal solicitação ou exigência para que a **PARTE DIVULGADORA** possa buscar, na medida do possível, uma proteção ou dispensa de apresentação de tais **Informações Confidenciais**, em consonância com as disposições deste **TERMO DE CONFIDENCIALIDADE**.

XXXXXX - RIO DE JANEIRO/RJ

E-MAIL: x@eletrobras.com

Se endereçadas à PARTE INTERESSADA:

[=] [dados do representante]

8.3. Cada uma das **PARTES** é responsável por notificar a outra caso ocorra mudança de endereço, dados ou representantes, considerando-se válida a comunicação realizada nos termos desta Cláusula 8ª, até o recebimento da referida notificação.

ª - DOS LIMITES DO TERMO DE CONFIDENCIALIDADE

9.1. Este **TERMO DE CONFIDENCIALIDADE** representa a livre manifestação de vontade da **PARTE INTERESSADA**, obrigando-a de forma irrevogável e irretratável e revertendo em benefício da ELETROBRAS e de qualquer outra **PARTE DIVULGADORA**.

9.2. O presente **TERMO DE CONFIDENCIALIDADE** não constitui compromisso de exclusividade entre as **PARTES,** assim como não obriga as **PARTES** a celebrar qualquer negócio futuro, incluindo a **POTENCIAL OPERAÇÃO**, e restringe-se somente às disposições que dele constem.

PE- 10/2021

10.1 A **PARTE INTERESSADA** declara que não realizou, e concorda que não deverá, em conexão com as atividades contempladas por este **TERMO DE CONFIDENCIALIDADE**, ou em relação a quaisquer outras operações, comerciais ou não, que envolvam a ELETROBRAS, pagar, oferecer, prometer, ou autorizar o pagamento ou transferência de qualquer coisa de valor, direta ou indiretamente, a qualquer funcionário público ou empregado (incluindo funcionários de empresas estatais ou controladas pelo governo ou organização internacional público) ou a qualquer partido político, funcionário de partido, ou candidato internacional público, ou a qualquer outra pessoa ou entidade de uma forma que possa violar a Lei dos EUA contra Práticas de Corrupção Estrangeira, de 1977, e subsequentes alterações (o *Foreign Corrupt Practices Act* - FCPA) e a Lei Brasileira nº 12.846/2013.

ª - DAS DISPOSIÇÕES GERAIS

11.1 A **PARTE INTERESSADA** reconhece que a demora pela **PARTE DIVULGADORA** em exercer qualquer direito ou privilégio em virtude deste instrumento não importará na renúncia aos termos do presente **TERMO DE CONFIDENCIALIDADE** ou prejudicará qualquer das declarações ora prestadas pela **PARTE INTERESSADA**.

11.2. Na hipótese em que qualquer dispositivo do presente **TERMO DE CONFIDENCIALIDADE** venha a ser considerado inválido, ilegal ou inexequível diante da legislação aplicável em vigor, tal fato não afetará a validade, legalidade ou exigibilidade de suas outras disposições que permanecerão válidas se com ele não conflitarem.

ª - DO FORO E DA LEI APLICÁVEL

12.1. A **PARTE INTERESSADA** expressamente reconhece o foro da Comarca da Capital do Estado do Rio de Janeiro como o único e exclusivo foro competente para dirimir quaisquer controvérsias em decorrência deste **TERMO DE CONFIDENCIALIDADE**. A **PARTE INTERESSADA** renuncia expressamente a qualquer outro, por mais privilegiado que seja.

12.2. Este **TERMO DE CONFIDENCIALIDADE**, bem como a execução dos direitos e obrigações dele decorrentes, são inteiramente regidos e interpretados de acordo com a legislação brasileira.

TERMO DE CONFIDENCIALIDADE INDIVIDUAL

[Local], [Data]

À

CENTRAIS ELÉTRICAS BRASILEIRAS S.A. – ELETROBRAS

Nome do Profissional....., nacionalidade....., estado civil....., profissão....., identidade..... e CPF....., endereço ....., se compromete, por intermédio do presente **Termo de Confidencialidade Individual**, a não divulgar sem autorização quaisquer informações de propriedade da **Eletrobras** que tenha acesso em decorrência da execução do contrato que seu empregador ou empresa para a qual presta serviços mantém com a Eletrobras, em conformidade com as seguintes condições:

O **Responsável** reconhece que, no desempenho de suas funções em decorrência do Contrato nº _____/2021, celebrado em ___/___/___ entre a empresa _____ e a Eletrobras, estabelece contato com informações privadas da **Eletrobras**, que podem e devem ser conceituadas como segredo de indústria ou de negócio. Estas informações devem ser tratadas confidencialmente sob qualquer condição e não podem ser divulgadas a terceiros não autorizados, aí se incluindo os próprios empregados da **Eletrobras**, sem a expressa e escrita autorização do representante legal signatário do Contrato ora referido.

CONSIDERANDO QUE:

A **PARTE INTERESSADA** irá promover discussões, receber informações e manter tratativas para subsidiar execução de serviços técnicos, a ser realizado em conformidade com o Edital de pregão eletrônico nº. xxxxxx, para a realização do objeto deste contrato.

A fim de viabilizar a execução dos serviços objeto do Edital de pregão eletrônico nº. xxxxxx, a ELETROBRAS disponibilizará à **PARTE INTERESSADA** informações confidenciais relativas aos negócios, à operação e/ou ao patrimônio da ELETROBRAS e das empresas objeto da contratação, incluindo o acesso pela **PARTE INTERESSADA** às outras informações confidenciais adicionais que entenda pertinentes;

A ELETROBRAS deseja proteger as **Informações Confidenciais** de divulgação para terceiros e de seu uso não autorizado e exige, para franquear acesso às **Informações Confidenciais**, que a **PARTE INTERESSADA** preste certas declarações e garantias e se obrigue, por si e por todos os seus **REPRESENTANTES**, a manter a confidencialidade dessas **Informações Confidenciais**;

A **PARTE INTERESSADA** compromete-se, por meio deste **TERMO DE CONFIDENCIALIDADE**, a observar e submeter-se às regras e condições abaixo descritas:

PE- 10/2021

1.1. O termo "**Informação Confidencial**" significa, para fins deste **TERMO DE CONFIDENCIALIDADE**, toda e qualquer informação de natureza operacional, econômica, técnica, contábil, comercial, ambiental, jurídica ou de qualquer outra natureza, revelada, fornecida ou comunicada, seja verbalmente ou por escrito, em forma eletrônica ou não, incluindo, sem limitação, textos, fotografias, desenhos, gráficos, projetos, estudos, documentos, mapas, planos, especificações, diagramas, padrões, procedimentos, técnicas, direitos, relações comerciais, *knowhow*, tecnologia, composição de preços, inventos, segredos de comércio, contratos, instrumentos, relatórios, interpretações, previsões, registros ou qualquer outro documento relativo à ELETROBRAS e/ou às empresas objeto da contratação, fornecido ou disponibilizado à **PARTE INTERESSADA** ou a seus **REPRESENTANTES**, por qualquer meio.

1.1.1. Todas e quaisquer análises, compilações, previsões, estudos ou outros documentos elaborados pela ELETROBRAS, pela **PARTE INTERESSADA**, ou por seus **REPRESENTANTES** com base nas **Informações Confidenciais** descritas no item 1.1 acima serão também considerados como **Informação Confidencial** para os fins do presente instrumento.

1.1.2. A ELETROBRAS não prestou, nem prestará, qualquer declaração ou garantia, explícita ou implícita, com relação à exatidão ou abrangência das **Informações Confidenciais,** e a **PARTE INTERESSADA** reconhece que a ELETROBRAS não terá qualquer responsabilidade relacionada à **Informação Confidencial**, incluindo por eventuais erros ou omissões.

1.2. O termo **REPRESENTANTES**, quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, deverá incluir qualquer diretor, conselheiro, administrador, empregado, preposto a qualquer título, auditor, advogado, consultor, representantes autorizados, ou outros assessores, da ELETROBRAS, das empresas objeto da contratação, da **PARTE INTERESSADA** e/ou de suas respectivas **AFILIADAS**, conforme o caso, que tenham acesso à **Informação Confidencial**, nos termos deste **TERMO DE CONFIDENCIALIDADE**.

1.3. O termo **AFILIADA,** quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, significa, conforme o caso, todos os eventuais controladores diretos ou indiretos da ELETROBRAS, das empresas objeto da contratação e/ou da **PARTE INTERESSADA,** bem como qualquer outra entidade que seja direta ou indiretamente controlada pela ELETROBRAS e/ou pela **PARTE INTERESSADA**, ou por seu(s) controlador(es).

1.3.1. Para fins deste **TERMO DE CONFIDENCIALIDADE**, controle acionário deverá ser entendido segundo o significado atribuído no artigo 116 da Lei 6.404, de 14 de dezembro de 1976, conforme alterada e em vigor.

1.4. O termo **PARTE DIVULGADORA** significa, no âmbito deste **TERMO DE CONFIDENCIALIDADE**, a ELETROBRAS, as empresas objeto da contratação e/ou suas respectivas **AFILIADAS**, a depender de quem for detentor da respectiva **Informação Confidencial** divulgada, e o termo **PARTE RECEPTORA** significa a **PARTE INTERESSADA,** que recebe tal **Informação Confidencial** (quando em conjunto, **PARTES**).

ª - DO OBJETO

DocuSign Envelope ID: 472A8AFF-8139-4ED2-9BE2-9CE8D5180B8F

Eletrobras

DSS
Rua da Quitanda, nº 196 - 5ºandar
CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

O presente **TERMO DE CONFIDENCIALIDADE** tem por objeto assegurar, e comprometer a **PARTE INTERESSADA** com, durante todo o prazo previsto na Cláusula 3ª abaixo, o sigilo, a confidencialidade e o acesso restrito de todas e quaisquer **Informações Confidenciais** relacionadas ao serviço objeto da contratação pelo do Edital de pregão eletrônico nº. xxxxxx, sem prejuízo de qualquer outra proteção assegurada à **PARTE DIVULGADORA** por normas de propriedade industrial ou intelectual.

ª - DO PRAZO

As obrigações previstas neste **TERMO DE CONFIDENCIALIDADE** permanecerão vigentes pelo período de 5 (cinco) anos contados da assinatura do presente **TERMO DE CONFIDENCIALIDADE**, independentemente das negociações continuarem ou da segregação patrimonial da Eletronuclear e da Itaipu Binacional ser consumada, ou da conversão da MP 1.031/2021.

ª - DAS OBRIGAÇÕES

4.1. Em decorrência do compromisso de sigilo firmado neste **TERMO DE CONFIDENCIALIDADE**, a **PARTE INTERESSADA** obriga-se por si e por seus **REPRESENTANTES** a:

Manter toda e qualquer **Informação Confidencial** como confidencial e, exceto conforme disposto na Cláusula 7ª abaixo, não revelar qualquer **Informação Confidencial** sob qualquer forma, assegurando a cautela razoável que a **PARTE INTERESSADA** normalmente exerce em relação à preservação de suas próprias informações confidenciais, utilizando-as exclusivamente para os fins previstos neste **TERMO DE CONFIDENCIALIDADE**, ressalvado, no entanto, que a **PARTE INTERESSADA** poderá revelar a **Informação Confidencial** a seus **REPRESENTANTES** que (a) necessitem conhecer a **Informação Confidencial** exclusivamente para os fins de avaliação da **operação de segregação patrimonial**, (b) sejam previamente informados acerca da natureza confidencial da **Informação Confidencial**, e (c) concordem, por escrito, em agir de acordo com os termos deste **TERMO DE CONFIDENCIALIDADE**; e

Enviar, imediatamente, notificação por escrito à ELETROBRAS informando a respeito de qualquer má utilização, revelação não autorizada, esbulho ou apropriação indébita das **Informações Confidenciais** que lhe forem reveladas, ou qualquer violação deste **TERMO DE CONFIDENCIALIDADE** que chegue ao seu conhecimento.

ª - DA DEVOLUÇÃO DE INFORMAÇÕES CONFIDENCIAIS

5.1. Caso a **PARTE INTERESSADA** não prossiga na execução dos serviços objeto do do Edital de pregão eletrônico nº. xxxxxx ou, a qualquer momento, mediante requerimento da **PARTE DIVULGADORA**, a **PARTE INTERESSADA** obriga-se e compromete-se a devolver ou destruir todas as **Informações Confidenciais** recebidas, dentro do prazo de 10 (dez) dias úteis a contar da interrupção dos serviços ou do requerimento da **PARTE DIVULGADORA**, sem retenção de cópias e com a devida confirmação escrita de eventual destruição pela **PARTE RECEPTORA**.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

ª - DAS PENALIDADES

A **PARTE INTERESSADA** reconhece e concorda que o descumprimento de qualquer obrigação estabelecida neste **TERMO DE CONFIDENCIALIDADE** sujeitará a **PARTE INTERESSADA** a uma multa não compensatória no valor de 25% do valor da contratação devida à ELETROBRAS, adicionalmente à responsabilização da **PARTE INTERESSADA** por perdas e danos, incluindo danos indiretos, causados à **PARTE DIVULGADORA**, que deverá ser integralmente indenizada pela **PARTE INTERESSADA**, sem prejuízo da adoção pela **PARTE DIVULGADORA** lesada de todas as medidas jurídicas cabíveis para assegurar a total proteção de suas **Informações Confidenciais**. Adicionalmente, a **PARTE INTERESSADA** assegura que fará com que seus **REPRESENTANTES** observem os termos deste **TERMO DE CONFIDENCIALIDADE** e será responsável por qualquer descumprimento deste **TERMO DE CONFIDENCIALIDADE** por qualquer de seus **REPRESENTANTES**.

ª - DA EXCEÇÃO À CONFIDENCIALIDADE

7.1. Os termos e condições deste instrumento não se aplicam:

às informações que porventura foram, comprovada e legitimamente, obtidas pela **PARTE INTERESSADA** antes da assinatura deste **TERMO DE CONFIDENCIALIDADE** e não representem quebra por qualquer pessoa de qualquer obrigação de confidencialidade anterior aos termos deste **TERMO DE CONFIDENCIALIDADE**;

se a **PARTE DIVULGADORA** concordar previamente e por escrito em disponibilizar a terceiros determinada informação, observados os limites expressamente consentidos pela **PARTE DIVULGADORA** com relação à divulgação para tais terceiros;

à revelação obrigatória por força da legislação vigente, regulamento ou ato normativo de caráter mandatório, por exigência de qualquer autoridade governamental ou órgão regulador, ou em caso de decisão judicial, arbitral ou administrativa que determine a disponibilização de **Informação Confidencial**, devendo, entretanto, a **PARTE INTERESSADA** (i) divulgar somente a parcela da **Informação Confidencial** exigida para o cumprimento da respectiva obrigação, e (ii) envidar seus melhores esforços para que seja assegurado tratamento confidencial às **Informações Confidenciais** divulgadas;

se a informação houver sido expressamente identificada pela **PARTE DIVULGADORA** como não sendo informação de natureza privilegiada e confidencial; e

se, no momento da revelação, as informações já forem de domínio público em geral ou que, a partir desse momento, tenham se tornado de domínio público através de publicação ou procedimento equivalente que não constitua violação deste **TERMO DE CONFIDENCIALIDADE**.

Na hipótese de ocorrência do disposto na alínea (c), a **PARTE INTERESSADA** deverá imediatamente, antes de proceder a qualquer divulgação da **Informação Confidencial**, notificar a ELETROBRAS sobre tal solicitação ou exigência para que a **PARTE DIVULGADORA** possa buscar,

9.2. O presente **TERMO DE CONFIDENCIALIDADE** não constitui compromisso de exclusividade entre as **PARTES,** assim como não obriga as **PARTES** a celebrar qualquer negócio futuro, incluindo a **POTENCIAL OPERAÇÃO**, e restringe-se somente às disposições que dele constem.

ª - ÉTICA E CONFORMIDADE

10.1 A **PARTE INTERESSADA** declara que não realizou, e concorda que não deverá, em conexão com as atividades contempladas por este **TERMO DE CONFIDENCIALIDADE**, ou em relação a quaisquer outras operações, comerciais ou não, que envolvam a ELETROBRAS, pagar, oferecer, prometer, ou autorizar o pagamento ou transferência de qualquer coisa de valor, direta ou indiretamente, a qualquer funcionário público ou empregado (incluindo funcionários de empresas estatais ou controladas pelo governo ou organização internacional público) ou a qualquer partido político, funcionário de partido, ou candidato internacional público, ou a qualquer outra pessoa ou entidade de uma forma que possa violar a Lei dos EUA contra Práticas de Corrupção Estrangeira, de 1977, e subsequentes alterações (o *Foreign Corrupt Practices Act* - FCPA) e a Lei Brasileira nº 12.846/2013.

ª - DAS DISPOSIÇÕES GERAIS

11.1 A **PARTE INTERESSADA** reconhece que a demora pela **PARTE DIVULGADORA** em exercer qualquer direito ou privilégio em virtude deste instrumento não importará na renúncia aos termos do presente **TERMO DE CONFIDENCIALIDADE** ou prejudicará qualquer das declarações ora prestadas pela **PARTE INTERESSADA**.

11.2. Na hipótese em que qualquer dispositivo do presente **TERMO DE CONFIDENCIALIDADE** venha a ser considerado inválido, ilegal ou inexequível diante da legislação aplicável em vigor, tal fato não afetará a validade, legalidade ou exigibilidade de suas outras disposições que permanecerão válidas se com ele não conflitarem.

ª - DO FORO E DA LEI APLICÁVEL

12.1. A **PARTE INTERESSADA** expressamente reconhece o foro da Comarca da Capital do Estado do Rio de Janeiro como o único e exclusivo foro competente para dirimir quaisquer controvérsias em decorrência deste **TERMO DE CONFIDENCIALIDADE**. A **PARTE INTERESSADA** renuncia expressamente a qualquer outro, por mais privilegiado que seja.

12.2. Este **TERMO DE CONFIDENCIALIDADE**, bem como a execução dos direitos e obrigações dele decorrentes, são inteiramente regidos e interpretados de acordo com a legislação brasileira.

(subitem 16.2)

A **CONTRATADA** neste ato declara em caráter irrevogável e irretratável que está ciente dos termos e condições aplicáveis à legislação anticorrupção vigente em decorrência do relacionamento com as Empresas Eletrobras, em especial os itens a seguir:

1. Definições

1.1. "**Agente de Governo**" significa (i) funcionário, gerente ou representante que atue em caráter oficial ou em nome de: (a) um governo nacional, uma divisão política ou uma jurisdição de tal governo; (b) órgão, conselho, comissão, tribunal ou agência, civil ou militar, de qualquer dos entes acima mencionadas, independente da sua constituição; (c) associação, organização ou empresa de propriedade ou controlada pelo governo; ou (d) partido político (no conjunto, "**Autoridade Governamental**"); (ii) funcionário que atue nos órgãos legislativo, administrativo ou judicial, quer tenha sido eleito ou nomeado; (iii) gerente ou indivíduo que ocupe cargo em partido político; (iv) candidato a cargo político; (v) gerente ou funcionário de organização supranacional (por exemplo, Banco Mundial, Nações Unidas, Fundo Monetário Internacional, OCDE, CAF); ou (vi) qualquer outra pessoa ligada ou associada, inclusive por parentesco direto, a quaisquer das categorias acima.

1.2. "**Leis Anticorrupção**" significa a Lei dos EUA contra Práticas de Corrupção Estrangeira, de 1977, e subsequentes alterações, (*Foreign Concept Practices Act* "**FCPA**"), a Lei Anticorrupção Brasileira (Lei nº 12.846/2013) e qualquer lei ou regulamento antissuborno, anticorrupção e de conflitos de interesses aplicável, ou qualquer outra legislação, regra ou regulamento de propósito e efeito similares.

2. Garantias e Compromissos da CONTRATADA

2.1. A **CONTRATADA** analisou, está familiarizada e entende os requisitos do Programa de Integridade (*Compliance*) das Empresas Eletrobras ("**Programa**") e deverá sempre observar tal Programa no que diz respeito ao desempenho de seus serviços em nome da **ELETROBRAS**. A **CONTRATADA** declara que tomou as medidas necessárias para garantir que todos os diretores, empregados, prepostos ou qualquer outra pessoa agindo eu seu nome envolvido nos serviços também esteja familiarizado com os requisitos do Programa de Integridade (*Compliance*) das Empresas Eletrobras.

2.2. Com relação aos serviços fornecidos pela **CONTRATADA**, a **CONTRATADA** não tomou e não tomará nenhuma medida que possa violar as proibições descritas nas Leis Anticorrupção, se as Leis Anticorrupção forem consideradas aplicáveis, inclusive:

a) pagar, oferecer, concordar em pagar, ou fazer com que sejam pagas, direta ou indiretamente, quaisquer contribuições, taxas ou comissões políticas a qualquer Agente do Governo, ou;
b) oferecer, pagar, prometer pagar ou autorizar que se dê dinheiro ou benefício em qualquer forma ou valor, direta ou indiretamente, a qualquer Agente do Governo ou a qualquer pessoa,

mesmo tendo conhecimento ou estando ciente da grande probabilidade de que toda ou parte de tal dinheiro ou benefício em qualquer forma ou valor será oferecido, dado, ou prometido, direta ou indiretamente, a qualquer Agente do Governo com a finalidade de:

i. influenciar em qualquer ato ou decisão de tal Agente do Governo, em sua qualidade oficial, inclusive uma decisão de deixar de cumprir suas funções oficiais; ou
ii. induzir tal Agente do Governo a usar sua influência junto à Autoridade Governamental com a finalidade de afetar ou influenciar qualquer ato ou decisão de tal Autoridade Governamental, ou assegurar uma vantagem indevida para a **ELETROBRAS** ou a **CONTRATADA**, com a finalidade de ajudar a **ELETROBRAS** ou a **CONTRATADA** a obter ou contratar negócios, ou encaminhar negócios a quaisquer terceiros.

2.3. A **CONTRATADA** garante ainda que entende plenamente e que anteriormente não se envolveu e não se envolverá em conduta que tenha resultado ou venha a resultar em violação das disposições de todos os requisitos legislativos e de órgãos reguladores, conforme aplicáveis, ao fornecimento dos serviços e aos termos desta declaração.

2.4. Com relação à execução dos serviços, a **CONTRATADA** preparará e manterá livros, registros e contas que, em detalhes razoáveis, reflitam, de forma precisa e clara, as transações e alienações dos ativos, e manterá um sistema de controle contábil interno suficiente para assegurar, de forma razoável, que:

a) as transações sejam executadas de acordo com a autorização geral ou específica da **ELETROBRAS** e sejam registradas de acordo com os princípios contábeis geralmente aceitos e/ou os padrões contábeis internacionais de forma a manter a contabilização de tais ativos;
b) o acesso aos ativos seja permitido somente de acordo com as demais obrigações do representante nos termos desta declaração;
c) a contabilização registrada dos ativos seja comparada aos ativos existentes, em níveis razoáveis, e que medidas adequadas sejam adotadas com relação a quaisquer diferenças.

2.5. Diante da presença de indícios de que a **CONTRATADA** esteja violando qualquer Lei Anticorrupção ou outra Lei prevista no item 1.2, ou no caso da **ELETROBRAS** ser acionada por qualquer órgão com objetivo de fornecer informação sobre seus terceiros, a **CONTRATADA** será comunicada de tais fatos e se compromete a colaborar com esclarecimentos formais ou permissão de acesso aos livros e registros contábeis, restritos aos termos do presente Contrato, no prazo de 10 (dez) dias úteis da referida comunicação. A **ELETROBRAS** se reserva o direito de indicar o profissional para verificação de livros e registros contábeis, a seu critério exclusivo, arcando com todos os custos incorridos.

2.6 A **CONTRATADA** se compromete a cumprir com as Leis Anticorrupção a que esteja submetida e que lhe são aplicáveis.

2.7. A **CONTRATAD**A garante que nenhum de seus administradores, diretores, empregados ou qualquer pessoa agindo em seu nome, nem qualquer membro direto de sua família (por exemplo, pais, cônjuges e irmãos) é um Agente do Governo e que nenhum deles possui parentesco ou relacionamento comercial com qualquer Agente do Governo a não ser conforme divulgado no "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras", disponível no website da **ELETROBRAS**. A **CONTRATADA** informará imediatamente à **ELETROBRAS** sobre quaisquer relacionamentos futuros com qualquer Agente do Governo durante a vigência de sua contratação.

2.8. Em adição, a **CONTRATADA** declara estar ciente da possibilidade de a **ELETROBRAS** solicitar sua anuência para efetuar diligências e auditorias em suas dependências e/ou locais de prestação de serviços para monitorar e verificar o cumprimento das disposições contidas no "Guia de Conduta para Fornecedores da Eletrobras" e no "Código de Conduta Ética e Integridade das Empresas Eletrobras".

2.9. A **CONTRATADA** se compromete a não realizar ações de corrupção ativa e tráfico de influência em transação comercial internacional no âmbito de sua atuação na prestação dos serviços no exterior contratados pelas Empresas Eletrobras.

3. Honorários e Pagamentos

3.1. A **CONTRATADA** receberá todos os pagamentos devidos por transferência eletrônica de fundos diretamente para a conta bancária periodicamente indicada à **ELETROBRAS**, em seu nome e país de residência da **CONTRATADA** ou no país em que os serviços são realizados.

4. Dever de informar

4.1. A **CONTRATADA** declara ter ciência da existência do Canal de Denúncias da Eletrobras, disponibilizado por meio do endereço eletrônico www.canaldedenuncias.com.br/eletrobras e do telefone 0800 377 8037, disponível 24 (vinte e quatro) horas por dia, 07 (sete) dias por semana e da responsabilidade de utilizá-lo, quando necessário, para manifestação de condutas que envolvam a **ELETROBRAS**, direta ou indiretamente, e que representem violações ao "Código de Conduta Ética e Integridade das Empresas Eletrobras" ou sejam incompatíveis com a legislação vigente.

4.2. A **CONTRATADA** compromete-se a informar imediatamente a **ELETROBRAS** se quaisquer eventos subsequentes fizerem com que as informações ou declarações aqui relatadas deixem de ser precisas ou completas.

5. Rescisão

5.1. O Representante/Fornecedor de Bens ou Serviços declara que concorda que as Empresas Eletrobras poderão suspender, por tempo determinado, ou rescindir sua contratação mediante aviso por escrito, após a realização do processo administrativo preceituado nos arts. 88 e 97 do Regulamento, respectivamente, caso entendam que o representante violou o Programa ou violará, ou se for processado por violação de uma Lei Anticorrupção.

A data de assinatura desta declaração é a data da assinatura eletrônica/digital pelo Representante Legal da **CONTRATADA**, conforme protocolo de assinaturas anexo.

I. Glossary

Added Value (VA): It refers to the marginal outcome from the difference between the Capitalization Scenario and the Current Scenario in the present value for each cash generating unit (CGU).

ANEEL: National Agency of Electric Energy, independent authority linked to the Ministry of Mines and Energy, was created to regulate the Brazilian electricity sector.

BASE DATE: Refers to the Base Date considered to determine the Net Present Value, i.e., January 1, 2022.

Capitalization Scenario or Capitalization Flow: Cash flow after the capitalization of Eletrobras as determined by Law 14.182/2021, which replaces the current concession contracts with 30-year concession contracts, considering the power plants as independent energy producers.

Cash Generating Unit (CGU): Refers to the smallest identifiable group of assets that generate commercial returns. For this report, it refers to the analysis of each power plant (HPP, SHP) of the scope of analysis.

CPC: Abbreviation for Accounting Pronouncements Committee. Conceived from the union of efforts and communion of different accounting entities to ensure the international convergence of accounting standards.

CSLL: "Social Contribution on Net Income", federal income tax (after calculating the operating income).

Current Scenario or Current Flow: Cash flow considering the concession contracts under current legislation.

DECOMP: Model used to determine the power generation dispatch that minimizes the total operating cost over the planning period.

DESSEM: Model for scheduling the operation of hydrothermal systems at an interval up to half an hour, and a horizon of up to two weeks.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

EBIT: Acronym for "Earnings Before Interest and Taxes". Refers to the profit before financial charges (interest payments) and taxes are discounted, an indicator that reflects the company's income before interests and tax deductions.

EBITDA: Acronym for "Earnings Before Interest, Taxes, Depreciation, and Amortization".

EBT: Acronym for "Earnings Before Tax", which corresponds to the difference between revenues and expenses, excluding taxes.

FCFF: Acronym for "Free Cash Flow to Firm". Refers to a measure of financial performance that indicates the cash generated after costs, taxes, and investments. It is commonly used for calculating project profitability without leverage.

Financial Model: Financial-economic model produced by Upside to determine the Total Added Value (**VA_{total}**) and the Grant Bonus.

Fortran: programming language designed to solve various types of equations and mathematical operations.

Forward Price: Energy's price for future delivery, which depends on the purchased volume, on the price of the contract, and on the buyers/sellers' strategy.

GF: Physical guarantee

Grant bonus: Portion of the total Added Value allocated: (i) 50% deducted from required indemnities and revitalizations to the Federal Government, with payment in a single installment; and (ii) 50% to the Energy Development Account (CDE), with payment flow to be defined by the Energy Policy National Council (CNPE).

GSF: "Generating Scaling Factor", Refers to the ratio between the volume of energy generated by the MRE power plants and the total Physical Guarantee of these power plants, which is calculated monthly.

Hedge: instrument to secure prices of certain assets for future purchase or sale. Thus, the risks offered by fluctuations in the financial market are reduced. In this regard, the company can ensure the amount it wishes to pay or receive on a certain date.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

IR: "Income Tax", federal income tax (after calculating the operating income).

IRR: "Internal Rate of Return", based on the annual free cash flow balance (investments + pre-operating expenses – net income), less depreciation and cash inflows and outflows from financing.

IS: Income Statement for the Year.

Marginal Cash Flow: Refers to the difference, for each Cash Generating Unit (CGU), between the flow from the new concession contracts defined by Law 14182/2021 (Capitalization Scenario) and the pre-capitalization cash flow (i.e., before the effects of Law 14182/2021 or Current Scenario). The marginal cash flow discounted by the discount rate to be defined (WACC) will result in the Added Value for each CGU.

Matlab: high-performance interactive software aimed at numerical calculation.

MM: Million.

MRE: Portuguese Acronym for “Mecanismo de Realocação de Energia”, meaning **"**Energy Reallocation Mechanism", refers to the mechanism for sharing the risks associated with optimizing electricity resources of the National Interconnected System – SIN.

Neural Network: According to the definition presented in the public website from the Institute of Mathematical and Computational Science from the University of São Paulo (ICMC-USP), artificial neural networks are computational techniques that uses a mathematical model inspired by the intelligent organism’s neural structure that acquire knowledge through experience. Available at: <https://sites.icmc.usp.br/andre/research/neural/#intro>. Accessed on: 12/23/2021.

Newave: Model that estimates the future cost of energy and translates to DECOMP the impact of the use of water stored in the reservoirs.

NPV: "Net Present Value" is the sum of future free cash flows and a residual value, brought to the present value at a certain discount rate.

O&M: Operation and maintenance.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

ONS: “Operador Nacional do Sistema” [National System Operator], a Brazilian private non-profit entity in charge of coordinating and controlling the operation of the electricity generation and transmission facilities of the National Interconnected System.

OPEX: "Operational Expenditure". Designates the amount that shall be expended to maintain the capital assets of a certain company in operation, namely equipment and installations.

PIE: “Produtor Independente de Energia” [Independent Energy Producer], a regime under which revenue is obtained through contracts in a Free Trading Environment.

PIS/COFINS: "Social Integration Program and Contribution to Financing Social Security", federal taxes levied on gross revenue in the non-cumulative regime.

PLD: “Difference Settlement Price” (spot price), used to assign a value to the volumes of energy settled through the Electric Energy Trading Chamber–CCEE (difference between electricity contracted and electricity consumed or generated).

P-value: The p-value is defined as the probability of observing a test statistic value greater than or equal to the one actually found. The naming conventions P10, P25, P50, P75 and P90 used in this Report indicate this level of probability at 10%, 25%, 50%, 75% and 90% generally applied at a level of NPV.

REH: “Ratifying Resolution”, public consultation document published by ANEEL.

Relevant fact: Refers to the document published by Eletrobras on February 23, 2021, which comments on assumptions considered and results

R-Squared: A statistical measure that determines the proximity of the data to the fitted regression line – also known as the “coefficient of determination”, or the explanatory degree of a linear regression. The closer to 1, the better the statistical fit to the variable explained.

Total Added Value (VA_{total}): It refers to the sum of each added value for every power plant that is object of this Report analysis. It is discounted from the value the indemnities of Tucuruí HPP and Curuá-Una HPP.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Variable: Critical Variables are those that, when modified, produce significant behavior and performance shifts on the project. Consequently, they affect the project's Internal Return Rate (IRR), Shareholder's Return (Shareholder IRR), and so on. Non-critical Variables are those that do not significantly affect the results from the project. It can be used, though, as flags for other events that might influence the project's result.

WACC: Acronym for "Weighted Average Cost of Capital". It represents the discount rate to be used to determine the discounted cash flow available to the firm. Determined by the opportunity cost of shareholders and the cost of third-party capital, weighted by their amounts.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

II. Disclaimer

Upside Finanças Corporativas Ltda. ("Upside") was contracted by Centrais Elétricas Brasileiras S.A. - Eletrobras ("Eletrobras" or "Company") to provide specialized services to support the decision of the senior management, which aims to define the grant amount in the possible privatization process of the Company, establishing scenarios, evaluating the positive and negative impacts related to the submission of Provisional Measure (MP) 1031/21 by the Ministry of Mines and Energy (MME) to the House of Representatives, as well as Relevant Fact published by Eletrobras on 02/23/2021, and possible regulatory alternatives, as provided for in the Auction Notice of Electronic Auction DSS 10/2021 ("Auction Notice") and its Exhibits (Exhibit I of this Report). This Economic and Financial Study Report - Calculation of the Grant Amount ("Report" or "Study") with the data forward by CNPE for the definition of the granting aggregated was prepared by Upside based on information and assumptions provided by the Company, as well as on public information and critical variables converged by Upside and Eletrobras ("Information"), without Upside's independent verification of such Information.

Upside used the exact Information presented or discussed with the Company and, in preparing the Report, it was considered that the Information reflects the Company's most accurate parameters and assessment of the business and the markets in which it operates. Upside adopted that the Information is true, accurate, complete, and sufficient and that no other information that could be relevant in the scope of the work was not made available to Upside; therefore, no evaluation, verification, or inference on the Information was performed, so Upside undertakes no responsibility for independent investigations into the Information.

This Report does not represent a proposal, request, advice, or recommendation from Upside about any investment or divestment decision, of any nature, present, or future ("Transaction").

Upside's analysis does not include legal, contractual, environmental, land, corporate, tax, accounting, fiscal, and/or technical audit services; thus, Upside will only be responsible for the advisory services provided within its scope of work, as

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

established in the Auction Notice (Exhibit I of this Report), not including the verification and criticism of any assumptions and other legal, contractual, environmental, land, corporate, engineering, tax, accounting, fiscal and/or technical data not expressly contracted. Eletrobras shall carry out its own independent analysis of the aspects not expressly contracted, directly or through specialized consultants.

Considering the new publication of data from the competent authority through CNPE Resolution 30 of December 21, 2021, this Report was elaborated as product 5.b) described on the Terms of Reference from the Auction Notice (Exhibit I of this Report), which is: *"Final report that must evaluate, in addition to the abovementioned topics, the data that will be sent by the competent authority to define the added value to the grants of the new concession contracts under the terms of current legislation and regulations"*. Therefore, this Report consists on the last product of the services, regardless of any event on the Eletrobras privatization process that may occur after the submission of this Report, as well as regardless of the impacts on the analysis herein developed.

The base date used on this Report is January 1st, 2022 ("BASE DATE") and the Report was concluded on January 3, 2022.. This Report is based on Information made available to Upside until the date of its conclusion, considering the market, economic, and other conditions as they were presented and how they could be evaluated up to the completion date. Although future events and other outcomes may affect the conclusions presented in this Report, Upside has no obligation to update, revise, rectify, or revoke this Study, in whole or in part, because of any development or information made available after the completion date or for any other reason or subsequent event, unless expressly mentioned in the contract.

In addition, this Study may contain forward-looking statements, forecasts, estimates, and projections ("Forward-Looking Statements"). Upside does not undertake any responsibility regarding the Forward-Looking Statements contained in this Report, nor regarding their correctness, accuracy, completeness, and sufficiency, as well as the format they present. The financial calculations contained in this Report themselves may not result in an accurate sum due to rounding.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

As the analysis and figures are based on forecasts of future income provided by or which data were provided by the Company, they do not necessarily suggest the achievement of actual financial income, which may be significantly more or less favorable than those indicated in the Report. If any of the premises and related variables listed does not materialize or if, in any case, the Information proves to be incorrect, incomplete, insufficient, or inaccurate, the conclusions of this Report may change substantially. Considering that these analyses are intrinsically and inevitably subject to uncertainties, being based on various events and factors beyond our control and the control of the Company, Upside will not be held liable if future incomes are substantially different from those incomes presented in this Report.

All financial projections that have been and will be made for Eletrobras and made available by Upside have been or will be prepared in good faith, based on reasonably acceptable assumptions.

Although this Report contains a risk analysis, the treatment of identified risks or any suggestion, recommendation, assessment or critique of the risk mitigation strategy is not included in the scope of Upside, since they are not provided for in the Auction Notice (Exhibit I of this Report). The Company has its own risk analysis and management strategy, to which Upside did not have access, Upside performed its analysis for the sole purpose of supporting the analysis of attractiveness scenarios by Eletrobras. Moreover, Upside does not intend to exhaust the risks associated with Eletrobras' privatization process in this Report, but merely to identify them and, when necessary, consider them in the economic and financial modeling covered in this Study. Accordingly, the Company should base its decisions on its own risk analysis, or with the assistance of specialized third-party consultants. Therefore, under the terms and limitations of the Auction Notice (Exhibit I of this Report), Upside shall not be responsible for any treatment, management or mitigation of risks, which should be performed by Eletrobras.

Furthermore, the Auction Notice (Exhibit I of this Report) also does not provide for any definition, recommendation, suggestion, evaluation or critique of the energy trading strategy, which was defined and will be implemented by Eletrobras. In this regard, Upside used the energy trading guidelines determined by Eletrobras, without

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

conducting any kind of gaging, critique or review of these guidelines, and the projections made are not intended to replicate specific trading strategies or subjective perceptions/expectations, which are impossible to predict. That having been stated, the modeling performed by Upside sought to estimate the value of energy trading based on concrete data available up to the BASE DATE. Hence, Upside is not responsible for the energy trading strategy adopted by Eletrobras.

It is important to note that, in the December 15th, 2021 Plenary Session of the Brazilian Federal Court of Auditors, available at the Official YouTube Channel of the referred Court, (https://www.youtube.com/watch?v=Tq2chFMol5U, accessed in 12/16/2021), in oral manifestation regarding case TC008.845/2018-2, a procedure with the objective of *"monitoring Eletrobras privatization, its sectorial impacts, for the consumer and for the Union, considering even the scenario in which the privatization is not carried out",* Minister Benjamin Zymler exposed the impossibility to predict what shall happen in a 30 years' time frame – term of extension of the Eletrobras grants.

During his speech, the Minister highlighted that "*any study* [of economic-financial modeling, notably on the privatization of Eletrobras] *is not a mathematical equation in which the aim is to verify the value of the variable x*". Thus, it is not possible that the results of the economic-financial modeling are exact and precise, even when the studies use "*sophisticated methodologies*". That is because the studies use mathematical models that *"assume that the future is a statistic projection of the past"*, i.e., "*are probabilistic methods that aim the future*", but yet, are subject to failure – not due to lack of diligence or knowledge of the analysts, but rather because of the limitation of the mathematical instruments available.

Thus, as recognized by Minister Benjamin Zymler, there is no instrument capable of predicting the future energy prices – which is the main variable of this Study. To conduct the necessary price projections, Upside has included in its Technical Team renowned specialists of the Brazilian electric sector, as listed in section III.2.2 – Qualifications of Specialist Professionals. Moreover, Upside has used the best methodology currently available.

III. Initial Considerations

This Study is part of the process of Eletrobras' privatization. On February 23, 2021, the federal government delivered to the National Congress the Provisional Measure (MP) 1031/2021, to allow the National Bank for Economic and Social Development (BNDES) to proceed with studies that would structure the capitalization of Eletrobras.

After the regular procedure in both Houses of the National Congress, the House of Representatives approved Provisional Measure (MP) 1031/2021 on June 21, 2021, which was submitted for approval of the Brazilian Presidency. On July 12, 2021, such Provisional Measure was converted into Law 14182/2021, with vetoes by the Brazilian Presidency.

In the period between the publication of Provisional Measure 1031/2021 and the publication of Law 14182/2021, Eletrobras released the Auction Notice (Exhibit I of this Report) of Electronic Auction DSS 10/2021 ("Auction Notice") for *"hiring specialized services to support the decision of the senior management, which aims to define the value of the grant in the possible privatization process of the Company, establishing scenarios, evaluating the positive and negative impacts related to the submission of Provisional Measure 1031/21 by the Ministry of Mines and Energy (MME) to the House of Representatives, as well as the relevant fact published by Eletrobras on 02/23/2021, and possible regulatory alternatives, according to the conditions established in the Auction Notice"*.

In this context, according to Contract No. ECE-DSS-4588/2021 ("Contract"), entered into on July 7, 2021, Upside was hired by Eletrobras to calculate the value of the grant in the Company's privatization process, in support of the decision of the high management of Eletrobras.

That said, this chapter will expose the context of the work that resulted in this Report.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

III.1. Justification of the Works

Initially, it is observed that according to Law 14182/2021, the privatization of Eletrobras is subject to the granting of new generation concessions and attributes to the National Energy Policy Council (CNPE), chaired by the Minister of State for Mines and Energy (MME), the competence to calculate the Total Added Value and the consequent grant bonus.

Indeed, at an extraordinary meeting held on August 31, 2021, the CNPE determined, under CNPE Resolution 15/2021, that the grant bonus to be paid to the Federal Government will be R$ 23.2 billion. At the same time, it established that R$ 29.8 billion of the Total Added Value would be allocated to the Account for Energy Development (CDE, Portuguese acronym for “Conta de Desenvolvimento Energético”), as determined by Law 14182/2021. Subsequently, CNPE Resolution No. 30, of December 21, 2021, amended CNPE Resolution No. 15, changing to R$ 25.3 billion the grant bonus to be paid to the Federal Government, in addition to R$ 32.1 billion of the Total Added Value allocated to the CDE.

Nonetheless, while the calculation had not yet been determined, Eletrobras opted for an independent analysis through a specialized consulting firm for this scope, to add knowledge and experience so a better analysis of the capitalization proposal could be made, in order to support the Proposal of the Eletrobras Management Team that will be submitted to the General Meeting of Shareholders.

This hiring is justified because, as described in the Auction Notice (Exhibit I of this Report), good Corporate Governance is measured by the four pillars Corporate Responsibility, Accountability, Equity, and Transparency. Thus, the company must conduct its business diligently to perpetuate itself and must ensure its economic and financial viability, reduce negative externalities and increase the positive externalities of its business and transactions, considering, in its business model, the various capitals (financial, human, intellectual, etc.) of the company in the short, medium, and long term.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

It is noteworthy that, despite the BNDES having the competence to execute and monitor the privatization process (art. 1, Paragraph 3 of Law 14182/2021), Eletrobras is responsible for contracting the specialized technical services necessary to carry out the issue and public offering of shares, as well as adopting the other measures necessary to implement the capitalization, according to art. 1, paragraph 1, items III and IV, of CPPI Resolution 176, of April 27, 2021.

Therefore, executing the economic-financial modeling of the premises and methodology approved by Eletrobras is an adequate measure to the current legislation, as well as the Company diligence duties. That said, the history and main experiences of the consultancy advising Eletrobras and which prepared this Report are highlighted below.

III.2. About Upside

Upside was founded in June 2000 by Humberto Bizerril Gargiulo, previously an executive at large national and international financial institutions such as Unibanco, Banco Santander, Citibank, Lloyds, and Chase.

Upside was a pioneer in advising the largest agents in the electricity sector and has in its track record operations of great relevance, such as the funding and advisory services at auction for the Belo Monte HPP (11,233.1 MW), Substations and Transmission Lines of the Complex Madeira River Hydroelectric (2,300 Km), First Project Finance with China Development Bank in the country and Petrobras' Logum pipeline.

Since its foundation, Upside independently advises the most diverse investment decisions in the infrastructure area, promoting debt and equity structuring solutions with national and international sources.

During its more than 20 years of operation, Upside has already provided services to the main companies in the infrastructure sector, such as Ecovix, Duke Energy, Planova, CPFL, Eletronorte, Eletrosul, BR Distribuidora, Desenvix (currently

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Stratkraft Energias Renováveis), CEEE, Norte Energia, Chesf, Furnas, Sinop, State Grid, Engie Camargo Correia, GE.

With remarkable expertise in advising on Public Concession Auctions, Economic and Financial Analysis, Business Plans, Corporate and Structured Finance, Due Diligence, Project Finance, Issue of Technical Reports, structuring of public-private partnerships, Mergers and Acquisitions (M&A) and Valuation, Upside has a position with the largest banks in the sector in the Anbima Ranking of Project Financing from 2011 to 2019, occupying the 1st place as an Independent Financial Advisor.

In addition to being a pioneer in advising large agents in the infrastructure sector throughout the country, Upside advised, in total, R$ 11.76 billion in Valuation and M&A. Added to the other scopes of the company's work, the value of projects advised exceeds R$ 102.9 billion, divided into 135 transactions.

Upside is committed to the highest standards of integrity and business ethics and, convinced that the best path requires good practices and corporate governance, has invested in hiring a Compliance Officer and in the following management and internal control tools: Code of Conduct, Ethics Channel, Due Diligence of Business Partners, and Training in Business Ethics - Compliance.

III.2.1. Main Company Experiences

Table 1 below lists Upside's main experiences throughout its twenty-one (21) years of operation.

Table 1: Upside's Main Experiences

Contracting Party	Project	Description	Transaction Value	Year
Furnas	Tijoá Participações	Economic and financial evaluation of Tijoá Energia.	CONFIDENTIAL	2020
CEEE-GT	Lot 6 of the Transmission Auction (TA) ANEEL 001/2020	Financial advisory service at auction for granting a government service concession through a bidding process in the form of an auction.	191,950,000.00	2020
CEEPower and Brafer	Litoral Sul Transmissora de Energia (LSTE)	M&A advisory on the sale of LSTE to EDP Energias Renováveis.	405,000,000.00	2019

III.2.2. Qualifications of Specialist Professionals

In alphabetical order:

Alexandre Akira Kariatsumari – Graduated in Civil Engineering from the State University of Campinas (Unicamp), graduating in MBA EAD Finance at Foundation for Research and Development in Administration, Accounting and Economics (Fundace) at FEA-RP/USP. He has experience in fixed assets valuation for Purchase Price Allocation (PPA), Impairment test, management and accounting purposes. He is currently a financial modeling analyst at Upside, assisting in the economic and financial valuation, fundraising processes and technical reports.

Edinaldo Paulo Tenório V. do Amaral – Graduated in Law from the Federal University of Pernambuco (UFPE), he took a course in Project Finance from the Brazilian Association of Infrastructure and Basic Industries (Abdib). He is currently a partner at Amaral, Paes de Andrade e Figueirêdo Advogados, and is specialized in public law, with experience in Administrative, Constitutional, Economic, and Regulatory Law. His expertise includes the structuring of concession projects and legal advisory for companies participating in public competitions.

Edvaldo Santana – Qualified Professional of the Execution Team. Ph.D. in Production Engineering from the Federal University of Santa Catarina. Full Professor at UFSC from 1994 to 2013. Market Superintendent at ANEEL between 2000 and 2005. Officer at ANEEL for two terms of office between 2005 and 2013. CEO of ABRACE between 2016 and 2019. Vice President of Strategies and New Business at

Electra Energy until March 2020. Lattes Curriculum: http://lattes.cnpq.br/7860414535351286

Gustavo Oshiro Henriques - Qualified Professional of the Execution Team. He has over ten (10) years of experience, and his curriculum includes activities related to corporate finance in Brazil, such as advisory, structuring, and fundraising via banks and capital markets, from which the operations of State Grid Brazil Holding and HPP Sinop stands out. Bachelor's in Economics from the University of São Paulo (USP), he has experience developing economic and financial models and tools for Project Finance, project evaluation and analysis. He coordinated the preparation of appraisal reports, financial due diligence, sectorial and macroeconomic technical notes. He led the participation in financial advisory services for infrastructure concession auctions.

Humberto Bizerril Gargiulo - Qualified Leadership Professional. With more than forty (40) years of experience, he has in his resumé, in the last five (5) years, activities related to Valuation of the following energy companies in Brazil: HPP Sinop, Transmissora Porto Alegrense de Energia (TPAE), Transmissora Delmiro Gouveia (TDG), Extremoz Transmissora Do Nordeste (ETN), Pantanal Transmissão S.A., Firminópolis Transmissão S.A., Caldas Novas Transmissão S.A., and Paineira Participações e Empreendimentos Ltda. (according to its shareholding in SHPs, WPPs, and HPPs). Prior to the last five (5) years, the professional coordinated the Valuation service of Rio Grande Estaleiro (for Ecovix), of Linha Verde Transmissora de Energia S.A. (LVTE), three (3) wind projects (for Cemig), TPP Barcarena (for Eletronorte), and confidential electric energy generation projects (for CPFL). Post-Graduated in Management Development by PDG and founder of Upside, he has experience in finance, accounting, and risk analysis. Bachelor's degree in law from the University of São Paulo, he has worked with Treasury, Capital Markets, and Corporate Finance in global financial groups such as Citibank, Lloyds, and Chase. Former Officer of Corporate Products at Unibanco, Executive Director of Structured Finance at Banco Santander and visiting speaker at IBMEC-SP and FGV-SP.

Leontina Pinto – Electrical Engineer from the Federal University of Rio de Janeiro – UFRJ (1979), Master's in Systems Engineering in Optimization (COPPE-UFRJ, 1981), and Ph.D. in Applied Mathematics (IM/UFRJ, 1986). She was a

Classification: Confidential

researcher at the Centro de Pesquisas de Energia Elétrica CEPEL, a professor at COPPE/UFRJ and PUC/RJ. She is currently Executive Officer of Engenho Pesquisa, Desenvolvimento e Consultoria. With over 30 years of experience in the electric energy market, the expert has more than 300 published works. Among the main subjects of research are: system planning and reliability, optimal management of energy systems, the study of geomagnetic phenomena, models for risk analysis, models for forecasting climate scenarios, models for forecasting futures market, and energy trading scenarios. Lattes Curriculum: http://lattes.cnpq.br/9577413795829532

Lucas Pimentel – Lawyer, specialized in energy law, focused on acting on structuring electric energy generation projects and consulting advisory in energy law and regulatory law. Graduated in Law at the Federal University of Pernambuco. Post-Graduate at LLM in Business Law at Getulio Vargas Foundation – FGV. Former Coordinator of the Energy Law Commission of the Escola Superior de Advocacia de Pernambuco – ESA/PE. Secretary for Regulatory Affairs at the National Institute of Clean Energy – INEL.

Luiz Guilherme G. S. Hoelz - Bachelor of Business Administration, with a specialization in Finance, from Northeastern University, Boston, USA. He started his career at Itaú Unibanco in São Paulo and during his time in the United States he worked as a Trading Coordinator at BNY Mellon and as a Credit Research Analyst at the asset manager Gratham, Mayo, van Otterloo & Co. Today he is an Associate Financial Analyst at Upside, working with Economic and Financial Valuation, M&As and Debt Capital Markets.

III.3. Terms and Conditions of Hiring

Eletrobras published the Auction Notice (Exhibit I of this Report) for contracting specialized services aiming to define the grant value in the possible privatization process, to assist the Company's senior management in its decision-making. After winning the bid, Upside ("Contracted Party") entered into, on July 7, 2021, the contract with Eletrobras ("Contracting Party"). Therefore, the main terms and conditions of this contract will be explained below.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

III.3.1. Terms and Contractual Obligations

Although the Contract was entered into on July 7, 2021, there was a preceding condition linking the Contract's validity to the conversion of Provisional Measure 1031/2021 into law, according to clauses Three - Deadlines and Twenty - Condition Precedent of the Contract. Consequently, the term of effectiveness of the Contract began on July 12, 2021, the date of conversion of Provisional Measure 1031/2021 into Law 14182/2021.

Regarding the execution period, the Contract established ten (10) weeks, and the first meeting between Upside and Eletrobras, in which Eletrobras provided Upside with the operational guidelines for the work, took place on July 20, 2021. Therefore, in the week of July 12 to 16th, 2021, the provision of services had not yet started by the Contracting Party, thus the counting of the execution period started in the following week - from July 19 to 23rd, 2021.

Additionally, both parties have obligations arising from the contractual relationship that must be observed for the correct progress of the work and compliance with the established deadlines. Thus, according to Clause Nineteen of the Contract, Eletrobras' obligations are:

- 19.1. Upon faithful compliance with the agreed conditions, **ELETROBRAS** shall pay the **CONTRACTED PARTY** for the execution of the service.
- 19.2. Facilitate, in a timely manner for the **CONTRACTED PARTY**, the access to documents and/or information available which eventually becomes necessary for the execution of the services.
- 19.3. Provide the **CONTRACTED PARTY's** physical access to **ELETROBRAS** facilities.
- 19.4. Guide the **CONTRACTED PARTY** regarding the indication of possible sources of information which eventually become necessary for the execution of the service.
- 19.5. Appoint a responsible employee to monitor the execution of the Contract.
- 19.6. Notify the **CONTRACTED PARTY** about any irregularities in the execution of the subject matter.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

III.3.1.1. Contractual addendum

After having elapsed the ten (10) weeks provided for in the term of execution of the services, the works had not yet been completed, due to delays arising from the supervening facts mentioned below:

1. Changes in legislative provisions: Following the conversion of PM 1031/2021 into Law 14182/2021, which occurred after the publication of the Auction Notice (Exhibit I of this Report) and the signing of the Agreement, the legal text applicable to the economic and financial model was substantially changed and, therefore, the scenario constructed in Law 14182/2021 added new specificities and a greater level of complexity in the assumptions. Among them, we can mention the GSF and PLD, determined by a mathematical optimization and prediction model in a complex calculation, which can exceed 24 hours to be updated, involving the forecast of several scenarios of hydrology, solar radiation, and anemometric forecast for the entire electricity system and the consequent optimization of variables. The extensive change in the most elementary assumptions of the optimization model required the adoption of a more fundamentalist analysis of the assumptions of the optimization model – and the consequent customization to the new values provided. It is worth noting that the results generated, considering the significant changes in the assumptions, are not systematically simulated as a simple or routine update. The coherence of the scenarios needs to be recursively analyzed considering the feasibility of the new configurations proposed to the system.

2. Water crisis: The current water crisis is considered the worst in the last 91 years[1] ; it has already impacted the 2022 Gross Domestic Product (GDP)

[1] RIBEIRO, Vitor. **País vive maior crise hídrica dos últimos 91 anos, diz ministério**. 2021. Retrieved from Agência Brasil. < https://bityli.com/9okQ2l > Accessed on: September 30,2021.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

growth forecasts and is putting pressure on inflation[2]. The time frame for the end of this crisis is uncertain. Therefore, there is a demand to prepare many more scenarios than initially foreseen, and these are not usual scenarios, but rather ones capable of altering the nation's energy planning. At the time the Auction Notice (Exhibit I of this Report) was issued, rainfall expectations generated concern with the reservoir levels; however, there was still no concrete scenario of the severity and lack of predictability that this fact would take, the effects of which are still difficult to measure.

3. Publication of CNPE results and discussion of assumptions: Calculating the amount of the concession granting is a responsibility of the CNPE, and Upside was engaged to conduct an independent analysis to support Eletrobras' decision-making process. It is worth noting that the duration of the services depends on the publication of these assumptions, as they are essential for the execution of the services. Despite the services having started on July 19, 2021, the publication of the initial grant amounts and physical guarantees only occurred another six (6) weeks later, on September 1, 2021. After this publication, the results of the services provided during these six (6) weeks needed to be revised. This is because such publication once again changed the deck of assumptions of the predictive economic and financial models of hydrological risk, or Generation Scaling Factor (GSF) and Difference Settlement Price (PLD), which needed to be run and processed again. Subsequently, the published amounts needed to be critiqued and analyzed independently, which led to new runs of financial models. Also, throughout the services, several meetings were held to discuss assumptions and, even after the ten (10) weeks of services initially planned, the aforementioned discussion had not ended. Lastly, in October 2021, CNPE was reviewing the calculations to publish new values and assumptions that would

[2] VIECELI, Leonardo. **Piora da crise hídrica impacta planos de empresas e ameaça economia até 2022**. Retrieved from Folha de S.Paulo. < https://bityli.com/ATFjm > Accessed on: September 30,2021.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

substantiate an Analysis of Advantages to be elaborated by the Contracted Party. This analysis, however, would not generate new sensitivities.

Considering the foregoing factors, in a request dated October 11, 2021, the Contracted Party requested an increase in the schedule time and fees stemming from the extension of the contractual term, with the following requests:

1. Extension of the contractual execution period for another eight (8) weeks and, in addition, another three (3) weeks after Eletrobras makes available the final CNPE data for the preparation and approval of the sensitivity analysis, i.e., 110% (one hundred and ten percent), considering the delay in the initially planned schedule, resulting from supervening facts, and the need to analyze the assumptions that are yet to be published by the CNPE; and

2. Increase in the contract value by 22.79% (twenty-two and seventy-nine hundredths percent), considering the actual increase in the amount of man-hours initially estimated, resulting from the events mentioned above, i.e., from factors exogenous to the Contracted Party's will.

The request was admitted and, on December 7, 2021, the Contracting Party and the Contracted Party entered into a contractual amendment establishing the schedule and price conditions listed above, in addition to extending the term of the Agreement for three (3) months, ending March 09, 2021.

III.3.2. Scope of Work

At first, it is highlighted that Upside's scope of work, according to the Auction Notice (Exhibit I of this Report), consists of supporting the decision of the high management of Eletrobras, aiming to support the Company in the discussions on the value of the grant in the possible privatization process.

It is important to emphasize that, as stated in section III.1 – Justification of the Works, the calculations of the grants were determined by CNPE, chaired by the MME,

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

firstly at an extraordinary meeting held on August 31, 2021. Later they were reviewed and altered on December 21, 2021.

In these terms, the service provided by Upside consists of an independent analysis of the Contracting Party's cash flows, considering the current legislation related to the privatization process. The purpose is to provide technical support to Eletrobras management concerning economic and financial aspects so that the Company has greater reliability in the analysis of the calculation determined by CNPE, as well as to promote discussions related to said calculation, from a rational perspective and regarding the assumptions considered.

This Report presents, besides the content of the reports planned in the Public Notice (Appendix 1 from this Report) that were already forwarded to Eletrobras, the assessment of the data sent from CNPE for determining the aggregated value of the grants of the new concession contracts. They were defined on the terms of the legislation and regulation in effect. The data is going to be considered for the Analysis of the Advantages.

III.3.2.1. Auction Notice Guidelines

As established in the Auction Notice (Exhibit I of this Report), all methodologies, assumptions and variables used and necessary for the development of the services, which will be established based on the applicable legislation and regulations in force, as well as public information (not including private information), will be analised by Eletrobras, including, without limitation: (i) physical guarantee of hydroelectric power plants; (ii) hedge for hydrological risk (GSF) mitigation in the scenario of independent production exploitation regime; (iii) electrical losses; (iv) energy price; (v) quota revenue; (vi) discount rate; (vii) risk premium; (viii) taxes; and (ix) business risk analysis.

According to the Auction Notice (Exhibit I of this Report), the projection of prices for energy commercialization will be based on market research for the concession period, along with a methodology commonly used in the market to project long-term prices.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Furthermore, according to instructions in the Auction Notice (Exhibit I of this Report), the calculation of the new Physical Guarantee of the hydroelectric power plants involved in the process will be developed using the methodology established in the current legislation, considering the base case (decks of the computational models involved in the calculation) and the specific assumptions considered by the Energy Research Company (EPE, from the Portuguese “Empresa de Pesquisa Energética”) for the calculation, both subject to the availability of public information (not private). It is noteworthy that, in the provision of services, the legislation and regulations in force throughout the Contract term will be considered.

In conclusion, as extracted from the Auction Notice (Exhibit I of this Report), the products for the provision of services are described in the following table:

Table 2: Products of the Provision of Services

ITEM	PRODUCT
1	Economic and financial model, prepared in Excel, unlocked, without hidden tabs, and with all available formulas, for calculating the grant amount, quantifying the financial impact using the discounted cash flow methodology. Input data are defined under Provisional Measure 1031/2021 and the relevant fact published by Eletrobras on 02/23/2021. Since these data are subject to change, the model should allow for appropriate variations. The model should predict, by power plant, the discounted cash flow of the current scenario of exploration by quota regime and independent production regime.
2	Tutorial for using and updating the economic and financial model for calculating the grant value of item 1.
3	A complete report detailing the assumptions and methodologies used (which must take into account the terms of current legislation and regulations applicable to the case) to prepare the economic and financial model. In Portuguese and English.
4	Report with the analysis of attractiveness scenarios for Eletrobras considering the subject matter of Provisional Measure 1031/2021, observing the costs, risks (taking into account the applicable legislation in force, such as but not limited to ANA, ANEEL, etc.) and benefits associated with the change to free market, quantifying the financial impact using the discounted cash flow methodology. Explain the critical variables that influence the advantage, or not, under the change of operating regime for independent production, from the point of view of Eletrobras. In Portuguese and English.

5	a) Final revised model provided in product 1, considering the legislation, regulations, and final regulations issued on capitalization modeling. b) Final report that must evaluate, in addition to the abovementioned topics, the data that will be sent by the competent authority to define the Added Value to the grants of the new concession contracts under the terms of current legislation and regulations. In Portuguese and English.
6	Eight (8) executive meetings, with the preparation of specific material, within the scope of the previous items, with members of the Executive Board and Management Directors.

Source: Eletrobras Auction Notice (Exhibit I of this Report).

III.3.2.2. Definition of Power Plants

According to art. 1 of Law 14182/2021, the privatization of Eletrobras is subject to the granting of new concessions for Concession Contracts 007/2004-ANEEL-Eletronorte and 004/2004-ANEEL/Furnas. In addition, the Federal Government is authorized to provide new concession grants for concessions under the ownership or control, directly or indirectly, of Eletrobras, which have been extended under the terms of art. 1 of Law 12783/2013 (art. 2, item I, of Law 14182/2021), as well as for the Sobradinho HPP (art. 2, item II, of Law 14182/2021) and Itumbiara HPP (art. 2, item III, of Law 14182/2021).

As for the concessions mentioned in the articles above, it should be noted that the Concession Contract 007/2004-ANEEL-Eletronorte, of November 12, 2004, grants Centrais Elétricas do Norte do Brasil S.A. – Eletronorte the exploitation of the hydroelectric potential of Tucuruí power plant and, through the Second Amendment to Concession Contract 007/2004-ANEEL-Eletronorte, of April 10, 2006, the Curuá-Una plant was included in this contract.

Also, pursuant to Concession Contract 004/2004-ANEEL-Furnas, dated on November 12, 2004, the state-owned company Furnas – Centrais Elétricas S.A. is the concessionaire of the Corumbá I, Estreito, Funil – RJ, Furnas, Marimbondo, Porto Colômbia, Itumbiara, and Mascarenhas de Moraes power plants.

Regarding the concession grants extended under Law 12783/2013, it is noted that the exploitation of the Coaracy Nunes power plant was granted to Eletronorte by

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Concession Contract 002/2012-ANEEL-Eletronorte, dated on May 7, 2012, and extended under the terms of the First Amendment 002/2012-ANEEL-Eletronorte, signed on December 4, 2012.

Also, regarding the grants of extended concessions, the Concession Contract 006/2004-ANEEL-CHESF, of November 12, 2004, grants Companhia Hidroelétrica do São Francisco - CHESF to explore the electric energy generation of Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Sobradinho, Funil, and Pedra.

Regarding the subject, the First Amendment to the Concession Contract 006/2004-ANEEL-CHESF, signed on December 4, 2012, extended the concession of the power plants of Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Funil, and Pedra, according to Provisional Measure (MP) 579/2012 – later converted into Law 12783/2013. The concession of HPP Sobradinho, in turn, was extended under the Third Amendment to the Concession Contract 006/2004/ANEEL/CHESF, of December 16, 2015, based on Law 12783/2013.

Therefore, the power plants that will be considered in this Study are: Boa Esperança (CHESF), Apolônio Sales (CHESF), Paulo Afonso I (CHESF), Paulo Afonso II (CHESF), Paulo Afonso III (CHESF), Paulo Afonso IV (CHESF), Luiz Gonzaga (CHESF), Xingó (CHESF), Sobradinho (CHESF), Funil (CHESF), Pedra (CHESF), Coaracy Nunes (Eletronorte), Tucuruí (Eletronorte), Curuá-Una (Eletronorte), Corumbá I (Furnas), Estreito (Furnas), Funil – RJ (Furnas), Furnas (Furnas), Marimbondo (Furnas), Porto Colômbia (Furnas), Itumbiara (Furnas), and Mascarenhas de Moraes (Furnas).

Considering the above, the guidelines to be observed in the provision of services in reference are detailed below.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

III.3.2.3. Commercialization Methods

During the execution of the services that comprise the scope of Upside, it will be necessary to consider the form of energy commercialization of each power plant subject matter of the analysis, for which the possible options are: (i) the Quota Regime; (ii) the guidelines established in Law 13182/2015; or (iii) the provisions applicable to the Independent Electric Energy Producer (IEEP).

In Quota Regime – governed by Law 12783/2013 –, the electric energy generator provides a Physical Guarantee of energy and power of the hydroelectric power plant and, in return, receives the Annual Generation Revenue (RAG, Portuguese acronym for “Receita Anual de Geração”). RAG is an amount in Reais (R$) subject to adjustments for unavailability or generation performance, composed by the regulatory costs of operation, maintenance, administration, remuneration, and amortization of the hydroelectric power plant, adjusted annually in July, in addition to being revised every 5 years. From the power plants subject matter of this Study, the following are under this energy commercialization regime: Boa Esperança, Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV, Luiz Gonzaga, Xingó, Funil, Pedra, Coaracy Nunes, Corumbá I, Estreito, Funil – RJ, Furnas, Marimbondo, and Porto Colômbia.

To provide resources for the implementation of electric energy projects, Law 13182/2015 authorized the state-owned companies Companhia Hidro Elétrica do São Francisco and Furnas Centrais Elétricas S.A. to participate, respectively, in the Northeast Energy Fund (FEN), and the Southeast and Midwest Energy Fund (FESC). The power plants subject matter of this work submitted to Law 13182/2015 are Sobradinho (CHESF) and Itumbiara (Furnas).

In summary, part of the revenue from contracts of power plants governed by this law entered into in the Free Contracting Environment (ACL, Portuguese acronym for “Ambiente de Contratação Livre") are destined to the FEN or FESC, according to specific conditions, not mentioned herein, under art. 10, Paragraphs 16 and 18, and art. 22, Paragraph 16, of Law 11943/2009 (amended by art. 5, Law 13182/2015). Also, by Law 13182/2015, as of 2030, in the case of Itumbiara (art. 10, Paragraphs 4 and

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

16), or 2032, for Sobradinho (art. 5, which amends art. 22, Paragraphs 3 and 4, of Law 11943/2009), the amounts of contracted energy shall be uniformly reduced at the rate of one-sixth each year and such reductions are subject to the allocation of physical guarantee quotas of energy and power (Quota Regime).

However, with the privatization of Eletrobras, the Sobradinho and Itumbiara regime, and the other power plants that are the subject matter of this Study will continue to be operated for independent production according to art. 3, item II, of Law 14182/2021.

Regarding the aforementioned regime, Law 9074/1996 (art. 11 and 12) grants special conditions for Independent Electric Energy Producers (IEEPs) based on cogeneration units. Under this law, IEEP is anyone who receives a concession or authorization to produce electric energy for the sale of all or part of the electric energy produced at their own risk and expense. As for the power plants subject matter of this analysis, the HPPs Tucuruí, Curuá-Una, and Mascarenhas de Moraes are considered IEEPs.

III.4. Structure of the Report

This Study aims to present (i) the detailing of the assumptions, the variables and methodology used to elaborate the financial-economic model; (ii) the attractivity scenarios analysis for Eletrobras, observing the costs, the risks and the benefits associated to the change to free market, quantifying the financial impact by using the discounted cash flow methodology. It is also going to explain the critical variables that influences, or not, the Analysis of the Advantages under the transition from the exploration regime to independent production; and (iii) the data assessment that were sent from the competent authorities (CNPE) for determining the grants' aggregated value for the new concession contracts.

The Study starts in chapter IV- Legal and Regulatory Sensitivity Analysis by a risk analysis of legal issues, which examined the matters of extension of the granting, such as right of extension of the granting, hydrological risk, and other subjects, as well as the indication of their possible impacts on the cash flow to be developed.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The report then presents the methodology in chapter V, which will be discussed in terms of setting up the proposed financial flow in section V.1, preparation of the discount rate in section V.2, timely presentation of the physical guarantee values adopted in section V.3 and the energy forecast aspects in section V.4 of the projected values of GSF, PLD (Portuguese acronym for “Preço de Liquidação de Diferenças"), and price curve.

In chapter VI - Definition of Assumptions, the premises and variables used in this Study will be presented in order to define, for the Current Scenario and the Capitalization Scenario, the general assumptions of revenues, of costs and operating, macroeconomic, tax and fiscal expenses, and the sector charges applicable to the Cash Generating Units (CGU). This chapter closes displaying section VI.5, which presents, for the Base Case, the commercialization strategy and the different p-values of the curves elaborated from the methodologies discussed in the previous chapter.

Next, chapter VII - Summary Analysis of the Risks, using the methodology described in the section VII.10, consolidates and describes all the risks addressed in this Report and points out the directions for the sensitization of the analyses that will be done in the next chapter VIII – Results. Lastly, chapter VIII aims to set out and analyze the results achieved, particularly for the Base Case, but also the proposed convergence and sensitivity analyses. In section VIII.3, a pause in the Report is proposed, for an exercise on how the inflexibility of the thermal plants proposed by Law 14182/2021 indirectly affects the Total Added Value.

As a final product of this analysis, in section VIII.5 – Risk rating, the results achieved from the sensitivity analyses are related to the Base Case to understand the quantitative effect – when calculated – of the risks identified in the previous chapter VII - Summary Analysis of the Risks. Thus, we seek to understand the map of risks involved in the possible capitalization of Eletrobras, which presumably can be considered by Company’s Management.

On the last analytic chapter of this Report, chapter IX – Analysis of Advantages, the values established by CNPE Resolution 30/2021 will be compared to the Base Case results, especially, as well as to the other scenarios of different exposition to the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

sensitized risk on previous chapter VII. The result analysis also comprises the perception of advantage on the Eletrobras privatization process. Finally, chapter X - Conclusion exposes in an allusive form the main conclusions of this Study and chapter XI – References presents the bibliography used in this Study.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

IV. Legal and Regulatory Sensitivity Analysis

Although Upside is not directly engaged in the assessment of legal issues, analyzing certain aspects related to the capitalization model provided for in Law 14182 is relevant to indicate the risks associated with this scenario, considering the current legislation and regulation applicable, as per Terms of Reference, Exhibit I of the Auction Notice (Exhibit I of this Report). In this regard, within our analysis, we took into account the following issues:

- Extension of Eletrobras Grants. Form of extension of the Eletrobras HPP concession grants set forth in Law 14182/2021 and applicable regulatory regimes.
- Right to Extend Eletrobras Grants due to the MRE. Eletrobras acquired the right to extend HPP grants, as established in REN ANEEL 2919/2021 and REN 2932/21. Define which treatment will be given to the Tucuruí, Itumbiara, Mascarenhas de Moraes, and Sobradinho HPPs, considering that the extension of their concession grants was already expressly established before Law 14182/2021.
- Hydrological Risk – Impacts in case the expectation of modifications in the current settings of the Energy Reallocation Mechanism – MRE does not occur because of the entry into operation of new Thermoelectric Power Plants as provided for in Paragraph 1 of Art. 1 of Law 14182/2021, contracted with 70% inflexibility.
- Analysis of Other Points. Analysis of other regulatory and legal points that may impact the privatization of Eletrobras.

IV.1. Extension of Eletrobras Grant

Law 14182/2021, through art. 1, expressly provides for conditions, faculties, and requirements related to the privatization of Eletrobras and the extension, by the Federal Government, of certain HPP concessions currently linked to the company:

> *"Art. 1 The privatization of Centrais Elétricas Brasileiras S.A. (Eletrobras) will take place as provided for in Law 9491 of September 9, 1997, and in Paragraph 1 of this article and will be* ***conditioned on the granting of new electric power***

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

generation concessions for Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), *signed by the Federal Government and Furnas Centrais Elétricas S.A. (Furnas), under the rules and conditions established in this Law.*

Paragraph 1 The privatization of Eletrobras will be carried out in the form of capital stock increase, through the public subscription of ordinary shares with a waiver of the subscription right by the Federal Government, and ***the granting of new electric power generation concessions will be carried out for thirty (30) years, from the date of signature of the new agreements referred to in the caption of this article****, and the contracting of thermoelectric generation powered by natural gas will be carried out by the granting authority, in the form of a capacity reserve auction referred to in art. 3 and 3-A of Law 10848, of March 15, 2004, in the amount of one thousand megawatts (1,000 MW) in the Northeast Region in the metropolitan regions of the Federation units that do not have in their capital natural gas supply point on the date of publication of this Law, in the amount of two thousand five hundred megawatts (2,500 MW) in the North Region distributed in the state capitals or metropolitan region where it is feasible to use the existing proven national natural gas reserves in the Amazon Region, guaranteeing at least the supply to two capitals that do not have a natural gas supply point on the date of publication of this Law, in the amount of two thousand and five hundred megawatts (2,500 MW) in the Midwest Region in the State capitals or metropolitan regions that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for the delivery of one thousand megawatts (1,000 MW) of natural gas thermal generation in the year of 2026, two thousand megawatts (2,000 MW) in the year of 2027, and three thousand megawatts (3,000 MW) in the year of 2028, with a supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation of Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation do bid by the same correction discretion of Auction A-6 of 2019, and in the amount of two thousand megawatts (2,000 MW) in the Southeast Region, of which one thousand two hundred and fifty megawatts (1,250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of the Superintendence for the Development of the Northeast (Sudene) that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for*

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *delivery of natural gas thermal generation of one thousand megawatts (1,000 MW) in the year of 2029, for States that have a natural gas supply point on the date of publication of this Law, and one thousand megawatts (1,000 MW) in the year of 2030, of which two hundred and fifty megawatts (250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of Sudene that do not have a natural gas supply point on the date of publication of this Law, with supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation in Auction A-6 of 2019, with updating of this value until the date of publication of the specific auction notice by the same discretion of correction of the Auction A-6 of 2019, and the extension of the contracts of the Alternative Energy Sources Incentive Program (Proinfa) for twenty (20) years, as well as the contracting in Auctions A-5 and A-6 of at least fifty percent (50%) of the declared demand of the distributors, for hydroelectric power plants up to fifty megawatts (50 MW), at the maximum price equivalent to the ceiling established for the generation of Small Hydroelectric Plants (SHP) of Auction A-6 of 2019 for projects without grant, with updating of this value until the date of publication of the specific auction notice by the same correction discretion of Auction A-6 of 2019, as established in art. 20 and 21 of this Law.*
>
> *(Emphasis Added)*

According to the excerpts highlighted above, it is an essential condition for the privatization of Eletrobras: (i) granting of new generation concessions for Concession Contract 007/2004-Aneel-Eletronorte and the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), granted through Contract 004/2004-Aneel/Furnas; and (ii) that the new concession term is thirty (30) years from the signature date of the new concession contracts. Therefore, without the extension of these concession contracts for a new period of thirty (30) years from the signing of the corresponding concession contracts, it will not be possible to complete Eletrobras privatization process.

Art. 2 of Law 14182/2021, in turn, provides that the Federal Government is authorized to provide new authorization grants, also for thirty (30) years from the signature date of the new contract, to execute the privatization of Eletrobras, which includes grants already mentioned in Art. 1 of Law 14182/2021:

> *"Art. 2 For the promotion of the privatization referred to in this Provisional Measure, the Federal Government is authorized to grant, for thirty years, counted*

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *from the date of signature of the new contracts, new grants for electricity energy generation concessions under ownership or control, directly or indirectly, of Eletrobras:*
>
> *I - that have been extended under the terms of art. 1 of Law 12783, of January 11, 2013;*
>
> *II - achieved by the provisions of item II of § 2 of art. 22 of Law 11943, of May 28, 2009;*
>
> *III - achieved by the provisions of § 3 of art. 10 of Law 13182, of November 3, 2015;*
>
> *IV - granted through the Concession Contract 007/2004-Aneel-Eletronorte; and*
>
> *V - granted through Concession Contract 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP."*

In addition, according to art. 3 of Law 14182/2021, the privatization of Eletrobras is subject to the shareholders' approval, by shareholders' meeting, of the "*execution of the new electricity concession contracts referred to in art. 2, to replace the contracts in force on the date of publication of this Provisional Measure, with the alteration of the operating regime for independent production, on the terms set out in Law 9074, of July 7, 1995, including the conditions for the termination of the grants, the expropriation of the facilities and the indemnification*".

In other words, if the shareholders' meeting does not approve the execution of new concession contracts for all generation projects covered by the art. 2 of Law 14182/2021, the privatization of Eletrobras cannot occur.

Regarding the regulatory requirements for the renewal of concessions mentioned above, we highlight the following conditions brought by Law 14182/2021:

- the alteration of the exploitation regime of the generated energy to independent production, under the terms of the provisions of Law 9074, of 1995, including what refers to the conditions for the extinction of the concessions, the transfer of installations and compensations (item III of Art. 4 of Law 14182/2021);

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- the assumption of the hydrological risk management, considering that no renegotiation is allowed under the provisions of Law 13203, dated December 8, 2015 (item IV of Art. 4 of Law 14182/2021); and
- The Sobradinho and Itumbiara HPPs, which are subject to, respectively, the provisions of item II of Paragraph 2 of art. 22 of Law 11943/2009, and Paragraph 3 of art. 10 of Law 13182/2015, will preserve their respective legal obligations, observing the conditions and the validity of the current electric energy sales contracts referred to in those devices. The energy arising from the obligations established in the aforementioned legal provisions may not be subject to resale, commercialization, or assignment in the Free Contracting Environment (ACL), and its use shall be restricted to the consumers who are part of those electric energy sales contracts. Therefore, only electric energy unbound to the legal provisions mentioned above can be used for other purposes. (Paragraph 1 of Art. 4 of Law 14182/2021);

The generation plants of Eletrobras that must or may have their concessions renewed through the provisions of Law 14182/2021 are listed below:

Part of the generation plants that may have their concession grants renewed under Law 14182/2021 belongs to the quota system created by Law 12782/2013. By art. 5 of Law 14182/2021, CNPE is responsible for defining, through CNPE Resolution 15/2021, reviewed by CNPE Resolution 30/2021, the HPPs' gradual transition (or change to free market) from the quota system to the independent electric energy production model, which shall occur through the partial transition of twenty percent (20%) of the HPPs' physical guarantees each year, ending in five (5) years, from 2023 to 2027 with the exception of the Tucuruí, Curuá-Una and Mascarenhas de Moraes HPPs, whose change to free market shall occur from the signing of the new concession contracts

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Additionally, CNPE Resolution 30/2021 included §13 to Art. 2 of CNPE Resolution 15/2021, which provides for hypotheses of non-application of the energy quota regime, created by Law 12783/2013, to part of the electric energy that would be allocated to concessionaires and permissionaires of electric energy distribution, as we observe:

> *§13. The amounts of energy corresponding to the following shall not be subject to the allocation quotas of the physical guarantee of energy and power for the concessionaires and permissionaires of public service of electric energy distribution of the National Interconnected System - SIN*
>
> *I - to items I and II, of § 4, of art. 22, of Law No. 11,943, of 2009, subject to the provisions of § 12, of art. 22 of Law No. 11,943, of 2009; and*
>
> *II - to items I and II, of § 13, of art. 10, of Law No. 13,182, of 2015, subject to the provisions of § 12, of art. 10, of Law No. 13,182, of 2015."*

The conditions set in paragraph 13, Article 2 of CNPE Resolution 15/2021, included by Resolution CNPE 30/2021, however, may be questioned by the electric power distribution concessionaires and permissionaires, since CNPE Resolution 15/2021 does not have sufficient hierarchical normative force to alter the quotation conditions established in Laws 11943/2009 and 13182/2015, norms hierarchically superior to CNPE Resolution 15/2021.

Thus, while the obligations bound to the quotas remain valid, in whole or in part, a large group of Eletrobras HPPs will maintain their obligations and remuneration bound to the quotas, which will only be 100% bound to the independent production model after the transition to free market end.

As such, during the transition, part of the physical guarantee of the plants will be under the quotas regime and another part will be under independent production. Accounting for the effects of coexistence in these two modalities is not trivial; therefore, several points need to be clarified, such as which methodology will be adopted by the CCEE to allocate the hydrological risk and how the hedge that is to be adopted by the new company will be distributed. These uncertainties pose risks to the privatization process.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

IV.2. Right to Extend Eletrobras Grants due to the MRE

Under Law 13203/2015, Eletrobras HPPs whose concessions may be extended by Law 14182/2021 have the right to extend the terms of their concessions, as approved by ANEEL, to offset the costs associated with the GSF.

ANEEL published, among others, Approval Resolution 2919/2021 and REH 2932/21, providing for the extension of concession grants for hydroelectric power plants participating in the MRE. According to REN 895/2020, the extension benefit must be applied to HPPs whose holders express an interest in the extension within sixty (60) days after the approval of the respective extension, as noted:

> *Art. 7 ANEEL will authorize the extension of the grant of each MRE power plant with a grant in force on the publication date of Law 14052, of September 8, 2020, according to the deadlines established in the Approval Resolution, and will establish the necessary acts to the realization of the grants' extension.*
>
> *Paragraph 1 The application of the provisions of this article is subject to the request of the interested party within sixty (60) days from the date of publication by ANEEL of the period of extending the grant extension of each MRE power plant, according to Paragraph 9 of art. 6, as well as compliance with the conditions referred to in items I and II of the caption of art. 2-B of Law 13203, of 2015.*

Supplementarily, Paragraph 1 of art. 1 of REH 2919/2021 and REH 2932/2021 identically establish how the holders of HPPs may request the extension of their grants:

> *Sole paragraph. To comply with the provisions of Paragraph 1, of art. 7, of ANEEL Normative Resolution 895, of December 1, 2020, the generation agent must complete the electronic form available at the following addresses:*
>
> *I - Authorization Grants: https://forms.office.com/r/eme4P7vtJT*
>
> *II - Concession Grants: https://forms.office.com/r/5TQETM8Bxe*

As seen above, there is no discussion regarding applying the right to extend Eletrobras HPPs' grants due to the compensation applicable to power plants participating in the MRE, according to Law 13203/2015. However, Law 14182/2021 is unclear how the extension of grants provided for in Law 13203/2015 will be applied to Eletrobras HPPs, which may also have their grants extended due to the privatization.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

From the reading of art. 2 of Law 14182/2021, it can be assumed that the new concession contracts of the Eletrobras HPPs that may have their grants extended must expressly establish a concession period of thirty (30) years from their signature, regardless of the concession period existing before its signature:

> *Art. 2. In order to carry out the privatization referred to in this Law, the Federal Government is authorized to grant,* ***for the period provided for in paragraph 1, art. 1, of this Law, from the date of signature of the new contracts****, new grants of electric energy generation concessions under the direct or indirect ownership or control of Eletrobras, which: (emphasis added)*

Thus, if the extension of the concession grants of Eletrobras HPPs listed in REH 2919/2021 and REH 2932/2021 and/or benefited by Law 13203/2015 is implemented before the privatization of Eletrobras, which is expected, the extensions of the concessions listed in art. 2 of Law 14182/2021 shall be of thirty (30) years, regardless of the extension carried out by REH 2919/2021 and by REH 2932/2021.

However, in case the privatization occurs before the application of the extension of the concession grants of the Eletrobras HPPs listed in REH 2919/2021 and REH 2932/2021 and/or benefited by Law 13203/2015, even considering such event as a remote possibility, we understand that the term of thirty (30) years should be increased by the respective extension resulting from Law 13203/2015.

This increase would exceed the limit of thirty (30) years of concession granting, provided for in art. 4 of Law 9074/1995, which is a contradiction and a legal limitation. However, we understand that its application is due, since the forecast of the extension is a right of the owners of projects that were affected by the MRE, it is provided for in a legislation subsequent to Law 9074/1995, and its subject is a specific topic (treatment of the MRE and applicable compensation).

In turn, it is understood that, for purposes of calculating the value of their grants by the CNPE, the extensions of grants of the hydroelectric power plants (HPPs) that occur through REH 2919/2021 and REH 2932/2021 and/or by Law 13203/2015 before the privatization of Eletrobras and the extension of its concession contracts through Law 14182/2021 should be taken into account, since such rights to prolong the grant

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

and extend the concession contracts is already applicable to the respective HPPs under such conditions.

IV.3. Hydrological Risk and Reservoir Capacity

The financial risks associated with hydrological aspects are shared between centrally dispatched hydroelectric generation plants through the Energy Reallocation Mechanism - MRE, provided for in Law 9648/1998 and regulated by Decree 2655/1998 and Electric Energy Commercialization Rules established by the Electric Energy Commercialization Chamber (EECC), which defines MRE as follows:

> *The Energy Reallocation Mechanism (MRE) was conceived to share among its members the financial risks associated with the commercialization of energy by hydraulic power plants dispatched centrally and optimized by the ONS.*

Thus, a hydroelectric power plant that has generated less than its respective physical guarantee (PG), by decision of the system operator, may have the difference compensated, in whole or in part, by other hydroelectric power plants participating in the MRE that have generated in greater volume. That is, the MRE is a form of sharing risks between hydroelectric power plants.

However, in recent years the generation “deficit” of the power plants participating in the MRE, in relation to the total of Physical Guarantees, has been proportionally high. This fact has resulted in the frequent application of the Physical Guarantees Adjustment Factor of the MRE power plants, known as GSF. In other words, the MRE's HPPs have, frequently, generated much less than their physical guarantees, resulting in financial implications.

For example, according to the Monthly Bulletin for Monitoring the Brazilian Electric System for July 2021, prepared by the Federal Government, the power plants participating in the MRE had a deficit equivalent to almost 30% concerning seasonal electric energy.

These generation deficits, which in practice form a hydrological risk, have intensified in recent years, especially in 2021, due to a sequence of periods with

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

unfavorable hydrological regimes and the low volume presented in the reservoirs of the HPPs.

The set of hydroelectric power plants belonging to the MRE may be overvalued by Physical Guarantees, which requires an in-depth analysis by the Government.

Indeed, Eletrobras' HPPs, on average, had their Physical Guarantees reduced by around 7%, which seems reasonable. This significantly contributes to the improvement of the GSF for the set of MRE power plants. However, if, in 2023, the review process does not reach the other participants of the Mechanism, the Eletrobras power plants will be affected, as they will receive a smaller energy share when they produce less.

This is a risk with a non-negligible financial impact. It is recommended that Eletrobras study alternatives to mitigate this type of risk through interactions with the Government.

Part of the Eletrobras HPPs that will be subject to the grant of new concessions are currently part of the quota regime provided for in Law 12783/2013, which is not affected by the hydrological risk, since these generation differences are paid by consumers through distributors, as provided for in Art. 1, Paragraph 5 of Law 12783/2012:

> *Art. 1 As of September 12, 2012, the hydroelectric power generation concessions covered by art. 19 of Law 9074, of July 7, 1995, may be extended, at the discretion of the granting authority, once, for a period of up to thirty (30) years, in order to ensure continuity and efficiency in the provision of the service and the reasonableness of tariffs.*
>
> *(...)*
>
> *Paragraph 5 In the extensions referred to in this article, the hydrological risks, considered as the Energy Reallocation Mechanism - MRE, will be undertaken by the SIN distribution concessionaires and licensees, with the right to be transferred to the final consumer's tariff.*

Differently, Law 14182/2021 establishes that hydrological risks must be managed by the respective HPPs that will receive new concession grants:

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *Art. 4 These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*
>
> *(...)*
>
> *IV - the assumption of hydrological risk management, renegotiation is prohibited pursuant to Law 13203, of December 8, 2015.*

The exceptional character created by Law 12783/2012, which transferred the hydrological risk of the HPPs in the quota regime to captive consumers, ceases to exist, and the power plants subject matter of change to free market will undertake such risk, as it was before the aforementioned law.

Law 14182/2021, in its Paragraph 1 of art. 1 and art. 2, provides for the contracting of a series of generation projects in the coming years, mainly from thermal sources, which, along with renewable sources, will significantly alter the electric matrix:

> *Art. 20, Law 14182/2021. The granting authority will contract capacity reservation, referred to in arts. 3 and 3-A of Law 10848, of March 15, 2004, in the amount of one thousand megawatts (1,000 MW) in the Northeast Region in the metropolitan regions of the Federation units that do not have in their capital natural gas supply point on the date of publication of this Law, in the amount of two thousand five hundred megawatts (2,500 MW) in the North Region distributed in the state capitals or metropolitan region where it is feasible to use the existing proven reserves of national natural gas in the Amazon Region, guaranteeing at least the supply to two capitals that do not have a natural gas supply point on the date of publication of this Law, in the amount of two thousand and five hundred megawatts (2,500 MW) in the Midwest Region in the capitals of the States or metropolitan regions that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for the delivery of one thousand megawatts (1,000 MW) of natural gas thermal generation in the year of 2026, two thousand megawatts (2,000 MW) in the year of 2027, and three thousand megawatts (3,000 MW) in the year of 2028, with a supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation of Auction A-6 of 2019, with updating of this value until the date of publication of the specific invitation do bid by the same correction discretion of Auction A-6 of 2019, and in the amount of two thousand megawatts (2000 MW) in the Southeast Region, of which one thousand two hundred and fifty megawatts (1,250 MW) for States that have a natural gas supply point on the date of publication*

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of the Sudene that do not have a natural gas supply point on the date of publication of this Law, with inflexibility of at least seventy percent (70%) for natural gas, for delivery of thermal generation using natural gas of one thousand megawatts (1,000 MW) in the year of 2029, for States that have a natural gas supply point on the date of publication of this Law, and one thousand megawatts (1,000 MW) in the year of 2030, of which two hundred and fifty megawatts (250 MW) for States that have a natural gas supply point on the date of publication of this Law and seven hundred and fifty megawatts (750 MW) for States in the Southeast Region in the area of influence of Sudene that do not have a natural gas supply point on the date of publication of this Law, with supply period of fifteen (15) years, at the maximum price equivalent to the ceiling price for natural gas generation in Auction A-6 of 2019, with updating of this value until the date of publication of the specific auction notice by the same correction discretion of Auction A-6 of 2019.*

Such contracts, as mentioned, are provided for in art. 1 of Law 14182/2021, which represents an obligation of the Federal Government to promote them as encouragement and guarantee to the privatization of Eletrobras.

As if the high contracting volumes were insufficient, Law 14182/2021 provides that contracted thermoelectric power plants must have 70% inflexibility. According to Regulation No. 20/GM/MME, which regulates art. 3-A of Law 10848/2004, the MME guidelines for contracting thermal plants in the capacity reserve modality consider, at most, an inflexibility of 30%, whose contracting must necessarily be associated with the declaration of the need to purchase energy from agents' distribution and marketing.

In addition, due to what was determined by the Provisional Measure 998, converted into Law 14120, of 2021, there is an unprecedent growth in requests for authorization grants of new projects from encouraging sources, in order to seek subsidies (discounts in the use of the grid) to which renewable sources are entitled. This volume of projects corresponds to substantially more than double the current amount of nowadays operating wind and solar energy plants. In addition, most of them would be in the northeast region. All this volume should start operating from 2023, a condition for obtaining the grant.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

However, within this period, it is not possible to connect even one third (1/3) of this volume of MW to the transmission grid (as pointed out in section V.4.1.5), which would require new construction works, which new auctions would precede. Even if it was possible to connect all projects to the grid, it is necessary to consider the timely supply of equipment for all projects and obtain power purchase agreements for all projects made possible through grants.

Thus, it is reasonable to consider a shift in these projects' implementation schedule or extend terms for the obstacle course.

As a result of the energy volume that will be granted through the subsidies incentive and the inflexibility estimated for thermoelectric projects, a high surplus of electric energy is expected, which results in the tendency of not using hydroelectric power plants and, consequently, an increase in the risk linked to the MRE. However, it is not expected to occur a large growth in the Difference Settlement Price – PLD due to this energy surplus in the market.

These impacts will directly affect the Eletrobras HPPs that will be subject to granting new concessions provided for in Law 14182/2021, which could hinder such projects' expected generation and profitability.

IV.4. Other risks implicit in the electric matrix

However, it should be noted that as of 2023, when subsidized renewables would be available, and as of 2026, with the highly inflexible and costly TPPs, the electricity system will have an oversupply, but with high tariffs, given the costs of subsidies and such thermoelectric plants.

For example, if the average tariff for consumers in group A (high voltage) is R$ 450/MWh and the purchased energy (generation) is equivalent to R$ 280/MWh, consumers, whether or not they have already migrated to the ACL, usually require, during the term of the PPA, a total cost, also, for example, 20% lower than their current tariff.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

As the ACL's scope of action is purchased energy, its leeway would be R$ 290/MWh, which should be reduced by R$ 90/MWh, representing 20% of the final tariff. No scenario points to a reduction in regulated tariffs, at least in the next ten years.

It is important to add that the electric matrix, due to the growth in the participation of renewable sources, such as wind and solar, will become less and less dispatchable, especially from 2035 onwards. Important features arise from these issues.

The lower degree of dispatchability will require the use of firm energy sources, such as thermoelectric plants, including nuclear ones, which tends to increase or, at least, not let the short-term marginal costs and PLD fall. If this change in the matrix continues to be fostered by subsidies, even after 2035, regulated tariffs also tend to rise, or they would not fall as much as it would be desirable.

Even before that, and motivated by the shortage crisis in 2021, the government already authorized the simplified contracting of thermoelectric plants with costs above R$ 750/MWh in 5-year agreements, starting mid-2022. Therefore, the costs of the crisis will last at least until 2027. There are no great perspectives for tariff reductions.

Thus, the chances of long-term contract prices moving further away from the PLD are not negligible, even in a more distant scenario, such as after 2035.

Given some of these contradictions, such as oversupply and rising tariffs, the use of a mathematical model that for long has not responded to the reality of supply and demand relationship and the progress of distributed generation (DG), it is very likely that, even before 2030, the sector will be much different than today.

The outlook seems to be of changes towards decentralization, as in DG, with greater freedom of choice for consumers. This provides considerable advantages for “traders” with generation assets, such as Eletrobras. The dispersion of the market implies greater risks for the seller, which pure traders would not bear. The trade-off between risk and asset ownership is a form to balance the cost/revenue ratio in a freer environment.

In turn, the maintenance of subsidies, as provided for in at least two bills pending in the Brazilian Congress, will cause even greater increases in regulated tariffs, which

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

would difficult the transition and raise its costs, lasting several years, maybe even after 2035.

IV.5. Analysis of Other Issues

Additionally, it is important to note that part of the Eletrobras HPPs that will be subject to new grants will migrate, albeit gradually, to the independent production system, in accordance with CNPE Resolution 15/2021. Such projects must sell their electric energy generated in accordance with their Physical Guarantees, especially in the Free Contracting Environment – ACL.

However, considering the high volume of electric energy generated in accordance with the Physical Guarantees of all these projects, part of the electric energy generated may be subject to purchase and sale contracts with very short terms (one month, for example) to avoid settlement in the Short-Term Market – STM, especially in the early years.

In 2021, the sector managed to remedy the risk of default in the STM as a result of the injunctions that discuss the risk shared by the MRE, with the default being reduced to almost zero. However, one-time defaults may happen in some months, or new injunctions may arise, now due to the risk or damage caused by the water crisis, devastating the sector and leading to defaults in the STM.

In any case there are forms to mitigate the risks of default in the STM, and it is common for agents with surplus energy to sell it before closing the accounting for the respective month, as described above.

Therefore, we understand that the situation currently experienced is one of reducing defaults in the STM, which will reduce Eletrobras' risks in relation to its performance in the ACL and the possible settlement of surplus energy in the STM.

Further, the provision included on Article 3ºA of CNPE Resolution 15/2021, also included on CNPE Resolution 30/2021, deserves special attention:

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *Article 3ºA The concessionary must, under the penalty of termination of the contract, perform the following activities for the Appendix I HPPs:*
>
> *I – Develop and present to ANEEL, within thirty-six months from the Concession Contract signature date, the Study of Technical and Economic Feasibility, including the relevant Ambiental aspects, for the identification of the Optimal Utilization, with the assessment of the costs and systemic benefits of the modernization, repotentiation and hybridization investments of the HPPs granted to Eletrobras as listed on Appendix I, considering the existent civil structures according to the instruction to be defined by ANEEL, with MME stablishing the guidelines for its regulation; and*
>
> *II – Implementing the Optimal Utilization, if economically feasible, within one hundred and thirty-two months from the Concession Contract signature date.*
>
> *Single Paragraph. The new concession contracts, object of article 2º caput, shall contain a section regarding the obligation referred by the caption.*

By the provision set above, after the guidelines defined by MME and ANEEL regulations, Eletrobras shall, under penalty of termination of the contract, conduct studies to appoint the optimal utilization of the HPPs object of the new concession contracts to be entered into, considering environmental aspects, systemic costs and benefits in HPPs modernization, repowering and hybridization, and implement the referred measures to achieve the defined optimal utilization.

That is, Eletrobras shall make investments, not yet calculated, to conduct the studies and implement the optimal utilization of the HPPs object of the new concession contracts of Eletrobras' privatization, under penalty of termination of the referred concessions.

IV.5.1. Considerations regarding the possibility of challenging Law 14182/2021 to delay Eletrobras' capitalization process

Law 14182/2021, resulting from the conversion, by the National Congress, of Provisional Measure 1031/2021, conveys a complex plan for the privatization of Eletrobras, which reveals a reasonable potential impact on the electricity sector.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

As previously mentioned, the privatization will be carried out through a capital increase, pursuant to Law 9491/97 and art. 1, paragraph 1, of Law 14182/2021, through the placement on the market of ordinary shares intended for public subscription, with a consequent waiver of the right to subscribe them by the Federal Government. Consequently, the capital goes public, with a resulting decrease in the Federal Government's shareholding so that it loses the majority control of the voting capital.

> *The mentioned art. 1, in its "caption", conditions the implementation of privatization "on the granting of new electric energy generation concessions for Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP), signed by the Federal Government and Furnas Centrais Elétricas S.A. (Furnas)".*

The new grants referred to in the provision will continue to integrate, the supply of energy for 30 years, pursuant to paragraph 1, and will be accompanied by the contracting of thermoelectric generation powered by natural gas, in addition to the contracting, in Auctions A-5 and A-6 of at least 50% of the declared demand of distributors, hydroelectric power plants up to 50 MW, at the maximum price equivalent to the cap established for the generation of a Small Hydroelectric Plant (SHP) of Auction A-6 of 2019 for projects without a grant, as specified in the provision.

The privatization process, as mentioned, has the potential to affect the electricity sector because, once the capitalization of the state-owned company begins, Law 14182/2021 provides for not only the mandatory signing of new concessions related to existing projects but, concomitantly, the purchase of electric energy from concessionaires, licensees and those authorized by the granting authority. Therefore, there is a risk that the auction processes may disrupt the privatization of Eletrobras due to the bureaucracy inherent to this asset-disposal mechanism, the natural complexity of its legal rules and for exposing themselves to judicialization.

Thus, the legal-regulatory risk of the privatization plan will be analyzed next, considering (i) the conditions for implementing the normative program, (ii) the risk of

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

judicialization of the privatization policy of Eletrobras and (iii) the repercussion of the provision for establishing several related concession contracts on possible disruptions in the economic and financial balance, to subsidize the pricing of shares that market agents will subscribe.

IV.5.2. Conditions for implementing the normative privatization program and economic-financial balance

Art. 4 of Law 14182/2021 provides the conditions for the implementation of the concession grants referred to in art. 2, which in turn provides as follows:

> *Art. 2. In order to carry out the privatization referred to in this Law, the Federal Government is authorized to grant, for the period provided for in paragraph 1 of art. 1 of this Law, from the date of signature of the new contracts, new grants of electric energy generation concessions owned by or under the control of, directly or indirectly, Eletrobras, which:*
>
> *I - have been extended pursuant to art. 1 of Law 12783, of January 11, 2013;*
>
> *II - are achieved through item II of paragraph 2 of art. 22 of Law 11943, of May 28, 2009;*
>
> *III - are achieved through paragraph 3 of art. 10 of Law 13182, of November 3, 2015;*
>
> *IV – have been granted through Concession Contract 007/2004-Aneel-Eletronorte; and*
>
> *V – have been granted through Concession Contract 004/2004-Aneel-Furnas, specifically for the Mascarenhas de Moraes HPP.*

From the date of signature of the grants of new concessions, Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, the Federal Government is authorized to provide other grants, not necessarily linked to the contracts referred to in art. 1, but for the same period of thirty years.

In order to formalize these new grants, art. 4 sets forth the necessary conditions for the economic viability of such a complex operation:

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Art. 4. The conditions for the new grants of electric power generation concession referred to in art. 2 of this Law are:

I - the payment by Eletrobras or its subsidiaries, as defined by the National Energy Policy Council (CNPE), to the Account for Energy Development (CDE), referred to in Law 10438, of April 26, 2002, corresponding to fifty percent (50%) of the added value to the concession by the new contracts;

II - the payment by Eletrobras or its subsidiaries, of the bonus for the grant of new electric power generation concession agreements corresponding to fifty percent (50%) of the added value to the concession by the new contracts, deducted of the following amounts:

a) expenses related to the revitalization of the water resources of the São Francisco River and Parnaíba River watersheds, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;

b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and for the navigability of the Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caption of art. 3 of this Law;

c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, which concession contracts are affected by this Law, pursuant to subparagraph c, item V, caption, art. 3 of this Law; and

d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Watershed of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;

III - the alteration of the operating regime for independent production, pursuant to Law 9074, of July 7, 1995, including as regards the conditions for the extinction of grants, the expropriation of facilities and indemnities; and

IV - the assumption of hydrological risk management, renegotiation being prohibited pursuant to Law 13203, of December 8, 2015.

Paragraph 1. The new generation concession contract for the power plants reached by item II of paragraph 2 of art. 22 of Law 11943, of May 28, 2009, and paragraph 3 of art. 10 of Law 13182, of November 3, 2015, will preserve the obligations set forth in art. 22 of Law 11943, of May 28, 2009, and art. 10 of Law 13182, of November 3, 2015, respecting the conditions and effectiveness of the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *current electric energy sales contracts referred to in the aforementioned articles, provided that the energy arising from the obligations established in art. 22 of Law 11943, of May 28, 2009, and art. 10 of Law 13182, of November 3, 2015, may not be subject to resale, sale or assignment in the Free Contracting Environment (ACL), and its use shall be restricted to consumers who are part of the electric energy sales contracts referred to in the aforementioned articles.*
>
> *Paragraph 2. The provisions of art. 7 of Law 9648, of May 27, 1998, do not apply to new electric power generation concession agreements referred to in this article, and the quota referred to in item I of the caput of this article will be fully credited in favor of electric energy distribution concessionaires and licensees, for the purpose of reasonable tariffs in the Regulated Contracting Environment ([ACR [Portuguese acronym for Ambiente de Contratação Regulada]), distributed proportionally to the amounts discounted as a result of altering the operating regime for independent production referred to in item III of the caption of this article.*

If the privatization plan is implemented in the exact terms recommended by art. 1 of Law 14182, including the exercise of the option by the Granting Authority to contract the generations under the final wording of the caption of mentioned art. 1, an economic-financial equation will be established in relation to the expected average generation of Eletrobras HPPs, which will be considered in the calculation of the generation grant bonus.

If this privatization scenario does not occur in the terms considered by the CNPE for the calculation of the grant bonus, there may be an imbalance in the financial equation established as a premise for calculations referred to the bonus.

According to art. 5 of Law 14182/2021, it was designated to the National Energy Policy Council – CNPE, through CNPE Resolution 15/2021, the definition of the Total Added Value of new concessions, as well as the values referred to in items I and II of art. 4. These provisions address the installments that add to the financing of the concessions and which are also conditions to formalize the grant.

The first item provides for payment by Eletrobras or its subsidiaries, as defined by the CNPE, to the Account for Energy Development (CDE), referred to in Law 10438, of April 26, 2002, corresponding to 50% of the Total Added Value to the concession by the new contracts.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

In addition, item II refers to the payment by Eletrobras or its subsidiaries of bonuses for the granting of new concession contracts, corresponding to 50% of the Added Value to the concession, deducted from the installments regarding (i) expenses related to the revitalization of water resources of the São Francisco River and Parnaíba River watershed, pursuant to subparagraph “a” of item V of the “caput” of art. 3 of this Law; (ii) expenses related to the development of projects in the Legal Amazon, aiming at structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River; (iii) expenses related to projects in the area of influence of the reservoirs of Furnas hydroelectric power plants, whose concession contracts are affected; and (iv) expenses to reimburse the economic value of the electric energy supply to the Integration Project of the São Francisco River with Hydrographic Watershed of Northern Northeast (PISF).

The economic-financial risk that can be noted in the model involves, therefore, payments for the values added of the concessions, determined based on the criteria defined by the CNPE and in compliance with the minimum conditions defined in the items of paragraph 1 of art. 5:

> *Art. 5. The CNPE shall be responsible for establishing the added value by new electric power generation concession contracts and for fixing values referred to in items I and II of the caption of art. 4 of this Law.*
>
> *Paragraph 1. For the calculation of the added value to the concession, the following will be considered:*
>
> *I - the change of the exploitation regime to independent production;*
>
> *II - the deduction of credits related to the reimbursement for proven expenses for the acquisition of fuel incurred until June 30, 2017, by concessionaires that were controlled by Eletrobras and holders of the concessions addressed in art. 4-A of Law 12111, dated December 9, 2009, which have been proven but not reimbursed due to the economic and energetic efficiency requirements addressed in paragraph 12 of article 3 of said Law, including monetary restatements, in which case the compensation will be limited to three billion, five hundred million reais (R$ 3,500,000,000.00);*
>
> *III - the termination of the electric power contracted under the provisions of article 1 of Law 12783, of January 11, 2013, to comply with the provisions of item III*

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *of the caption of art. 4 of this Law, gradually and uniformly, within a minimum period of five (5) years and a maximum period of ten (10) years; and*
>
> *IV - (VETOED).*
>
> *Paragraph 2. The calculation of the added value to the concession shall consider the adjustments referred to in subparagraph b of item II of the caption of art. 6 of Law 9491, of September 9, 1997, provided that they are relative to obligations recognized by the Federal Government with Eletrobras.*
>
> *Paragraph 3. The recognition of the credits in item II of paragraph 1 of this article shall imply their settlement.*
>
> *Paragraph 4. The Ministry of Mines and Energy and the Ministry of Economy shall be responsible for proposing the values that will be fixed in accordance with the provisions of the caput of this article.*

Thus, if the calculations of the Total Added Value made by the CNPE are not accurate in relation to the cost components set forth in the above provision, some risks would exist that deserve to be noted. For example: are price expectations compatible with the commercialization in the ACL? Were the risks and benefits of acting in the ACL duly considered?

In compliance with the regulatory determination provided for in the aforementioned art. 5 of the privatization plan, the National Energy Policy Council published CNPE Resolution 15, of August 31, 2021, in the Federal Official Gazette of September 2, 2021, thus establishing at sixty-two billion, four hundred and seventy-nine million, six hundred and fifty-six thousand, three hundred and seventy reais and ten cents (R$ 62,479,656,370.10) the Total Added Value to be granted due to the privatization of Centrais Elétricas Brasileiras S.A. - Eletrobras (art. 1).

In addition to defining the Total Added Value, the CNPE's resolution also established the complex methodology for calculation, refunds and adjustments (art. 1, sole paragraph) and the amount to be paid by Eletrobras or its subsidiaries as a bonus for the granting of new electric power generation concession contracts whose subject-matter is a set of HPPs listed in Exhibit I of CNPE Resolution 15/2021, in the amount of twenty-five billion, three hundred and seventy-nine million, seventy-nine thousand, nine hundred and seventeen reais and seventy-six cents (R$ 25,379,079,917.76).

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Another element to be considered in the risk matrix is that, in the event of imperfect compliance with charges and compulsory contracts for concessions and purchases of energy potential, pursuant to Law 10848/2004, established by the provision, there would be a fundamental change in the result originally pictured in the privatization plan, which may be questioned in the future, especially from a political point of view. Thus, the contracting of thermoelectric plants, SHPs or the extension of the terms of PROINFA contracts does not depend on Eletrobras, but its privatization was related to such events.

Considering this possibility, in theory, can be seen as a factor to be considered when setting the price of the participation quotas that will be released on the open market in the execution of the central stage of the privatization plan. However, as discussed below, the mere possibility does not seem to indicate a substantial encumbrance of the value of the securities, which could compromise the maximization of disposals of shareholding, since it is clear the possibility of inducing the market to understand the plan as a riskier disinvestment modality than it is, due to the risks and parameters weighed by the granting authority to precisely define the values and potentials to be delegated and contracted in the future.

In the change to free-market modality, taking into account the studies conducted by the Federal Government and BNDES, which will still be subject to an in-depth economic analysis by the TCU, it is certain that any regulatory and even infrastructural obstacles to implementing concessions and strengthening, among other sources, thermal plants, are deemed circumstances with a mere *possibility* of taking place. It is understood that the risk inherent to any type of contracting does not make them predictable or deprive them of their exceptional character.

According to MARÇAL JUSTEN FILHO ("**Teoria Geral das Concessões de Serviço Público**", São Paulo, Dialética, 2003, p. 400):

> *"(…) the extraordinary nature of the event can be affirmed from both a qualitative and a quantitative perspective. An extraordinary chance is verified when an anomalous and implausible event occurs after the agreement is formalized, producing a change in the original relationship between charges and benefits. When*

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

alluding to the anomaly of the event, reference is made to an event that strays away from predictability standards due to its qualitative or quantitative configuration."

The reason for preparing studies before formalizing and implementing the divestment plan is to predict, with the greatest accuracy available to the granting authority, the parameters necessary to guarantee the continuity of public interest services.

Hence, in principle, the mere possibility of the charges defined in the risk matrix as sufficient to ensure the soundness of the privatization and the contracts that condition is not being complied with, due to extraordinary reasons, as provided for in the privatization law, does not justify the significant encumbrance on the value of the securities placed on the market, to the point of restricting the interest of economic agents in the capitalization of Eletrobras.

IV.5.3. Considerations on litigation risks surrounding the privatization of Eletrobras

It should be noted, with regard to the sensitive aspects involving Law 14182/2021 and concerning the litigious aspect of the capitalization process of Eletrobras, that this law, upon the conversion of PM 1031/2021, was challenged before the Federal Supreme Court, through the filing of the Direct Action of Unconstitutionality (ADI, from the Portuguese term "Ação Direta de Inconstitucionalidade") 6938, in which various party groups appear as plaintiffs.

Among the complex constitutional issues raised in the ADI, the following stand out (i) the questions around the constitutionality of the entire normative structure of Law 14182/2021, based on the argument that the originally issued Provisional Measure lacked the constitutional premises of urgency and relevance of the matter; and (ii) the specific challenge to art. 1, paragraph 1, and arts. 20 and 21, whose declaration of unconstitutionality is requested alternatively to the invalidation of the entirety of the text.

It should be noted, regarding item "ii" above and the subject matter of ADI 6938, that those provisions are the same that establish the controversy that will be herein

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

examined regarding the definition of the risk matrix of the concessions under the public divestment plan and the possibility that the complexification of the supply network could lead to a break in the economic-financial balance of privatization, which would ultimately affect the market price of equity securities.

In order to focus on the argument to be discussed by the Supreme Court and which, more significantly, interests to the analysis now performed, it will be addressed how a possible granting of the secondary claim would affect the plan and composition of the price of securities.

Indeed, the current wording of art. 1, paragraph 1, as approved by the conversion project, was the result of improvement to the text sent by the Presidency of the Republic, to which 632 amendments were presented, in Parliament, including amendments that added, excluded and modified the text, and whose subjects, as claimed by the associations that filed the direct action, exceeded the thematic relevance defined by the text of PM 1031/2021 sent to the House of Representatives, as they deal with issues such as the debated obligation to extend concession contracts and the imposition of mandatory purchases of energy potential, without the corresponding budget provisions.

They argue, under the argument of thematic irrelevance, the inclusion of "budgetary long-tails" contained in the conversion law:

> *(i) the mandatory contracting of 8,000 MW of installed capacity of natural gas thermoelectric plants – 1,000 MW in the Northeast region, 2,500 MW in the North, 2,500 MW in the Midwest and 2,000 MW in the Southeast (art. 1, paragraph 1, combined with art. 20);*
>
> *(ii) the mandatory contracting of 2,000 MW or more of installed capacity of hydroelectric power plants with up to 50 MW of power – "small hydroelectric plants" (art. 1, paragraph 1, combined with art. 21);*
>
> *(iii) the authorization for the immediate construction of the Tucuruí Line, regardless of the environmental licensing process already in progress (art. 1, paragraphs 10 and 11).*

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The entry of thermal plants, through the concessions provided for in art. 1, paragraph 1, and reproduced in art. 20, as stated in the ADI, would imply the artificial creation of a market reserve for thermoelectric plants powered by natural gas for fifteen years and the contracting of small hydroelectric power plants in auctions held until 2026.

Thus, the execution needs the established conditions to the granting authority and to Eletrobras itself by art. 1, paragraph 1 et seq. (arts. 4 and 5 of Law 14182/2021, *v.g.*), and it is an extremely important condition to ensure the soundness of the economic and financial balance mechanism, since the calculations of generating potential, operational inflexibility and subrogation of thermals to energy capacity are based on assumptions that identify, in the elements of art. 1, paragraph 1, the conditions that should guarantee national supply according to the average consumption per MWh in the regions affected by privatization.

In fact, the exact provision of art. 1, paragraph 1, combined with the authorization conferred to the Federal Government to grant, from the date of signature of the new contracts, new grants of electric energy generation concessions owned by or under the control of, directly or indirectly, Eletrobras, established in art. 2, is a core element of privatization itself.

The lengthy wording contrary to the good legislative technique, which is evidenced by the provision of art. 1, paragraph 1, appeared, due to its importance to privatization, as a drafting strategy undertaken by Congress, aimed at making the Legislative Branch's intention prevail in this privatization, as it virtually made the presidential veto unfeasible due to its content.

Art. 66, paragraph 2, of the Federal Constitution, provides for this as "the partial veto will only cover the full text of an article, paragraph, item or subparagraph", which made it impossible to veto fragments of art. 1, paragraph 1, or even the entirety of its text, under penalty of emptying the privatization.

This circumstance was even emphasized by the author of the bill of conversion in Parliament, Congressman Elmar Nascimento (DEM-BA) when asked about the purpose of the deliberate lack of technique regarding the wording of the provision:

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *"(…) more or less. It is more or less more assured that the will of the congress will prevail in this matter."*[3]

These considerations reveal an important observation around the judicialization of the capitalization plan, consisting in the fact that the risk was already deemed materialized since the most relevant provision to privatization, currently, has already had its constitutionality challenged.

Thus, presuming that Law 14182/2021 is not declared unconstitutional in full – since the assessment of the existence of the premises authorizing the issuance of Provisional Measures is an act of a political-discretionary nature of the President of the Republic exceptionally reviewed by the Court –, a possible acceptance of the secondary claim made in the ADI would lead to the exact consequence that would result from the presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21 and the conditions addressed in arts. 2, 4, and 5.

ADI 6938 is currently in the stage of submittal of information by interested parties, after which it will be held under advisement by the Rapporteur, Justice Nunes Marques, to examine the preliminary injunctions filed by the plaintiff associations.

It is worth mentioning that, in addition to the complexity inherent to the privatization plan itself, there are various constitutional issues surrounding the subject. Thus, since the filing of the direct action in July, the injunction has not been examined so far. Federal Supreme Court Chief, Justice Luiz Fux, upon receiving the request at the time of assignment, deferred the examination to the Justice-Rapporteur, recognizing the exceptional complexity of the matter discussed.

This injunction seeks to suspend the effects of Law 14182/2021 and, alternatively, of the mentioned provisions challenged on a secondary basis, which would bring forward the definitive remedy until the final judgment of the action. In consequence, the capitalization process as a whole would paralyze.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Regarding the referred ADI, it's important to note that the Federal Public Ministry, through the General Attorney's Office, in an opinion added to the case records on October 19, 2021, was for the dismissal of the ADI requests.

However, a critical point to be examined, and one that draws the Government's attention and the market, is the analysis of the privatization project by TCU.

On September 13, 2021, it was found that the Federal Government had already sent the first part of the studies to the Accounting Court, which would be subject to a taking of accounts reported by Justice Aroldo Cedraz.

Although the TCU no longer has the power to halt the effectiveness of Law 14182/2021, given that the opinion in Precedent 347/STF is superseded, which authorized it to decide on the unconstitutionality of acts by the Government, there is a possibility that the Court determine the suspension of the privatization, in case of evidence of possible litigation regarding the economicity of the project and complexity of the economic-financial balance, likewise ADI 6938.

In Case TC 000.350/2021-4, a request for examination of the record by Justice Aroldo Cedraz, rapporteur of the Eletrobras case at the TCU, imposed a sixty-day delay in the publication of the auction notice regarding the implementation of 5G technology by auction, and ultimately, voted against the proposal from the technical unit, which was in line with the Federal Government' agenda.

Such considerations lead us to believe that, under the privatization feasibility standpoint, the possibility of the TCU examining more sensitive aspects of the project subsist, and with possible delays in the initially expected schedule to offer the securities in the market, capitalization may be impacted in relation to the ratio between the amount defined for Eletrobras changing to the free market and the economicity of the mandatory concessions under Law 14182/2021.

Incidentally, although the postponement determined by Minister Aroldo Cedraz – the rapporteur of the privatization processing on Brazil's Court of Accounts (TC 008.845/2018-2) for inclusion in that Court's judgment agenda of 12/15/2021 –, has not severely impacted the progress of the project, it is possible that the Court's

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

understanding will constitute an important influencing factor to be considered on the pricing of shares of stock in the IPO, or even due to market orientation.

The aim of Proceeding 008.845/2018-2, mentioned above, which may be considered at this stage, is the process regarding the accompaniment of the privatization of Eletrobras and its sectorial impacts, for consumers and for the Federal Government, also considering the scenario of not carrying out the privatization.

On the aforementioned session on December 15, 2021, the analysis of Eletrobras' privatization was once again postponed, this time without a defined date for the Court's re-examination, due the request for examination of the case records presented by Ministry Vital do Rego. Indeed, specialized media[4] have pointed out that, after the request for examination presented in the TCU Plenary, the Company's shares fell more than 10%.

Although the Ministry of Mines and Energy is subject to the TCU's approval to be able to implement the operation, the suspension tends to impact the privatization schedule, which defined May, 2022 as the final prevision for the resolution of the matter, given that the Court will only meet again on January 19, 2022 and with no definition, so far, of the docket.

Despite the suspension, however, the MME and Eletrobras were authorized to proceed with the studies, notably about the points that will possibly be questioned by the other Ministers after the return of request for examination of the case records.

This aspect was highlighted in the session on December 15, 2021 in an oral manifestation by Minister Benjamin Zymler, who advanced his understanding to anticipate that he should return favorably to the proposed model for privatization:

> *"This request for examination of the case records compromise substantially the privatization schedule. For the capitalization to be achieved on April, we can use as reference Eletrobras' financial statements from the fourth quarter. After that, we'll*

[4] Infomoney. After droping 13%, Eletrobras' stocks (ELET3;ELET6) close practically stable with relief about TCU. Available at: https://www.infomoney.com.br/mercados/acoes-da-eletrobras-elet3elet6-caem-cerca-de-10-com-pedido-de-vista-interrompendo-analise-de-privatizacao-no-tcu/. Access in 12/29/2021.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *have to use the financial statements from the first quarter of 2022. Then I would say that the chances of occurring the privatization in 2022 are practically impossible."*[5]

Besides Minister Zymler, the reporting judge Aroldo Cedraz also voted for the advancement of the privatization, determining, therefore, the complementation of the studies by MME, which shall occur during the suspension period.

Among the points addressed by the before the request for examination of the case records, the following stands out:

a) Determination to MME to present additional studies about the medium to long term economic and financial impacts regarding the free and captive market consumers;

b) Recomendation to MME for complementing the studies for the definition of the HPPs optimal utilizations, for the subsequent submition to ANEEL's approval, involving updated values of flow, water consumption use and the definition of the physical guarantees risk, besides other free market energy price benchmarks and studies about tax benefits.

Regarding this specific point of the vote, as ascertained by Jota[6], Minister Cedraz stated as follows during the Plenary reading:

> *"Under these circumstances, I consider really foolharded the decision of abdicating State control of the twenty-two hidroeletric generation concessions under Article 2 of Law 14182/2021 without, at least, the previous stablishment of general regulation norms ans specific contractual rules that assure the Brazilian State the preservation of the benefits that these HPPs provide in terms of regulation, charge monitoring and planning for the confrontation of seasonal fluctuations in generation.*

c) The determination to the National Energy Policy Council (CNPE) to complement the motivation of the HPPs change to free market option and the contributions to the Account for Energy Development (CDE);

---

Minister Raimundo Carreiro also joined Minister Aroldo Cedraz on the subject of the privatization process status, which, at first, indicates that the case would proceed faster in the Court after the examination of the case records and the end of Court recess, according to the proposition of the docks by the Presidency.

IV.6. Summary of assessments and notes

The privatization of Eletrobras presupposes the granting of new concessions to hydroelectric power plants generation projects considered of paramount importance for Eletrobras' operations, such as Concession Contracts 007/2004-Aneel-Eletronorte, signed by the Federal Government and Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), and 004/2004-Aneel/Furnas, specifically for the Mascarenhas de Moraes Hydroelectric Power Plant (HPP). In addition to such projects, the Federal Government shall grant new electric energy generation concessions from other priority projects, as per the list presented in Art. 2 of Law 14182/2021.

The application of grant extension for Eletrobras' projects participating in the MRE and benefiting from the provisions of Law 13203/2015 should be taken into account, either to extend the grant term of such undertakings (if the extension is granted after the granting of new concession pursuant to Law 14182/2021) or for indemnity purposes.

The contracting of thermoelectric power plants with 70% inflexibility, as well as the institution of recovery programs for SIN HPPs reservoirs, may impact the electric energy generation of Eletrobras HPPs, as such HPPs may have their electric energy generation reduced, further increasing the risk of an increase in the deficit in the MRE.

One of the elements to be considered in the risk matrix and which, in principle, is able to affect the pricing of shares, is the possibility of challenges if the thermal plants are not implemented in the exact terms of Law 14182/2021. The partial or imperfect fulfillment of the conditions calculated as necessary and indispensable for privatization may lead to future challenges. However, in practice, the construction schedule of these thermoelectric plants should consider the needs of the electric system, which, as it

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

seems, would not require such power plants in the sites established by the law, nor on the dates set forth.

Although the possibility mentioned above can, in theory, be taken as a factor to be considered when setting the price of the quotas that will be released on the open market, in the execution of the core stage of the privatization plan, the mere possibility of the charges defined in the risk matrix as sufficient to ensure the soundness of the privatization and the contracts that condition is not being complied with, due to extraordinary reasons, as provided for in the privatization law, does not justify the significant encumbrance of the value of the securities placed on the market, to the point of restricting the interest of economic agents in the capitalization of Eletrobras, as highlighted in the reasoning.

Regarding the possible risk of commencement of litigation on the complex privatization plan, it should be stated that, at least in part, the risk level that may be envisaged was deemed consummated even before the works rtelated to the pricing of quotas taken to the market begun. This occured because when the project to convert Provisional Measure - PM 1031/2021 was approved by the Parliament, with the consequent enactment of Law 14182/2021, ADI 6839 was immediately filed before the Federal Supreme Court, in which the plaintiff parties question the main provisions that inform privatization.

Considering that the examination of the preliminary injunction requested in ADI 6839 has been deferred on some occasions, mainly due to the complexity of the constitutional issues addressed in the direct action, it is possible to understand that the processing of this action for abstract control should not bring significant legal uncertainty to the market so that the inconvenience that the possibly aggravated risk could significantly burden Eletrobras' capitalization can be ruled out.

Assuming that Law 14182/2021 is not declared fully unconstitutional, possible granting of the secondary claim in the ADI would lead to the exact same consequence that would occur with a presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire regulation depends on implementing the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

provision of art. 1, paragraph 1, combined with arts. 20, 21 and the conditions addressed in arts. 2, 4, and 5.

However, as the legality and economy assessment of the privatization is pending examination by the Federal Accounting Court - TCU, which imposed hindrances to similar projects in the past, and given the opinion issued by the Justice reporting on the Eletrobras case, to some extent, the process may be impacted by its proceeding at the Court, which, in principle, could characterize an influencing factor to be considered on the pricing of securities when going public or even due to market orientation, assumptions that will be better evaluated after the ruling of the case in the TCU, that, even though scheduled for judgment on December 15, 2021, was suspended after a request for examination of the case records during the session.

V. Methodology

In this chapter, the methodology for determining the Marginal Cash Flow for calculating the Grant will be presented, as well as the critical variables of its formulation, in particular, the energy sales curves derived from the hydrological scenarios that calculate the GSF, PLD and forward curves. Figure 1 presents a block diagram of how the main topics of this analysis were systematized to arrive at the results of chapter VIII.

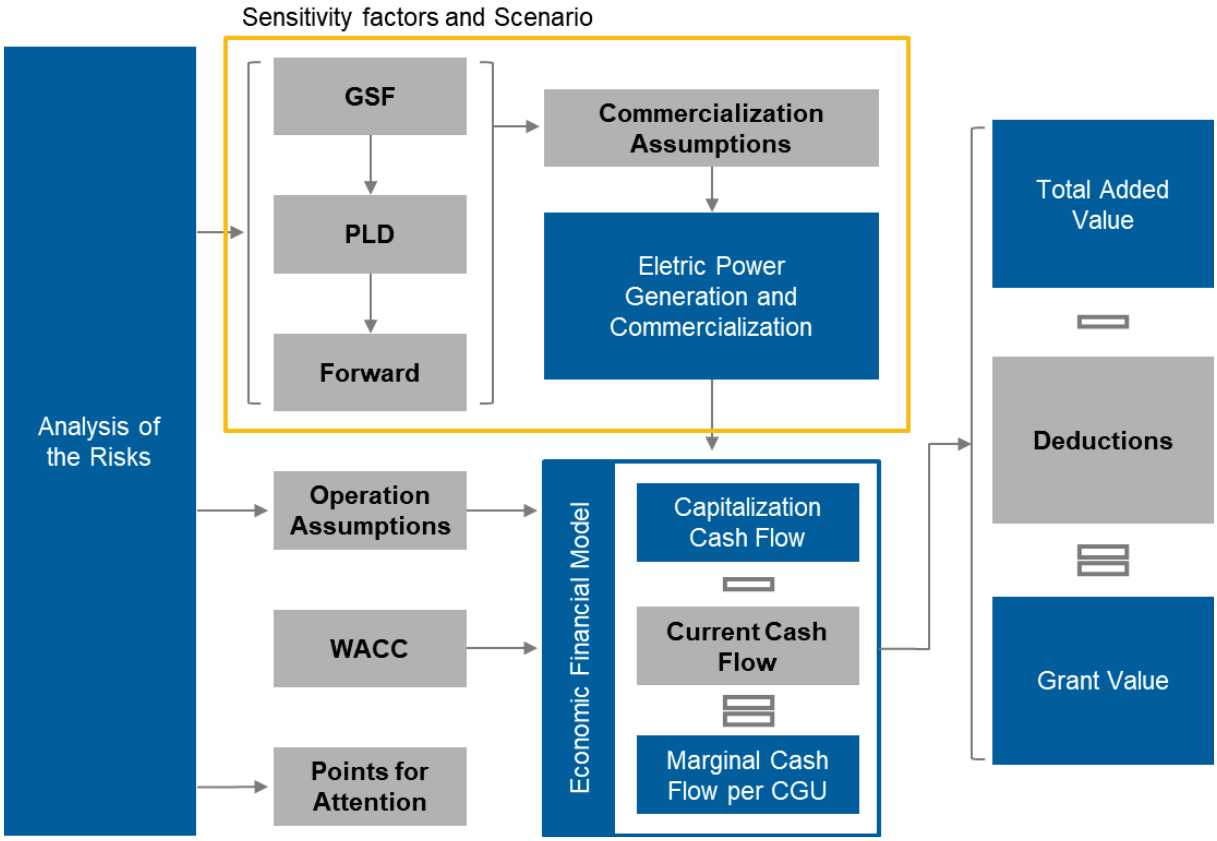

Figure 1: Methodological Flowchart

Source: Own Elaboration.

As it will be discussed in chapter VII – Summary Analysis of the Risks, the risks taken into account throughout the Report will be addressed in 1. Points for attention, to be monitored by Eletrobras Management; 2. Assumptions and variables parameterized for the risk in the Financial Model, as stated in chapter VI – Definition of Assumptions**Definition of Assumptions**; and 3. Risks analyzed through sensitivity

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

cases and scenarios, perceived through major changes in the hydrology assumptions and variables, configuration and expansion of the future electrical system, energy prices and certain trading strategies.

Section V.4 – Pricing and Hydrological Risk Scenario presents how the future probabilistic scenarios of GSF and PLD will be projected based on climatological series, including (for example) assumptions about expansion of the system and climatic periodicities such as El Niño, La Niña, etc. These assumptions, associated with the electricity production costs of each submarket, make up the determinants of the neural network for the formation of projective energy trading price curves ("Forward curves").

Provided with GSF, PLD, and forward curves, it is possible to explore the application of several trading strategies that can best balance the risks and opportunities of exposure to the sale of energy on the short-term market and the free (non-regulated) contracting environment. These strategies were defined exogenously to the Financial Model.

In light of the foregoing, the set of assumptions (herein called "Operating Assumptions"), hydrological scenarios ("GSF" and "PLD" in the diagram), prices ("Forward"), trading strategies and discount rate comprise the Financial Model's external basic inputs, which was structured by a Marginal Cash Flow logic expounded in section V.1. This (the Marginal Cash Flow) is the outcome from the difference between the cash flow projection from the power plants (or CGUs – Cash Generating Units) considering the scenario in which Eletrobras' capitalization ("Capitalization Flow") against the scenario as it is today ("Current Flow").

Overcoming this phase of inputs, the Added Value of each CGU (or HPP) is calculated by net present value, which, when integrated, results in the Total Added Value. This amount, thereafter, must be deducted from the amounts determined in Law 14.182/2021 to, finally, reach the calculation of the Grant Amount.

It is worth noting that adopting a single discount rate (WACC) for quota flows and in independent production rules out the discussion of this rate from the topic of

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

"energy trading business risk" and ultimately allows for the application itself of the Marginal Cash Flow methodology, which will be further explained in section V.2.

In general, it is also worth noting that the risk analysis in this scope refers to the risks identified in the context of future flows projected when Eletrobras is capitalized. In this regard, despite permeating the entire conception of the Base Case, the risk analysis receives an *ex-post* contour in relation to its formulation, so much so that it will only receive an extended discussion after the presentation of the Study's basic assumptions and variables, in chapter VII. Even still, as will be seen, this analysis has a recursive character in the reformulation of the assumptions, which will be tested in different cases of sensitivity and end up affecting the Base Case at different levels.

Finally, this "dispersion" of possible values added formed by the "disruption" of the assumptions of the Base Case will compose the conclusion of the Risk Analysis, whereby each of the points raised will be rated as threats or opportunities, low or high, to provide a framework to support Eletrobras Management's decision making regarding the risks taken. This last topic will be covered in section VIII.5 – Risk rating which concludes this Report.

V.1. Marginal Cash Flow and Grant Determination

The Total Added Value of the capitalization (VA_{total}) can be understood as the sum of the individuals Values Added of each power plant by applying the cash-generating unit (CGU) concept with the discount from the indemnities of Tucuruí and Curuá-Una HPPs. A CGU is "the smallest identifiable group of assets that generates cash inflows, which are largely independent of cash inflows from other assets or other groups of assets" (CPC 01, item 6). From this derives the formula below:

$$VA_{total} = \sum VA_i - Indemnities$$

Where:

VA_{total} = Total Added Value

VA_i = Added Value for each CGU where i = 1, 2, 3... 18

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The Added Value (VA), in turn, will be calculated by the Discounted Cash Flow method using the difference of the net present value of the free cash flows to the firm (FCFF) of the Capitalization Scenario ($FCFFc$) and the Current Scenario ($FCFFa$).

In the BASE DATE, the sum of the discounted cash flow for each period results in the Net Present Value (NPV), according to the following formula:

$$VA_{total} = \sum_{i=1}^{18} NPV_{FCFFc,i} - \sum_{i=1}^{18} VPL_{FCFFa,i} - Indemnities$$

Where:

VA_{total} = Total Added Value;

NPV_{FCFFc} = Net Present Value of Capitalization Scenario Flows;

NPV_{FCFFa} = Net Present Value of Current Scenario Flows;

The appropriate discount rate for remunerating these flows is the WACC (Weighted Average Cost of Capital), which reflects the weighted average cost of equity and cost of debt, and represents the minimum rate of return required for the sector evaluated without considering the project indebtedness flow.

Section V.2 - Weighted Average Cost of Capital (WACC) proposes the adoption of a single WACC to calculate both flows, the Capitalization Scenario and the Current Scenario. Therefore, it is presumed that the risks due to the change of the exploration regime in accordance with the new concession contracts will be accounted for along the cash flow of the Capitalization Scenario, excluding the need to project two cash flows.

In this case, the measurement of Added Value can be expressed through the Marginal Cash Flow, which is, the cash flow resulting from the difference between the Capitalization Scenario and the Current Scenario. This mathematical simplification is relevant for reduce the number of assumptions considered and reducing the study to the most relevant and sensitive assumptions for determining the Added Value.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The cash flow under the quota system (Law 12783/2013) is determined as follows:

+ Annual Generation Revenue (RAG)
- Operating Expenses (OPEX)
- Capital Expenditure (CAPEX)
- Sectorial Charges
- Annual Generation Revenue Taxes

= $FCFF_{Quotas}$

And for the cash flow under the independent power production regime:

+ Power Sale
- Operating Expenses (OPEX)
- Capital Expenditure (CAPEX)
- Exposure to the STM
- Sectorial Charges
- Independent Power Producer Taxes[1]

= $FCFF_{IPP}$

Considering that the calculation of the Added Value will be given by the difference between the flows of the Capitalization Scenario and the Current Scenario, it is understood that, for the period in which there is a convergence between the two scenarios (period in which they would occur concurrently) some assumptions can be disregarded from the Marginal Cash Flow assuming that there is no change in its forecast from the change in the commercialization regime. These assumptions are Operating Expenses (OPEX) and Capital Expenditure (CAPEX).

Furthermore, it is understood that the sectorial charges and taxes applicable to the Marginal Cash Flow also refer to the marginal sectorial charges and taxes resulting from the difference between the two cash flows.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

If there is an understanding, however, that there may be a change in Operating Expenses or Capital Expenditure arising from the renewal of the concession contracts, the marginal variation of these must be implemented in the Marginal Cash Flow.

For the period in which there is no convergence of flows, which is, periods in which there will only be a cash flow determination for one of the two scenarios (Current Scenario or Capitalization Scenario), the complete cash flow must be considered.

It should be noted that, even for the period in which the commercialization system is the same between the two scenarios, there is Added Value, and the Marginal Cash Flow does not presume null values. This is due to the difference in energy traded between the regimes, as the new physical guarantee is applied to the Capitalization Scenario flow.

Thus, as the CGUs under analysis are, in the Current Scenario, under specific energy commercialization regimes and with different concession end dates, the Added Value for each CGU must be defined separately. The basic assumptions for the definition of the Added Value in each period are made according to Table 4 below.

Table 4: Treatment of Added Value for each CGU

HPP	Treatment
Quota Regime in accordance with Law 12783/2013	
Boa Esperança[1] Paulo Afonso Complex[1] Luiz Gonzaga[1] Xingó[1] Funil – BA Pedra Coaracy Nunes Corumbá I Estreito Funil – RJ Furnas Marimbondo Porto Colômbia	**2023 - 2042**: Added Value = NPV IEEP - NPV Quotas **2042 - 2052**: Added Value = NPV IEEP [1]for the CHESF HPPs (Boa Esperança, Paulo Afonso Complex, Luiz Gonzaga and Xingó), approximately 2% of Physical Guarantees was considered under the Independent Power Regime.

Source: Own Elaboration.

The assumptions of the concessions are found in section VI.3 – General Assumptions of the Concessions, wherein the respective physical guarantees, termination of concessions, extensions and electricity trading regimes are detailed.

Table 4 shows that there are three blocks of power plants for calculating Added Value; from those, the treatment received by the power plants under the Law 12783/2013 represents the most common case. In it, there is a transition from the current quota regime to the flow at an independent producer. Figure 2, below, exemplifies the profile of this flow (of revenue only) for the case of the Paulo Afonso Complex HPP.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

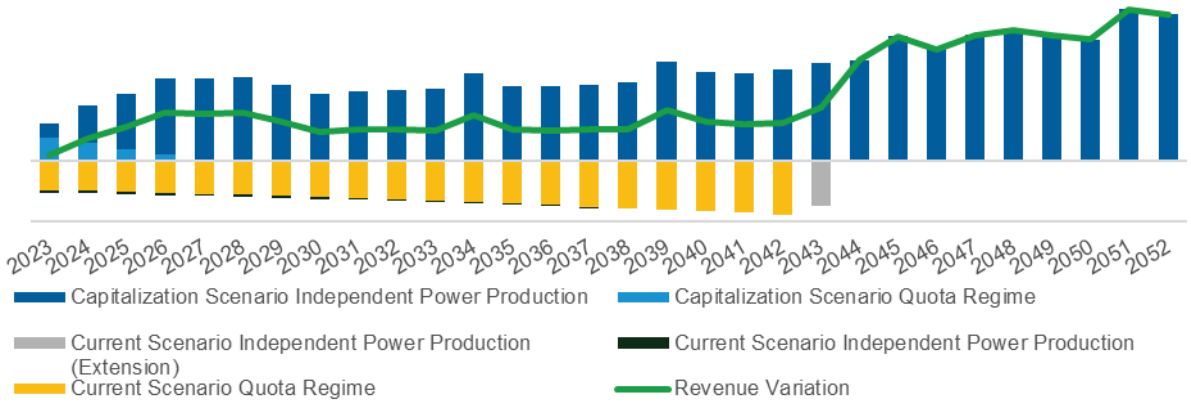

Figure 2: Treatment Added Value Paulo Afonso Complex

Source: Own Elaboration.

The Second block refers to the Sobradinho and Itumbiara power plants, which fall under the transitional regime under Law 13182/2015. As detailed in section VI.4.2 – Revenues from power plants under law 13182/2015, the Sobradinho and Itumbiara plants, which are currently independent producers, would uniformly migrate to the quota system; however, they would return being independent producers due to the extension of the grant as a consequence of the hydrological risk renegotiation, as provided for in Law 14052/2020.

One can see in Figure 3 and Figure 4 that, for the plants in the second block, there is a slightly negative revenue difference at the start of the Added Value calculation, due to each plant's revised Physical Guarantee in the flow under the independent production regime, as described in section V.3 – Recalculation of physical guarantees. After the revenue difference returns to a positive level, because of the situation how the independent producer flow exceeds the current revenue flow under the quota regime. Both plants end the flows with considerably negative revenue differences, as their extensions go beyond the period of the contracts signed in the Capitalization Scenario.

Therefore, these flows from the additional period are considered to reduce the value of the Grant, as shown in Figure 3 and Figure 4 for the Sobradinho and Itumbiara

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

HPPs, the Added Value of the last period is a negative value related to the negative flow of independent producer that the power plants would be entitled to in the Current Scenario, but which will not be considered in the Capitalization Scenario.

For periods in which the Added Value is the difference between (i) the IPP's NPV for the Capitalization Scenario and (ii) the IPP's NPV for the Current Flow, it is going to be considered, as Marginal Cash Flow, the FCFF, which is the result of the difference of the reviewed and actual GF.

It should be noted that the analysis period for determining the Total Added Value is from January 2023 to January 2059. In other words, it is considered that the new concession contracts will be signed in December 2022 after the payment of the Grants, and these contracts will be effective until December 2052. The additional period (from January 2053 to January 2059) refers to the extension of the concession of the Sobradinho (until January 2059) and Itumbiara (until March 2058) HPPs, detailed in section VI.3 - General Assumptions of the Concessions.

It is important to stress that the profile of the marginal flow demonstrated are not suited to represent the financial flows regarding the scale and specific values once this is going to be presented in chapter VI – Definition of Assumptions. Instead, its purpose is to illustrate under the perspective of a methodological treatment the way which the marginal flow is evaluated for the different blocks of HPPs and their particular cases.

The Grant, on the other hand, will be provided as described by Art. 4 of Law 14182/21.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *"Art. 4. These are conditions for the new grants of electric power generation concession referred to in art. 2 of this Law:*
>
> *I - the payment by Eletrobras or its subsidiaries, as defined by the National Energy Policy Council (CNPE), to the Account for Energy Development (CDE), referred to in Law 10438, of April 26, 2002, corresponding to fifty percent (50%) of the added value to the concession by the new contracts;*
>
> *II - the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession agreements corresponding to fifty percent (50%) of the added value to the concession by the new contracts, deducted of the following amounts:*
>
> *a) expenses related to the revitalization of the water resources of São Francisco River and Parnaíba River watersheds, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;*
>
> *b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;*
>
> *c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, pursuant to subparagraph c, item V, caput, art. 3 of this Law; and*
>
> *d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Watersheds of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;"*

In this way, the Grant bonus to the CDE will be given as 50% of the calculated total Added Value, while the Grant bonus to be paid to the Federal Government will be given by the remaining 50% of the total Added Value deducted from the installments described in the legislation in accordance with section VI.9 – Deductions of the Grant bonus according to Law 14182/2021.

V.2. Weighted Average Cost of Capital (WACC)

The WACC is the weighted average cost of capital and represents the minimum rate of return required by the project to allocate its equity capital and third-party capital.

It is determined by the opportunity cost of shareholders and the cost of third-party capital, weighted by their respective amounts, in accordance with the following formula:

$$WACC = K_d * w_d * (1 - T) + K_{and} * w_{and}$$

Where:

K_d = cost of third-party capital

w_d = proportion of third-party capital

T = effective tax rate on profit

K_{and} = cost of equity capital

w_{and} = proportion of equity capital

In this Study, the WACC of the project will be determined considering the costs from the financing sources available for the project, as well as the observed average leverage of companies operating in the same sector. Accordingly, the cost and the respective amount of the project's debt are going to be defined.

For the cost of equity capital, the Capital Asset Pricing Model (CAPM) methodology is going to be used, which is commonly used by the international financial literature to determine such cost, defined by the following formula:

$$K_{and} = R_f + \beta * (ERP)$$

Where:

K_{and} = cost of equity capital;

R_f = risk-free rate refers to the return obtained through risk-free investments;

β = coefficient representing the systematic risk of the business;

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

ERP = market equity capital risk premium

A problem to be addressed is the different levels of risk perceived between the quota system and the independent production system, in which the concessionaire is subject to GSF and commercialization risks, which would justify, for example, the use of two different discount rates for each of the flows.

However, a satisfactory proposal to address this problem is to incorporate the perceived risk into the projected cash flow. As explained in section V.4.1.8 - Median and Hydrological Curves, several envelopments associated with different climatological series will be prepared. These scenarios will be subsequently ordered in terms of Total Added Value so that the greater their associated p-values, the more conservative the scenarios generated will be. Hence, it can be concluded that adopting a lower and more conservative NPV would be equivalent to a bolder cash flow discounted at a higher discount rate. Strictly speaking, p-values above p50 already satisfy this choice criterion; for the purposes of this Study, we are using the 90% level p-value (p90), i.e. 90% probability of observing an NPV greater than or equal to the one found, given the distribution of possible hydrological scenarios (this matter is addressed in section V.4 – Pricing and Hydrological Risk Scenario and resumed in section V.4.3 – Application in the Financial Modeling).

In this regard, it should be noted that conservatism in the NPV does not necessarily comes from a worse or better hydrological scenario, but from the optimization condition of the trinomial GSF, PLD and energy trading price detailed in section V.4.3

Similarly, it is postulated that the adjustment by the NPV p-values of the implicit power generation and commercialization business risk is an eminently financial-methodological character. Therefore, strictly speaking, the hydrological curves should be critiqued, above all else, based on the hydrological median (as defined in section V.4.1.8 – Median and Hydrological Curves), because it is based on such prospecting that a depreciation of the financial flow is calculated, stemming exclusively from the inclusion of the implicit risk of the business, since a single discount rate remains applied to the Current Scenario and Capitalization flows. The dispersion of hydrological

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

scenarios arising from the envelopes can be understood as an interval of coverage for possible changes in the value of the NPV, given a confidence criterion.

It is noted that the direct application of two discount rates for each of the flows to be analyzed, although theoretically justifiable, would find little consolidated support in the available literature for the isolated estimation of the additional risks undertaken when assuming the commercialization and generation risk.

Finally, it should be noted that, as explained in section V.1, an important development for the objectivity and simplicity of works using a single discount rate is making the Total Added Value feasible by the Marginal Cash Flow assessment method.

V.2.1. Definition of Beta (β)

The variable β represents the systematic risk of the business, defined as the covariance between the return of the chosen asset in relation to the market, divided by the variance of the market's return. This factor is estimated through changes in the asset price, over time, in relation to the Stock Exchange. However, as the project is not a publicly-traded company in this study, the representative beta value is defined as the average obtained from comparable companies.

For this Study, the β obtained must be the unlevered β, that is, the one disregarding the leverage level and capital structure of the group of companies similar to Eletrobras. Thereafter, β will be re-leveraged according to the capital structure to be defined in this section.

The unlevered β considered for this Study is 0.56, as shown in Table 5.

Table 5: Determination of unlevered beta.

Company	D/E	Levered β	Unlevered β
ELETROBRAS	70.36%	1.49	0.91
AES BRASIL	108.52%	0.56	0.31
CESP	22.24%	0.50	0.41
CEMIG	66.16%	1.34	0.92
COPEL	59.51%	0.94	0.66
ENGIE	57.23%	0.62	0.43

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

EDP BRASIL	96.18%	0.58	0.33
CPFL	64.21%	0.70	0.48
		Average	**56**

Source: Economatica.

To re-leverage beta, the following formula must be followed:

$$\beta_{levered} = \beta_{unlevered} * \left[1 + \left(\frac{D}{E} * (1 - T)\right)\right]$$

Where:

D = percentage or total debt amount of the asset;

E = percentage or total value of the asset's equity capital;

T = effective marginal tax rate on profit;

$\beta_{unlevered}$ = unlevered beta;

$\beta_{levered}$ = levered beta.

To calculate $\beta_{levered}$, the capital structure for the asset in question must be determined, a topic that is going to be discussed in section V.2.4 – Optimal Capital Structure.

The effective tax rate on profit (T) will be the benchmark rate of 34%.

V.2.2. Risk-Free Rate, Market Premium and Country Risk, Brazilian and American Inflation

To define the cost of capital, the risk-free rate and the market risk premium must be estimated. The Risk-Free Rate (R_f) was calculated according to the daily average of the trading rate of Brazilian government debt securities (NTN-B) maturing in approximately ten (10) years in the period between 2011-2021.

For the Market Risk Premium (ERP), the United States Equity Risk Premium was used, according to values provided by DAMODARAN (2021).

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The adopted Long-term Brazilian Inflation (Π_{BRL}) forecast was provided by the BACEN expectation system.

Table 6 contains the data obtained for each of the named factors:

Table 6: Weighted Average Cost of Capital - Rates

Risk-Free Rate	Market Risk Premium	Brazilian Inflation
5.16%	4.72%	3.17%

Source: Own Elaboration (with data from BACEN, FED, Ipea, and Aswath Damodaran).

V.2.3. Funding Costs (K_d)

To estimate the funding costs (K_d) for the project, we choose to use the Rating-*Based Default Spread* method. In this method, a risk spread is assigned over the risk-free rate (R_f), which is presented as a variable depending on the degree of interest coverage for a given level of leverage. That is, for each level of leverage, a level of interest coverage will be determined, which will be understood as a level of credit risk that should impact the level of the indebtedness spread on the risk-free asset, according to values provided by DAMODARAN in Table 7.

Table 7: Weighted Average Cost of Capital - Spreads

Interest Coverage Ratio			
>	≤	Rating	Spread
8.500	100,000.00	Aaa/AAA	0.69%
6.500	8.500	Aa2/AA	0.85%

Source: Ministry of Economy.

V.2.4. Optimal Capital Structure

The capital structure will be estimated from the optimal capital structure, defined as the one that minimizes the cost of capital (WACC) and, therefore, maximizes the value of the respective cash-generating unit. Figure 8 represents the calculation of the optimal capital structure with different levels of leverage with the respective financing costs. The optimal capital structure calculated for the study is 35%.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

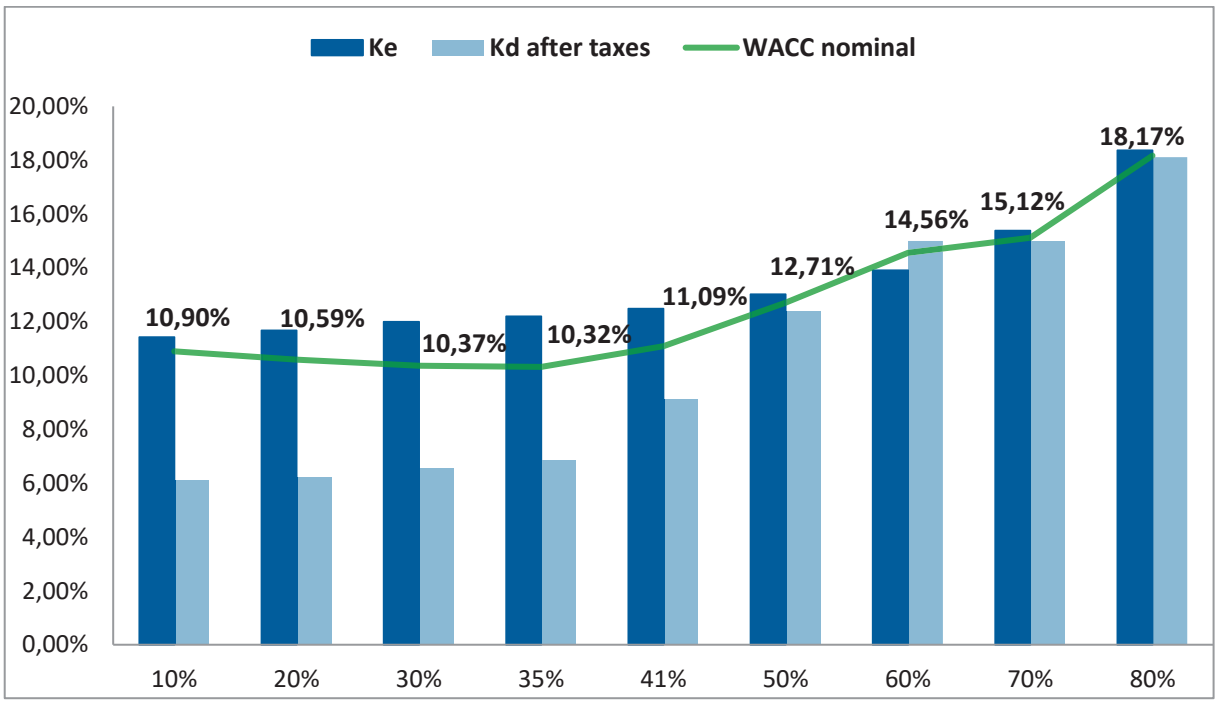

Figure 8: Weighted Average Cost of Capital – Optimal Capital Structure

V.2.5. WACC - Results

Thus, from defining all the parameters necessary for accounting the weighted average cost of capital, Table 9 is presented with the WACC value determined.

Table 9: Weighted Average Cost of Capital - WACC

Risk-Free Rate Scenario			NTN-B
Beta Scenarios			Market Average

Source: Own Elaboration.

This amount will be used as the basis for the project's discount rates, as the reference for determining the discounted cash flow, NPV and for calculating the grant bonus.

V.3. Recalculation of physical guarantees

According to Law 14182/2021, new concession contracts will be generated for the CGUs under analysis. A new physical guarantee must be determined in the case of new concession contracts and not renewals, extensions, and amendments to an existing contract.

MME Regulation No. 544, of August 31, 2021, determined the new values for the Physical Guarantees of the power plants; Table 10 summarizes the effects of the publication.

Table 10: Physical Guarantee Reviewed

Subsidiary	CGU (HPP)	Physical Guarantee (MW)	Physical Guarantee (13182/2015) (MW)	Physical Guarantee Revised (MW)
CHESF	Boa Esperança	132.9	3.0	136.2
	Paulo Afonso Complex	2,067.1	46.7	1,658.8
	Luiz Gonzaga (Itaparica)	891.0	20.1	727.0

Source: Own Elaboration with Data from MME Regulation No. 544.

According to the Auction Notice (Exhibit I of this Report), as to the calculation of the new Physical Guarantee of the power plants to be considered in the modeling, it should consider, as a reference, the methodology established in legislation in force, as well as the base case (decks of the computational models involved in the calculation) and/or the specific assumptions that the Energy Research Company will possibly consider for the calculation. Since Upside used the assumptions of the EPE itself, it was not necessary to calculate the new Physical Guarantees. In addition, during the provision of services, the official calculation of the grant was disclosed by the CNPE, in which the EPE assumptions were also used. For the results generated in the base case of this Study, it is presumed that the physical guarantees of the MRE power plants of this scope are going to have their physical guarantees exactly in accordance with MME Regulation No. 544, of August 31, 2021.

V.4. Pricing and Hydrological Risk Scenario

This section examines the three main price pillars in the Brazilian electricity sector:

- The PLD price (clearance), which is widely used by authorities as a reference - from fines fees to auction base price. It is calculated by the CCEE as the marginal cost of operating the system (limited by higher and lower regulatory values). This is used for what is known as “clearance” of electricity surpluses and shortages resulting from market negotiations;
- The regulated price (distributor tariffs), made up of an array of contracts, charges, and mandatory contributions. In this case, the tariff has several components, including auction prices;
- The unregulated price (free market), resulting from bilateral negotiations.

Although it is non-intuitive, the PLD influences the entire market. For instance, if a generating agent expects a better result simply by using clearance as a selling

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

market, consumers (“free” and “captive”) may be compelled to pay a higher price to “compete” with the PLD, whereby the generator will choose to trade the more attractive prices or simply deliver the energy to PLD clearance.

The product of this analysis will be the monthly curve of the GSF and PLD given the reference hydrological scenario (this scenario will be called the “hydrological median”), discussed in section V.4.1.8, and forward curves, as seen in section V.4.2.2, derived from this median. Based on this central curve, several curve envelopes (also called “hydrological curves”) will be simulated, which will be implemented in the Financial Model, as explained in section V.4.3 – Application in the Financial Modeling.

V.4.1. GSF and PLD projection

In the next sections, the method, critical analysis factors, and results of the GSF and PLD projections to be used in the construction of the projected Marginal Cash Flow will be demonstrated. This hydrological base scenario will be called the “hydrological median”; based on this central projection, the probabilistic scenarios of hydrological curves will be further studied.

V.4.1.1. PLD

PLD prices are calculated by a set of long-term models (the chain of models) managed by the National System Operator (ONS) and by the Commercialization Chamber (CCEE).

As operating conditions and targets change frequently, the volatility of the PLD is very high. Figure 9 presents the historical behavior of the PLD, showing sudden (usually unexpected) "surges" that can last from 3 to 12 months. The use of reservoirs - deeply depleted - leaves the system with little (or no) protection against weather

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

events, such as droughts/floods or even weaker winds. Without our “batteries” (full reservoirs), prices fluctuate according to nature.

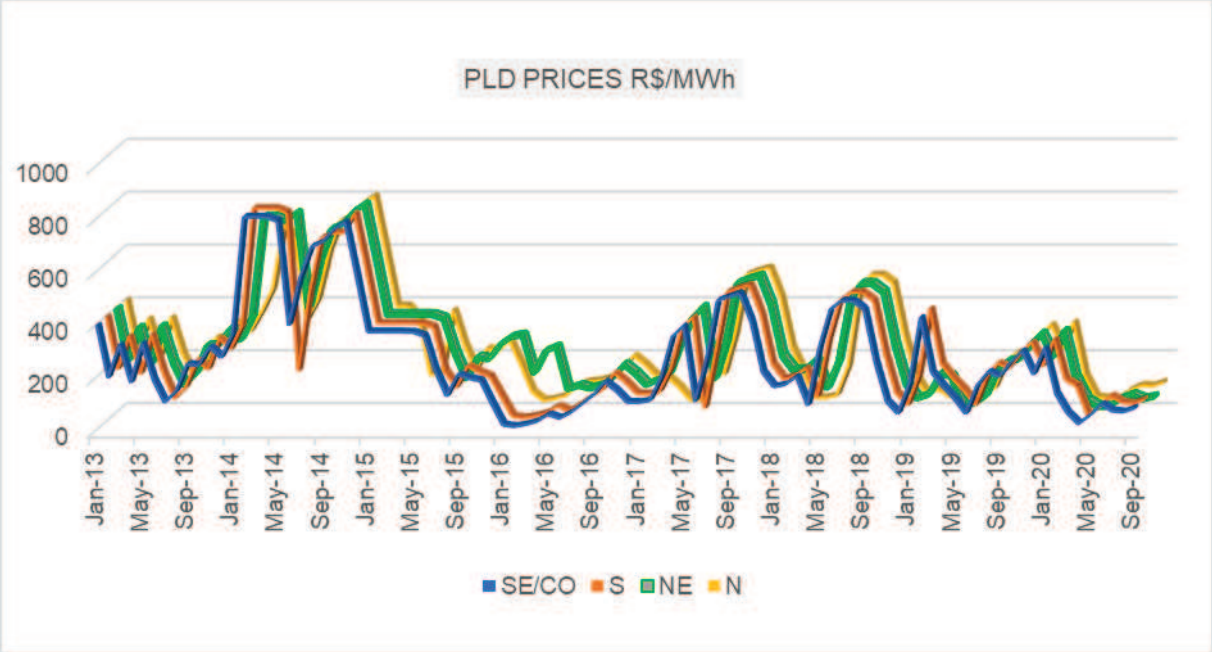

Figure 9: PLD Prices History.1

Source: Own Elaboration.

To simplify, it can be argued that PLD prices correspond to the marginal costs derived from the optimal functioning of the system. Therefore, we need to know:

- Future expansion (installed capacity) and the characteristics and locations of associated sources;
- The future availability of energy source (wind, water, radiation, gas, coal...);
- Future demand.

Granularity and location must meet the PLD assessment. Currently, the PLD is evaluated hourly.

V.4.1.2. Expansion

The expansion combines the generation and transmission projects already contracted, the expected evolution (such as the next auctions) and the long-term future expectations derived from an optimization model compatible with the EPE tools. It is

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

important to note that although our information is based on the PDE 2030 and PNE 2050 reports, we do not reproduce this data accurately. The reason is simple: since the publication of these works, the system and the market have undergone relevant changes – modernization, delays, laws etc.

We can summarize our survey regarding future expansion in the following steps:

1- Use the PDE 2030 and PNE 2050 as a basis
2- Compare the expansion of these documents with the current one: implement delays, new engagements
3- Implement new decisions (modernization, new laws, etc.)
4- From 2030 onwards (when there are no more new contracts, and it is necessary to expand to meet the load, use a model similar to the MDI (from EPE) to calculate the optimal expansion
5- Consolidate final expansion

Apart from of delays, expansion prices do not have a significant impact on the PLD because all units (except fossil and nuclear) operate with "zero fuel cost" (water, wind and sun are free, in theory, and O&M costs/tariffs are disregarded). On the other hand, fossil/nuclear costs are significant and have a high impact on marginal costs (for example, the dispatch - or the expected future dispatch - of a marginal thermal unit will define the marginal costs and, therefore, will impact the PLD).

Unit prices for fossil power plants fall into two categories:

- "availability price" - fixed price indexed by inflation, which will be paid independently of the factory dispatch;
- "variable price", or CVU, is usually specified under contract and indexed by some defined indicator. This indexing poses an important and sometimes overlooked problem. Its growth is generally higher than inflation rates and causes associated prices to significantly increase on a long-term basis.

The availability of power plants is not enough to meet the load if there is no energy source - in this case, water, wind and sun (so far). It is important to “forecast" climatological inputs such as water input (for hydropower plants), wind velocity (for wind farms), and solar radiation (for solar/photovoltaic power plants).

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

A climatological model was used, which analyzes the climatic dynamics of each series (drainage basin, regional wind speeds, and solar irradiation) to “extract” periodicities and combine their projections into future scenarios.

For example, historical wind velocity records in Northeast Brazil could be broken down into their main periods: long-term Niños/Niñas variation, annual pattern, and intra-annual cycles (2-3 months). Our forecasting model "extends" these periodicities into the future, along with the associated variability, synthesizing realistic wind power production scenarios.

Figure 10, below, illustrates the hydrological inflow scenarios projected for each market (normalized by the long-term average). These scenarios will correspond to the water availability that can be used for hydroelectric generation.

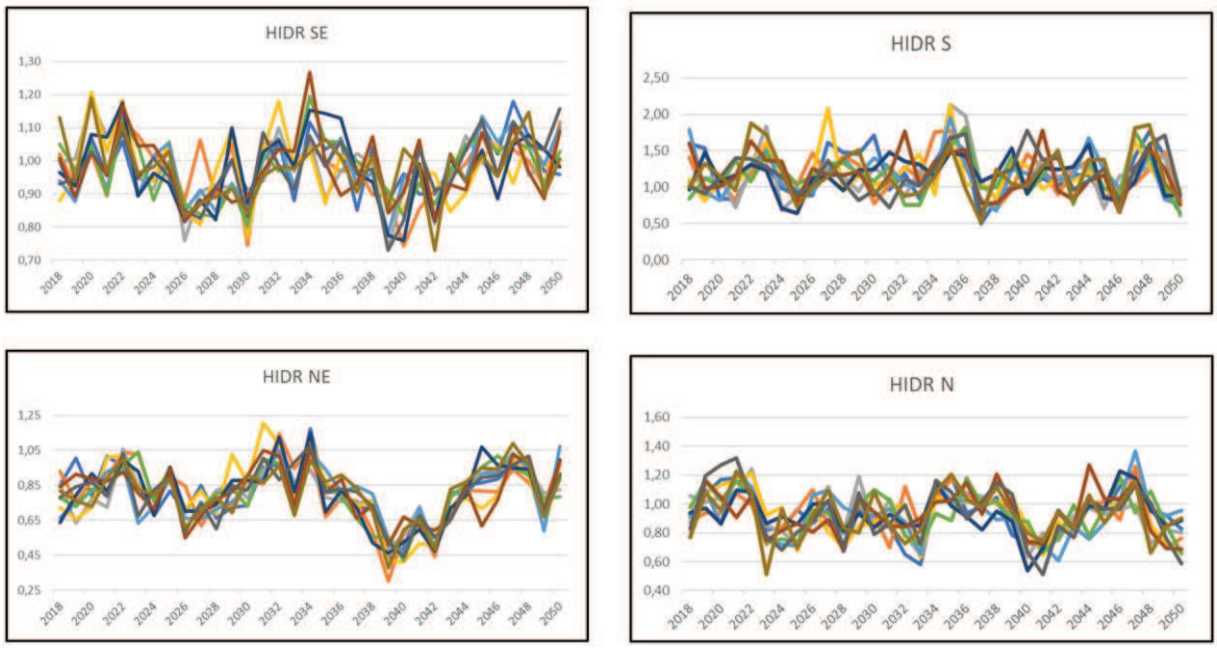

Figure 10: Entry scenarios for each submarket

Source: Own Elaboration.

COVID-19 has had a substantial impact on demand growth. Next year's progress is still unknown, and forecasts are challenging. However, most experts agree that the years ahead will not reach the exuberance of the past. Furthermore, efficiency will play an increasingly important role as distributed generation penetrates and more intelligent equipment emerges.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Even so, the growth of the Brazilian electric energy load is remarkable - even with frequent economic crises, past historical averages showed significant annual growth of 3-4%. In other words, approximately 2 GWmed (in physical guarantee) had to be incorporated into the country per year. Even with much more modest dynamics, the load still grows, and some unanticipated needs (such as peak power) will still lead to considerable expansion.

The expansion of the reference generation is calculated by the Energy Planning Authority (Energy Planning Company, PDE 2020-2030). It is essential to note that this benchmark expansion includes already contracted power plants (to be built under concessions or auction contracts) and planned inclusions but not yet contracted (approximately plants to begin to operate after 2026).

However not the entire expansion schedule develops as specified. Delays and inefficiencies are possible - and usually likely.

There is no official plan longer than 2030. Therefore, it is necessary to build a complementary expansion configuration based on credible assumptions, to be listed as follows.

From 2026 onwards, it is reasonable to presume that Brazil will still be growing and that the need for new plants will persist. However, there is not much information about the power plants that would be chosen to be built. A brief analysis of the Brazilian hydroelectric inventory (Eletrobras) shows that, given the total inventory of 72446 MW, only 18115 MW is viable (according to environmental restrictions). From that potential, only 5192 MW are actually under basic design - with actual conditions to be built.

Assuming a conservative hypothesis, we disregarded the construction of new power plants. The hydroelectric source will be expanded only through SHPs, including mandatory ones, according to Law 14120/2021.

The additions of fossil power plants would not be significant since renewable energies are spread throughout the country, and their price is very competitive. However, fossil energy will be attractive to provide reliability and mitigation of climate-related risks. Recent auctions (capacity, simplified) point to the inclusion of new

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

thermal plants, already established by Law 14182. The importance of these power plants becomes even greater due to the required inflexibility: at least equal to 70%.

Nuclear power plants, in the other hand, are widely rejected by society, which fears adverse effects. The costs are not competitive, and, although defended by some specialists (Eletrobras herein included), they do not find consistent support either among the authorities or among the Brazilian population.

Renewable sources of energy – wind, solar, biomass, to name a few – are Brazil's best bets. This study assumes a proportionally distributed expansion, although changes (e.g., more photovoltaic than wind generators) have no impact on PLD forecasts, since they are all represented at zero cost in the operating models (as water, sunlight and wind are considered "free" fuels).

Figure 11 below shows the resulting basic expected expansion for the next few years by source (new thermal and renewable additions in search of incentives not yet included)

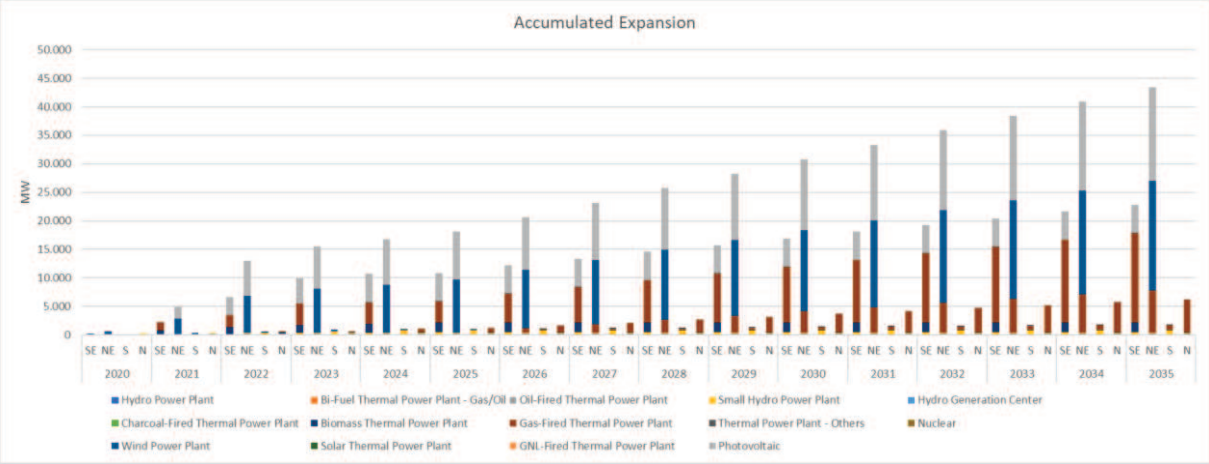

Figure 11: Expected Expansion by Source

Source: Own Elaboration.

In addition, two important generation additions were considered:

- New renewable energies going into commercial operation – many new projects were expected, such as the deadline for receiving incentive subsidies (Law 14120, of March 1, 2021). The Law established that the "granting" (subsidy)

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

must be issued by March 1, 2022; all subsidies were issued 36 months prior to the operation date.

- However, as concession deadlines approach and procedures (including connection authorizations)are processed at a sorely slow pace, it is more realistic to presume a deadline delay. Therefore, an operation date delay of six years was considered (until 2028).
- The Eletrobras Privatization Law (Law 14182 of July 12, 2021) establishes the construction of new thermoelectric power plants (gas-powered) associated with high inflexibility (minimum 70%) located in regions not yet served by gas supply. As a significant time was estimated to construct the necessary infrastructure, the perception of the professionals involved in this Report is that the entry dates were postponed for roughly two years.

Table 11 shows the new proposals for renewables and thermal additions for the period 2022-2030.

V.4.1.3. Physical Guarantee

The physical guarantee of Eletrobras' power plants was considered as approved by MME Ordinance 544 of August 31, 2021.

We considered the reduction of the physical guarantee of all other MRE plants being 2.0% (as of 2023) and an additional reduction of 1.5% (as of 2028).

It is important to point out that the renewable energies and inflexibility thermoelectric generators are "non-dispatchable" - in other words, their outputs are mandatorily used for load supply. This will produce a significant impact (reduction) in PLD, since their operating costs are defined as equal to zero in all evaluation models. Table 12 indicates the analytic expansion considered.

Table 12: Expansion of the Resulting Generation

V.4.1.4. Demand Prospect (Load)

Future load scenarios are expected for a range of agents and models. The official forecasts, in general, are optimistic, based on the hypothesis of a fast economic recovery - and are seldom confirmed in real life.

It was adopted a model based on Hilbert Spaces[7], described in the references, already implemented in several Brazilian distribution companies and used by the Electric Energy Commercialization Chamber (CCEE). This model breaks down the load and its drivers - such as economic indicators, temperatures, consumer behavior.

Figure 12 below shows the Load Forecast Platform, building a function capable of “translating” driver input variables (drivers) into future load scenarios. The model is applied both to markets (regulated and free) as well as for all distributors, covering the entire country. The platform derives from a load forecast function for each market and distributor, considering the specific regional characteristics (mining, industry, temperature dynamics, etc.).

[7] See Witte et al. (2017)

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

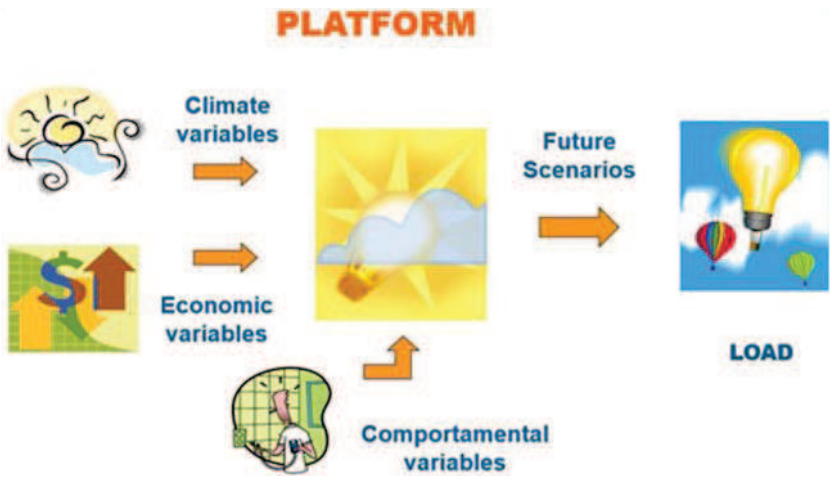

Figure 12: Load Forecast Platform

Source: Own Elaboration.

The main algorithm may be described as:

- Use the Hilbert spatial model and historical records to build a transfer function and map possible input variables in loads;
- Make input variables projections;
- Use the function created to map the projected input variables in future load scenarios.

The main drivers (which will be given specific weights, according to the local load characteristics) are associated with economic indicators:

- Seasonality: the load follows a strong seasonality, according to its periodicity dynamics: high temperatures in the summer, vacations, industrial production peak (March and October).
- Evolution of the Brazilian GDP: higher production requires more energy. In addition, economic growth leads to higher yields, entailing higher consumption. It is positive feedback.
- Broad Consumer Price Index - IPCA index reflecting the inflation rate - sometimes seen by the consumer as a “gain”, a higher income. Part of the population also reacts to inflation with a “buy while you can” approach. Consumption grows.
- Exchange rate: produces the same response as the IPCA.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- United States of America GDP: The USA is still seen by many as the "world engine," and the industrial activity (steel, ores, etc.) "feeds" American needs. It is interesting to point out that China's trade would also be a good indicator, were any reliable information available.
- Selic tax: The Brazilian economy is fueled by credit. Better rates encourage consumption (in general) and electricity. As there are no credit volume projections, the interest rates (SELIC) may be used as an indicator.

Projections of the Brazilian input variables are obtained from the Brazilian Central Bank's forecast data, while the US GDP is obtained from the Congressional Budget Office.

The efficiency impact is obtained from EPE Studies, summarized in Table 13 below – it is important to note that the term efficiency herein comprises the distributed generation and possible developments - such as micro-grids and prosumers (the new proactive rather than passive consumers).

V.4.1.5. Restrictions of the System transmission and connection

To define the restrictions of the electric energy transmission system and connection to the system, a deck of assumptions adopted by the National Electric System Operator - ONS, published in the Monthly Operation Program (PMO), was used.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

As the main renewable energy production frontier is concentrated in the Northeast submarket, the energy export limits established by the ONS from that region to the Southeast region, the main consumer submarket, were considered as a restriction for expansion of the system and implementation of new non-dispatchable renewables projects, according to Table 15.

V.4.1.6. Chain of models

The Brazilian electric system is (still) dominated by huge reservoirs, capable of multi-year regulation. Therefore, the operating models must approach a long-term outlook (typically five years, divided into months). On the other hand, long-term models generally disregard small details like local grid or power plant restrictions.

As a result, the Brazilian operation is not based on a single model but a chain of models, shown in Figure 13:

- The long-term model (NEWAVE) has an annual outlook (in general, five years) and evaluates the water values at the end of each period (month);
- The short-term model (DECOMP) has a bimonthly outlook (generally divided into weekly stages and load levels) and evaluates the operation for each stage of time (dispatch and marginal costs).

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

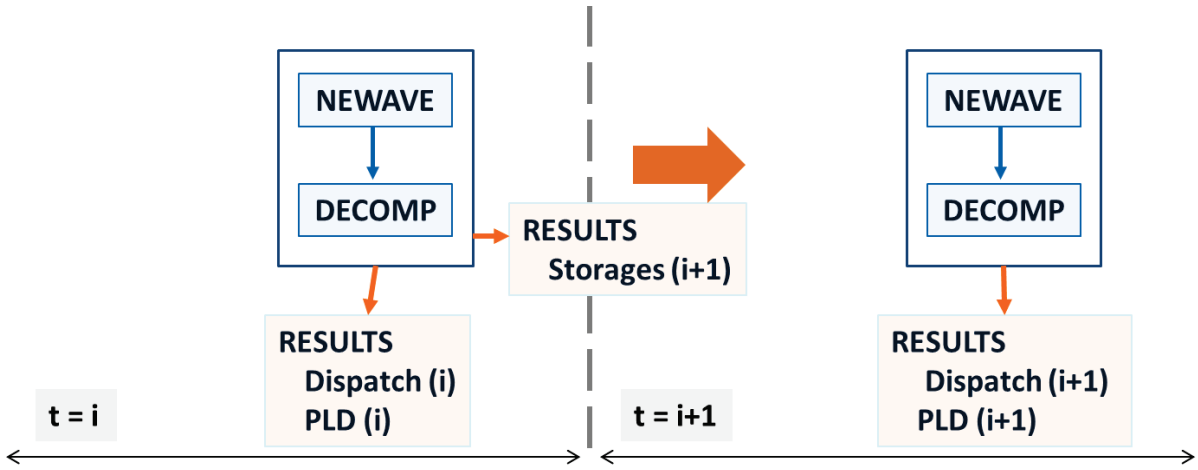

Figure 13: Representation of the chain of models.

Source: Own Elaboration.

The PLD prices are defined as the marginal operating costs of the system, limited by upper and lower regulatory thresholds. They are evaluated once a month by a chain of models specially designed for operating the Brazilian hydrothermal system and refined weekly.

The PLD is calculated by the Electric Energy Commercialization Chamber (CCEE)

- Use the long-term operation model (annual) (NEWAVE) to calculate the value of water at the end of the next two months of operation.
- Upon knowing the value of water at the end of the next two months of operation, use the short-term operation model (weekly) (DECOMP).

Naturally, dispatch and associated marginal costs depend on two key factors: available energy and load to be covered. As in a long-term scenario, it is impossible to know the exact load values and (more importantly) availability; the operation model corresponds to a stochastic algorithm (probabilistic) for decisions under uncertainties, as shown in Figure 14.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

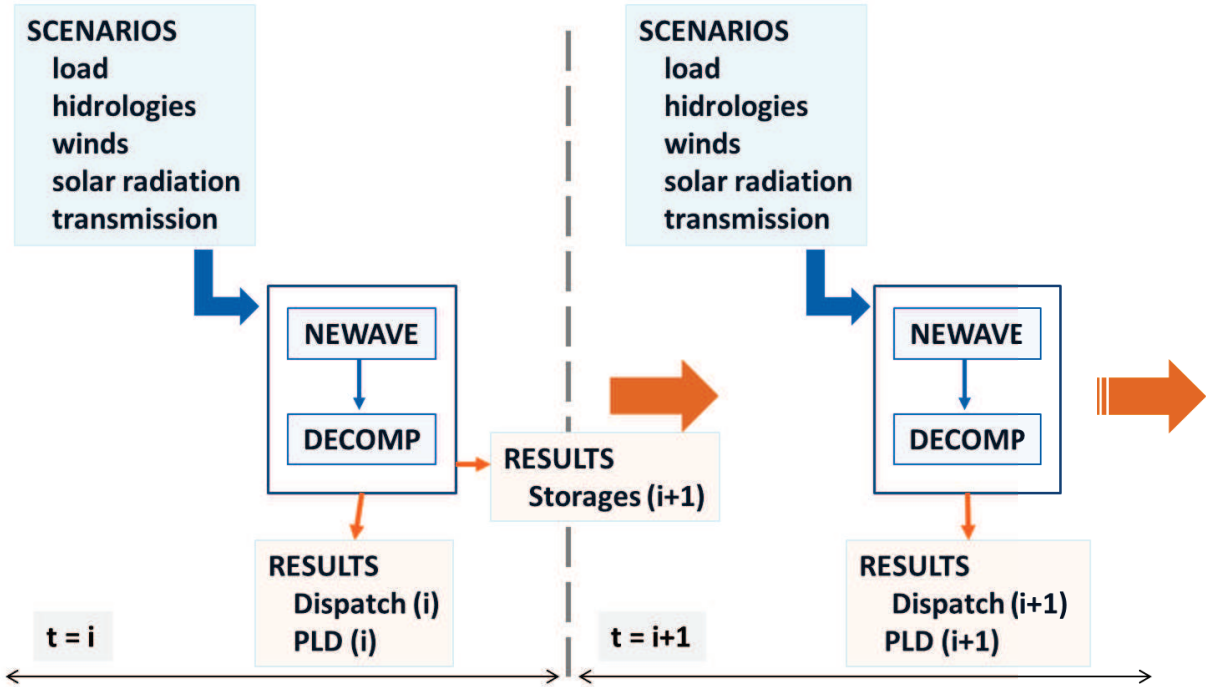

Figure 14: Operation model

Source: Own Elaboration.

The DECOMP model seeks a weekly discretization, split into three "stages" (levels): load base, average and peak. However, this representation was acknowledged as unable to capture the system's needs and costs. This became a crucial issue, since the offer depends more on renewable generation due to uncertain and volatile resources and daily modulation.

Such variability (predictable or not) makes it impossible to rely on an “average” representation of this type of energy. However, both NEWAVE and DECOMP (long and medium/short term models) still express the renewable energy (SHP, wind, photovoltaic, by biomass) through monthly averages, obtained from a typical generation profile (which may not even be realistic).

On the other hand, NEWAVE and DECOMP do not represent the transmission system - only the main interchange lines are accommodated without any electrical modeling. It would be interesting to increase the accuracy of the daily operation, introducing some transmission restrictions (even where simplified).

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The DESSEM model attempts to fill in these gaps, connecting the weekly dispatch calculated by NEWAVE/DECOMP and the daily pre-dispatch of the following day.

It is interesting to note that future scenarios are built through mathematical models at each PLD assessment - combined with the insights of the Operational Authorities (ONS, the National Electric System Operator).

The future long-term hydrological availability scenarios are calculated through auto-regressive models (NEWAVE) and, in the short term, through forecasting models (DECOMP). These models do not consider weather cycles (Niños, Niñas, etc.) or even climate change trends already noticeable in most Brazilian watershed. On the contrary, these models “tend” towards a long-term average in a few months, eliminating climate effects.

In addition, the wind, photovoltaic, and SHP alternatives are modeled by the “physical guarantee” - approximately a “worst-case” (admitted risk of 5%) calculated in the last years (number of years, depending on the source and available records). However, the generation available is more abundant than that. For example, in the Northeast region, the Photovoltaic and Wind alternatives are anticorrelated, as shown in Figure 15. The same anticorrelations may be found in Hydrologic flows in the Southeast and Wind Velocity in the Northeast.

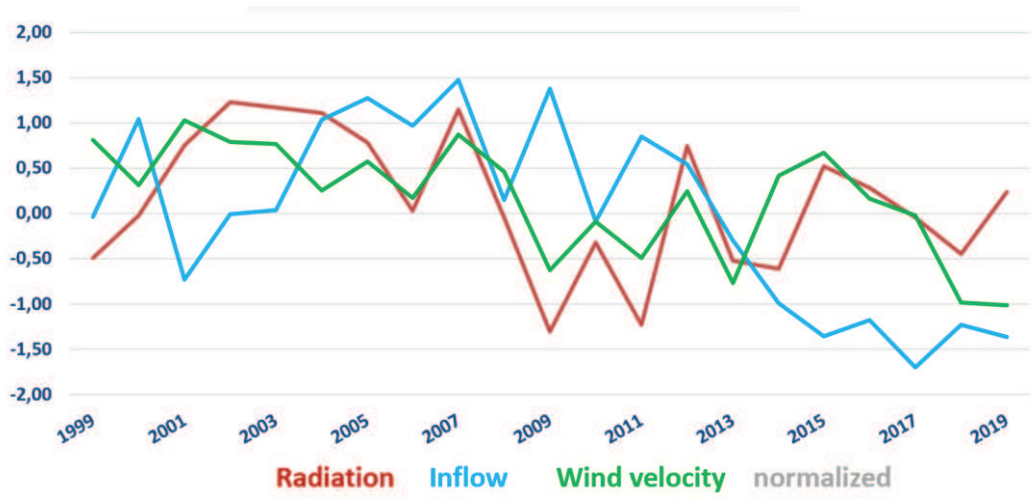

Figure 15: Photovoltaic and Wind alternatives

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Source: Own Elaboration.

These (anti)correlations are important risk mitigators: when there is no wind, the Sun may “make up” the shortage; an increase in the wind may offset a dry year, and so on. If such effects are not considered, the results of the simulated operation will be far from reality, and the PLD forecasts may be far from accurate[8].

V.4.1.7. Adjustment Methodology

Our methodology seeks to adjust the simulation of the chain of models for the price calculation while preserving the true reproduction of the official chain of models, however, adjusting the future scenarios to more realistic forecasts.

To this effect, we used a “chain-linked” model (jargon in the sector which at each month re-executes the chain of programs, simulating the “reaction” – or the calculation, of the models to the forecast scenario at each moment in time.

The chain-linked model can be summarized in the steps below and Figure 16.

[8] For further reference, see Macêdo et al (2007), Macêdo (2006) Pinto et al (2004), Pinto et al (2002), and Szcuzupak, Crombez (2014).

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

1. Climate availability forecasting (hydrologies, wind, solar radiation, etc.) each month. Calculation of reservoir producibility associated with level of the represented reservoirs.
2. Reproduction of the NEWAVE/DECOMP chain operation for the forecast scenarios.
3. Calculation of dispatch (and byproducts: PLD, GSF, etc.)
4. Correction of the storage status at month-end (considering the actual availabilities based on all climate variables and the effective productivity of the power plants for the observed reservoir levels).
5. Back to 1, to re-execute the chain for the next month.

The results exactly replicate the calculation of the official chain of models (those that calculate the optimal operation) while eliminating the trends of synthetic hydrologic series (too optimistic) and the flow x generation "over productivity".

We emphasize that – for greater efficiency and without loss of precision – the model chain was reprogrammed in a MATLAB environment. The results reproduce the programs in FORTRAN, using the same models and parameters.

V.4.1.8. Median and Hydrological Curves

The climatological scenarios used in this study are calculated through a projection of climatological periodicities and their impact on each submarket (taking into account events such as El Niño, La Niña, solar cycles, etc., as discussed in section V.4.1.6). Based on the basic periodic series that generates the base hydrological scenario, or the hydrological median, a different noise is added for each scenario, creating the set of future occurrences. As the noises are drawn from an equiprobable distribution, the scenario distribution will also be equally probable.

The number of scenarios drawn was 100 scenarios with positive noise (or more optimistic) and 100 scenarios with negative noise probabilistically symmetrical to those, which, added to the hydrological median, add up to 201 hydrological curves. In our experience, tests show that this sampling has been sufficient to represent the state space with good precision in the convergence of the models (equal to or greater than 95% confidence). This ensures the compatibility with the NEWAVE/DECOMP chain and the reliability of the results produced.

Figure 17 and Figure 18 include the hydrological median and the change of the 200 hydrological curves for GSF and PLD. It is worth noting that the more conservative curves have lower GSF and higher PLDs, unlike the riskier curves, whose GSF is higher and PLD is lower. Each hydrological curve will be the basis for calculating the forward curves and for the Total Added Value.

It is interesting to note that for the hydrological median scenario:

- El Niño years (2027, 2033, etc.) generally bring air currents to the Southeast, causing a price increase. The La Niña years (2028, 2034, etc.) are associated with better (higher) inflows, leading to a recovery in the water reserves;
- Prices are very high and the GSF is low during 2021/2022, due to the continuation of the severe hydrological crisis;
- From 2023, the prices start to show a persisting reduction due to the entry of new renewable energy; GSF is still low, to the extent that the renewable energies start to displace the hydroelectric dispatch, as illustrated in Figure 19: Projection: Dispatch (Physical guarantee) x Demand;
- From 2028-2030, the entry of inflexible thermoelectric plants improves these effects, leading to lower PLDs and GSFs, as illustrated in Figure 19: Projection: Dispatch (Physical guarantee) x Demand;
- From 2030, the offer and demand start the adjustment process, with the PLD price tending to marginal costs and GSF close to generation of full physical guarantee.

It is important to see that the models do not show any PLD difference among submarkets. The main reasons are:

- A well-planned system will establish an expansion to "direct" the energy from cheaper sources to the loads. The price differences represent gridlocks, in general, the interchange limits that will be solved with backups soon to be built;
- This is exactly what Brazil experienced in 2020 and 2021. The transmission limits between the Northeast and the North, together with the entry of renewables and the decision to replenish the reservoirs in the North, lead to an excess availability in the Northeast and lack of stored energy in the South and Southeast;
- In addition, regional restrictions set by the ONS indicated minimum generation levels of submarkets, which contributed to the mandatory thermal generation, with consequent higher PLDs.

However, it is important to note that:

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- The current situation changed. The energy shortage affects all submarkets, which are equally vulnerable. PLD is equalized. This scenario will remain until the end of 2022. Moreover, there will be no differences in water storage. Therefore, there are no expected price differences;
- After 2022, a significant backup from the NE/SE will end the interchange limits - and will end the gridlock that caused the price differences;
- As to local and regional restrictions, ONS does not inform the future operational restrictions (from the BASE DATA on). For this reason, even if they exist (and may result in some differences), at this point, it is not possible to include any limits in the models and, consequently, forecast any difference.

Lastly, it is important to note that although the PLD prices are uniform throughout the submarkets, the forward prices may present differences. The reason is the composition of the sources in each submarket - e.g., higher amounts of wind and solar energy in the Northeast, hydrological prevalence in the North, etc. As production costs differ, the limiter (and consequently the energy sale price itself) will have different values for each submarket via the variable known as CPPS (Weighted Cost of Production by Submarket). It is worth recalling that negotiations usually have a "premium" for delivery in submarkets other than a generation, mitigating risks - whether existing or not - perceived by the agents.

Another analysis to be regarded is the impact on the GSF due to the expected load and expansion of power plants from “non-dispatchable” sources. Figure 19 shows the projection of the dispatch order against the system demand. Since inflexible SHPs, Biomass, Wind, Photovoltaic and Thermal cannot be dispatched, the demand is fulfilled with hydroelectric power plants. Until 2040, there will be no need for all the energy supply, that is, the generation will be less than its physical guarantee; this situations occurs not because of external solicitation or lack of water, but because of lack of demand.

Analyzing this situation, with the entry of renewable power plants and the inflexibility of thermoelectric power plants, it will be more unlikely that the system is going to need all the physical guarantee of the hydroelectric plants to meet demand. With restricted generation, hydroelectric plants can get their revenue affected.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

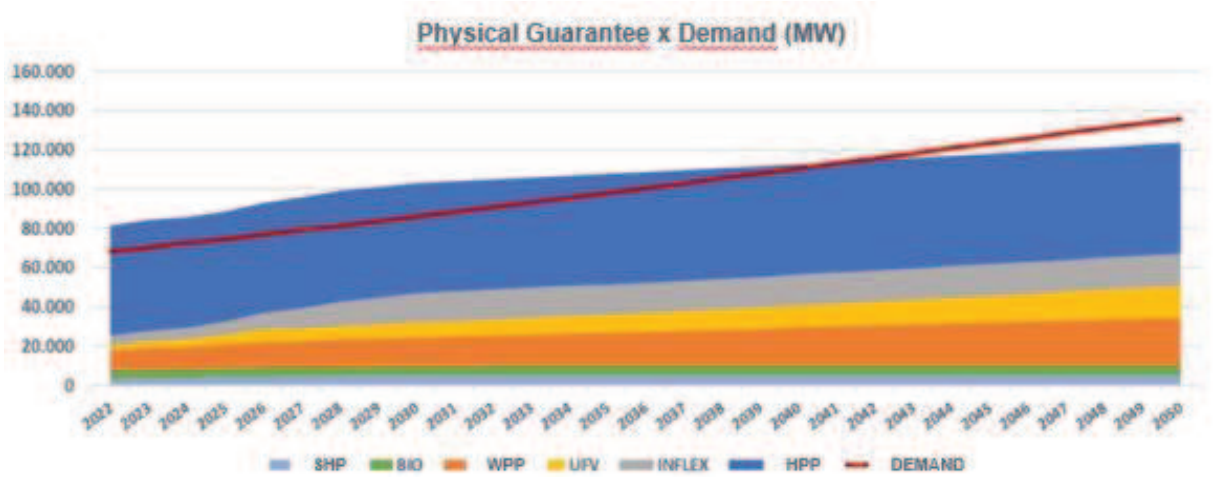

Figure 19: Projection: Dispatch (Physical guarantee) x Demand

Source: Own Elaboration.

As this is a scenario with important implications for this Study, due to the inflexibility of thermoelectric plants, we propose an analysis of this variable and its impact on the Total Added Value in section VIII.3 – Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir release Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir release (i.e. overflow). From the viewpoint of the risk of oversupply in the system as a whole and its direct impact on the GSF, the hydrological median already incorporates this assumption according to observations and analyses in this section.

V.4.2. Market Prices

This section presents the derivation of the projection of market prices for the Brazilian electricity sector, and makes intensive use of statistical nomenclature and concepts[9].

To prepare this, we used, as input, the PLD and CPPS variables explained below, applied to a neural network whose details are in the following sections.

[9] For readers interested in a more complete mathematical basis, we suggest Morettin et al. (2017a).

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

In general terms, historical market price data for the Brazilian electricity sector were taken and a function was derived that relates short-, medium- and long-term contracts (hence the 1, 3 and 5 year contracting strategy to be announced), with respect to PLD and the perceived production costs.

V.4.2.1. Weighted Production Cost per Submarket (CPPS)

The energy production costs of a submarket are defined as the division of the total project costs by the energy generated throughout the entire operation of the plant. In the long run, this equals the marginal cost of expanding the system. In this Study, this estimated cost curve will be called Weighted Cost of Production by Submarket, known by the Portuguese acronym “CPPS”.

To this effect, considering the experience of the professionals of this Study, a periodic survey (every six months) is made with investors in the sector to tabulate the production costs per source and submarket.

Table 16 shows the production costs for each source in the Southeast, obtained from a July 2021 prospective survey.

Table 16: Production Costs in the Southeast, in R$/MWh per source

Source: Own Elaboration monitoring the implementation of ANEEL's Electric Power Generating Plants. Available at: < https://bityli.com/IKBkcj >. Accessed on 09/16/2021.

It is possible to notice a significant increase throughout 2020-2021, mainly due to the dollar appreciation (which strongly impacts equipment and inputs), increased civil construction (felt mainly by the hydroelectric power plants) and strong competition among investors to construct their projects before the expiry of the term for tax incentives, which is determined by the modernization of the sector.

The CPPS in Table 17 is obtained through the paying-in of production costs per submarket from all plants associated there to (paying the products between the physical guarantee of each plant and the production cost corresponding to its energy source in that respective submarket).

The dynamics of CPPS curves depend on several factors. However, it should be noted that for the expansion period, the dispute for equipment and infrastructure should increase production costs for wind and solar (dispute for the benefit), thermal (Law 14182/2021), and Small Hydros (mainly due to the dispute in civil construction).

Table 17: Weighted Production Cost per Submarket (CPPS)

CPPS - R$/MWh

V.4.2.2. Forward Curves

As stated by TCU Minister, Benjamin Zymler, during the oral manifestation about the Process 008845/2018-2 – currently ongoing with Eletrobras privatization's follow up object – it is not possible to predict what is going to happen in the next 30 (thirty) years horizon – the granting extension term. In other words, the results from the financial-economic modelling will not be exact and precise, as conveyed by the Minister, even when the most sophisticated methodologies are employed. This is because the used "probabilistic methods" are still subjected to a failure probability.

Therefore, there are not instruments capable of predict, with unequivocal certainty, the prices of the future energy – which is the main variable of this section. However, to perform the necessary price projections, Upside has included in its Technical Team renowned specialists of the Brazilian electric sector, as listed in section III.2.2 – Qualifications of Specialist Professionals. Moreover, Upside has used the best methodology currently available.

The prices of contracted energy for future delivery (called Forward Curves in the market term) depend on the contracted volume, the contract price and the buyers/sellers' strategy.

As it is normal in any market, the longer the contract horizon, the smaller the impact of momentary short-term price fluctuations (in our case, PLD). In our experience, longer term contracts, here treated as five years, nearly resemble CPPS. On the other hand, short term contracts – or one year for the purposes of this Study – are similar to PLD prices.

For illustration purposes, Figure 20 explains our observation, showing BBCE (Brazilian Energy Exchange) prices for one, three, six and 12 months compared to PLD prices. It shows that the short-term prices fluctuate aiming to be equal to PLD, the limit of which (around R$ 180/MWh) from production costs. An exception is the pandemic

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

period, with an imbalanced market and erratic prices - the generators sold their product at any possible price.

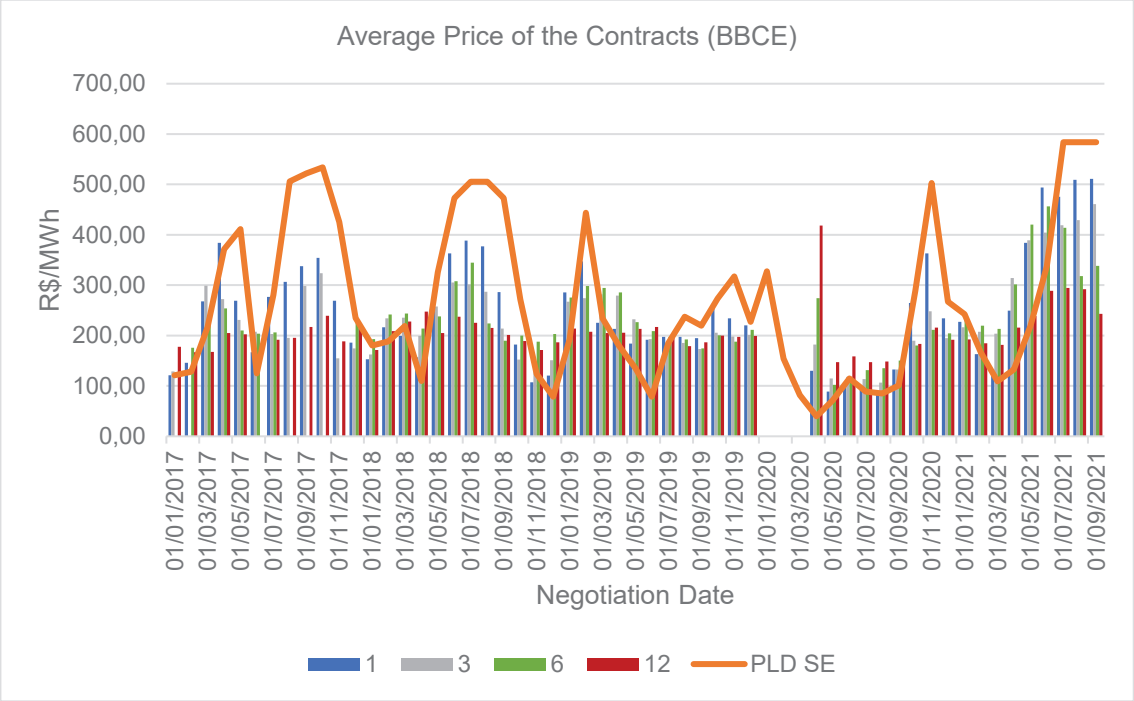

Figure 20: BBCE and PLD price comparison

Source: Own Elaboration.

This study builds a forward price curve based on the observed historical data and some explanatory variables (which impact their behavior). We used the CPPS (since selling for long periods at prices below the cost of production price would harm the business) and the PLD (short-term driver, which affects not only the result but also the perception of the agents).

Interestingly, this forecast does not intend (nor could it) to replicate the specific strategies for commercialization or insights/subjective expectations, which are impossible to predict. On the contrary, we seek a model that can estimate the trading value of this energy based on the concrete data available to us. As specified later in section VI.5 – Commercialization Assumptions, we nonetheless follow Eletrobras' request to approximate the timeliness of the sale of amounts of energy, to take into account not only the beginning of its duration, but also the advance with which the deal is closed. In this regard, we consider that the totality of energy to be sold is contracted,

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

in equal amounts, during the first five months of the twelve previous months, at market prices associated with the months of each negotiation. Thus, the price of contracts will be the average of prices projected over the first five months of the twelve months before the beginning of the contract.

To do so, we use three abundant forward price histories of one-year, three-year and five-year durations from various trading companies and specialized institutions (Dcide, BBCE). It is important to compose historical data from several sources to eliminate any strategy trend associated with a single agent or a specific methodology for data processing.

It is also important to note that the monthly price is used as an average of the prices charged in each month, weighted by the amounts sold. It rules out any distortions associated with non-significant deals - e.g., selling a small amount associated with an anomalous price, i.e., one that deviates from the curve (higher or lower, an outlier or “point outside the curve”).

The model was built based on two tools:

1- A neural network to build the function

Forward Price = ALFA * PLD + BETA * CPPS

The grid is relatively simple and can be presented in the Figure 21 below. Different functions were built for contracts with a duration of 1, 3, and 5 years.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

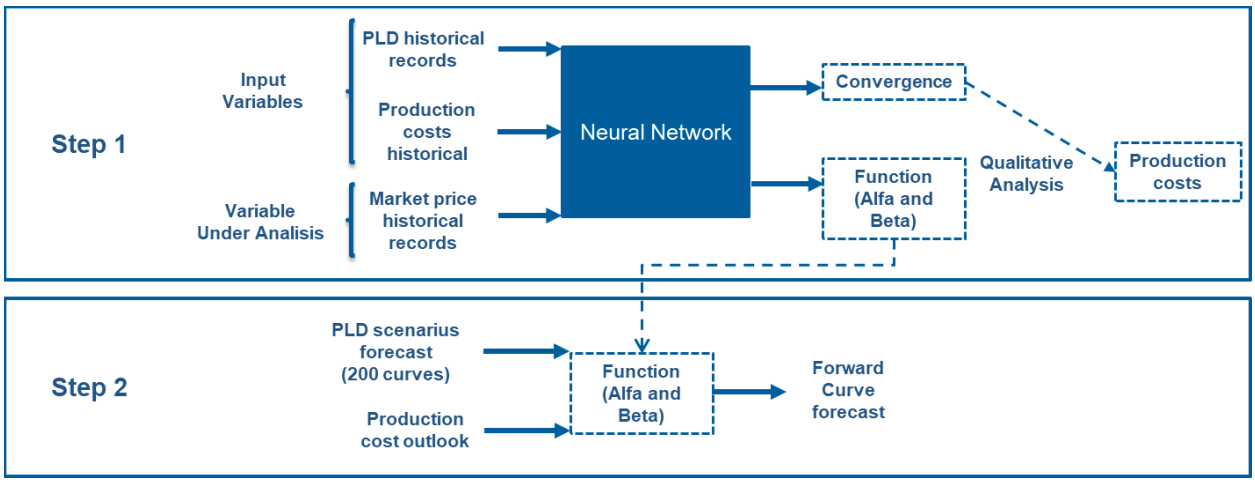

Figure 21: Neural network Diagram

Source: Own Elaboration.

Table 18 shows the polynomials obtained. However, the neural network indicated an inconsistency: the forward curve variability is much lower than that of PLD. As a result, it detected a threshold where the market prices ceased to follow the PLD prices.

The analysis of the results obtained showed that this threshold corresponded to the historic CPPS. In other words, sellers (except for anomalous periods, such as the pandemic) did not sell their production below the cost price.

Based on this tested hypothesis and following the results of the mathematical model (explained by the empirical reality), we propose that, in practice, the market price expectation function has a lower limiter equal to the expected CPPS (Table 17Table 17), also called “mathematical hope or expectation” in probability theory (in this case, the mean itself for scenarios is equiprobable).

- A linear regression statistical model, which confirms the function obtained from the neural network.

After obtaining the specific function for each type of contract, we used a linear regression model (also for each type of contract) to review the reliability of the resulting function. Table 18 shows the results of the model: the number of samples and

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

adherence, for each year, of approximately 95% - which may be deemed quite satisfactory, given the uncertainties we face in the Brazilian electric energy market.

For the composition of the prices of the forward curve, the CPPS and the PLD were considered according to Table 18, in which the forward price at a certain time is given by the PLD at the same time multiplied by Alpha plus the CPPS at that time multiplied by Beta. The relationships used present a satisfactory R-squared (adjustment coefficient).

Table 18: Forward Price Formation

Forward Price Formation				
	No. of Samples	Alfa	Beta	R^2
1 year	1328	1.0825	-	0.962
3 years	1175	0.6308	0.3692	0.947
5 years	372	0.1292	0.8708	0.968

Source: Own Elaboration.

V.4.3. Application in the Financial Modeling

From the DESSEM model, materials were selected in a spreadsheet containing 200 envelopes of GSF and PLD curves (considered sufficient to cover future scenarios), plus the case of the hydrological median. To define the forward curves, we used the relationship between CPPS and PLD defined in section V.4.2, maintaining the assumption that the PLD is unique among the submarkets, as explained in section V.4.1.1. Forward curves are shown for each North, Northeast, Southeast submarkets, apart from the South submarket, where none of the plants studied here are located. All prices (PLD and forward) were generated on the base date of August 2021. The annual inflation adjustment of these prices is considered every January, according to the accumulated IPCA price index of the previous 12-month period.

Each of the 201 hydrological scenarios, including the hydrological median plus the 200 interrelated envelopes of GSF, PLD, and trading curves corresponds to a Total Added Value. These scenarios were generated and subsequently placed in descending order to select the minimum expected NPV levels for each p-value.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Therefore, the p-value levels eligible for the base scenarios will be those resulting from the accumulated cross-section from samples of 201 results.

As a matter of fact, the financial effect of applying the hydrological curves in the Financial Model involves a problem of optimizing the joint generation of the plants evaluated, in which the scenarios of (i) short-term market exposure; and (ii) energy sales in the free/regulated markets are weighted intertemporally by the difference in the availability of monthly physical guarantee in the Capitalization Scenario compared to the Current Scenario in MW-average. The implicit assumption for this equation is that generation follows the GSF.

As to this topic, the method to select each series should also be explained. Contrary to intuition, the curves do not follow any ordinality with one another. This is because the criterion was ordering by NPVs rather than ordering by hydrological curves, given the relevance of capturing the intertemporal effect jointly in the Total Added Value calculation. For example, a more unfavorable hydrological scenario may be associated with a higher NPV and vice versa. By the same token, as the evolution of the NPV is also non-linear regarding the hydrological scenarios, it may happen that the best or worst NPV scenarios are associated with the central envelopes of the hydrological forecasts. This causes the worst and best hydrological scenarios to alternate almost symmetrically as they converge to, or diverge from, the central branches of the hydrological scenarios (for illustration purposes, see Figure 31).

Furthermore, between sensitivity scenarios (to be discussed in the following sections) and trading scenarios, the hydrological curves that originated the NPV p-values do not maintain correlation with one another. In other words, a given NPV p-value can be associated with a hydrological curve in each scenario and a different curve in another scenario. Analyzing these curves to understand the effects of the application of different assumptions on the GSF or PLD between the sensitivity scenarios becomes an innocuous task.

In this regard, the hydrological curves work as a measure of dispersion of possible NPV scenarios, given the impossibility of applying a better NPV probability

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

distribution than the future hydrological scenarios themselves. This distribution is the one that without it the p-value selection logic for the NPV could not be applied.

In defense of the application of this logic, as discussed in section V.2 – Weighted Average Cost of Capital (WACC), we point out that it is precisely this hydrological risk (in this case, hydrological dispersion) that – associated with the trading risk – constitutes the main measurable business risk assumed in the Capitalization Scenario.

This is tantamount to stating that – as there are numerous critical variables still unknown, uncertain and unpredictable that may eventually affect the future cash flows of the Capitalization Scenario – the critical variables are reduced, for the sake of simplicity, to a dispersion of hydrological curves as representative to measure the probable (and measurable) dispersions of NPV.

Of these two findings, we repeat: (i) the non-cross-correlation of the hydrological curves with the NPV scenarios in different cases of trading and sensitivity; and (ii) ultimate purpose of the hydrological curves as a measure of the probability distribution of NPV; it is also derived that the only hydrological scenario suitable for comparisons and critical analyses on the GSF or PLD of that sensitivity scenario is the case of the hydrological median.

VI. Definition of Assumptions

This chapter will discuss the assumption of each cash-generating unit (CGU) split into: macroeconomic assumptions, tax and fiscal assumptions, general assumptions, investment assumptions, revenue assumptions, operational assumptions, amortization of value-added, and deductions from value-added according to Law 14182/2021.

VI.1. Macroeconomic Assumptions

The macroeconomic assumptions were defined based on the Focus Report of the Central Bank of Brazil, published on August 16, 2021. The project modeling used the IPCA, IGP-M, and Target Selic Rate forecasts.

The Broad Consumer Price Index (IPCA) is prepared by the National Consumer Price Index System (SNIPC) and is intended to measure inflation of a set of products and services (market basket) sold in the retail market related to families' consumption.

The Selic Rate is the base interest rate of the Brazilian economy. The Selic Rate, calculated in transactions performed in one day among the financial institutions that use federal bonds as security, influences all interest rates in Brazil. To align the effective Selic rate with the target Selic, the Central Bank trades bonds through the Special System for Settlement and Custody.

The Interbank Deposit Certificate (CDI) is the rate that grounds the yield from loans between financial institutions. As loans are made at Selic rates and received in CDI, these rates are closely related, and it is not possible to have a profit or loss in these transactions.

The General Market Price Index (IGP-M) is one of the versions of the General Price Index (IGP). It is measured by the Getúlio Vargas Foundation (FGV) and is composed of the Wholesale Market Price Index (IPA-M), Consumer Price Index (IPC-M) and the National Construction Cost Index (INCC-M). It is used as an adjustment index in the Brazilian market.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The indices used in this analysis are in accordance with Table 19 below.

Table 19: Macroeconomic Scenario

Index[10]	2020	2021	2022	2023	2024	2025	2026	2027
IPCA	4.52%	7.03%	3.89%	3.35%	3.18%	3.16%	3.16%	3.16%
IGP-M	23.14%	19.64%	5.10%	4.04%	3.96%	3.86%	3.86%	3.86%
CDI	2.76%	7.46%	7.50%	6.73%	6.53%	6.48%	6.48%	6.48%

Source: Focus Report (8/16/2021).

VI.2. Fiscal and Tax Assumptions

The fiscal and tax assumptions adopted are in conformity with the current Brazilian legislation. As Eletrobras is a company under a taxable income regime, the following rates considered must be extended to the Marginal Cash Flow Study. Table 20 below summarizes the rates:

Table 20: Taxes and Taxation Regime

Taxation Regime	Taxable income
Taxes on revenue	
Social Integration Program (PIS)	1.65%
Contribution to Social Security Financing (COFINS)	7.60%
Income Tax	
Social Contribution on Net Income (CSLL)	9.00%
Income Tax (IR)	15.00%
Additional Income Tax (AIR)	10.00%

Source: Own Elaboration.

Social Integration Program (PIS): federal tax contribution of social nature, intended to fund unemployment compensation, bonus, and participation by employees in the private or governmental companies in the revenue from agencies and entities.

[10] After the last year of the Central Bank's expectation in 2025, the values were perpetuated.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The Federal Tax is levied on gross sales at a 1.65% rate under the non-cumulative regime.

Contribution to Social Security Financing (COFINS): federal tax contribution of social nature, intended to fund the social security, which comprises essential areas such as the Social Security Institute, Social Assistance and the National Health System. It is levied on gross sales at a 7.60% rate under a non-cumulative regime.

Income Tax (IR): the tax under the income regime is calculated on the taxable base defined by the income before applicable taxes, which is, the net flow of revenues, tax on gross revenue, operational expenditures, and sectoral charges. This tax has a 25% rate. Because of the marginal flow, that is, the difference between the two flows, analyzed herein, the discount of the income tax surcharge (R$ 20,000.00 per month) should not be taken into account.

Social Contribution on Net Income (CSLL): federal tax contribution intended to fund social security. This contribution is levied at a 9.00% rate on the same taxable base from Income Tax (IR).

Non-taxable Financial Revenue on the tax base: Considering the flows were designed to result in the free cash flow to the firm (unlevered flow), it is calculated the cash flow adjusted for retainable cash, which consequently rules out the necessity to compute financial revenues on the Income Tax (IR) and CSLL tax bases.

It should be stressed that the calculation (cash flow) made to determine the Added Value is the Marginal Cash Flow; hence, the contribution of taxes is also marginal, in other words, the tax base is going to be equal to the difference in operating income obtained from the difference between the Capitalization Scenario and the Current Scenario. Thus there is no need to include the R$ 20,000.00 deduction per month to calculate the tax charge on the Additional Income Tax (AIR), which is projected with the 10% rate on the tax base.

VI.2.1. SUDENE/SUDAM Benefit

The Superintendence for Development of Northeast Region (SUDENE) is intended to foster the development of productive activities through the management of tax incentives and benefits in the Northeast macro-region and vicinities (AL, BA, CE, MA, RN, PB, PE, PI, SE, and in part, MG and ES). Similarly, the Superintendence for Development of Amazon (SUDAM) applies the same benefits of SUDENE to attract or keep investments in the Legal Amazon region (MA, PA, AP, RR, RO, AC, AM, MT, TO).

For both superintendencies, there are three tax incentive plans:

I. Corporate Income Tax – IRPJ exemption;
II. 75% reduction in the IRPJ for new projects; and
III. IRPJ reinvestments.

The power plants in this study are classified in the second case, where energy infrastructure projects will benefit. The term of the 75% reduction in IRPJ is 10 years from the beginning of its effect. Table 21 shows the power plants with SUDENE and SUDAM tax incentives and their respective periods of effect.

The SUDENE/SUDAM benefit is being considered as free to the firm; that is, a 75% reduction in the IRPJ is recorded in the marginal flow and has a direct impact on the Total Added Value.

VI.4. Revenue Assumptions

According to the current energy commercialization regime, revenue assumptions were considered in three main blocks of power plants for detailing revenue.

1. Power plants under law 12783/2013 (Quota Regime). They include the following CGUs: Boa Esperança HPP, Paulo Afonso Complex (HPPs Apolônio Sales, Paulo Afonso I, Paulo Afonso II, Paulo Afonso III, Paulo Afonso IV), Luiz Gonzaga HPP, Xingó HPP, Funil-BA HPP, Pedra HPP,

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Coaracy Nunes HPP, Corumbá I HPP, Estreito HPP, Funil-RJ HPP, Furnas HPP, Marimbondo HPP, and Porto Colômbia HPP.

2. Power plants under law 13182/2015. They include the following CGUs: Sobradinho HPP and Itumbiara HPP
3. Independent power plants. They include the following CGUs: Tucuruí HPP, Curuá-Una HPP, and Mascarenhas de Moraes HPP.

The sections below will discuss the method to determine the revenue from each of these power plants.

VI.4.1. Revenues from power plants under law 12783/2013

These power plants were recently renewed, according to Law 12783/2013, under the quota regime. Under this regime, the generator does not bear the hydrological risks nor the financial income from Energy Reallocation Mechanism but earns a fixed monthly revenue (Annual Generation Revenue – RAG) adjusted each year by the IPCA index and revised every five years according to the physical guarantee quotas associated to each power plant.

Table 23 below shows the RAG amounts, and their components for each power plant analyzed in this report, as mentioned above. The data for the Current Flow were obtained through Approval Resolution 2,902/2021. The base date of the amounts below is July 2021.

Table 23: Generation Revenue from power plants under Law 12783/2013.

Subsidiary	CGU (HPP)	Total RAG (REH 2,902/2021) (R$)

VI.4.2. Revenues from power plants under law 13182/2015

Itumbiara HPP and Sobradinho HPP are ruled by the special regime of Law 13182/2015, and under this law, energy is commercialized.

That Law sets out that 90% of Sobradinho's Physical Guarantee must be linked to electricity supply contracts in the unregulated trading environment (ACL) until February 2037, with a uniform reduction for the quota regime at the rate of one-sixth each year starting from February 2032. In the same period mentioned above, the uniform and annual reduction of contracts and any termination or permanent reduction of the amounts contracted in the ACL will be subject to the allocation of physical guarantee and power quotas under the terms of Law 12783/2013.

In the case of Itumbiara, the Law determines that 80% of the HPP's Physical Guarantee must be linked to energy supply contracts in the ACL until February 2035, with a uniform reduction at the rate of one-sixth each year starting from February 2030. In the same period mentioned above, the uniform and annual reduction of contracts and any termination or permanent reduction of the amounts contracted in the ACL will be subject to the allocation of physical guarantee and power quotas under the terms of Law 12783/2013.

Thus, Sobradinho HPP and Itumbiara HPP would move to the quota regime (Law 12783/2013) from 2032 and 2030, respectively. Consequently, the future RAG to be received by those power plants must be defined, as such value is not available in the Approval Resolution 2,902/2021, given that such power plants did not receive the revenue from allocation of physical guarantee quotas in the current cycle.

The RAG values for Sobradinho HPP and Itumbiara HPP were estimated according to the Impairment model of Eletrobras group for CHESF and Furnas subsidiaries, respectively. These values are summarized in Table 25.

Table 25: Revenues from power plants under Law 13182/2015 after the commercialization period in the Free Market (ACL)

Subsidiary	CGU (HPP)	Total RAG (R$)

CHESF	Sobradinho	198,989,726
Furnas	Itumbiara	513,061,980

Source: Own Elaboration.

The RAG values for both power plants for the Capitalization Flow, shown in Table 26, were obtained in the Appendix II of CNPE Resolution 30/2021.

Table 26: Power plants revenue under the Law 13182/2021 Capitalization Flow.

Subsidiary	CGU (HPP)	Total RAG 2021-2022 (R$)	Total RAG 2022-2023 (R$)	Total RAG 2023-2024 (R$)	Total RAG 2024-2025 onwards (R$)
CHESF	Sobradinho	219,552,910	220,713,757	221,874,604	223,035,451

Source: CNPE 30/2021.

The Value-Added calculation in this study is determined through the Marginal Cash Flow. Thus, for the entire period of free energy commercialization (ACL or ACR contracts), the new concession contract flow (Capitalization Scenario) will be the difference between the capitalization scenario cash flow, which comprises the revision of Physical Guarantee and the current scenario cash flow, which does not.

Additionally, both plants have the right to a 2,555-day extension of the grant due to the renegotiation of the hydrological risk, pursuant to Resolutions 2919/2021 and 2932/2021. Aside from the 2,555-day extension, Itumbiara also has a 395-day concession extension, pursuant to Dispatch 608/2016. In calculating the Added Value, the flows of the additional period are considered to reduce the value of the Grant, as detailed in section V.1 – Marginal Cash Flow and Grant Determination,

VI.4.3. Revenue from independent energy producers

As discussed in the previous section, for generators currently under the independent energy production with free negotiation of their contracts, the Added

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Value by the renewal of the concession contracts under Law 14182/2021 will result from the difference between the current and revised Physical Guarantee, according to Table 22 and section V.1 – Marginal Cash Flow and Grant Determination. The value-added of such power plants will then be the cash flow from the Capitalization Scenario, intended for independent energy production, minus the cash from the Current Scenario, intended for the provision of public service, according to the energy commercialization assumptions defined in section VI.5 – Commercialization Assumptions.

VI.5. Commercialization Assumptions

In this section, is expatiate on how the prices applied to the Financial Model were formed from the forward curves in section V.4.2 – Market Prices and how the portfolios of five, three and one-year contracts were composed.

Noting the limitations of the scope of this Study (see chapter II – Disclaimer), without intending to fully formulate a trading strategy for the Company, we worked with the information received that Eletrobras tends to enter into its trading contracts early. Accordingly in agreement with the Company, we consider that contracts renewed in a given month are traded between the first five months of the previous twelve months in equal amounts of energy each month, i.e., the simple average of forward prices can be taken from those first five months. Thus, the basis for calculating the forward curves of this Study will indicate (for example) that a contract whose start-up period is January had its prices formed by the average of the forward prices (given by the statistical model in section V.4.2.2) from January to May of the previous year.

VI.5.1. Contracts Portfolio

Here, we could model several different models for the sale of energy. Following the short-, medium- and long-term rationale set forth in section we decided on the portfolio composition with one-, three- and five-year contracts, respectively.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

It is always worth remembering that this is one of many possible portfolios; here we intend to seek the value of energy, and never replicate commercialization strategies that are unpredicted. Our intention here was simply to cover a wider range of possible contracts practiced on the market.

For the composition of the Base Case portfolio, we composed the mix of five-, three- and one-year contracts at the target ratio of 50%, 30% and 20%, respectively, of the energy sold in each period. The reason for the choice is the pursuit of a good risk vs. value compromise: five-year contracts guarantee stable revenue over the long term, but there is not always market demand for this; medium-term contracts (three years), most sought after by the consumer, have a satisfactory risk vs. price ratio. Finally, one-year contracts are for the surplus, and are subject to the volatility of the PLD (higher or lower). It is worth stressing that this portfolio composition do not aim to simulate commercialization strategies. It is understood, however, that when composing energy contracts of 5 years, there is less exposure to prices' volatility.

Different trading strategies were also considered, changing Hedge and contract portfolio; Table 27 summarizes the different trading strategies in this Study. The contract mix is treated by the Financial Model as a portfolio target to be achieved, according to the methodology described below.

Table 27: Trading strategies.

		Assumptions						
		BASE CASE						
Hedge		**20% until 2025 and 10% after**	**0%**	**10%**	**15%**	**20%**	**30%**	20% until 2025 and 10% after

Source: Own Elaboration.

For the Independent Energy Producer regime, at the end of each contract cycle, the volume of the next new contract of the same duration is determined, according to the order in which the total amount of available energy of the respective submarket is filled, figuratively, like fulfill a glass in a pre-set priority contract order:

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- Initially, 50% of the submarket energy is separated for five-year contracts, 30% for three-year contracts and 20% for one-year contracts, in that order;
- Any energy that does not fit into the longer duration contract is reallocated to the smaller cycles, changing the target ratio;
- The energy that does not behave within the aforementioned contract terms is settled at the current PLD;
- The curve resulting from this operation is a month-to-month percentage distribution of the volume of energy to be allocated to the aforementioned contracts, including PLD.

At a subsequent time, this percentage distribution is applied to the “physical guarantee curve available for trading” of each power plant in the respective submarket, which corresponds to the scaled net physical guarantee of the hedge and of losses, both in the Current Scenario and in the Capitalization Scenario.

As the distribution of plants in submarkets coincides with the distribution of plants among Eletrobras subsidiaries, this is equivalent to the realistic strategy that each subsidiary decides its portfolio composition based on the total negotiable physical guarantee and subsequently distributes these contracts among its plants. For the purposes of calculating the Added Value per CGU, it is considered that these contracts are distributed proportionally among the plants, hence the application of the percentage to each plant’s “physical guarantee curve available for trading”.

In the specific case of CHESF’s Capitalization Scenario, the amount of 85 MWaverage – referring to the availability of energy to the São Francisco River Integration Project (PISF), pursuant to Law 14182/2021, Article 6, Paragraph 6 – was apportioned among the plants in the Northeast in proportion to their Physical Guarantees. This volume of energy was also deducted from these plants to calculate the “physical guarantee curve available for trading”.

Accordingly, the final contract mix does not necessarily reach 50%, 30% and 20% for five, three and one-year contracts, respectively, with part of the energy to be settled in the PLD. Table 28 summarizes the average portfolio of each submarket under the Current Scenario and Capitalization Scenario for each trading strategy

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

adopted. It is important to point out that this percentage varies monthly, and that the values are (once again) averages of the total time of the analysis horizon, already considering the weighting of physical guarantee period by period of all plants in the submarket. As these percentages depend exclusively on the volume and temporal distribution of physical guarantee to the independent production regime, they are constant between the Base Case and the sensitization scenarios to be discussed.

Finally, it is worth mentioning that the strategies outlined herein are exogenous to the Financial Model, in the sense that dynamic, iterative or predictive strategies seeking to maximize or establish a risk criterion assumed in the trading strategy to reach the Total Added Value were not studied. As explained above, the very composition of duration of the contracts and their target distribution already address a composition of risk versus price that is considered reasonable.

It is fact that, in practice, the universe of contract terms available to commercialization is way larger than those pointed out by the Study (only 5, 3 and 1 year). This allows Eletrobras to sell a contract, given the remaining time horizon for the commercialization of a given energy volume, without resorting to the PLD liquidation. Similarly, the target portfolio composition most certainly will not be constant over time. It will be subjected to an unknown punctual market equilibrium, Company strategy and risk appetite.

An important corollary of the portfolio composition criteria of “filling the glass” on the reasons and steps earlier indicated is that the financial flow is going to be subjected to a lower price variance in comparison to the case in which at every moment new contracts are simultaneously signed, keeping the prices updates as 50/30/20 proportions. This would generate a financial contract complexity that would be hard to calculate and, thereafter, to be audited, once that it would coexist period to period contracts with equal term that would be settle in different price levels. It is recognized, nevertheless, that the Company can resort to this practice on future.

If on one hand, however, it is stated that the variability of the price and average term of the portfolio is reduced in this framework of rules; on the other hand, nothing is asserted about the level of conservativism in terms of price levels, since, hypothetically, it is possible to close a higher price contract for a longer duration and, after a few years, the prices of lower contracts duration (which typically tend to be higher than their longer-duration contemporary counterparts) are closing at lower prices relative to that longer still active contract. This type of comparison was not addressed in this Report

VI.5.2. Prices and Contracts – Base Case

For the purpose of detailing the Base Case and the timeliness of this Report, this section will detail only the behavior of contract prices and energy allocation for the Base Case. Table 29 shows the annual average of PLD and of each type of contract by submarket in the hydrological median curve. Contract prices are calculated on a monthly basis and locked in by the Financial Model starting from the time it enters into effect, yet the prices are the same for the Current Scenario and for the Capitalization Scenario; what distinguish both flows is the amount of energy distributed for the Independent Producer regime.

Table 29: PLD prices and contracts for the Hydrological Median.

For the Current Scenario and Capitalization Scenario, all energy at Independent Producers is apportioned by submarket and then by power plant. Figure 22, Figure 23 and Figure 24 illustrate the monthly allocation of energy in Independent Producer in five, three and one-year contracts and PLD for the Southeast, Northeast and North regions respectively, in the Current Scenario, whereas Figure 25, Figure 26 and Figure 27 illustrate this energy allocation for the Capitalization Scenario.

VI.6. Investment Assumptions

Given the marginal flow must be considered, as explained in section V.1 – Marginal Cash Flow and Grant Determination, the investment assumptions must be treated in marginal terms, that is, the differences between the investments under the current concession contracts and the new concession contracts.

Compared to the contract currently in effect, the investments in the extension period under the capitalization regime were extracted from the data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE. According to official letters DE.E.017.2021, DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021.

The amounts accrue monthly in a straight-line (uniform) basis, from January of each year.

Source: Eletrobras.

The linear depreciation rate of 2.486% was calculated through the weighted average forecasted depreciation expensefor the 2022 period, according to the Impairment model of Eletrobras group, with analysis dated Sep/21. Despite its non-cash effect, its importance for analysis relies in (i) the tax savings caused by the deduction of the tax base in the marginal cash flow; and (ii) the calculation of the balance of fixed assets from these capitalizations at the end of the analysis horizon.

Due to difficulties in unitizing the CAPEX for initiating the depreciation expense, which takes place only after the effective conclusion of the capital investment, and given its low impact on the cash flow (equivalent to the product of the fixed asset balance, the monthly depreciation rate and the tax rate on the income), it was considered the simplification of applying the depreciation over the consolidated fixed asset balance of the previous month since the beginning of the first capital expenditure.

The remaining amounts from the balance of fixed assets at the end of the analysis were conservatively reverted by their historical residual book value without any adjustments for inflation.

VI.7. Operation Assumptions

This section will present the operational assumptions for the CGUs presented previously: administrative costs and expenses and operational expenditure, sectoral charges, working capital, and technical losses from energy generation.

For operating costs in the capitalization contract extension period compared to the contract currently in effect were considered the data sent by the subsidiaries: CHESF, FURNAS, and ELETRONORTE, according to official letters DE.E.017.2021, DG-01777-2021, CE-DO-0040/2021, CE-DE-027/2021, and CE-DO-083/2021. For Tucuruí HPP were considered the impairment model with analysis dated Sep/21. The tables below show the operating costs and expenses for each power plant. However, these costs will only be projected for the period with no convergence or coexistence

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

between both flows (Capitalization Scenario and Current Scenario). The convergence period presumed no change in costs and expenses.

Table 33: Operating Cost – CHESF.

Power plant	Opex for 2022 (R$ MM)	Period	OPEX for the Period (R$ MM)
Boa Esperança	55.20	2042 to 2052	55.20

Corumbá	115.00	37.83	77.17

Source: Eletrobras.

CHESF estimates were defined from the base date of December 2020.

Table 36 below shows the sectoral charges applicable to each power plant. Thus, it should be stressed that for the Marginal Cash Flow, the sectoral charges will only be calculated from the difference between the current contract and the future concession contracts determined by Law 14182/2021.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Table 36: Sectoral Charges

Charge	Amount	Reference base
CFURH	5.32 R$/MWh	Generated energy
ONS & CCEE	0.08%	Net Revenue
R&D	1.00%	Net Revenue
Inspection by ANEEL	0.40%	Net Revenue
TUST	6.98 R$/kWh.month	Physical Guarantee

Source: Own Elaboration.

Regarding the Value-Added study, as the energy generation follows the GSF monthly, there is no settlement at Optimization Energy Tariff (TEO); this tariff is not considered, as there is no energy commercialization in the MRE context.

VI.8. Amortization of Added Value

The calculated AddedValue AddedTotal Added Value will be amortized throughout the new concession contract, that is, throughout 30 years as from BASE DATE.

Amortization of this value will affect the tax base calculated for the Marginal Cash Flow. By reducing the tax base, the lower amount expended to pay taxes affects the future cash flows, affecting the calculated Added Value. Therefore, an iterative calculation must be made until a null economic gain for the period under analysis is reached.

After verifying the Total Added Value based on the assumptions defined in this report and comparing the results published by CNPE, the advantage of the capitalization process will be analyzed and presented as results and awareness.

The analysis of the advantage will consider the annual payments to CDE, according to Exhibit III of CNPE Resolution no. 30, of December , 2021, then the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Marginal Flow will be deducted from annual payments, and the Total Added Value resulting from this analysis will the advantage of implementing Law 14182 of July 2021, compared to the proposed base scenario.

VI.9. Deductions of the Grant bonus according to Law 14182/2021

According to item II, Article 4 of Law 14182/2021:

> *"II – the payment by Eletrobras or its subsidiaries, of the bonus from the grant of new electric power generation concession contracts correspond to fifty percent (50%) of the added value to the concession by the new contracts, deducted of the following amounts:*
>
> *a) expenses related to revitalizing the water resources of São Francisco River and Parnaíba River watersheds, pursuant to subparagraph a, item V of the caput of art. 3 of this Law;*
>
> *b) expenses related to the development of projects in the Legal Amazon, for structural reduction of the energy generation costs and the navigability of Madeira River and Tocantins River, according to the provision in subparagraph b, item V, caput of art. 3 of this Law;*
>
> *c) expenses related to projects in the influence area of the reservoirs of Furnas hydroelectric power plants, the concession contracts of which are affected by such Law, according to subparagraph c, item V, caput, art. 3 of this Law; and*
>
> *d) expenses to reimburse the economic value of the electric energy supply to the Integration Project of São Francisco River with Hydrographic Watersheds of Northern Northeast (PISF), pursuant to paragraph 6 of art. 6 of this Law;"*

Therefore, the deductions from the bonus for the grant of new electric energy concession contracts payable to the Federal Government are determined at present value.

It is understood that the amount destined to item a) of item II, Art. 4 of Law 14182/2021, is in agreement with Art. 6 of the same law.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *"Art. 6 The obligation of electric energy generation concessionaires located in the Rio São Francisco watershed the concession contracts of which are affected by this Law, in compliance with the measure under subparagraph a, item V, caput of art. 3 of said Law is a contribution of three hundred and fifty million reais (R$ 350,000,000.00) for ten (10) years, adjusted by the IPCA published by the IBGE or another index that may replace it, as from the month of execution of the new concession contracts.*

It is understood that the amount destined to item b) of item II, Art. 4 of Law 14182/2021, is in agreement with Art. 7 of the same law.

> *"Art. 7 The obligation of the concessionaire executing Concession Contract no. 007/2004-Aneel-Eletronorte, subject to the provision in the caput of art. 1 of this Law, in compliance with the measure addressed in* ***subparagraph b, item V, caput of art. 3 of this Law*** *is the contribution of two hundred and ninety-five million reais (R$ 295,000,000.00) per year, for a term of ten (10) years, adjusted by the IPCA published by IBGE or another index that may replace it, as from the month of execution of the new concession contract, for application in the program for structural reduction of energy generation costs in the Legal Amazon and at least twenty percent (20%) in actions to ensure navigability of the Madeira River and ten percent (10%) in actions to ensure navigability of the Tocantins River.*

It is understood that the amount destined to item c) of item II, Art. 4 of Law 14182/2021, is in agreement with Art. 8 of the same law.

> *"Art. 8 The obligation of electric energy generation concessionaires located in the influence area of Furnas hydroelectric power plant reservoirs, the concession contracts of which are affected by this Law, to comply with the measure under* ***subparagraph c, item V, caput of art. 3*** *of said Law is a contribution of two hundred and thirty million reais (R$ 230,000,000.00) for ten (10) years, adjusted by the IPCA published by the IBGE or another index that may replace it, as from the month of execution of the new concession contracts.*

It is understood that the amount destined to item d) of item II, Art. 4 of Law 14182/2021, is in agreement with paragraph 6, Art. 6 of the same law.

> *"Paragraph 6 In addition to the contribution specified in the caput of this article, the electric energy generation concessionaires located in the São Francisco River watersheds, the concession contracts of which are affected by this Law, shall make electric energy available at an annual amount of eighty-five average*

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

> *megawatts (85 Mwmed) for twenty (20) years as from publication date of this Law, for a price of eighty reais per megawatt-hour (R$ 80.00/MWh), adjusted by the IPCA or another index that may replace it, through a specific agreement, directly to the Federal Operator of the PISF installations."*

The availability of energy to the PISF, as detailed above, was addressed in the Financial Model for CHESF's power plants and prorated proportionally to each power plant's Physical Guarantee, as described in section V.4.3 – Application in the Financial Modeling. Despite the forecast of modulation of this energy, this was considered linearly in the financial flow.

Further to these amounts, due regard should be given to item II, paragraph 1 of Art. 5 of Law 14182/2021:

> *"Paragraph 1 The calculation of the added value to the concession will consider:*
>
> *[...]*
>
> *II – the deduction of credits related to refund for proven expenses with the acquisition of fuel incurred until June 30, 2017, by the concessionaires controlled by Eletrobras and holders of the concessions addressed in art. 4-A of Law 12111, dated December 9, 2009, that have been proven but not refunded as a result of the required economic and energetic efficiency addressed in paragraph 12 of article 3 of said Law, including adjustments for inflation, in which event the offset will be limited to three billion, five hundred million reais (R$ 3,500,000,000.00);"*

The composition of the deductions and revitalizations described in this section is included in Table 37, considering contributions made in January.

Table 37: Deductions and revitalizations according to Law 14182/2021

Present Value of the Flows of amounts in items a, b, and c of item II of Art. 4 of Law 14182/2021 (R$)	**5,925,726,527**
Real Discount Rate	**6.9%**

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Base Date	Jan/22

Source: Own Elaboration.

Further to these discounts, indemnity for non-depreciated and non-amortized assets must also be considered, as the current concession will have an early termination. The indemnity related to non-amortized and non-depreciated assets of Tucuruí HPP basic project is considering the estimated R$ 5,043,166,900.98 informed in the parameters published on the CNPE Resolution 30, of December 21st, 2021. The calculation method was based on its New Replacement Value ("VNR") provided for in NT EPE-DEE-RE-080/2021-R0, as explained by Eletrobras. The considered value of the indemnities of non-amortized and non-depreciated assets of Curuá-Una HPP was R$ 19,550,421.43, according to CNPE Resolution 30, of December 21st, 2021. The indemnities related to the power plants under Law 12783/2013 have a recorded balance in December 2012, adjusted by the IPCA until the BASE DATE of this report. According to the Official Letter 143/2021-DR/ANEEL, of July 8th, 2021, Mascarenhas de Moraes HPP is not going to be entitled to receive an indemnity.

VII. Summary Analysis of the Risks

In this section, the objective is to discuss the risk methodology used herein, explain the scope of this analysis, and point out the step-by-step process of consolidation of the main risk factors that are extensively highlighted in this Study, as well as others yet to be mentioned. In this chapter, a systematization of the risks is proposed in the groups (i) Legal Notes; (ii) Water and Regulatory Aspects; (iii) Economic and Financial Risks; and (iv) Trading Risks.

In each group, the risks will be (i) identified; (ii) described; (iii) analyzed in terms of chances of occurrence and impact. Some of these possible impacts have been addressed through sensitivity analyses compared to the Base Case so they can then be (iv) rated by risk level.

In this regard, due to its dependence on the analysis of sensitivity cases, this section can be taken as an introduction to section VIII – Results, when after assessing the impact of the results obtained in the sensitivity analysis of section VIII.4, the risks will be rated in section VIII.5 – Risk rating.

VII.1. Methodology, scope and main concepts

The risk analysis methodology is based on the works “A Guide to Project Management Body of Knowledge – PMBOK GUIDE” by the Project Management Institute – PMI, and “Modern Project Management”, by Dalton Valeriano, in addition to NBR ISO 10006, issued by the Brazilian Association of Technical Standards – ABNT, which deals with “Quality Management – Guidelines for quality in project management”.

According to Dalton Valeriano (“Modern Project Management”), *“Risk, according to the common understanding, is the possibility of occurrence of an undesirable result, as a consequence of any event”.* Also according to the author, risk is inherent to the project, due to the uncertainties surrounding it, and has two dimensions: *“the probability of its occurrence; and the impact on the project (the*

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

severity of the damage [herein referred to as Threat] *or the magnitude of the benefit* [herein referred to as Opportunity])".

Risk management, in its entirety, *"consists of systematic processes of identifying, analyzing and assessing risks, and establishing appropriate responses to them"*, which also *"can detect opportunities and determine how to take advantage of them"*. Therefore, it is recommended to develop processes related to risk management, with the aim of *"minimizing the impact of potentially negative events, and taking full advantage of opportunities for improvement"*, under the terms of NBR ISO 10006:2000, issued by the ABNT.

However, it is worth noting that the summary and analysis of risks performed by Upside has the outline established in the Contract and in the Auction Notice (Exhibit I of this Report), i.e., it refers only to the survey and analysis of risks that impact or could impact the attractiveness scenarios for Eletrobras, in the context of its privatization. Therefore, this concept was mentioned only as a reference for the next chapters, although risk management is not part of Upside's scope of work.

It is also important to mention that this Study does not include the analysis of budgetary risks, schedule of construction work of the power plants, operation, construction and other risks associated with technical engineering activities, even though we recognize the potentiality of their impacts on cash flow of the CGUs and, consequently, in the Added Value calculated herein.

Based on the technical team's expertise, initially the risks that impact or could impact the attractiveness scenarios for Eletrobras will be identified, as recommended by NBR ISO 10006:2000 in occasions on which significant decisions will be made. Under the terms of the PMBOK GUIDE, this process will involve identifying individual risks, as well as surveying their characteristics.

Subsequently, to support the analysis and (when possible) the development of mitigation strategies, as recommended by the PMBOK GUIDE, the possibilities of occurrence of risks will be identified, and then an analysis of such risks will be performed, qualitative and/or quantitative, on an as-needed basis.

Before quantifying the impacts arising from each risk, a qualitative analysis of the impacts will be performed to prioritize them, according to the potential effects on the project. Qualitative analysis is a method that uses description rather than numerical instruments to define the risk level. To apply this analysis, explanatory words or scales are used to describe the magnitude of potential consequences and the subjective likelihood of occurrence of these consequences. Scales can be adapted or adjusted according to circumstances, and different descriptions can be used for different risks.

In general, the analysis can be used: (i) when quantitative precision is not required; (ii) to carry out an initial risk assessment, before a subsequent, more detailed analysis; (iii) when the level of risk does not justify the time and resources needed to carry out a numerical analysis; and/or (iv) when numerical data are not available or are inadequate for a more quantitative analysis.

After the qualitative stage, wherein the degree of importance of the identified risks is determined with the objective to guide the quantification, a Semi-Quantitative Analysis will be developed. During this approach, part of these impacts will be analyzed qualitatively and assessed as (i) high, (ii) medium or (iii) low impacts. For impacts that receive quantitative treatment through sensitivity analysis, it is proposed that high, medium and low impacts are considered those (i) above 10%; (ii) between 10% and 5%; and (iii) below 5%, respectively. As mentioned above, positive impacts will be rated as Opportunities and negative impacts will be rated as Threats.

Also in this approach, because of the difficulty in using numerical methods, the likelihood will be judged by subjective probability, according to the expertise of the professionals involved in the Report, and qualified as either high, medium, or low.

The expected value of the risk results from the cross product of probability and impact, resulting in its final rating. This rating ranges from High to Low, as shown in Table 38.

Table 38: Impact versus Probability Product

Impact	Probability	Classification
Low	Low	Low

VII.2. Application in Financial Model

This Study is not intended to prepare a risk management and/or treatment plan for the Company. The goal is to assess the main points requiring attention identified in the aforementioned procedures and to survey the potential impacts on the Eletrobras capitalization process and the influence thereof on economic and financial modeling and analysis.

Thus, based on the identification, analysis and partial quantification, the following will be developed for the points requiring attention that represent risks: (i) ways to expand and seize opportunities; and (ii) responses to risks and threats. Among these, non-calculable legal notes and notes of a political and administrative nature will be kept as points requiring attention.

Other aspects that have a direct relation and/or interference in aspects related to concession terms, physical guarantee, GSF, and any other points that may influence the Company's strategy must be dealt with, according to the nature of each impact, in the economic and financial model, with: (i) Qualified incorporation of risk in the Base Case cash flow projection; or (ii) Base Case sensitization, in such a way that the impact of the Total Added Value is verified in an extreme or borderline way in the scope of the risk. The latter, in turn, will involve: (i) risk considerations in the assumptions on entry into operation, such as GSF and PLD; or (ii) changes in the formation of the trading price curve.

The expression "qualified incorporation in the Base Case" is understood to mean application of the risk assumption according to a reasonably conservative scenario. In other words, given a risk with low or remote probability, it can be judged by the non-application or partial application of a certain assumption sensitized to the risk.

For the sensitization scenarios, the borderline analysis of the risk scope should be understood as the limit of the possible risk coverage area, given a particular confidence level, considered sufficient confidence. That is to say, through this analysis,

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

it is possible to glimpse the maximum changes in Total Added Value for that particular aspect of risk.

Sensitivity analyses, however, do not seek to exhaust all predictable and unpredictable aspects of the impact of a given risk, but rather the specific impact of sensitization of a specific assumption that contemplates a relevant facet of that risk.

In the same way as negative impacts of a marketing and/or political nature, opportunities of such nature will be points requiring attention and will not be reflected in the financial model.

VII.3. Identifying and describing risks

In this section, all the risks identified in the Study are summarized and structured in groups: (i) Legal Notes; (ii) Water and Regulatory Aspects; (iii) Economic and Financial Risks; and (iv) Trading Risks. The risks will be identified for future reference in section VIII.5 and summarized in Table 39.

Table 39: Identification and Treatment of Risks.

Type	ID	identified Risks	Path Analysis
Legal (L)	J1	Risk of a Declaration of Unconstitutionality of Law 14182/2021 in ADI 6938	Point for attention
	J2	Risk of an Accounting and Legality Analysis by the Federal Court of Accounts	Point for attention
	J3	Extension of the terms of the current concession due to the Energy Relocation Mechanism (MRE)	Base Scenario considers the extension of REH 2902 and 2906
Water/Regulatory (R)	R1	Reduction of Physical Guarantees (“PG”) of the MRE	Sensitization: No Physical Warranty Review
	R2	Effects of thermoelectric plants due to inflexibility	Sensitization: Partial entry (50%) of the thermal plants provided for in Law 4182 Sensitization: Entry of Angra 3 and auctioned plants in the Simplified Competitive Procedure 001/2021
	R3	Entry of renewable power plants as of 2023	Sensitization: Entry of renewable energy and thermal energy in accordance with Law 14182
	R4	Dispatchability of the new energy matrix	Point for attention
	R5	Displacement between PLD and contract prices	Base Scenario evaluates the most likely scenario
	R6	Future transformation of the electricity sector	Point for attention

VII.3.1. Legal Notes

VII.3.1.1. Risk of Declaration of Unconstitutionality of Law 14182/2021 in Declaratory Action of Unconstitutionality – ADI 6938 (ID:J1)

Regarding the possible risk of commencement of litigation on the complex privatization plan, it should be noted that, at least in part, the risk level that may be envisaged was deemed consummated even before the works regarding the pricing of quotas taken to the market begun. Because when the project to convert Provisional Measure - PM 1031/2021 was approved by the Parliament, with the consequent enactment of Law 14182/2021, the ADI 6839 was filed immediately with the Federal Supreme Court, in which the plaintiff parties dispute the main provisions that establish the privatization. Presuming that Law 14182/2021 is not declared fully unconstitutional, possible granting of the second claim in the ADI would take to the same consequence that would occur with a presidential veto: annulment of the privatization itself, as ultimately, the effectiveness of the entire

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

regulation depends on implementing the provision of art. 1, paragraph 1, combined with arts. 20, 21, and the conditions addressed in arts. 2, 4, and 5. Its correction goes through the departments of the Office of the General Counsel for the Federal Government working on the ADI at the Federal Supreme Court, which has under the specific procedure to judge this action, defended the constitutionality of Law 14182/2021. This risk must be deemed a point of attention and it was not considered in the Financial Modeling.

VII.3.1.2. Risk of Accounting Analysis and Legality by the Federal Accounting Court (ID: J2)

As the legality and economic assessment of the privatization is pending examination by the Federal Accounting Court - TCU, which imposed hindrances to similar projects in the past, and given the opinion issued by the Justice reporting on the Eletrobras case, to some extent, the process may be impacted by its handling at the Court. Although the TCU no longer has the power to halt the effectiveness of Law 14182/2021, given the superseded opinion in Precedent 347/STF, which authorized deciding on the unconstitutionality of acts by the Government, there is a possibility of the Court staying the privatization, in case of evidence of possible litigation regarding the economy of the project and complexity of the economic-financial balance, likewise ADI 6938. In Case TC 000.350/2021-4, a request for examination of the record by Justice Aroldo Cedraz, who reports on the background of the Eletrobras case at the TCU, imposed a sixty-day delay in the publication of the auction notice regarding the implementation of 5G technology by auction, and ultimately, voted against the proposal from the technical unit, which was in line with the Federal Government' agenda. Such considerations lead us to believe that, under the privatization feasibility standpoint, the possibility of the TCU examining more sensitive aspects of the project exist, and with possible delays in the initially expected schedule to offer the securities in the market, capitalization may be impacted as regards the ratio between the amount defined for Eletrobras changing to the free market and the economy of the mandatory concessions under Law 14182/2021. The risk of hindrances by the TCU, once the process is provided with supporting documents, calls for mitigation by the legal departments

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

representing the Federal Government, BNDES and all other agents working on the privatization, to advance the issuance of a definitive standpoint of the Court concerning the economy of the privatization and its accounting lawfulness. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3.1.3. Extension of the current concession terms because of the MRE (ID: J3)

A subset of Eletrobras power plants covered by Law 13203/2015, acquired the prerogative of extending the current terms of the concession, in return for a significant portion of the costs incurred with the MRE. However, as it coincides with this capitalization process, there are moderate risks of the vested right not being fully comprised. The recommendation is that such right be duly contemplated in a specific clause of the new concession contracts. The impact of this risk in the calculation of the Total Added Value was considered in the Financial Model through the extensions of grants in accordance with Ratifying Resolution 2919/2021 and REH 2932/21.

VII.3.2. Water and Regulatory Aspects

VII.3.2.1. Reduction of the physical guarantees of the MRE (ID: R1)

If the physical guarantees of other MRE power plants will not be revised, **there is a not negligible risk** that Eletrobras Group, because of the reduced physical guarantees to which it was subject, incurs financial costs associated with the sharing of the burdens and benefits of the centralized operation, at higher rates than other agents. The reduction in the Eletrobras physical guarantees improves the GSF to all parties but simultaneously reduces the participation of the power plants in the total energy allocated to them. The impact of the physical guarantees of the MRE not being reviewed will be analyzed with the sensitization of the scenario in which the physical guarantee reviews will not be carried out in 2023 and

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

2028 compared to the base case, as mentioned in section VII.3.4.2, in such a way that the impact of this risk on the Total Added Value will be verified.

VII.3.2.2. Effects of thermoelectric plants by inflexibility (ID: R2)

Although the contracting of thermoelectric plants object of Law 14182/2021 has the powers to mitigate the seriousness of any future crisis related to scarce water resources, especially in the medium term, they will also have a strong contribution to the displacement of hydroelectric power plants, decreasing the GSF value. The impact of the deployment schedule of thermoelectric plants with 70% inflexibility will be analyzed with the sensitization of the scenario of partial entrance (50%) of the thermoelectric plants provided for in Law 14182 of July 2021, and the entrance of Angra 3 and plants auctioned in Simplified Competitive Procedure 001/2021 compared to the base case, as mentioned in section VII.3.4.2, in such a way that the impact of this risk on the Total Added Value will be ascertained.

VII.3.2.3. Entry of renewables as from 2023 (ID: R3)

The high volume of renewables, with a start-up in 2023, will have similar effects. These risks demand for strategic positioning of the company, further to their commercial mitigation. The impact of the schedule to implement renewables from 2023 will be examined with the sensitivity analysis of the base case, as mentioned in section VII.3.4.2 – Short Term – PLD (ID: C1)

The settlement to PLD (for energy left as "hedge" and settled in the short term). It is worth noting that the PLD is volatile and highly dependent on the market scenario:

- The demand of the system impacts the PLD. Increments/decreases in demand lead to a rise/reduction of the PLD.
- In conclusion, the offer would have the opposite effect. However, this does not always happen. The generation offer at higher operating costs has less impact on PLD - generally, it concerns thermal power plants deployed at more critical moments. However, an increase in offer, which the system must absorb at null variable cost (as in the wind, photovoltaic, and inflexible thermal generation),

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

producing a reduction in PLD (as it increases the generation of plants at zero cost).

- It is even possible that the volume of energy produced by such sources, with "mandatory" dispatch (in the jargon, "non-dispatchable" energy), displaces the dispatch of hydroelectric power plants: if all the hydroelectric potential is not necessary to meet the load, these power plants do not generate, not because of lack of inputs (water), but lack of need (demand). This is a real risk, which must be addressed in the future by the applicable authorities.
- The hydrological component still plays a significant role. Median or high hydrologies (close to or higher than, historical average) tend to raise the reservoirs and make up an "energy stock" that mitigates risks. On the other hand, low hydrologies (lower than historical average) may lead to the "consumption of hydroelectric energy stocked" and demand a more intense thermal dispatch, with higher variable costs, directly impacting the PLD.
- Although the expansion forecast by the sectoral authorities points towards backups that eliminate price differences, the operation guidelines, local or even circumstantial restrictions may create imbalances leading to differences in prices. As these scenarios are unpredictable and not pointed out in the official models and data, we elected only to indicate this possibility.
- Lastly, it is worth noting that the offer depends on expansion. The entry of new power plants (and their respective costs) may change the business environment completely, consequently affecting prices and revenues.

Sensitivity factors for the base caseVII.3.4.2; thus, the impact of this risk on the Total Added Value will be examined.

VII.3.2.4. Capacity of dispatch of the new electric matrix (ID: R4)

The "new" electric matrix, given the increased share of renewable sources, tends to be less dispatchable or more mandatory. This will require more thermoelectric plants, which will prevent relevant reductions of the marginal cost in the short term. The same will happen with tariffs, which may increase even after 2030, especially if the subsidies policy for renewable sources is maintained. The risk here is the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

maintenance of interventionism, with the application of unreasonable prices, which may affect the free prices. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3.2.5. The displacement between PLD and contract prices (ID: R5)

An oversupply lead by subsidized renewable sources and inflexible thermal plants, associated with the prospective rising tariffs, will entail a GSF below 1.0, but contract prices further displaced from PLD, which calls for attention. However, because of what will happen with tariffs and market opening, it is more likely that the contract prices will be higher than PLD, which is an opportunity. This risk was considered in the GSF, PLD and Forward curve forecast, the entry assumptions of the Financial Modeling.

VII.3.2.6. Future change of the electric sector (ID: R6)

Given the facts described in items VII.3.2.2 to VII.3.2.6, combined with the expected insertion of distributed generation, the electricity sector is likely to go through important changes in the next few years. The sector may not be the same, even between 2026 and 2030. The displacement of hydroelectric power plants, which is a risk, may be more permanent than desired. However, hydroelectric power plants will not lose importance. It is not likely to disregard a storage capacity of an average 280 GW. It is a "battery" of huge proportions, which only needs to be used. Thus, among the expected changes, flexibility, which is, the ability to respond quickly to operational needs of an increasingly less dispatchable power system, will arise as one of the main products of the hydroelectric power plants. The suggestion is a strategic standpoint towards this direction to arrive earlier in this new focus of the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

business. This risk must be deemed a point of attention; it was not considered in the Financial Modeling.

VII.3.2.7. TUST (ID: R7)

Changes in the Electricity Transmission Systems Usage Tariff (TUST) for the submarkets tend to a balance in the medium term and to be neutralized in the ACL; however, the effects thereof should be analyzed, since they impact generators and consumers in different ways. The new TUST is not yet defined; however, it is expected to increase the TUST of generators in export submarkets, such as the North and Northeast regions – since there are signs that no additional generation is needed –, and a decrease in the TUST of consumers in these same submarkets, since there are signs that more consumers will be attracted. The opposite effect occurs in the Southeast and Central-West submarkets, with a decrease for generators and an increase for consumers. Costs increase for exporting generators, but given the reduction in TUST for consumers, there is a margin for passing on such costs, whereas for importing submarkets, consumers will demand a price reduction, given an increase in the TUST. This risk must be deemed a point requiring attention and it was not considered in the Financial Model.

VII.3.2.8. Expansion of the Transmission Network (ID: R8)

The expansion of the transmission network, especially for the interconnection between the Northeast and other regions, warrants attention. For quite some time now, the Northeast has been the focus of increasing installed generation capacity, with over 100 GW of renewable sources under study and/or undergoing processes of issuing grants. According to Brazil's Energy Research Agency (EPE), as stated by its president at an event held in October 2021, the transmission capacity between the Northeast and South, Southeast and Central-West is – in his words – expected to quadruple by 2028. At the same event, EPE indicated that the use of Direct Current lines to carry energy from that region was under study. Irrespective of the technology chosen, transmission restrictions – which lead to substantial

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

changes in the locational signal – will be minimized even before 2028, which will greatly reduce the exposure of power plants in the North and Northeast. This risk must be deemed a point requiring attention and it was not considered in the Financial Model.

VII.3.3. Economic and Financial Risks

The economic and financial risks affect the Eletrobras balance in terms of financial stability and attractiveness in the short and long term, related to the business illiquidity, counterparties, and attractiveness (capital allocation).

VII.3.3.1. Inherent risk of the business (ID: E1)

The change to the free market is expected to bring a higher exposure to Eletrobras or a higher correlation of its economic activity to the economic cycles from an increased inherent risk of the business. This risk would entail a direct negative impact on the calculation of the Added Value in this Study. According to section V.2 - Weighted Average Cost of Capital (WACC), this risk was addressed through a more conservative cash flow forecast to incorporate the higher risk associated with the business in the financial flow.

VII.3.3.2. Economic activity level (ID: E2)

Market oscillations may cause an imbalance in the economy, where production costs will be higher than the price of products in the market, and this fact demotivates producers, of which part of the stabilization plans implemented until the '90s is a typical example. In the recent crisis, this occurred again, when several free-market consumers had to renegotiate payments with the generators and sellers.

- This risk has medium to low chances, as these cycles are specific and widely spaced. In addition, the current scenario is based on a low base of economic cycle recovery.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- The impacts in the company's liquidity may range from medium to high, as on occurrence of any such event, the liquidity and income of Eletrobras may be jeopardized.
- Economic activity should be monitored to mitigate this risk, and an internal debt renegotiation policy must be in place. This policy sets the costs and payment terms granted to clients in the default portion. These costs passed on to defaulters must always be higher than the opportunity costs that Eletrobras bears in the financial market.
- Lastly, the company must keep a pre-established liquidity level and open credit facilities with the financial market, established in its internal policies.
- This point will be addressed through increases in load growth (3.1% p.a. according to EPE and 3.6% p.a.) so as to simulate changes in the level of demand, according to section VII.3.4.2.

VII.3.3.3. Credit risk of counterparties

Credit risk comprises every possibility of default in a transaction, which is, the inability to predict that the parties' obligations will be fulfilled accurately. It is an ever-present risk in commercial and financial negotiations. Specifically, as Eletrobras will sell its energy in the free market (ACL), it risks default on the energy buyer.

- If no mitigating system is adopted, the chances of this risk may range from medium to high. As an example, medium-size traders have already defaulted in the past.
- The impact of credit risk is high/medium, depending on the concentration of sales to a profile of high-risk clients/traders.
- The recommendation is to set a Risk Acceptance Criterion (CAR) to mitigate this risk, where each client/trader has its exposure limits. This procedure calls for the preliminary involvement of the Compliance Department and is managed by a Credit Department, which sets previous levels concerning the volume exposure period of each counterparty and monitors the economic-financial indices of the buying counterparty.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- There must also be a clear exposure policy for each buying counterparty to dilute the credit risk.
- Lastly, the company must keep a pre-established liquidity level and open credit facilities with the financial market.

VII.3.4. Commercialization Risks

Regarding the revenue associated with energy commercialization, we recommend considering some attention points on the energy commercialization risk.

The implemented commercialization strategies comprise two business modalities:

VII.3.4.1. Long Term – forward (C2)

Sales of energy under long-term contracts. The forecast of this revenue depends on the contract prices, which in turn depend on a series of factors, such as the commercial strategies of each agent, which in turn depend on a wide array of factors. Generally, we may mention.

- The insight of sellers and buyers in future energy prices, including the PLD (if the PLD rises, some sellers may be tempted to reduce contracts, if prices are not attractive, and merely settle their energy; in case of a drop in the PLD, some sellers may be pressed to sell at lower prices to close deals, even if at a disadvantage).
- The production costs, highly affected by economic scenarios - mainly the dollar and civil construction.
- The expansion of the system generation - i.e., the massive entry of renewables by 2025 (to preserve incentives) may lead to an oversupply and drop prices.
- The expanded access to the free market leads to the opposite effect, increasing demand and, consequently, the prices.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

It should be noted that the impact of all such effects on the market is subjective and unpredictable. For this reason, we elected the statistical adjustment of prices based on historical data, which so far has resulted in assertive forecasts.

It is also important to note the negotiated amount. The limit amount that each plant may sell in the market is set by its physical guarantee. Further, suppose the plant has allocated energy below the contracted sales after considering the MRE effects. In that case, it must buy the remaining "guarantee" at PLD-sensitive prices, which already present a risk given their volatility. It is important to note that the Energy Reallocation Mechanism (MRE) makes the amount available for sale depend on all participating hydroelectric power plants, leading to the need to forecast the dispatch of the joint system. It should also be noted that revisions of physical guarantees are expected (2022 and 2027) from the power plants that did not have the revision applied to Eletrobras's plants. Amounts resulting from this revision will have a relevant impact on the distribution of energy allocated among the power plants.

Lastly, as previously mentioned, it is possible that the hydroelectric power plants do not generate the total physical guarantee, not for lack of water, but lack of demand, as most of it, will be served by non-dispatchable power plants.

Thus, the negotiated amount, like the PLD and market prices, is subject to the dispatch risks - which permeates the entire negotiation.

Therefore, any offer/demand may significantly impact the dispatch of the system and its byproducts: the GSF, PLD and market prices - and consequently, revenue.

To mitigate the addressed risks, we recommend a sensitivity analysis, as described in section VII.3.4.2, of the result from the energy commercialization, addressing the following topics:

- Offer
- Expansion and revision of the physical guarantee: sensitivity to the scheduled entry of renewables and inflexible thermal plants, as well as the results of the revised physical guarantees.
- Hydrologic availabilities: sensitivity to hydrological affluence.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- Demand
- Sensitivity to increase in demand.
- increases in the price curve (CPPS and forward)

VII.3.4.2. Short Term – PLD (ID: C1)

The settlement to PLD (for energy left as "hedge" and settled in the short term). It is worth noting that the PLD is volatile and highly dependent on the market scenario:

- The demand of the system impacts the PLD. Increments/decreases in demand lead to a rise/reduction of the PLD.
- In conclusion, the offer would have the opposite effect. However, this does not always happen. The generation offer at higher operating costs has less impact on PLD - generally, it concerns thermal power plants deployed at more critical moments. However, an increase in offer, which the system must absorb at null variable cost (as in the wind, photovoltaic, and inflexible thermal generation), producing a reduction in PLD (as it increases the generation of plants at zero cost).
- It is even possible that the volume of energy produced by such sources, with "mandatory" dispatch (in the jargon, "non-dispatchable" energy), displaces the dispatch of hydroelectric power plants: if all the hydroelectric potential is not necessary to meet the load, these power plants do not generate, not because of lack of inputs (water), but lack of need (demand). This is a real risk, which must be addressed in the future by the applicable authorities.
- The hydrological component still plays a significant role. Median or high hydrologies (close to or higher than, historical average) tend to raise the reservoirs and make up an "energy stock" that mitigates risks. On the other hand, low hydrologies (lower than historical average) may lead to the "consumption of hydroelectric energy stocked" and demand a more intense thermal dispatch, with higher variable costs, directly impacting the PLD.
- Although the expansion forecast by the sectoral authorities points towards backups that eliminate price differences, the operation guidelines, local or even circumstantial restrictions may create imbalances leading to differences in

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

prices. As these scenarios are unpredictable and not pointed out in the official models and data, we elected only to indicate this possibility.

- Lastly, it is worth noting that the offer depends on expansion. The entry of new power plants (and their respective costs) may change the business environment completely, consequently affecting prices and revenues.

VII.4. Sensitivity factors for the base case

Based in the Summary Analysis of Risks proposed herein, the risks may be segregated into 1. Points for attention, to be prudently addressed by Eletrobras Management; 2. Risks incorporated into the Financial Model, per chapter VI –Definition of Assumptions according to its most likely scenario; and 3. Risks analyzed in cases of sensitivity.

The latter, in turn, are those addressed in this section. They will be analyzed on two fronts: 1. Projection of new GSF, PLD curves and envelopments and price curve, incorporating new assumptions; and 2. Sensitivity of the commercialization strategies prepared based on these curves.

To address the risks (i) section VII.3.2.1 – Reduction of the physical guarantees of the MRE (ID: R1); (ii) section VII.3.2.2 – Effects of thermoelectric plants by inflexibility (ID: R2); (iii) section VII.3.2.3 – Entry of renewables as from 2023 (ID: R3); (iv) VII.3.2.5 – The displacement between PLD and contract prices (ID: R5); and (v) section VII.3.3.2 – Economic activity level (ID: E2), the following GSF, PLD and price curves scenarios and envelopments are proposed:

- Scenarios in which the physical guarantees will not be revised in 2023 and 2028;
- Expansion scenario according to the schedule defined in Law 14182, of July 2021 and Law14120, of March 2021;
- Scenarios with the partial entry (50%) of thermal plants expected in Law 14182, of July 2021;
- The scenario of entry of Angra 3 and power plants auctioned in the Simplified Competitive Procedure 001/2021;

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- The scenario in which the load rises at an annual rate of 3.1%, as forecast in the PDE 2030;
- The scenario in which the load rises at an annual rate of 3.6%;
- Scenario with maximum premium of R$ 10,00 on the Northeast Region price curve;
- Scenario with maximum premium of R$ 20,00 on the Northeast Region price curve;
- Scenario with single CPPS for all submarkets; and
- Scenarios with variations from 10% to 14% above and below in the CPPS.

Additionally, given the current scenario that predicts a significant entry of thermal and renewable power plants inducing to an oversupply of energy, it is expected HPPs will need to overflow. Therefore, it was also considered a hypothetical scenario in which the thermal plant inflexibility is altered so the risk of overflowing is not greater than 10%, according to the absorbing capacity of the system.

Subsequently, to address the Commercialization Risks in section VII.4, different commercialization strategies will be simulated for each curve generated, consisting of (i) change in the Hedge percentage; and (ii) composition of the commercialization portfolio, so more conservative and more aggressive strategies are being considered. From all such scenarios, it is appropriate to always assess upper-risk levels above P50, according to the note on risk VII.3.3.1 – Inherent risk of the business (ID: E1), of section VII.3.3 – Economic and Financial Risks regarding the incorporation of intrinsic risks into the financial flow.

VIII. Results

In this section, we will expound the results obtained from the economic and financial modeling. The analysis of the results is structured into four topics: (i) Convergence Analysis; (ii) Base Case; (iii) Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir release and (iv) Sensitivity analysis.

In total, it was considered 1407 Total Added Values for each of the 15 scenarios of this Study, resulting in 21105 values. Upon these values, it is going to be presented only the results from P10, P25, P50, P75 and P90, in accordance with the ordination defined in section V.4.3 – Application in the Financial Modeling.

In the first topic, we address the convergence assumptions and results for the Material Fact Scenario and the CNPE-15/2021 Scenario. In the next part, we present the results of the baseline scenario according to the assumptions addressed in section VI – Definition of Assumptions. Section VIII.3 deals with the scenario with variable inflexibility of thermals vis-à-vis risk of reservoir release, and the last part details each sensitization analysis conducted in this Study.

VIII.1. Convergence Analysis

In possession of the Studies carried out by Eletrobras and CNPE: the Material Fact and CNPE Resolution 15/2021 and 30/2021, respectively. The convergence analysis is based on the recalculation of the Total Added Value using, not the assumptions of this Study, but rather the assumptions presented in the Material Fact and those put forward by the Concession Granting Authority as provided for in CNPE Resolution 15/2021 and later Resolution 30/2021 to validate the results obtained, support Eletrobras' decision making in the capitalization process, and apply a consistency and accuracy test to the financial model of this Study.

The convergence analysis must use the assumptions published by the latest CNPE Resolution on the subject matter. Considering that the special session of Brazil's Court of Accounts (TCU) – which will analyze the process that deals with the first phase

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

of the capitalization of Eletrobras –has not yet taken place, it is worth mentioning that the decision may change the parameters previously defined by the CNPE.

It is important to emphasize that, even though the most recent CPNE (Resolution 30/2021) calculations had been analyzed as a new scenario in the convergence analysis, as well as for the elaboration of the Analysis of the Advantages, they did not generate new sensitivities.

VIII.1.1. Material fact scenario

The Material Fact published by Eletrobras on 02/23/2021 discloses changes to Provisional Measure MP 1031/21, sent by the Ministry of Mines and Energy (MME) to the Chamber of Deputies [Brazil's lower house of Congress].

VIII.1.1.1. Assumptions

The main informations included in the Relevant Fact published by Eletrobras are:

- The inclusion of the 30-year extension of the Tucuruí hydroelectric power plant (Concession Agreement 007/2004-Aneel-Eletronorte), of the subsidiary Centrais Elétricas do Norte do Brasil S.A. ("Eletronorte"), which is currently under the 'independent producer' regime (not under a quota regime);
- Obligation to contribute funds for the revitalization of the water resources of the drainage basins in the area of influence of the reservoirs at the hydroelectric power plants of Furnas Centrais Elétricas S.A. (Furnas) (R$ 230 million in 10 years), whose concession contracts are affected by the aforementioned MP, and for structural reduction of energy generation costs in "*Amazonia Legal*" (R$ 295 million in 10 years), directly by Eletrobras or indirectly through its subsidiary Centrais Elétricas do Norte do Brasil S.A. (Eletronorte), in addition to

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

the revitalization of the water resources of the São Francisco River basin (R$ 3.5 billion in 10 years, which was already foreseen in the PL);

- New revenue sharing between the Federal Government (through the payment of grant bonus) and the CDE – Energy Development Account (through the payment of annual quotas in 30 years); and
- The forecast for the creation of a special class preferred share, owned exclusively by Brazil's Federal Government, pursuant to the provisions of §7 of art. 17 of Law 6404 of December 15, 1976, which will give the power of veto in corporate resolutions provided for in the aforementioned Provisional Measure ("Golden Shares").

Other assumptions that were considered are those used by the Ministry of Mines and Energy in its preliminary calculations of possible grant amounts at the time the document was generated, i.e., the assumptions will be subsequently reviewed and may be revised. These assumptions are detailed below:

- Losses + GSF: 10%;
- Price/MW: R$ 155 between 2022 and 2029, and R$ 167 from 2030 to 2051;
- Period of change to free market: 5 years;
- WACC: 7.2%;
- Considering the review of the physical guarantee of the current concessions; and
- CCC Credit according to the Financial Information on 09/30/2020 Eletrobras.

It is worth noting that the rationale adopted in the PL remains the same, in the sense that all financial obligations provided for in the aforementioned PM will be deducted from the Added Value arising from the change of regime and the conceding of new concession grants.

VIII.1.1.2. Results

As a result of the Material Fact, Eletrobras arrived at preliminary amounts of the Added Value shown in Table 40.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Table 40: Preliminary Amounts Material Fact

Preliminary Amounts (R$ Billions)	
Revitalizations and Amazônia Legal	8.75
CCC Credit	2.50
50% Federal Revenue (grant)	25.50
50% CDE Revenue (grant)	25.50
Total	61.25

Source: Material Fact published on 02/23/2021.

To validate the Financial Model and contribute toward the analysis of the figures disclosed, the Added Value was calculated using the same assumptions as the Material Fact. The values obtained, along with a convergence analysis, are shown in Table 41Table 41.

Table 41: Convergence Analysis for Material Fact.

Upside Model vs. Material Fact	
Added Value before Indemnity	66,491,114,048
Indemnity – Tucuruí	5,103,744,550
Total Added Value	**61,387,369,498**
CCC Credits	2,906,498,547
CDE grant	**29,240,435,475**
Rebates Law 14182/2021	5,845,317,867
Federal Government Grant	**23,395,117,609**
Material Fact Calculated	**61,250,000,000**
Difference	**-0.22%**

Source: Own Elaboration.

Aware of the difference between the result obtained from the financial model and the result presented in the Material Fact itself, they point out that the model used in this Study is consistent in the calculation of Total Added Value and that – based on the assumptions considered – the published result is also coherent.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

VIII.1.2. CNPE scenario 15/2021

Brazil's National Energy Policy Council (CNPE), chaired by the Minister of Mines and Energy (MME), is responsible for calculating the Total Added Value and the consequent grant bonus. That having been said, the CNPE determined – in accordance with CNPE Resolution 15/2021, that the grant bonus to be paid to the Federal Government will be R$ 23.2 billion. At the same time, it established that R$ 29.8 billion of the Total Added Value would be allocated to the Energy Development Account (CDE), as determined by Law 14182/2021.

The parameters and assumptions considered in calculating the Total Added Value were presented by the MME on 08/27/2021.

VIII.1.2.1. Assumptions

The methodology used to calculate the Added Value was the Discounted Cash Flow.

To calculate the bonus amount for the granting of new concession contracts, the following indemnities for investments were considered: (i) not yet amortized, referring to the Basic Projects of HPPs; (ii) pegged to reversible assets of hydroelectric projects not yet amortized or not depreciated, whose concessions were extended or not, pursuant to art. 1 of Law 12783 of January 11, 2013, whose criteria and procedures for calculating these investments were defined in ANEEL Resolution 596 of December 19, 2013, pursuant to art. 2 of Decree 7850 of November 30, 2012.

The calculation made by the CNPE considered the revision of the Physical Guarantee of New Energy according to Ordinance MME 544 of August 31, 2021, already considered in the Base Case as indicated in Table 22: General data on the cash-generating units in section VI.3 – General Assumptions of the Concessions. Table 42 summarizes the parameters of fees, charges, and compensation considered in the model.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Table 42: Fees, Charges, Compensation, Other.

Parameter	Amount
Weighted Average Cost of Capital – WACC	7.31%
Social Integration Program (PIS)/ Contribution for the Financing of Social Security (COFINS)	9.25%
Income tax / Social contribution on net income (CSLL)	34.00%
Electric Energy Services Inspection Fee (TFSEE)	0.40% on power
Research and Development (R&D)	1.00% on net operating revenue (NOR)
Financial offset for the use of water resources (CFURH)	7% of the energy produced
Use of Public Asset (UBP)	0.00%

Source: CNPE Resolution 15/2021.

Additionally, electrical losses of 3.5% and an estimate of the new indemnity replacement value for non-depreciated and non-amortized assets of the basic project of the Tucuruí Hydroelectric Power Plant at R$ 5,103,744,550.00 were considered. Table 43 summarizes Energy prices on the Free Market and Hedge Market (Hydrological Risk).

Table 43: Energy Price on the Free Market and Hedge Market (Hydrological Risk)

Period	Energy prices	Hedge (1-GSF)
2022–2025	233 R$/MWh	19.50%
2026	207 R$/MWh	14.70%
2027	181 R$/MWh	10.00%
>2028	155 R$/MWh	5.20%

Source: CNPE Resolution 15/2021.

The extensions of the grants, due to the renegotiation of the hydrological risk, were considered in accordance with ANEEL Resolution 2919/2021, except for the Itumbiara Hydroelectric Power Plant, the extension of which was approved by ANEEL Dispatch 608/2016. The approval of the extension of the grants for the Tucuruí, Itumbiara (2nd period) and Mascarenhas de Moraes Hydroelectric Power Plants was not yet available.

The assumptions for termination of contracts for energy from Eletrobras plants are:

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- Termination of contracts for electricity from the quotaholder plants will be 20% per year, starting on January 1, 2023, following the schedule in Exhibit II of CNPE Resolution 15 of August 31, 2021.
- Energy from the Tucuruí, Curuá-Una and Mascarenhas de Moraes Hydroelectric Power Plants may be traded starting from the signing of new concession contracts, since these plants are not currently classified as quotaholders.
- However, for the Sobradinho and Itumbiara Hydroelectric Power Plants, the free (unrestricted) use of energy must comply with the rules established in Law 11943 of May 28, 2009 and Law 13182 of November 3, 2015.

Finally, the CNPE considered characteristics of the programs/projects in its Study, namely:

- Revitalization of the São Francisco River and Parnaíba River Basins. Annual contributions of R$ 350,000,000.00, adjusted for inflation according to the General Consumer Price Index (IPCA), or by another index that supersedes it, starting from the month of signing of the new concession contracts, for 10 years. Start of obligation: 2023.
- Reduction of generation costs in “Amazônia Legal” and navigability of the Madeira and Tocantins Rivers. Annual contributions of R$ 295,000,000.00, adjusted for inflation according to the IPCA, or by another index that supersedes it, starting from the month of signing of the new concession contracts, for 10 years. Start of obligation: 2023.
- Revitalization around the area of influence of the Furnas HPP reservoirs. Annual contributions of R$ 230,000,000.00, adjusted for inflation according to IPCA, or by another index that supersedes it, starting from the month of signing of the new concession contracts, for 10 years. Start of obligation: 2023.
- Supply of electricity in a mean annual amount of 85 MW, as from January 01, 2023, for a period of 20 years at the price of R$ 80.00/MWh, on the base date of January 01, 2022, to be annually adjusted for inflation according to the IPCA, or by another index that supersedes it, through a specific contract directly with the Federal Operator of the installations of the Project for the Integration of the

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

São Francisco River with Drainage Basins of the Northern portions of the Northeast Regions (PISF).

VIII.1.2.2. Results

As stated in section III.1 – Justification of the Works, according to CNPE Resolution 15/2021, the bonus for the granting of new electricity generation concession contracts to be paid to the Federal Government will be R$ 23.2 billion, and payment to the CDE will total R$ 29.8 billion, as determined by Law 14182/2021. Table 44 summarizes the granting value and Added Value published by the CNPE.

Table 44: Added and grant amount.

Results (R$)	
Total Added Value	62,149,426,264.33
Federal Government Granting	23,805,611,331.58
CDE grant	29,621,463,858.48

Source: CNPE Resolution 15/2021.

Similar to the Material Fact of section VIII.1.1, the CNPE's 15/2021 assumptions were considered in the economic-financial model, to arrive at an analytical comparative basis of the results of CNPE Resolution 15/2021. The values obtained by the convergence model and analysis are shown in Table 45.

Table 45: Convergence Analysis for CNPE 15/2021.

Upside vs. CNPE model	
Added Value before Indemnity	67,253,170,814
Indemnity - Tucuruí	5,103,744,550
Total Added Value	**62,149,426,264**
CCC Credits	2,906,498,547
CDE grant	**29,621,463,858**
Rebates Law 14182/2021	5,815,852,527
Federal Government Grant	**23,805,611,332**
Calculated CNPE	**62,479,656,370**
Difference	**0.53%**

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Source: Own Elaboration.

Just as the convergence analysis of the Material Fact, since the results obtained with the CNPE assumptions are similar, the accuracy of the Financial Model is considered to be supported.

VIII.1.3. CNPE Scenario 30/2021

On December 22, 2021, it was published CNPE Resolution 30/2021, that altered the CNPE Resolution 15/2021 and establish the Total Added Value by the new concession contracts according to the Law 14182/2021

After the analysis and considerations made by the TCU, the calculation of the Total Added Value, the financial model and specific assumptions were reviewed and adjusted by CNPE. This Resolution established the Total Added Value of R$ 67,052,502,399.86 to be granted given Eletrobras privatization. From this total value, R$ 25,379,079,917.76 is going to be paid to the Federal Government and R$ R$ 32,073,001,926.43 is going to be paid to CDE – Energetic Development Account.

VIII.1.3.1. Assumptions

The main assumptions changes in relation to the CNPE Resolution 15 are based on the update of price curves, Grant extensions and indemnities. The remaining assumptions were not altered.

46 details the new prices adopted by CNPE.

Table 46: Energy Prices

Period	Energy Prices
2022 a 2025	233 R$/MWh
2026	212.71 R$/MWh
2027	192.43 R$/MWh
2028 onwards	172.14 R$/MWh

Table 47 details the new indemnities values deduced from the Added Value.

Table 47: Indemnity reposition value estimation of the non-depreciated and non-amortized fixed assets from the basic project.

Indemnities (R$)	
Mascarenhas de Moraes HPP	-
Tucuruí HPP	5,043,166,900.98
Curuá-uma HPP	19,550,421.43

Source: CNPE Resolution 30/2021.

Finally, the Grant extensions as a result of the Hydrological Risk Repatriation were updated in 518 days for Tucuruí HPP, and in 395 days for Itumbiara HPP, on the first period and 2555 days on the second period, in accordance with ANEEL Resolution n. 2919 and n. 2932.

VIII.1.3.2. Results

As presented results, CNPE found the preliminary Total Added Value results showed up onTable 48.

Table 48: Total Added Value and Grant Value

Results (R$)	
Total Added Value	67,052,502,399.86
Grant to the Union	25,379,079,917.76
Grant to CDE	32,073,001,926.43

Source: CNPE Revolution 30/2021.

Similarly, to convergence analysis performed previously, the assumptions from the CNPE 30/2021 were also inputted in financial-economic model to get an analytical comparative base of the results. The values obtained from the Financial Model and the convergence analysis are shown on Table 49.

Table 49: Convergence Analysis for CNPE 30/2021.

Upside Model vs CNPE 30/2021

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Added Value before Indemnities	73,504,469,722
Tucuruí Indemnity	5,043,166,901
Curuá-Una Indemnity	19,550,421
Total Added Value	**68,441,752,400**
CCC Credit	2,906,498,547
Grant to CDE	**32,767,626,926**
Abatement – Lei 14.182/2021	5,815,852,527

CNPE 30 Calculation	**67,052,502,400**
Difference	**-2.03%**

Source: Own Elaboration.

Even though the convergency was not as precise as the earlier ones, but given that the model used in this Study treats commercialization and prices scenarios in a different way compared to the model adopted by CNPE Resolution 30/2021, when applying the published assumptions, the convergence analysis was close enough to ensure the precision of the Financial Model.

VIII.2. Base case

As defined in the chapters V – Methodology and VI – Definition of Assumptions, the methodology and assumptions considered in this Study were applied to calculate the Added Value of the Base Case for each of the 200 envelopes, plus the hydrological base scenario and for each trading strategy.Figure 30 shows the hydrological median scenario for the Base Case.

The 201 GSF and PLD curves sensitize the hydrological risks, and each one generates a Total Added Value; the results obtained were then ordered for the purpose of obtaining the p-values shown in Table 50. One can see that the ordering is from the highest to the lowest Total Added Value, i.e., the most conservative curve in terms of hydrological risks does not necessarily bring a conservative result in financial terms; Figure 31 depicts the NPV for each hydrological p-value, pre-ordering the values.

Source: Own Elaboration.

Taking a more conservative stance, the result adopted for the purpose of analysis and comparisons is the value obtained by p90 through the trading strategies of the base case; for this scenario, the Added Value considered is R$ 64.357 billion. It is noteworthy that the values shown in Table 50 are pre-rebates and indemnities.

VIII.3. Excursus: Analysis of the variable inflexibility of thermals against risk of reservoir release

When hydroelectric plant reservoirs are full, it is common for them to release water, i.e., to discharge water from the reservoirs without generating energy. Having stated the foregoing, this section proposes a brief pause in the presentation of the results to test a change in the inflexibility of thermal plants so that the reservoir release risk of hydroelectric plants is no more than 10%.

Since, in practice, it is not possible to change the inflexibility of thermal plants, this scenario is only theoretical and does not represent a suggestion or value judgment. However, as in the next few years there is a forecast of massive increase in thermal and renewable power plants, probably above the load growth, it is possible that the

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

hydroelectric plants will be displaced in such a way that their reservoirs are full, necessitating reservoir release. In other words, this scenario proves to be necessary since it is not beneficial – from the viewpoint of hydroelectric power plants – for them to have limited production to the point where it is necessary to release water from reservoirs, in addition to being an ideal scenario that society supports without impacting the consumer price so much.

Table 52 shows has the maximum inflexibility that can be absorbed by the system without the risk of reservoir release exceeding the 10% threshold.

Figure 32 compares the GSF expectation (average value) for the Base Case and for the thermal inflexibility scenario of the Law described in Table 52 (corresponding to a maximum reservoir release likelihood equal to 10%). One can see that after the recovery of the reservoirs (2022/2024), the new scenario of inflexibility leads to GSF levels nearly always greater than 1 – the “waiving” of generation by thermoelectric plants allows a more intensive use of hydroelectric plants, which may return to contribute to the energy supply. In other words, the requirement of inflexibility at 70% makes the system sub-optimal, replacing the hydroelectric generation available at low cost with more expensive thermoelectric plants.

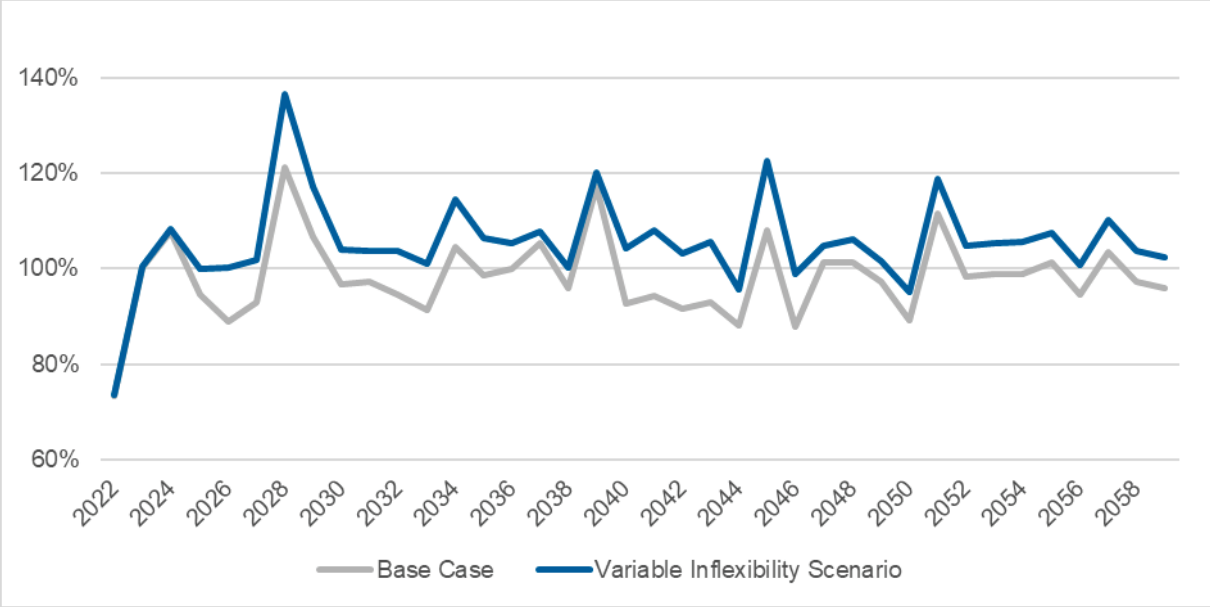

Figure 32: Comparison of GSF with the Base Case in the hydrological median curve. Source: Own Elaboration.

Finally, Figure 33 compares the PLD of the base case and the scenario associated with reduced inflexibilities described previously. It worth noting that the PLD for the scenario of less intensive use of thermoelectric power is higher. This does not mean that the costs are higher; on the contrary, as the use of fossil fuels is reduced, their costs will be lower. What occurs is that now the cost of thermal generation is reflected in the PLD – as opposed to the mandatory inflexibility scenario, where costs are divided among consumers. In other words, the base scenario (70% mandatory inflexibility) leads to a higher cost, but disregarded by the calculation of the economic sign, the reduced inflexibility scenario leads to a lower cost, but more appropriately incorporated into the calculation of marginal costs.

The 70% inflexibility is set forth in Law 14182, which increases the negotiating power of entrepreneurs in thermoelectric plants. However, associating inflexibility – in real terms – with a given level of reservoir release, even though it is an extremely complex task in terms of system operation, represents a test of how the reallocation of energy in water sources interferes in the Total Added Value of capitalization of Eletrobras. This test, however, alters the thermoelectric feasibility equation, which may increase costs for consumers. Table 53 includes the results obtained in this scenario/exercise, and Figure 34 shows the hydrological median scenario.

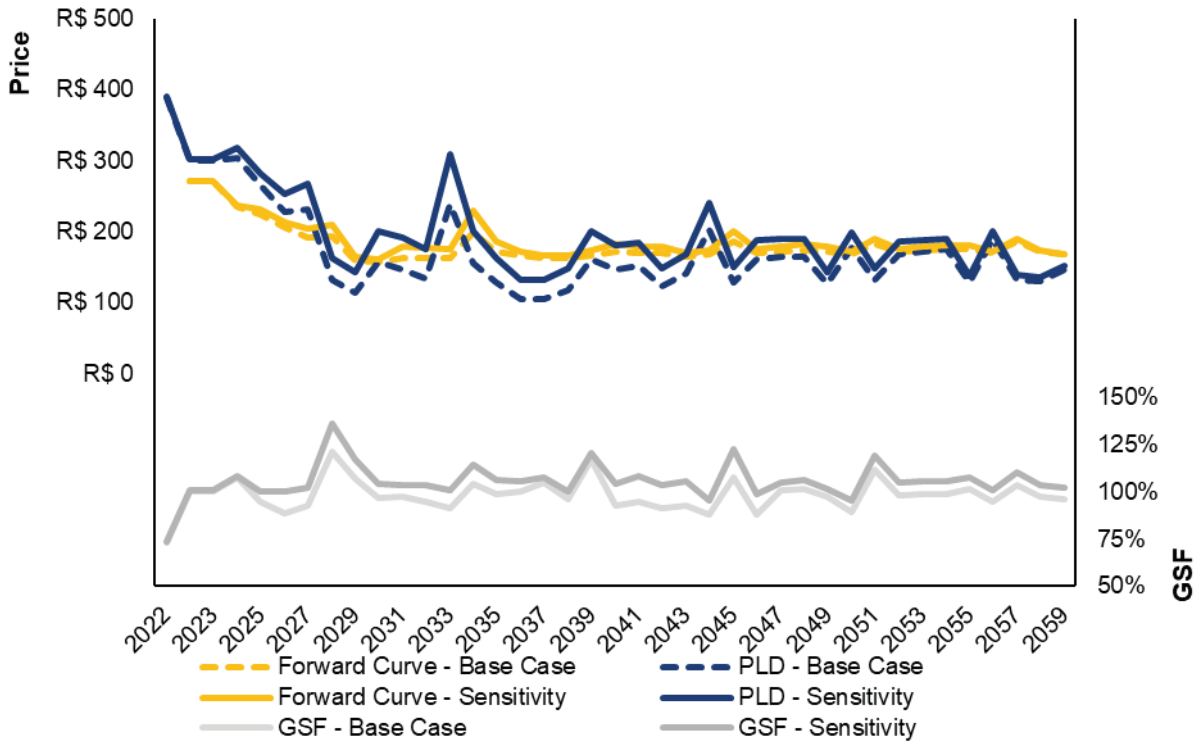

Figure 34: GSF, PLD and forward curve compared to the Base Case in the hydrological median curve.

Source: Own Elaboration.

Compared to the results of the Base Case, section VIII.2 - Base case, the resulting Total Added Value is considerably higher. The result is coherent since, due to the fact that inflexibility is reduced, hydroelectric plants are dispatched less frequently, thus increasing the GSF. However, since the Total Added Value is

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

significantly higher, one can see that, to reach a 10% risk of reservoir release, it was necessary to aggressively reduce the inflexibility of the thermal plants, as shown in Table 52. In other words, it is understood that – given the current scenario of the Brazilian energy sector – part of the hydroelectric plants will inevitably be displaced to the point where the releasing water from their reservoirs becomes necessary, which can be understood as a suboptimal point of the electrical system.

Figure 35 graphically displays the dispersion of the NPV's p-values for this sensitivity case, as shown in green, in relation to the Base Case. It is also exhibited in blue the dispersion of the NPV's p-value for the base case. For each scenario, the inferior limit of each area below represents the NPV's P90, and the superior limit represents the NPV's P10.

VIII.4. Sensitivity analysis

According to section VII.4 – Sensitivity factors for the base case, the risks that could be considered in the model, were sensitized in this Study in the form of scenarios. In this section, the results of such sensitization will be presented.

Each scenario generated allows us to analyze and understand the impact on Total Added Value starting from the change of the PLD, GSF, and forward price curves. Therefore, 201 price curves and NPVs were generated for each scenario, and their results were ordered in the same way for the Base Case for the purpose of comparison.

For each scenario, the hydrological median is shown, which should serve as a parameter for analyzing the impact of that sensitivity, according to the notes in section V.2 – Weighted Average Cost of Capital (WACC).

VIII.4.1. No review of Physical Guarantees

This sensitivity assumes that there will be no revision of the PGs of the other MRE plants in 2023 and 2028. In this scenario, the impact is not high, but is it not negligible either, and the likelihood that a review of the PGs will not take place is low, given that the government has control over the decisions. However, it is estimated that there will be great pressure for the review of the PGs not to be carried out – or for any changes to be merely marginal, since the simple recalculation of the PGs of the Eletrobras HPPs, although not surprising, triggered noise at companies and associations. Additionally, it is possible for 2022 and 2023 to be years of political uncertainty, which can affect strategic decisions, such as the one that changes the value of the entire hydroelectric complex. Table 54 summarizes the results obtained and Figure 36 shows the hydrological median scenario of this sensitization.

As shown in section VII.3.2.1 – Reduction of the physical guarantees of the MRE (ID: R1), given the reduction of PGs submitted to the Eletrobras plants, the non-review of PGs of the other plants of the MRE could impact the reduction of the Added Value, since their plants would suffer proportionally higher financial costs than the other agents. This expectation was verified in the results obtained since they are inferior to the results of the Baseline Scenario, as graphically demonstrated on Figure 37.

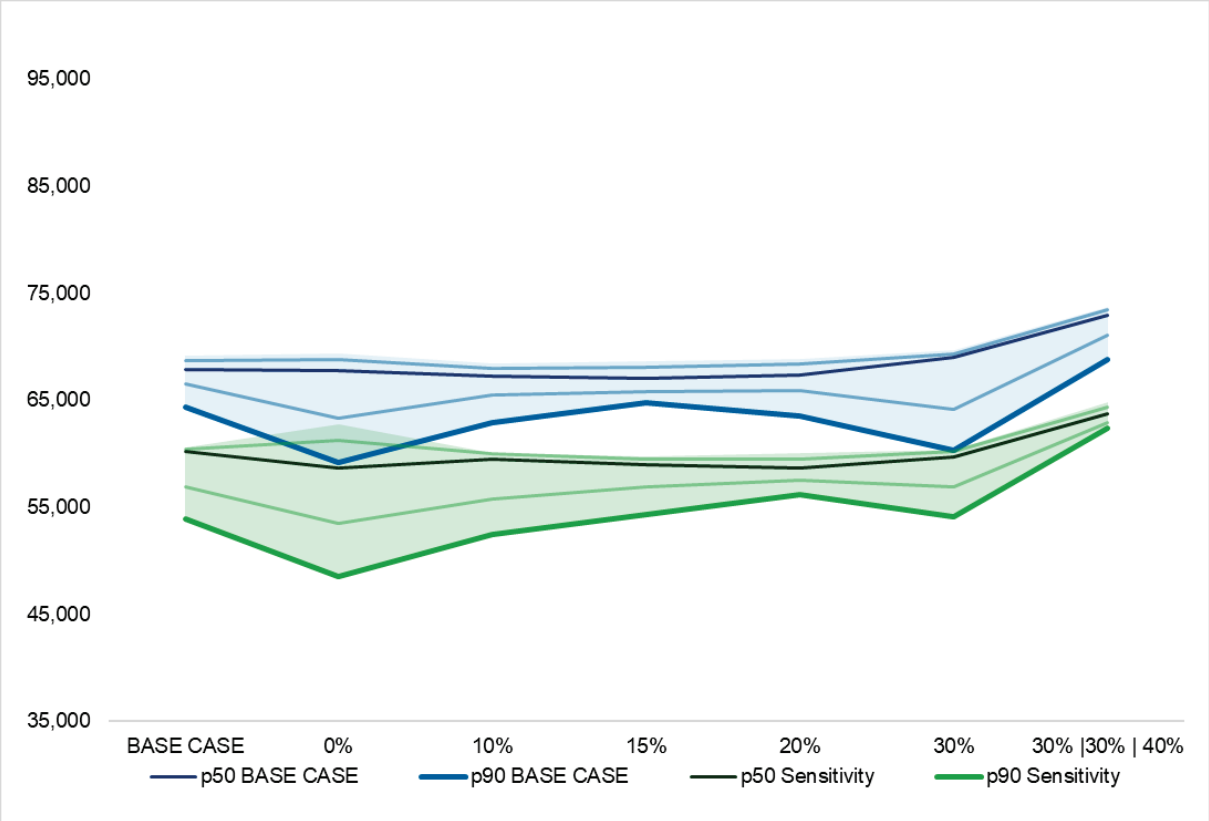

Figure 37: Results without physical guarantee revision (values in R$ millions).

VIII.4.2. Entry of renewables and thermals pursuant to Law 14182/2021

Here, the scenario in which thermal and renewable plants come into operation pursuant to Law 14182 of July 2021 was sensitized.

It is considerably unlikely that the 8,000 MW of thermoelectric plants provided for in Law 14182/2021 will be built according to the outlined schedule, in which the first

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

plants would enter into operation in 2026. The stages of planning, designing and building the infrastructure for transporting natural gas and electricity are not trivial, and there is still no news on how this will happen, at least in the electricity sector. If 2022 and part of 2023 are taken for planning, projects and auctions, there would be less than three years for the start of operations of the first plants. Furthermore, the outlook for the price of natural gas is uncertain, which increases the chances of a shift in the schedule. As the price of electricity has already been set by law, the increase in input costs – which represents more than 50% of the product's value – may (for example) make the financing equation difficult, especially in the Project Finance modality. Table 55 details the proposed schedule for the entry of thermal and renewable plants for the Base Case, where the addition of thermal plants was shifted two years with regard to the schedule under Law 14182.

Table 55: Proposal for renewables and thermal additions (Base Case).

ADDITIONAL RENEWABLE CAPACITY + INFLEXIBLE THERMALS					
Year	WIND	UFV	THERMALS N	THERMALS NE	THERMALS SE

Source: Own Elaboration.

Likewise, it is even more difficult for all renewable energy projects, which participate in an unprecedented race, to be successful in terms of starting commercial operations as from 2023. There are more than 100,000 MW of projects submitted to ANEEL. According to the EPE president, when speaking at ENASE/2021, only in 2022 would the Studies with alternatives for energy flow be presented; so, because of that

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

alone, it is very likely that only the complexes for which connection to the network is viable will be authorized. As for the others, the future holds a certain regulatory void in store. According to the aforementioned Law, those who do not obtain the concession grant or do not enter into operation after 2023 lose the right to subsidies associated with the discount for the use of the network; however, it is more likely that, politically speaking, a longer period will be given for the implementation of the projects – with subsidies.

Table 56 summarizes the results obtained and Figure 38 shows the hydrological median scenario of this sensitization.

Source: Own Elaboration.

According to section VII.3.2.2 – Effects of thermoelectric plants by inflexibility (ID: R2), the entry of thermoelectric power plants, as provided for in Law 14182, will displace the hydroelectric power plants, reducing the GSF. One can see the high impact of the entry of thermal and renewable energy by the difference in the results compared to the values of the Base Case in Figure 39, which considers a two-year delay; the inequality indicates that the hydroelectric plants will be intensely impacted by the entry of thermal and renewable energy, so that its production will be restricted until the load grows to the point where the hydroelectric plants are activated again, increasing the GSF.

VIII.4.3. Partial entry (50%) of the thermal plants provided for in Law 14182/2021

To address the same risks associated with scenario VIII.4.2 – Entry of renewables and thermals pursuant to Law 14182/2021, but instead of a delay in the schedule, the entry of half of the thermal plants provided for in Law 14182 of July 2021 is considered.Table 57 shows the schedule and installed quantity, in which, for this scenario, half of the thermal capacity will be considered. As stated before, the price of natural gas tends to be uncertain, or very volatile, which increases risks and costs and may discourage potential stakeholders. This hinders the implementation of the entire installed capacity provided for in the Law.

In contrast to scenario VIII.4.2VIII.4.2 – Entry of renewables and thermals pursuant to Law 14182/2021, when considering the entry of half of the thermals, the Total Added Value increases compared to the Base Case, as demonstrated on Figure 41. With an effect not unlike the delay in the Law's schedule, the partial entry also favorably meets the risk of water resource scarcity in the short and medium term, with a contribution slightly above the Base Case scenario. However, the probability of shifting the entire schedule is greater than the probability of partial deployment of the plants.

VIII.4.4. Entry of Angra 3 and auctioned plants in the Simplified Competitive Procedure 001/2021

To quantify the impact of the Angra 3 nuclear power plant and the recent Simplified Competitive Procedure on the Total Added Value, this scenario was also sensitized, as shown in Table 59 Table 59.

There have already been several decisions made by different levels of government, such as the CNPE and the MME, which report on the continuity of the construction of Angra 3, the entry into operation of which will reportedly be in 2026 or 2027. It is a very likely scenario, even if there is a change of government in 2023. As for Simplified Competitive Procedure 001/2021, roughly 750 MW-average were

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

contracted, which will start operating in May 2022, which is a very small amount compared to the total amount under discussion.

Figure 42 depicts the hydrological median scenario of this sensitization.

Similar to scenario VIII.4.2VIII.4.2 – Entry of renewables and thermals pursuant to Law 14182/2021 Entry of renewables and thermals pursuant to Law 14182, the entry of Angra 3 displaces the hydroelectric plants, reducing the GSF, which contributes to

the reduction of the Total Added Value. As exhibited on Figure 43, below, the results shows that the NPV's p-values are little dispersed between themselves.

VIII.4.5. Load growth at an annual rate of 3.1% as forecast by EPE

Unlike the Study exposed in section V.4.1.4 – Demand Prospect (Load), the 2030 PDE, published by EPE, estimates a load growth rate of 3.1% a year; such scenario sensitizes this change considering the load growth according to what was published, and its results are shown in Table 60. It is a very difficult perspective to be practiced, especially at the beginning of the cycle, i.e., between 2022 and 2025. It is not known for how long the political scenario, which is currently unstable, will affect decisions to expand the industry and electricity-intensive segments. Moreover, the

Classification: Confidential

prospects for GDP growth – in worldwide terms – are not good either, which would be another obstacle to the growth of electricity consumption in Brazil as well.

Figure 44 depicts the hydrological median scenario of this sensitization.

Table 60: Results – 3.1% load growth scenario.

As would be intuitive, an increase in demand should increase the Total Added Value. However, in the short and medium term, with an increase in the load above the volume that the plants are able to offer, plus the expectation of a reduction in PG in 2023 and 2028, it is necessary for the thermal plants to be activated by the hydroelectric plants to meet the demand, which justifies the reduction in results compared to the Base Case, portraited on Figure 45, by the sensitivity P90 line below the Base Case P90 line.

VIII.4.6. Load growth at an annual rate of 3.6%

As seen in section VIII.4.5 – Load growth at an annual rate of 3.1% as forecast by EPE, a greater growth in demand resulted in a decrease in Total Added Value and, to understand the behavior of Total Added Value vis-à-vis load growth, it was also sensitized by a growth of 3.6%. As explained in section VIII.4.5, in practice, it is reasonable to conclude that this growth is unlikely to happen; however, the results obtained do not diverge much from the Base Case, i.e., even in an unlikely scenario in which demand grows more aggressively, the Total Added Value does not evolve in the same way. Thus, the load growth adopted for the Base Case, in addition to being the most plausible rate, is also a growth rate that optimizes the calculation of Added Value.

Table 61 shows the results obtained and Figure 46 depicts the hydrological median scenario of this sensitization.

Even with a high load growth, the change in Total Added Value varies little compared to the Base Case. It is understood that in the short and medium term, the impact on the dispatchability of hydroelectric plants is similar, while in the long term, this loss is better compensated. Therefore, it can be inferred that the growth adopted for the Base Case, in addition to being a more likely growth, is also an optimal rate for the capitalization scenario. The little variability in relation to the base case is shown on Figure 47.

VIII.4.7. Maximum premium of R$ 10.00 on the Northeast price curve

To mitigate the risks of the trading price and price differences between submarkets – in which the Northeast region has more attractive prices – three scenarios were sensitized: the sensitization of this section and the two following sections, VIII.4.8 and VIII.4.9. This considers a maximum premium of R$ 10.00 in the price curve of contracts in the Northeast Submarket, which is the region with the lowest prices. Due to its more attractive price, the Northeast (NE) region is motivated to sell in other submarkets, unlike the southeast region, which has higher prices, so the premium is limited to the prices of the region with the highest prices and is understood as a risk premium of energy trading in another submarket. Table 62 shows the results obtained and Figure 48 depicts the hydrological median scenario of this sensitization.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Since this sensitization adopts only a premium on the price curve of the Northeast region, its impact is only seen at CHESF plants; Table 63 shows the change of the Total Added Value for each subsidiary of this sensitization compared to the Base Case, in the p90 curve. This sensitization rewards CHESF plants for having more attractive prices for sales between submarkets. Figure 49 exhibits the largest Added Value for this case in relation to the Base Case.

VIII.4.9. Single CPPS for all submarkets

The third scenario that sensitizes of the risks discussed in section VIII.4.7 – Maximum premium of R$ 10.00 on the Northeast price curve, adopts the same CPPS, per Table 17: Weighted Production Cost per Submarket (CPPS), so that the forward price curve is the same for all submarkets. This sensitization considers a scenario where prices naturally converge to a common market value; the results are presented in Table 66 and Figure 52 shows the hydrological median scenario of this sensitization.

Table 66: Single CPPS for all submarkets.

Given that the common CPPS adopted is a weighting of the Base Case cost, the consolidated Total Added Value did not vary significantly, as exhibited on Figure 53, that compares the NPV's p-values, but the changes between subsidiaries are noteworthy, as shown in Table 63, which compares the results with the p90 curve of the Base Case. There was a balance between the subsidiaries in such a way that, because they have higher CPPS, the plants in the North and Southeast regions had

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

their prices reduced after the weighting, and those in the Northeast region, since they had the lowest CPPS, had their prices increased, thereby increasing the NPV of their respective plants.

VIII.4.10. Changes in CPPS at 10% and 14% higher and lower

To sensitize CPPS oscillations and different possibilities of projections for the weighted cost of production – which guide the calculation of the forward price curve both in the equation and in the lower limit of the price curve –, four scenarios were inserted with changes of 10% and 14% (higher and lower) of the CPPS curve as requested by Eletrobras; Table 68 shows the results obtained in each sensitization. Figure 54 through Figure 57, below, show the hydrological median scenario of each sensitization in the CPPS.

Changes that reduce the CPPS reduce the price curve, which in turn decreases the Added Value. The opposite operation is also valid: an increase in the CPPS implies an increase in the Added Value. As one can see, changes in the cost of production significantly impact the result of Total Added Value, i.e., its volatility must be observed since any decrease in the cost of production reduces the economic value of the business; for example: such a scenario can be seen if there is a massive entry of power plants that run on renewable energy sources, whose cost is low, together with a delay longer than the one considered in the schedule of entry of thermal plants, per Law 14182. Table 69 compares the p90 values of the four scenarios of changes in the CPPS.

VIII.5. Risk rating

In this section, as discussed in chapter VII, the risks and sensitivities considered will be rated according to their impact and probability and then distributed in a matrix according to the methodology defined in section VII.1 – Methodology, scope and main concepts.

Each risk summarized in this Study is identified by an identification number (ID), as categorized in Table 39 – Identification and Treatment of Risks., Table 39 on page 160.

Table 70 shows the rating of risks and sensitivities in the disciplines of NPV variation compared to the Base Case (ΔNPV), Threat/Opportunity (T/O), Probability (P), Impact (I) and Consolidation between Probability and Impact (PxI). Table 71 shows

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

how the sensitivities were arranged. The risks shown here must always be understood as being in comparison with the Base Case, and not in absolute terms.

Table 70: Risk Rating on Impact and Probability.

Source: Own Elaboration.

According to section VII.1 – Methodology, scope and main concepts of the Risk Analysis and Synthesis, the threats were for the sensitivities; the impact was measured from the difference of the Added Value compared to the Base Case. Thus, changes up to 5% were considered low impact, changes between 5% and 10% were considered medium impact, and for changes above 10%, the impact was estimated as

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

high. In the case of risks that were not treated as sensitization, the impact was rated according to the assessment of the experts involved in the Report, from the viewpoint of potential effects to Eletrobras.

Impacts that decrease Total Added Value or that bring losses to capitalization were rated as “Threat”, while impacts that increase Total Added Value or that result in an advantage to capitalization were rated as “Opportunity”.

The probability of each risk and sensitization was rated according to the expected occurrence, as explained in sections VII.3 – Identifying and describing risks and VIII.4 – Sensitivity analysis.

Risks for which it is not possible to measure their impact and/or probability, or whose probability is remote, were rated as “Imprecise/Remote”. However, there are risks that are already rated as Threat or Opportunity despite the Impact or Probability being imprecise.

It is worth noting that a high impact on the NPV or probability does not necessarily represent a considerable threat or opportunity, as it is the combination of these that results in the risk rating. The sensitization scenarios also stress the model according to the assumptions of the respective scenario, but they are unlikely to be ascertained in practice in the same way in which they were sensitized, i.e., they should be understood as extreme impacts.

Table 71 organizes the risks identified into Opportunity and Threat, which will subsequently be presented in a risk matrix. The rating – divided into: high, medium-high, medium, medium-low and low – is made by calculating the Impact vs. Probability of each risk/sensitization. Risks rated as “imprecise” occupy this position because they do not present specific values of impact and/or probability.

Table 71: Risk rating x level

	Classification	ID	Risk/Sensitization	I	P
THREATS	High	R1	Sensitization: No Physical Guarantee Review	High	High

With the exception of risks J1, J2 and R6, which have inaccurate/remote impacts and probabilities, Figure 62 distributes the risks according to their respective rating. One can see that a good part of the risks is distributed in the Medium/High area of the diagram; therefore, it is inferred that the most relevant risks for capitalization are considered and analyzed in this Study. Following the size scale, each element of the chart in which a number is contained refers to how many risks occupy that position.

Figure 62: Dispersion Matrix by Rating.

Source: Own Elaboration.

As can be seen, a good part of the risks is part of the operating structure of the electricity sector. And it is exactly these risks that are rated in the categories high/high; high/medium; medium/high; high/low or low/high, as shown in Table 60.

Of these, Company Management should pay close attention to those whose management can initiate on the short-term, such as the review of physical guarantees of other MRE plants, the expansion schedule of renewable energy plants, and the inflexibility of the Thermoelectric Plants provided for in Law 14182/2021, in addition to the expansion of transmission. These are cases that create or remove value from

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

companies, but under which Eletrobras – both now and in the future – has a reasonable bargaining power.

It should be noted that it is normal for the imposed (or exogenous) increase in the offer, and the transmission restrictions or the intensification of the locational signal, to affect the Company's value. But Eletrobras has everything that a major power generating/trading company needs to mitigate these risks, which is ownership of mature assets and in different submarkets.

Thus, it is recommendable that – at least with regard to the trading activity – the strategies be joint strategies (of the companies as one), to minimize the risks and costs of undesirable exposures in a very volatile price market that is vulnerable to interventions.

IX. Analysis of Advantages

This chapter aims to directly compare the results between the Base Case and its sensitivities with the added value published by CNPE Resolution 30/2021. From this comparison, every difference in value, if positive, is going to be denominated as advantageous for Eletrobras; similarly, every negative difference is going to be denominated disadvantageous. This comparison has the purpose of complying with the Auction Notice term “Analysis of Advantages” (Appendix 1 from this Final Report), strictly within the scope of this Study. It is not, however, extensively conceptualized in the Brazilian literature when analyzing, specifically, privatizations, as well as the transportation infrastructure sector.

As reference, it is taken the P90 Base Case of R$ 64,357,049,480.30. This value is 4.02% lower, or R$ 2,695,452,919.56, than the Total Added Value of CNPE Resolution of R$ 67,052,502,399.86. Besides, as exhibited on Figure 63 and Figure 64 below, from 14 sensibility analysis results, 4 results are higher the CNPE value, and 5 results are up to 6% lower. Therefore, it is understood that for a larger proportion of this Study’s sensitivity, the results fall in the interval of values that Eletrobras has the capacity and potential to accordingly act with its post-capitalization business goal and objectives.

Source: Own Elaboration.

As in every generated volume it was used the P90 values (conservative scenario), and according to section VI.5 – Commercialization Assumptions, the contract mix was held constant. The combination of these factors demonstrates a high conservatorship level on the execution of this work, which also reflects on the results. It is important to highlight that, for the Base Case portfolio, the contract mix was composed by 5-, 3- and 1-year contracts with the respective target proportion of 50%, 30% and 20% of the commercialized energy in each period. The reason of Eletrobras choice is to pursuit a good risk vs. value compromise: 5 years contracts guarantee a stable revenue for the long term, but not always there is demand on the market for them; medium term, 3 years, contracts, most sought by consumers, are the last type to satisfy the risk-value relationship; and, finally, 1-year contracts are the leftovers, and they are subjected to the PLD volatility (for better or worse). Most certainly, as a private company, the firm could explore different strategies accordingly to the energy market outlook in each moment, gaining efficiency in the company's result.

As already mentioned, the commercialization scenarios above are conservative and do not consider the behavior of future markets. That is, in this Study, the Base Case assumes a relevant conservative level and, from it, a series of results with critical variables alterations, through sensitivities, were elaborated, as stated on section VIII.4 – Sensitivity analysis. These scenarios can or not occur in the future and, for each sensitivity, it was generated results that shifts the Grant value for higher or lower. Hence, from a Base Case, there is a range of possibilities and alternatives that could implicate in a direct advantage on the Total Added Value.

Eventual fiscal gains of various nature could be later appreciated by the Union and CDE payment schedule. In this Study, it was used the Marginal Cash Flow method. Thus, the existence of accumulated losses or negative taxable profit are transparent in the performed analysis. Individually, every Cash Generating Unit (CGU) would marginally contribute with its result (positive or negative) on the total subsidiary result and, consequently, on the Eletrobras' consolidated result.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

According to Eletrobras strategy, every advantage brought with the HPPs' exploration right as PIE (Independent Producer) must be understood as an intangible asset to be amortized over the concession. However, even adopting the commercialization strategy given by Eletrobras, after the privatization, the Company could explore different strategies accordingly to the future market outlook.

Given that, it falls to Eletrobras' management the search, on the scope of energy commercialization, for scenarios that return larger gains, holding the firm's business plan. Consequently, these scenarios would result in higher NPV values, taking advantage of the business' maximum potential on its private exploration regime.

X. Conclusion

Upside Corporate Finance Ltd. was contracted by Eletrobras to provide specialized services under the Contract ECE-DSS-4588/2021, to support the decision of the high management on the grant amount in the privatization process, establishing scenarios and evaluating the positive and negative impacts of the Law 14182/2021, which conditions the Eletrobras change to free market process to the calculation of the grant by the economic-financial modeling using the premises and methodology approved by the Company.

The Total Added Value and Grant amounts to be paid to the Federal Government and CDE were established by CNPE Resolution 30/2021. The objective of this Study, therefore, was to carry out an independent calculation, considering the current legislation, public and Company's, in order, to identify the conditions of financial viability of the Eletrobras capitalization from its own perspective.

It is important to consider that the Company - subject of this study – was decisive for the Brazilian electricity sector evolution for more than 60 years, especially in the 1970s and 1980s, through its role in coordinating the expansion and operation of the systems; and now, it introduces into its history a relevant capitalization process amid important transformations in the sector, which, together make the structure of a sales model or the definition of an added value more complex.

With such transformations, compounded by a severe shortage of water resources, for example, it is not trivial to identify the long-term marginal costs tendency - an essential element to quantify with reasonable precision the grant bonus or how much can be paid to keep the assets.

Yet on each planned change, there are different possibilities for each one's future. There is no doubt about the increase in the renewable sources share in the electric matrix, but the expansion rate has been affected by external factors and the subsidy policy that increased the race for more wind and solar capacity. It is estimated that somewhere between 60 and 100 GW are part of this race despite the numbers are not accurate.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Although positive, given that the increasingly cleaner power sources increase the supply, it removes value from hydroelectric generators, which will be displaced by intermittent power plants for a long time with short-term marginal costs equal to zero.

At least in the medium term, the circumstances are challenging as there is no way to transport all this energy. Thus, it was considered that the energy flow capacity limits the pace of expansion, as it is now, but there are studies already underway to quadruple the power of the interconnection between the Northeast region and other regions of Brazil.

Similarly, the capacity expansion of thermoelectric plants with compulsory flexibility will also displace hydroelectric plants - such as intermittent sources -, even more if the schedule envisaged for in Law 14182/2021 is maintained, which increases risks and costs.

These two aspects (accelerated expansion of the renewables supply and thermoelectric plants inflexibility) tend to affect the adjustment factor of physical guarantees, or GSF, increasing the costs of the hydroelectric plants and potentially reducing their revenues. This will not happen only if the marginal operating costs are highly low. This is a non-negligible risk, which requires attention, especially in the hedge policy.

Furthermore, in order to embrace these critical variables in our pricing process, our methodology used models that project the climatological series and, therefore, future prices of GSF and PLD in short, medium and long-term horizons, as well as the impact generated by the entry into operation variables of energy sources (wind, solar, gas thermoelectric and nuclear thermoelectric). These climatological series - tested for different assumptions sets - were gathered in eight databases with 201 probabilistic scenarios each.

From these databases, were tested another seven scenarios of variations in energy commercialization price assumptions, resulting in a total of 13 sensitivities scenarios, in addition to the Base Case and a case analysis in section VIII.3. Each of these 15 sets of results was tested for seven trading cases, varying the composition of the contract portfolio and the hedge.

It was in this respect that the evolution of prices in the free market had a key role in the Added Value calculation, which also depend on the supply profile and the system's operating policy in a long and difficult-to-predict period.

In the short term, these prices are strongly influenced by the recent crisis, which increases short-term risks. However, in the medium and long term, prices in the free market may be more affected by the profile of supply and production costs, which implies a decrease trend.

With effect, the Eletrobras power plants are located in different submarkets (North, Northeast, and Southeast/Center-West), which is an important competitive advantage that aggregates value. However, the commercialization strategy requires cautions related to the dynamics that is going to reflect the price difference between these submarkets, mainly when the production costs (of the Firm’s assets) also vary. Hence, the revenue values herein calculated must be viewed as a reference. Punctual strategies – that are not contemplated in the scope of Upside’s work – associated with specific scenarios (and unpredictable at the moment) must elevate or even reduce the projected volume.

It is important to emphasize what will happen with the physical guarantees (GF) revision of the MRE HPPs. As the GFs of Eletrobras’ HPPs have already been calculated, for a lower value, not correctly revising the other would imply in reduce the participation of a large block of MRE HPPs, which also increases the risks and costs.

The financial-economic model built for this Study projected the monthly Marginal Cash Flow (for reference, see section V.1), in nominal base, for the whole projective horizon of the analysis, for each of the 22 power plants covered by the Law 14182/2021 (or 18 CGUs, considering Paulo Afonso Complex as a single CGU composed by 4 power plants). This model has used numerical methods for optimizing the 18 financial flows in order to estimate the Added Value for each CGU. Applying 201 times the different hydrological curves for each scenario, it was selected different levels of p-value from this result dispersion (P10, P25, P50, P75 and P90). According to our risk adjustment methodology (see section V.4.3), it was taken the P90 level as reference value. On total, it has been generated more than 21 thousand scenarios.

Classification: Confidential

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

The objective of this model was to generate a Total Added Value and an Added Value for each CGU, of which, after discounting the contribution values to the regional funds, we get the Grant Value to be paid to the Union and to CDE, as stated in the schedule established by CNPE Resolution 30/2021. Applying the discount rate calculated in this Study on the resulting NPV of this financial flow results on the Calculation of the Advantage (if positive) or Loss (if negative) associated with Eletrobras' capitalization process as proposed by CNPE.

Taking the Base Case calculated by Upside, as reference, this Study found a Total Added Value of R$ 64.357 billion (P90). This value is relatively lower than the value given by CNPE resolution 30/2021, of R$ 67.053 billion. This value, however, must be temporized with the commercialization strategies and other advantages associated with the regime of private business exploration. These are the cases that create or remove value of the companies, but under which the Eletrobras, as currently as in the future, has a reasonable bargain power as a result that includes the property mature assets in different submarkets, which allows the elaboration of an optimized energy commercialization strategy.

AVISO DE LICITAÇÃO

EDITAL DE PREGÃO ELETRÔNICO DSS Nº 10/2021

A Centrais Elétricas Brasileiras S.A. - **ELETROBRAS** torna público que, nos termos da Lei nº 13.303/2016, do Regulamento de Licitações e Contratos, doravante denominado "Regulamento", da Lei n. 10.520/2002 e do Decreto n. 10.024/2019, fará realizar licitação, na modalidade Pregão Eletrônico, sob o regime de empreitada por **PREÇO GLOBAL**, modo de disputa **ABERTO**, critério de julgamento **MENOR PREÇO** para contratação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, conforme condições estabelecidas no Edital.

DISPONIBILIDADE DO EDITAL A PARTIR DE 25/05/2021

1. Gratuitamente, nos sites: **www.gov.br/compras** e **www.eletrobras.com**

2. Na ELETROBRAS: Em razão da implantação de teletrabalho na Eletrobras e a adoção de protocolo de medidas de prevenção ao coronavírus (Covid-19), não será disponibilizada a retirada de edital nas dependências da **ELETROBRAS**. Todas as informações necessárias à licitação serão disponibilizadas nos canais descritos no item 1 acima, em cumprimento ao princípio da publicidade e à transparência.

➢ **ENTREGA DAS PROPOSTAS**: a partir de 25/05/2021, às 09h no site **www.gov.br/compras**

➢ **ABERTURA DAS PROPOSTAS**: em 17/06/2021, às 10h no site **www.gov.br/compras**

• Todas as referências de tempo neste Aviso observarão obrigatoriamente o horário de Brasília-DF.

A data de assinatura deste Aviso é a data da última assinatura eletrônica/digital da autoridade competente da ELETROBRAS, conforme protocolo de assinaturas anexo a este Aviso.

EDITAL DE PREGÃO ELETRÔNICO DSS N° 10/2021

A Centrais Elétricas Brasileiras S.A. - **ELETROBRAS** torna público que, nos termos da Lei nº 13.303/2016, do Regulamento de Licitações e Contratos, doravante denominado "Regulamento", e da Lei n. 10.520/2002, fará realizar licitação, na modalidade Pregão Eletrônico, sob o regime de empreitada por **PREÇO GLOBAL**, modo de disputa **ABERTO**, critério de julgamento **MENOR PREÇO** para contratação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, conforme condições estabelecidas no Edital.

1 – DISPOSIÇÕES PRELIMINARES

1.1. O presente pregão eletrônico será realizado em sessão pública, por meio da Internet, mediante condições de segurança – criptografia e autenticação – em todas as suas fases, disponível no sítio **www.gov.br/compras.**

1.2. Os licitantes ou seus representantes legais deverão estar previamente credenciados junto ao órgão provedor do sistema eletrônico antes da data de realização do pregão.

1.3. Os trabalhos serão conduzidos por empregado das Centrais Elétricas Brasileiras S.A. – **ELETROBRAS**, denominado pregoeiro, mediante a inserção e monitoramento de dados gerados ou transferidos para o aplicativo **"COMPRASNET"** e realizados de acordo com a legislação indicada no preâmbulo deste Edital.

2 – OBJETO

2.1. Constitui objeto da presente licitação a contratação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, de acordo com as especificações técnicas constantes do Termo de Referência (Anexo I).

2.2. Em caso de discrepância existente entre as especificações deste objeto descritas no Comprasnet e as especificações constantes deste Edital, prevalecerão as últimas.

3 – CONDIÇÕES DE PARTICIPAÇÃO

3.1. Poderá participar qualquer pessoa física ou jurídica legalmente estabelecida no País e que atenda às exigências deste Edital.

3.2. Não poderão participar as pessoas, físicas ou jurídicas, que tenham sofrido:

a) penalidade de suspensão temporária de participação em licitação e impedimento de contratar, prevista no inciso III do artigo 87 da Lei n. 8.666/1993 ou no inciso III do artigo 83 da Lei n. 13.303/2016, desde que aplicada pela **ELETROBRAS**;

CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

b) penalidade de impedimento de licitar e contratar, prevista no artigo 7º da Lei n. 10.520/2002 ou no artigo 47 da Lei n. 12.462/2011, aplicada por qualquer órgão ou entidade integrante da Administração Pública federal;

c) penalidade de declaração de inidoneidade, prevista no inciso IV do artigo 87 da Lei n. 8.666/1993, aplicada por qualquer órgão ou entidade integrante da Administração Pública nacional, ou a prevista no artigo 46 da Lei n. 8.443/1992, aplicada pelo Tribunal de Contas da União;

d) penalidade de proibição de contratar com o Poder Público prevista nos incisos do artigo 12 da Lei n. 8.429/1992;

3.3. Para os fins desta licitação, os impedimentos referidos neste Edital serão verificados perante o Cadastro Nacional de Empresas Inidôneas e Suspensas (CEIS), Cadastro Nacional de Empresas Punidas (CNEP), ambos mantidos pelo Executivo Federal, e outros sistemas cadastrais pertinentes que sejam desenvolvidos e estejam à disposição para consulta, conforme o caso.

3.4. Também estarão impedidas de participar da Licitação empresas que, na data do certame, estejam cumprindo sanção de proibição de participar de licitações e celebrar contratos administrativos nos termos das leis nº 12.529/2011, 9.605/98, e 12.527/11.

3.5. Também não poderão participar Sociedades integrantes de um mesmo grupo econômico, assim entendidas aquelas que tenham diretores, sócios ou representantes legais comuns, ou que utilizem recursos materiais, tecnológicos ou humanos em comum, exceto se demonstrado que não agem representando interesse econômico em comum participando da presente licitação;

3.6. Serão impedidas de participar, também, as pessoas, físicas ou jurídicas, referidas no artigo 38 da Lei nº 13.303/2016.

3.7. Também NÃO poderão participar deste certame:

a) Pessoa física ou jurídica que participe da elaboração de estudos, incluindo, sem se limitar, consultoria econômico-financeira ou assessoria para qualquer entidade que, direta ou indiretamente, tenha interesse no processo de capitalização da Eletrobras, objeto da MP 1.031/2021 e legislação subsequente.

b) A vedação se estende a seus dirigentes e gerentes, controladores, acionistas titulares de participação no capital, responsáveis técnicos ou subcontratados, sociedades controladas direta ou indiretamente, fundo de investimento, comercializadoras de energia e/ou entidade de previdência complementar nos quais a pessoa jurídica possua participação do capital, ou seja, administrador/gestor da qual seja patrocinadora, conforme o caso, o que deverá ser comprovado mediante declaração nos termos do modelo 3 do anexo 3 do Edital.

3.8. Não será admitida a participação de cooperativas na presente licitação.

3.9. Não será permitida a participação de empresas reunidas em consórcio.

3.10. O licitante poderá participar do procedimento licitatório por intermédio de sua matriz/sede ou filial, desde que cumpra as condições exigidas para habilitação e credenciamento, em relação ao estabelecimento com o qual pretenda participar do certame.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

3.11. O CNPJ do estabelecimento que participar do certame, matriz/sede ou filial, deverá ser o mesmo a constar no contrato com a **ELETROBRAS** e nas Notas Fiscais/Faturas emitidas, quando do fornecimento ou execução dos serviços contratados. Dessa forma, não será admitida a emissão de Notas Fiscais/Faturas por CNPJ de estabelecimento diverso daquele participante da Licitação.

3.12. Este pregão é de âmbito nacional.

4 - PROPOSTA FORMAL DE PREÇOS

4.1. As propostas deverão ser apresentadas de acordo com o modelo anexado ao Edital (Anexo II), devidamente preenchido.

4.2. As propostas deverão incluir todos os custos e despesas, tais como: custos diretos e indiretos, tributos, encargos sociais, trabalhistas e previdenciários, seguros, taxas, lucro, uniformes, alimentação, transporte, e outros necessários ao cumprimento integral do objeto.

4.3. O prazo de validade das propostas será de 60 (sessenta) dias, contados da data prevista para abertura da sessão, podendo vir a ser prorrogado mediante solicitação da **ELETROBRAS** e aceitação do licitante.

4.4. As propostas deverão conter a razão social, endereço, telefone, número do CNPJ, banco, agência, conta corrente e praça de pagamento, nome e telefone do representante da empresa.

5 - CRITÉRIO DE JULGAMENTO DAS PROPOSTAS

5.1. As propostas serão avaliadas pelo critério de **MENOR PREÇO**, levando-se em conta o valor **GLOBAL** constante na proposta de preços apresentada pelo licitante e as condições estabelecidas neste Edital e em seus anexos.

6 - DOCUMENTAÇÃO DE HABILITAÇÃO

6.1. Serão exigidos os seguintes documentos para a habilitação:

a) inscrição no Registro Público de Empresas Mercantis, a cargo da Junta Comercial da respectiva sede, no caso de empresário individual;

b) ato Constitutivo, Estatuto ou Contrato Social em vigor, devidamente registrado na Junta Comercial da respectiva sede, acompanhado de documentos comprobatórios da eleição/nomeação de seus administradores, em se tratando de Sociedades Empresárias ou Empresa Individual de Responsabilidade Limitada (EIRELI);

c) inscrição do ato constitutivo em cartório de Registro Civil de Pessoas Jurídicas do local de sua sede, no caso de sociedades simples, acompanhada de prova da indicação de seus administradores;

d) documento de autorização, devidamente arquivado, quando se tratar de empresa ou sociedade estrangeira em funcionamento no país;

e) atestado, emitido por pessoa jurídica de direito público ou privado, que comprove a experiência na execução do objeto desta licitação, limitada às parcelas técnica ou economicamente relevantes, conforme descrito abaixo:

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

- experiência em avaliação econômico-financeira (*valuation*) de empresas do segmento de geração de energia elétrica de médio ou grande porte (maior ou igual a 500 MW), no Brasil, nos últimos 5 (cinco) anos a partir de indicação de trabalhos prestados a outras empresas, com todos os detalhes pertinentes, tais como: nome da empresa, período, escopo detalhado do trabalho realizado contendo inclusive, o prazo de seu desenvolvimento.

e.1) Não será reconhecido o atestado que informe apenas execução parcial do objeto.

e.2) O(s) atestado(s) deverá(ão) ser entregue(s) em papel timbrado, contendo o nome, o endereço e o telefone de contato do(s) atestador(es), ou qualquer outra forma de que a **ELETROBRAS** possa valer-se para manter contato com a(s) empresa(s) declarante(s);

e.3) O(s) atestado(s) deverá(ão) ser firmado(s) por representantes formais da empresa emissora e explicitar claramente em seu corpo ou em documento complementar anexado, a conclusão integral dos serviços e a satisfação do contratante com a adequação dos resultados obtidos ao escopo. O(s) atestado(s) deverá(ão) mencionar explicitamente o serviço executado, de modo a não restar dúvidas sobre o trabalho realizado.

e.4) É permitida a apresentação de atestados de capacidade técnica emitidos em nome de outra empresa da qual a licitante seja subsidiária integral e/ou de subsidiária integral pertencente a licitante, desde que pertencente à mesma atividade econômica;

e.5) Somente devem ser aceitos atestados de capacidade técnica expedidos após a conclusão do contrato ou, tratando-se de prestação de serviços contínuos, se decorrido, no mínimo, um ano do início de sua execução, exceto se houver sido firmado para ser executado em prazo inferior.

f) Balanço patrimonial e demonstrações contábeis referentes ao último exercício social, exigíveis **na forma da lei**, comprovando patrimônio líquido de, no mínimo 10% do valor da proposta do licitante, **OU** índices de liquidez geral (LG), liquidez corrente (LC), e solvência geral (SG) superiores a 1 (um), que deverão ser calculados da seguinte forma:

LG = ativo circulante + realizável a longo prazo/passivo circulante + passivo não circulante;
LC = ativo circulante/ passivo circulante;
SG = ativo total/ passivo circulante + passivo não circulante;

g) certidão negativa de feitos sobre falência da sede do interessado.

g.1) O licitante em recuperação judicial ou extrajudicial poderá participar da presente licitação, desde que atenda às condições para comprovação da capacidade econômica e financeira previstas neste edital.

h) Declaração de ausência dos impedimentos do artigo 38 da Lei nº 13.303/2016, conforme Modelo 1, Anexo III do edital.

i) Declaração, conforme "Modelo 2", Anexo III deste edital, de que irá dispor, na data da assinatura do contrato, das categorias de profissionais, em quantidade compatível para a execução do objeto, de acordo com o item 10 do Termo de Referência, Anexo I do Edital.

PE- 10/2021

j) Declaração, conforme "Modelo 3", Anexo III deste edital, de que não se enquadra no impedimento previsto no item 3.7 do edital.

6.2. Microempresas e empresas de pequeno porte deverão atender a todas as exigências de habilitação previstas neste edital.

6.3. Os documentos exigidos nas alíneas "a", "b" e "c" do item 6.1 deverão estar acompanhados de todas as suas alterações ou da respectiva consolidação, quando for o caso, e deles deverá constar, entre os objetivos sociais, a execução de atividades da mesma natureza do objeto desta licitação.

6.4. Se a documentação de habilitação não estiver completa e correta ou contrariar qualquer dispositivo deste Edital e seus Anexos, o pregoeiro considerará o licitante inabilitado, devendo instruir o processo, se for o caso, com vistas a possíveis penalidades.

6.5. A apresentação de qualquer documento com falsidade material ou intelectual sujeitará o licitante à aplicação da sanção de suspensão temporária do direito de participar de licitação, de acordo com os critérios do artigo 96 do Regulamento, além das demais cominações legais.

7 - PROCESSAMENTO DO PREGÃO ELETRÔNICO

7.1 - Credenciamento

7.1.1. Antes da sessão pública, para acesso ao sistema eletrônico, os interessados em participar do pregão deverão dispor de chave de identificação e senha pessoal e intransferível, no provedor COMPRASNET.

7.1.2. Os licitantes ou seus representantes legais deverão estar previamente credenciados perante o provedor do sistema eletrônico.

7.1.3. O credenciamento junto ao provedor do sistema implica responsabilidade legal do licitante ou de seu representante legal e a presunção de sua capacidade técnica para realização das transações inerentes ao Pregão Eletrônico.

7.1.4. O uso da senha de acesso pelo licitante é de sua responsabilidade exclusiva, incluindo qualquer transação efetuada diretamente ou por seu representante, não cabendo ao provedor do sistema ou à **ELETROBRAS,** promotora da licitação, responsabilidade por eventuais danos decorrentes do uso indevido da senha, ainda que por terceiros.

7.1.5. A perda da senha ou a quebra de sigilo deverão ser comunicadas imediatamente ao provedor do sistema para imediato bloqueio de acesso.

7.2 - Participação

7.2.1. A participação no pregão eletrônico dar-se-á por meio de conexão ao sistema eletrônico COMPRASNET, bem como pela digitação da senha pessoal e intransferível do representante credenciado e subsequente encaminhamento da proposta de preços, e os documentos de habilitação exigidos neste edital, exclusivamente por meio eletrônico, observados a data e o horário limite estabelecidos.

CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

7.2.2. Como requisito para participação no pregão, o licitante deverá manifestar, em campo próprio do sistema eletrônico, que cumpre plenamente os requisitos de habilitação e que sua proposta está em conformidade com as exigências do instrumento convocatório.

7.2.3. O licitante será responsável por todas as transações que forem efetuadas em seu nome no sistema eletrônico, assumindo como firmes e verdadeiras suas propostas e lances, inclusive os atos praticados diretamente ou por seu representante, excluída a responsabilidade do provedor do sistema ou do órgão ou entidade promotora da licitação por eventuais danos decorrentes de uso indevido da senha, ainda que por terceiros;

7.2.4. Caberá ao licitante acompanhar as operações no sistema eletrônico durante a sessão pública do pregão, ficando responsável pelo ônus decorrente da perda de negócios diante da inobservância de quaisquer mensagens emitidas pelo sistema ou, ainda, em razão de desconexão.

7.3 - Recebimento das Propostas e dos Documentos de Habilitação:

7.3.1. O licitante deverá observar as datas e horários limites previstos para entrega e abertura da Proposta, juntamente com os documentos de habilitação, atentando também para a data e horário para início da disputa.

7.3.2. Todas as referências de tempo no Edital, no Aviso e durante a sessão pública observarão **obrigatoriamente** o horário de Brasília – DF e, dessa forma, serão registrados no sistema eletrônico e na documentação relativa ao certame.

7.3.3. O licitante, no momento da elaboração e envio de sua Proposta, deverá enviar, obrigatoriamente, através de campo próprio do Sistema, as declarações de inexistência de fato superveniente, de que o mesmo não emprega menor, e de que não possui, em sua cadeia produtiva, empregados executando trabalho degradante ou forçado, as quais somente serão visualizadas pelo pregoeiro na fase de habilitação.

7.3.4. Os licitantes poderão deixar de apresentar os documentos de habilitação que constem do SICAF, assegurado aos demais licitantes o direito de acesso aos dados constantes dos sistemas.

7.3.5. Na elaboração de sua proposta, o licitante deverá levar em conta as seguintes condições:

a) O(s) preço(s) unitário(s) e total(is), do(s) item(ns) constante(s) da(s) Planilha(s) de Preços, deverá(ão) ser em moeda nacional, com 2 (duas) casas decimais;

b) Para cada item da Planilha de Preços deverão ser consideradas todas as operações auxiliares ou complementares necessárias à sua completa execução;

c) Os preços devem incluir todos os impostos e taxas vigentes na legislação, discriminados por item, incidentes sobre materiais e serviços que façam parte da licitação.

7.3.6. As microempresas e empresas de pequeno porte, no ato de envio de sua Proposta, em campo próprio do Sistema, deverão declarar que atendem aos requisitos do artigo 3º da Lei Complementar nº 123/2006, para fazer jus aos benefícios previstos na referida Lei.

7.3.6.1. A não entrega da Declaração indicará que a microempresa, ou empresa de pequeno porte, optou por não utilizar os benefícios previstos na Lei Complementar n. 123/2006.

PE- 10/2021

7.3.6.2. A apresentação das declarações referidas nos itens 7.3.3 e 7.3.6 do presente Edital com falsidade material ou intelectual sujeitará os licitantes à aplicação da sanção de suspensão temporária do direito de participar de licitação, de acordo com os critérios do artigo 96 do Regulamento, além das demais cominações legais.

7.3.6.3. O licitante deverá encaminhar sua Proposta preenchendo o campo específico no sistema COMPRASNET.

7.3.7. O preenchimento da proposta, bem como a inclusão de seus anexos, no sistema COMPRASNET, é de exclusiva responsabilidade do licitante, não cabendo à ELETROBRAS qualquer responsabilidade.

7.3.8. Até a data e hora definidas para abertura da sessão pública, o licitante poderá retirar ou substituir a proposta e os documentos de habilitação anteriormente inseridos no sistema.

7.4 - Sessão Pública:

7.4.1. No horário previsto no Edital a sessão pública será aberta pelo pregoeiro.

7.4.2. Se por algum motivo a sessão de disputa não puder ser realizada na data e horário previstos, os participantes deverão ficar atentos à nova data e ao novo horário que serão disponibilizados no endereço eletrônico **www.gov.br/compras**, opção "**informações do pregão**".

7.4.3. O pregoeiro verificará as Propostas apresentadas, desclassificando aquelas que não estejam de acordo com os requisitos estabelecidos no Edital.

7.4.4. A desclassificação da Proposta será sempre fundamentada e registrada no sistema, podendo os participantes acompanhar o resultado da análise em tempo real.

7.4.5. As Propostas classificadas pelo pregoeiro serão ordenadas pelo sistema, automaticamente, e só estas participarão da etapa de lances.

7.4.6. O pregoeiro, então, dará início à fase competitiva do certame, em que os licitantes poderão ofertar lances exclusivamente pelo sistema eletrônico.

7.4.7. Os lances deverão ser formulados sobre o **PREÇO GLOBAL** do item, conforme Planilha de Preços – Anexo II.

7.4.8. Os lances serão registrados no sistema, de forma sucessiva, em valores distintos e decrescentes, observado o modo de disputa adotado.

7.4.9. Cada licitante será imediatamente informado do recebimento do seu lance e do valor consignado no registro.

7.4.10. Não poderá haver desistência dos lances ofertados, sujeitando-se o licitante desistente às penalidades previstas no item 11 deste Edital.

7.4.11. Será permitido ao licitante oferecer lance superior ao menor lance registrado no sistema, desde que inferior ao último por ele ofertado e diferente de qualquer lance válido.

7.4.12. O licitante somente poderá oferecer valor inferior ou maior percentual de desconto ao último lance por ele ofertado e registrado pelo sistema, observado, quando houver, o intervalo

PE- 10/2021

mínimo de diferença de valores ou de percentuais entre os lances, que incidirá tanto em relação aos lances intermediários quanto em relação ao lance que cobrir a melhor oferta.

7.4.13. Não serão aceitos mais de um lance de mesmo valor, prevalecendo aquele que for recebido e registrado em primeiro lugar.

7.4.14. Durante o transcurso da sessão, os participantes serão informados, em tempo real, do valor do menor lance registrado. O sistema não identificará o autor dos lances aos demais licitantes.

7.4.15. Durante a fase de lances, o pregoeiro poderá excluir, justificadamente, lance cujo valor for considerado inexequível.

7.4.16. No caso de desconexão do pregoeiro, no decorrer da etapa competitiva, o sistema eletrônico poderá permanecer acessível aos licitantes para a recepção dos lances. O pregoeiro, assim que possível, dará continuidade à sua atuação no certame, sem prejuízo dos atos realizados.

7.4.17. Quando a desconexão do sistema eletrônico para o pregoeiro persistir por tempo superior a dez minutos, a sessão pública será suspensa e reiniciada somente decorridas vinte e quatro horas após a comunicação do fato aos participantes, no sítio eletrônico utilizado para divulgação.

7.5 - Modo de Disputa

7.5.1. Modo de disputa aberto:

7.5.1.1. Será adotado o modo de disputa aberto, em que os licitantes apresentarão lances públicos e sucessivos, com prorrogações, conforme o critério de julgamento adotado, estabelecido no subitem 5.1.

7.5.1.2. O intervalo mínimo de diferença de percentuais entre os lances será de 0,1% (um décimo porcento). O intervalo incidirá tanto em relação aos lances intermediários quanto em relação ao lance que cobrir a melhor oferta.

7.5.1.3. A etapa de envio de lances durará 10 (dez) minutos e, após isso, será prorrogada automaticamente pelo sistema quando houver lance ofertado nos últimos dois minutos do período de duração da sessão pública.

7.5.1.3.1. A prorrogação automática da etapa de envio de lances será de dois minutos e ocorrerá sucessivamente sempre que houver lances enviados nesse período de prorrogação, inclusive quando se tratar de lances intermediários.

7.5.1.3.2. Na hipótese de não haver novos lances na forma estabelecida nos subitens 7.5.1.3 e 7.5.1.3.1, a sessão pública será encerrada automaticamente.

7.5.1.4. Encerrada a sessão pública sem prorrogação automática pelo sistema, nos termos do disposto no subitem 7.5.1.3.1, o pregoeiro poderá, assessorado pela equipe de apoio, admitir o reinício da etapa de envio de lances, em prol da consecução do melhor preço, mediante justificativa.

7.6 - Direito de Preferência para microempresas e empresas de pequeno porte

7.6.1. Encerrada a etapa de lances, o pregoeiro deverá verificar se ocorre o empate ficto em favor de microempresa ou empresa de pequeno porte, assegurando, se for o caso, o direito de preferência, observando-se o seguinte:

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

Eletrobras

DSS
Rua da Quitanda, nº 196 - 5ºandar
CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

a) o empate ficto ocorrerá quando as ofertas apresentadas pelas microempresas e empresas de pequeno porte sejam iguais ou até 5% (cinco por cento) superiores ao menor preço;

b) ocorrendo o empate, a microempresa ou a empresa de pequeno porte melhor classificada, poderá, no prazo máximo de 5 (cinco) minutos, contado do envio da mensagem automática pelo sistema, apresentar proposta de preço inferior àquela considerada vencedora do certame, situação em que, atendidas as exigências habilitatórias, deve ser adjudicado o objeto em seu favor.

c) se a microempresa ou empresa de pequeno porte melhor classificada não exercer o direito de preferência, deverão ser convocadas as remanescentes que porventura se enquadrem na situação de empate, na ordem classificatória, para o exercício do mesmo direito;

d) no caso de equivalência dos valores apresentados pelas microempresas e empresas de pequeno porte que se encontrem em situação de empate, deve ser realizado sorteio entre elas para que se identifique aquela que primeiro pode apresentar melhor oferta.

7.6.2. Caso a microempresa ou empresa de pequeno porte mais bem classificada, deixe de apresentar, no prazo citado, nova proposta de preço inferior àquela considerada vencedora do certame ou apresente proposta de preço inaceitável ou deixe de atender às exigências habilitatórias, o pregoeiro convocará, dentre as empresas remanescentes que porventura se enquadrem na hipótese do subitem 7.6.1, na ordem classificatória, a próxima microempresa ou empresa de pequeno porte mais bem classificada para o exercício do mesmo direito de preferência.

7.6.3. O procedimento previsto no subitem 7.6.2 será adotado, sucessivamente, até a apuração de uma proposta que atenda ao Edital ou até que não haja microempresa ou empresa de pequeno porte que se enquadre na hipótese do subitem 7.6.1.

7.6.4. Na hipótese de não-contratação nos termos previstos nos subitens 7.6.2 e 7.6.3, o objeto licitado será adjudicado em favor da proposta originalmente vencedora do certame, desde que sua proposta seja aceitável e ele apresente os documentos de habilitação, tudo de acordo com o presente Edital.

7.6.5. O disposto no subitem 7.6.1 somente se aplicará quando a melhor oferta inicial não tiver sido apresentada por microempresa ou empresa de pequeno porte.

7.7 - Encaminhamento da Proposta e dos documentos complementares

7.7.1. Encerrada a etapa de lances, se a proposta atender aos critérios de aceitabilidade de preços, o licitante detentor da melhor oferta, após solicitação do pregoeiro, encaminhará por meio do sistema eletrônico:

a) em até 2 (duas) horas, os documentos complementares de habilitação e a proposta final, decomposta em Planilha de Preços, conforme modelo do Anexo II do presente Edital, com os preços adequados ao seu último valor ofertado.

7.7.2. É de responsabilidade do licitante confirmar junto à **ELETROBRAS** o recebimento dos documentos de habilitação e proposta final, não cabendo à **ELETROBRAS** a responsabilidade pelo desconhecimento de tais informações.

7.7.3. O sistema permite o envio de apenas 1 (um) arquivo, de forma que, caso haja necessidade de encaminhar dois ou mais, estes deverão ser compactados, preferencialmente, no formato ".zip" e enviados em arquivo único.

PE- 10/2021

7.7.4. O prazo referido na alínea "a" do item 7.7.1 poderá ser prorrogado por decisão fundamentada do pregoeiro, se considerar necessário, ou após análise de justificativa apresentada pelo licitante.

7.8 - Aceitabilidade da proposta

7.8.1. Os documentos remetidos por meio da opção "Enviar Anexo" do Sistema COMPRASNET poderão ser solicitados em original ou por cópia autenticada a qualquer momento, em prazo a ser estabelecido pelo pregoeiro.

7.8.1.1. Os originais ou cópias autenticadas, caso sejam solicitados pelo pregoeiro, deverão ser entregues no endereço abaixo:

CENTRAIS ELÉTRICAS BRASILEIRAS - ELETROBRAS
DEPARTAMENTO DE PLANEJAMENTO DE AQUISIÇÕES E CONTRATAÇÕES
Endereço: Rua da Quitanda, 196/5º andar – Centro
CEP: 20.091-005 - Rio de Janeiro - RJ

Ref.: PREGÃO ELETRÔNICO Nº 10/2021

7.8.2. O pregoeiro examinará a proposta primeira classificada, decidindo motivadamente a respeito da sua aceitabilidade.

7.8.3. O pregoeiro deverá avaliar se a proposta do licitante vencedor da etapa de lances atende às especificações técnicas, demais documentos e formalidades exigidas no Edital, sob pena de desclassificação, podendo ser subsidiado pela unidade de gestão técnica no que se referir ao atendimento das questões técnicas relacionadas ao objeto da licitação ou de documentos com informações de ordem técnica que podem impactar a sua execução.

7.8.4. O pregoeiro deverá negociar com o licitante autor da melhor proposta condições mais vantajosas, que poderão abranger os diversos aspectos da proposta, desde preço, prazos de pagamento e de entrega, sem que lhe caiba, a pretexto da negociação, relativizar ou atenuar as exigências e condições estabelecidas no Edital e nos seus documentos anexos.

7.8.4.1. A negociação deve ser motivada pelo pregoeiro e, quando envolver aspectos técnicos, pelo gestor da unidade técnica.

7.8.4.2. A negociação deverá ser feita com os demais licitantes, segundo a ordem inicialmente estabelecida, quando o preço do primeiro colocado, mesmo após a negociação, permanecer acima do orçamento estimado.

7.8.4.3. Se depois de adotada a providência referida em 7.8.4.2 não for obtido valor igual ou inferior ao orçamento estimado para a contratação, será revogada a licitação.

7.8.4.4. A negociação será realizada por meio do sistema e poderá ser acompanhada pelos demais licitantes.

7.8.5. O valor global da proposta, após a negociação, não poderá superar o orçamento estimado pela **ELETROBRAS**, sob pena de desclassificação do licitante.

PE- 10/2021

7.8.6. O pregoeiro poderá desclassificar as propostas que apresentem preços manifestamente inexequíveis, assim considerados aqueles que, comprovadamente, forem insuficientes para a cobertura dos custos decorrentes da contratação pretendida.

7.8.7. A inexequibilidade dos valores referentes a itens isolados da planilha de custos, desde que não contrarie instrumentos legais, não caracterizará motivo suficiente para a desclassificação da proposta.

7.8.8. A análise de exequibilidade da proposta não deverá considerar materiais e instalações a serem fornecidos pelo licitante em relação aos quais ele renuncie à parcela ou à totalidade da remuneração, desde que a renúncia esteja expressa na proposta.

7.8.9. O pregoeiro poderá realizar diligências para aferir a exequibilidade ou qualquer outro aspecto da proposta.

7.8.10. O pregoeiro poderá exigir do licitante a demonstração da exequibilidade da sua proposta, cabendo-lhe, conforme o caso, verificar ou requisitar que lhe sejam apresentados:

a) acordos coletivos, convenções coletivas ou sentenças normativas em dissídios coletivos de trabalho;

b) informações junto ao Ministério da Economia (ou órgãos equivalentes);

c) consultas a entidades ou conselhos de classe, sindicatos ou similares;

d) pesquisas em órgãos públicos ou empresas privadas;

e) verificação de outros contratos que o proponente mantenha com a Administração Pública ou com a iniciativa privada;

f) pesquisa de preço com agentes econômicos dos insumos utilizados, tais como: atacadistas, lojas de suprimentos, supermercados e fabricantes;

g) verificação de notas fiscais dos produtos cotados na proposta e anteriormente adquiridos pelo proponente;

h) levantamento de indicadores salariais ou trabalhistas publicados por órgãos de pesquisa;

i) estudos setoriais;

j) consultas às Secretarias de Fazenda Federal, Distrital, Estadual ou Municipal;

k) análise de soluções técnicas escolhidas e/ou condições excepcionalmente favoráveis que o licitante disponha para a prestação dos serviços.

7.8.11. Qualquer licitante poderá requerer motivadamente que se realizem diligências para aferir a exequibilidade e a legalidade das propostas, devendo apresentar as provas ou os indícios que fundamentam a suspeita.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

7.8.12. Se a proposta do licitante vencedor da etapa competitiva de lances não for aceitável, o pregoeiro examinará as propostas subsequentes, na ordem de classificação, verificando o seu atendimento até a apuração de uma proposta que atenda os termos do Edital e desta verificando as condições habilitatórias. Constatado o atendimento das exigências fixadas no Edital, o licitante será declarado vencedor.

7.8.13. Somente serão desclassificadas as propostas que contenham vícios insanáveis.

7.8.13.1. São considerados sanáveis defeitos relacionados a documentos que declaram situações pré-existentes ou concernentes aos seus prazos de validade.

7.9 - Habilitação

7.9.1. Havendo necessidade, o pregoeiro suspenderá a sessão para a realização de diligências, com vistas ao saneamento de erros ou falhas que não alterem a substância das propostas, observado o disposto no subitem 7.8.13, informando via chat do sistema a nova data e horário para a sua continuidade, que não se dará em prazo inferior a 24 (vinte e quatro) horas a contar da data da comunicação.

7.9.2. Sendo aceitável a proposta, o pregoeiro deverá analisar a documentação de habilitação do licitante que a tiver formulado, para verificação de suas condições habilitatórias. Constatado o atendimento das exigências fixadas no Edital, o licitante será declarado vencedor sendo-lhe adjudicado o objeto do certame.

7.9.3. No julgamento da habilitação e das propostas, o pregoeiro poderá sanar erros ou falhas que não alterem a substância das propostas, dos documentos e sua validade jurídica, mediante despacho fundamentado, atribuindo-lhes validade e eficácia para fins de habilitação e classificação.

7.9.4. Se o licitante desatender às exigências habilitatórias, o pregoeiro examinará a documentação do licitante subsequente, e assim, sucessivamente, até a apuração de documentação que atenda os termos do Edital, cujo licitante será declarado vencedor.

7.9.5. Os licitantes são responsáveis pela fidelidade e legitimidade das informações e dos documentos apresentados em qualquer fase da licitação.

8 - RECURSOS

8.1. Declarado o vencedor do pregão**,** durante a sessão pública, qualquer licitante poderá manifestar imediata e motivadamente a intenção de recorrer, no prazo de 2 (duas) horas em campo próprio do sistema, quando deverá ser concedido a ele o prazo de 3 (três) dias para apresentação das razões do recurso a contar da disponibilização da decisão, ficando os demais licitantes desde logo intimados para apresentar contrarrazões em igual número de dias, que devem começar a correr do término do prazo do recorrente, sendo-lhes assegurado vista imediata dos autos.

8.1.1. O pregoeiro pode não conhecer o recurso já nesta fase em situação excepcional e restrita, caso a manifestação referida no item 8.1 seja apresentada fora do prazo ou por pessoa que não represente o licitante ou se o motivo apontado não guardar relação de pertinência com a licitação. É vedado ao pregoeiro rejeitar o recurso de plano em razão de discordância de mérito com os motivos apresentados pelo licitante.

8.2. Apresentadas as razões e contrarrazões, o pregoeiro disporá de 5 (cinco) dias úteis,

TEL: (21) 2514-5580 / 5225
PE- 10/2021

prorrogáveis por iguais períodos, para reavaliar sua decisão e dar os seguintes encaminhamentos, conforme o caso:

a) se acolher as razões recursais, deverá retomar a sessão pública para, revista a decisão nela tomada, dar prosseguimento à licitação, garantindo, depois de nova declaração de vencedor, o direito à interposição de recurso, inclusive por parte de licitante que tenha sido impedido de participar da licitação, que teve sua proposta desclassificada ou que foi inabilitado;

b) se não acolher as razões recursais, deverá produzir relatório e encaminhar o recurso para a autoridade competente, para decisão definitiva, que deve ser produzida em 5 (cinco) dias úteis, prorrogáveis por iguais períodos. Nesta última hipótese, a autoridade competente deverá tomar a decisão definitiva sobre o recurso.

8.3. Na hipótese da alínea "a" do item 8.2. deste Edital, a decisão de acolhimento do recurso deverá ser publicada no sítio eletrônico da **ELETROBRAS**, estabelecendo-se o prazo de 2 (dois) dias úteis para a retomada da sessão pública.

8.4. A decisão definitiva sobre o recurso deverá ser publicada no sítio eletrônico da **ELETROBRAS**.

8.5. O acolhimento de recurso importará a invalidação apenas dos atos insuscetíveis de aproveitamento.

8.6. A falta de manifestação imediata e motivada do licitante importará a decadência do direito de recurso e a adjudicação do objeto da licitação pelo pregoeiro ao vencedor.

8.7. Entende-se por manifestação motivada da intenção de recorrer a indicação sucinta dos fatos e das razões do recurso, sem a necessidade de indicação de dispositivos legais ou regulamentares violados ou de argumentação jurídica articulada.

8.8. As razões do recurso poderão trazer outros motivos não indicados expressamente na sessão pública.

9 - DUE DILIGENCE DE INTEGRIDADE

9.1. O licitante estará sujeito à análise de integridade prevista no item 5 do artigo 71 do Regulamento de Licitações e Contratos da **ELETROBRAS**, disponível no sítio eletrônico www.eletrobras.com.

9.2. A análise de integridade, prevista no item anterior, se fará com base no "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras", que deverá ser preenchido pelo licitante diretamente no sítio eletrônico www.eletrobras.com.

9.2.1. O "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras" preenchido terá validade de doze meses, não havendo necessidade de novo preenchimento por parte do licitante caso tenha preenchido o referido formulário em um período inferior ao estabelecido. Ainda assim, caso entenda necessário, a Eletrobras poderá solicitar novamente seu preenchimento.

9.2.2. Após o preenchimento do "Formulário de Due Diligence de Fornecedores do Sistema Eletrobras" no sítio eletrônico referido em 9.2, o licitante deverá encaminhá-lo assinado, eletrônica ou digitalmente, pelo Representante Legal, para o endereço eletrônico pregao_eletronico@eletrobras.com.

CEP: 20091-005 - Rio de Janeiro - RJ
TEL: (21) 2514-5580 / 5225
PE- 10/2021

9.2.3. O não preenchimento do "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras" pelo licitante poderá acarretar a desclassificação do licitante declarado vencedor.

9.3. A análise de integridade, na hipótese prevista no item 5 do artigo 71 do Regulamento de Licitações e Contratos, é condição indispensável para a homologação da licitação.

9.4. As empresas Eletrobras reservam-se o direito de utilizar a documentação referente à integridade elaborada por outra empresa Eletrobras, desde que tenha a validade prevista no item 9.2.1.

10 - ADJUDICAÇÃO E HOMOLOGAÇÃO

10.1. Se não houver recurso, a declaração de vencedor realizada pelo pregoeiro equivale e faz as vezes da adjudicação, cabendo a homologação à autoridade competente. Se houver recurso, a autoridade competente deverá realizar a adjudicação e homologação da licitação no mesmo ato.

10.2. A homologação da licitação está sujeita à análise de integridade, conforme artigo 71 do Regulamento de Licitações e Contratos da Eletrobras, disponível no sítio eletrônico www.eletrobras.com/pt/Paginas/Fornecedores.aspx.

10.3. Na fase de homologação, a autoridade competente poderá:

a) homologar a licitação;

b) revogar a licitação por razões de interesse público decorrentes de fato superveniente que constitua óbice manifesto e incontornável;

c) anular a licitação por ilegalidade, salvo as situações em que:

c.1) o vício de legalidade for convalidável; ou

c.2) o vício de legalidade não causar dano ou prejuízo à empresa ou a terceiro; ou

c.3) o vício de legalidade não contaminar a totalidade do processo de licitação, caso em que deve determinar ao pregoeiro o refazimento do ato e o prosseguimento da licitação.

10.4. O vício de legalidade será convalidável se o ato por ele contaminado puder ser repetido sem o referido vício, o que ocorre, dentre outros casos, com vícios de competência e tocantes às formalidades.

10.5. A revogação ou anulação da licitação, depois da etapa competitiva de lances, dependerá da concessão de prazo de 5 (cinco) dias úteis para que os licitantes interessados ofereçam manifestação.

10.6. A revogação ou anulação da licitação, ainda que parcial, deverá ser motivada, abordando-se todos os fundamentos apresentados pelos licitantes que ofereceram manifestação.

11- CONTRATAÇÃO

11.1. A **ELETROBRAS** convocará o licitante vencedor para assinatura do Contrato em prazo de até 10 (dez) dias úteis prorrogáveis por igual período. A recusa injustificada do licitante vencedor em assinar o instrumento contratual, dentro do prazo e condições estabelecidos, caracterizará o descumprimento total da obrigação assumida, sujeitando-o às penalidades legalmente estabelecidas.

11.2. Ocorrendo o previsto no item 11.1, a **ELETROBRAS** poderá revogar a licitação ou convocar os licitantes remanescentes, atendida a ordem de classificação, para negociação e possível adjudicação do objeto da licitação e homologação pela autoridade superior.

11.3. Todas as disposições sobre o Contrato estão previstas na Minuta do Contrato, documento anexado ao Edital, o qual contém cláusula suspensiva para o início da execução e vigência (Anexo IV).

11.4. É vedada a contratação de pessoa jurídica na qual haja administrador ou sócio com poder de direção que tenham relação de parentesco com:

I - detentor de cargo em comissão ou função de confiança que atue na área responsável pela demanda ou pela contratação; ou

II - autoridade hierarquicamente superior no âmbito da Eletrobras.

11.4.1. Para comprovação do preenchimento do requisito constante do item 11.4, o licitante vencedor deverá, como condição para a contratação, apresentar Declaração conforme Modelo 04 do Anexo III do Edital.

11.5. Para assinatura do contrato, será necessário o **cadastro dos Representantes legais no portal de assinaturas Certisign** (https://www.portaldeassinaturas.com.br/Home/Cadastro).

11.5.1 Caso a assinatura do contrato seja por procurador, o licitante deverá apresentar o instrumento de Procuração.

12 - PENALIDADES

12.1. O licitante que se comportar com má-fé estará sujeito, garantido o contraditório e a ampla defesa, à penalidade de suspensão temporária de participação em licitação e impedimento de contratar com a **ELETROBRAS**, por prazo não superior a 2 (dois) anos, de acordo com os critérios do artigo 96 do regulamento.

12.2. O licitante estará sujeito à multa, garantido o contraditório e a ampla defesa, nas seguintes hipóteses e nos seguintes percentuais, calculados sobre o valor da sua proposta:

a) não assinar o contrato, quando convocada dentro do prazo de validade de sua proposta, ou não mantiver a proposta – multa de 15% (quinze por cento);

b) deixar de entregar documentação exigida neste Edital – multa de 5% (cinco por cento);

c) apresentar documentação falsa – multa de 25% (vinte e cinco por cento);

d) comportar-se de modo inidôneo – multa de 25% (vinte e cinco por cento);

PE- 10/2021

e) fizer declaração falsa – multa de 25% (vinte e cinco por cento);

f) cometer fraude fiscal – multa de 25% (vinte e cinco por cento).

12.2.1. Ocorrendo mais de uma infração, as multas serão cumulativas até o limite de 25% (vinte e cinco por cento).

12.2.2. As penalidades referentes à inexecução do Contrato estão estabelecidas na Minuta de Contrato, Anexo IV deste Edital.

12.2.3. Nenhuma sanção será aplicada sem o devido processo administrativo.

13 - ATOS LESIVOS À ELETROBRAS

13.1. Com fundamento no artigo 5º da Lei nº 12.846/2013, a **LICITANTE** estará sujeita às sanções estabelecidas no item 14, observados o contraditório e a ampla defesa, e sem prejuízo das demais cominações legais, no caso dos atos lesivos à **ELETROBRAS**, assim definidos:

a) Prometer, oferecer ou dar, direta ou indiretamente, vantagem indevida a agente público, ou a terceira pessoa a ele relacionada, atuando em nome da **ELETROBRAS**;
b) Comprovadamente, financiar, custear, patrocinar ou de qualquer modo subvencionar a prática dos atos ilícitos previstos na Lei nº 12.846/2013, atuando em nome da **ELETROBRAS**;
c) Frustrar ou fraudar, mediante ajuste, combinação ou qualquer outro expediente, o caráter competitivo da presente licitação;
d) Impedir, perturbar ou fraudar a realização de qualquer ato do presente procedimento licitatório;
e) Afastar ou procurar afastar licitante, por meio de fraude ou oferecimento de vantagem de qualquer tipo;
f) Fraudar a presente licitação;
g) Criar, de modo fraudulento ou irregular, pessoa jurídica para participar da presente licitação;
h) Dificultar atividade de investigação ou fiscalização de órgãos, entidades ou agentes públicos, ou intervir em sua atuação, inclusive no âmbito das agências reguladoras e dos órgãos de fiscalização do sistema financeiro nacional, no âmbito da presente licitação.
i) comprovadamente, utilizar-se de interposta pessoa física ou jurídica para ocultar ou dissimular seus reais interesses ou a identidade dos beneficiários dos atos praticados.

13.2. As sanções indicadas no subitem 13.1 deste Edital se aplicam quando a **LICITANTE** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

13.3. Ademais, ainda que não se enquadre na definição legal presente no parágrafo único do art. 1º da Lei nº 12.846/2013, a **LICITANTE** compromete-se a não cometer os atos lesivos listados nesta cláusula junto a outros agentes públicos, durante a execução das atividades que concernem o âmbito do contrato firmado com a **ELETROBRAS**.

13.4. A **LICITANTE** compromete-se a não realizar quaisquer ações ou omissões que constituam prática ilegal ou de corrupção, nos termos da Lei nº12.846/2013, Decreto nº 8.420/2015, Lei nº.13.303/2016 e Decreto nº8.945/2016, ou de quaisquer outras leis ou regulamentos aplicáveis.

14 - RESPONSABILIZAÇÃO ADMINISTRATIVA

14.1. Caso a **LICITANTE** pratique qualquer ato lesivo previsto no art. 5º da Lei nº 12.846/2013, estará sujeita às sanções administrativas previstas no art. 6º da referida lei, a seguir descritas, sem prejuízo da garantia a ampla defesa e ao contraditório:

a) multa, no valor de 0,1% (um décimo por cento) a 20% (vinte por cento) do faturamento bruto do último exercício anterior ao da instauração do processo administrativo, excluídos os tributos, a qual nunca será inferior à vantagem auferida, quando for possível sua estimação;
b) publicação extraordinária da decisão condenatória.

14.1.1. Na hipótese da alínea 'a' do item anterior, caso não seja possível utilizar o critério do valor do faturamento bruto da pessoa jurídica, a multa será de R$ 6.000,00 (seis mil reais) a R$ 60.000.000,00 (sessenta milhões de reais).

14.2. A **ELETROBRAS** deve levar em consideração na aplicação das sanções aqui previstas o estabelecido no artigo 7º e seus incisos da Lei n. 12.846/2013.

14.3. Caso os atos lesivos apurados envolvam infrações administrativas ao Regulamento de Licitações e Contratos das empresas Eletrobras ou às disposições referentes à Lei nº.13.303/2016, e tenha ocorrido a apuração conjunta, a **LICITANTE** também estará sujeita a sanções administrativas previstas na Lei nº.13.303/2016 e no Regulamento de Licitações e Contratos da Eletrobras que tenham como efeito restrição ao direito de participar em licitações ou de celebrar contratos com a administração pública, a serem aplicadas mediante Processo Administrativo de Responsabilização (PAR).

14.4. As sanções referenciadas no subitem 14.1 deste Edital serão aplicadas fundamentadamente, isolada ou cumulativamente, de acordo com as peculiaridades do caso concreto e com a gravidade e natureza das infrações.

14.5. A decisão administrativa proferida pela autoridade julgadora ao final do PAR será publicada no Diário Oficial da União e no site da **ELETROBRAS**.

14.6. A **LICITANTE** sancionada administrativamente pela prática de atos lesivos contra a **ELETROBRAS**, nos termos da Lei nº 12.846/2013, publicará a decisão administrativa sancionadora, cumulativamente:
a) em meio de comunicação de grande circulação na área da prática da infração e de atuação da licitante ou, na sua falta, em publicação de circulação nacional;
b) em edital afixado no próprio estabelecimento ou no local de exercício da atividade, em localidade que permita a visibilidade pelo público, pelo prazo mínimo de 30 (trinta) dias;
c) em seu site eletrônico, pelo prazo de trinta dias e em destaque na página principal do referido site.

14.7. A aplicação das sanções previstas neste item não exclui, em qualquer hipótese, a obrigação da reparação integral do dano causado.

14.8. A publicação a que se refere o item 14.6 será efetuada a expensas da pessoa jurídica sancionada.

14.9. O processamento do PAR não interfere no seguimento regular dos processos administrativos específicos para apuração da ocorrência de danos e prejuízos à **ELETROBRAS** resultantes de ato lesivo cometido pela **LICITANTE**, com ou sem a participação de agente público.

14.10. O PAR e a sanção administrativa obedecerão às regras e aos parâmetros dispostos em legislação específica, notadamente, na Lei nº 12.846/2013 e no Decreto nº 8.420/2015, inclusive suas eventuais alterações, sem prejuízo ainda da aplicação do ato de que trata o art. 21 do Decreto nº 8.420/2015.

14.11. Na esfera administrativa, a responsabilidade da pessoa jurídica não afasta a possibilidade de sua responsabilização na esfera judicial.

14.12. As disposições deste item se aplicam quando a **LICITANTE** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

14.13. Não obstante o disposto nesta Cláusula, a **CONTRATADA** está sujeita a quaisquer outras responsabilizações de natureza cível, administrativa ou criminal, previstas neste edital e na legislação aplicável, no caso de quaisquer violações.

15 - DOS ESCLARECIMENTOS E DA IMPUGNAÇÃO DO EDITAL

15.1. Cidadãos e agentes econômicos podem pedir esclarecimentos e impugnar o edital, exclusivamente pelo endereço eletrônico **PREGAO_ELETRONICO@ELETROBRAS.COM**, no prazo de **até 5 (cinco) dias úteis** antes da data fixada para a abertura da sessão pública, devendo o gestor da unidade de licitações responder à impugnação, motivadamente, em **até 3 (três) dias úteis**.

15.2. Somente terão validade esclarecimentos prestados por intermédio do pregoeiro, que os disponibilizará no sítio **www.gov.br/compras**, através da opção "consultar mensagens" e www.eletrobras.com

15.3. O licitante, através de consulta permanente ao sítio acima indicado, deverá manter-se atualizado quanto a quaisquer **alterações** e **esclarecimentos** sobre o Edital, não cabendo à **ELETROBRAS** a responsabilidade por desconhecimento de tais informações, em face de inobservância do licitante quanto ao procedimento apontado neste item.

15.4. Todos os pedidos/impugnações e suas respectivas respostas serão devidamente publicados no sítio eletrônico da **ELETROBRAS**.

15.5. Somente serão consideradas as impugnações encaminhadas até às 18h:00min do último dia para sua interposição.

15.5.1. O dia de abertura da licitação não é computado para a contagem dos prazos indicados em 15.1.

15.5.2. Os pedidos de esclarecimentos serão respondidos antes da sessão de abertura da licitação.

15.6. Não serão prestados esclarecimentos por telefone.

15.7. Acolhida a impugnação contra o Edital, será designada nova data para a realização do certame, exceto quando, inquestionavelmente, a alteração não afetar a formulação das propostas.

15.8. Aplica-se, no que couber, quanto aos pedidos de esclarecimento e impugnação, o disposto no artigo 39 do Regulamento de Licitações e Contratos da **ELETROBRAS**.

16 - DISPOSIÇÕES FINAIS

16.1. Os licitantes serão responsáveis pela fidelidade e legitimidade das informações e dos documentos apresentados, em qualquer época.

16.2. A **ELETROBRAS** poderá promover alterações nos termos deste Edital, havendo reabertura do prazo para a apresentação das propostas, quando tais alterações afetarem a formulação das propostas.

16.3. A **ELETROBRAS** poderá revogar a licitação por razões de interesse público decorrentes de fato superveniente que constitua óbice manifesto e incontornável, ou anulá-la por ilegalidade, de ofício ou por provocação de terceiros, salvo quando for viável a convalidação do ato ou do procedimento viciado, observado o disposto no art. 62 da lei 13.303/2016.

16.4. Os recursos destinados à contratação correrão por conta do orçamento da **ELETROBRAS**.

16.5. Fica eleito o foro da cidade do Rio de Janeiro, com exclusão de qualquer outro, para dirimir qualquer questão oriunda da presente licitação.

16.6. Fazem parte integrante deste Edital os seguintes Anexos:

ANEXO I - TERMO DE REFERÊNCIA

ANEXO II - MODELO PARA A PROPOSTA – Planilha de Preços

ANEXO III - MODELOS DE DECLARAÇÕES

ANEXO IV - MINUTA DE CONTRATO

A data de assinatura deste Edital é a data da última assinatura eletrônica/digital da autoridade competente da ELETROBRAS, conforme protocolo de assinaturas anexo a este Edital.

1. Perfil da Eletrobras

As Centrais Elétricas Brasileiras S.A ("Eletrobras" ou "Companhia"), se constituiu com Lei n.º 3.890-A, de 11 de junho de 1962, sob a forma de sociedade por ações de capital misto. Tem como atribuição a promoção de estudos, projetos de construção e operação de usinas de geração, linhas de transmissão e distribuição de energia elétrica, bem como a celebração dos atos de comércio decorrentes dessas atividades, como a comercialização de energia elétrica.

A Eletrobras é também responsável pela administração de programas de governo voltados para o desenvolvimento do setor elétrico, como o Programa Nacional de Conservação de Energia Elétrica ("Procel"), o Programa Nacional de Universalização do Acesso e Uso da Energia Elétrica ("Luz para Todos") e o Programa de Incentivo às Fontes Alternativas de Energia Elétrica ("Proinfa").

Além disso, a Eletrobras exerce importante papel na integração energética da América Latina, sendo o Governo responsável pelos projetos binacionais como Itaipu e interligações fronteiriças com Argentina (Estação Conversora de Uruguaiana) e Paraguai (estação Conversora de Rivera) além de promover um papel de apoio em pesquisas de interesse do setor elétrico, realizado através do Centro de Pesquisas de Energia Elétrica ("Cepel").

A Eletrobras, em 31 de julho de 2020, aprovou o seu Plano Estratégico das Empresas Eletrobras 2020-2035. O novo Plano Estratégico 2020-2035, além de definir uma nova identidade empresarial (Propósito, Visão e Valores), estabeleceu um conjunto de diretrizes e objetivos voltados para o crescimento e modernização da Eletrobras e alinhados às novas tendências do setor de energia.

Em 31/12/2020, a Eletrobras atingiu a capacidade instalada de 50.648,2 MW em empreendimentos de Geração, o que representa 29% dos 174.412,68 MW instalados no Brasil. Do total da Eletrobras, 61,2% é composto de empreendimentos de propriedade integral do Sistema Eletrobras, 23,1% de empreendimentos realizados por meio de SPEs e 15,7% de empreendimentos em propriedade compartilhada, incluindo metade da capacidade de Itaipu Binacional (7.000 MW).

Aproximadamente 97% da capacidade instalada total da Eletrobras provêm de fontes com baixa emissão de gases de efeito estufa (GEE), contribuindo de forma decisiva para que a matriz elétrica brasileira seja uma das mais limpas e renováveis do mundo. Em 31/12/2020, do total de capacidade instalada alavancada em empreendimentos com baixa emissão de GEE no Brasil, 53% ou 70,2 GW pertenciam à Eletrobras.

Do total da capacidade instalada das Empresas Eletrobras, em 31/12/2020, cerca de 91% correspondiam à fonte por hidrelétricas, 4% por fonte nuclear, 3% por fontes térmicas, 1% por fontes eólicas e menos que 1% por fonte solar.

Em 31 de dezembro de 2020, a malha de Linhas de Transmissão (LTs) das Empresas Eletrobras atingiu um total de 76.128,54 km, sendo 9.127,41 km corporativas não renovadas; 57.303,17 km corporativas sob Regime de O&M, renovadas pela Lei 12.783/13; e 9.697,96 km correspondem à proporção de suas participações acionárias em empreendimentos realizados pela Companhia por meio de SPEs.

Considerando apenas as linhas com nível de tensão igual ou maior que 230 kV, ou seja, as tensões de ±800, 750, ±600, 525/500, 345 e 230 kV, a Eletrobras é responsável por 70.091,89 km, o que representa 43,54% do total de Linhas de Transmissão do Brasil nas referidas tensões. A partir do 4º trimestre de 2020, a extensão das linhas em corrente contínua da Eletrobras passou a ser

PE- 10/2021

contabilizada por polo e não mais por trecho, de forma a compatibilizar com a apuração efetuada pelo Ministério de Minas e Energia (MME).

Por essa nova metodologia, o total de linhas em quilômetros registrado em 2019 foi ajustado para 74.524,26 km, em 2020, sendo 8.318,35 km corporativas não renovadas; 55.819,83 km corporativas sob Regime de O&M, renovadas pela Lei no 12.783/13; e 10.386,08 km correspondentes à proporção de suas participações acionárias em empreendimentos realizados pelas Empresas Eletrobras por meio de SPEs.

No exterior, a empresa atua prioritariamente em projetos de integração regional e de geração de energia renovável no continente latino-americano.

Plano Diretor de Negócios e Gestão 2021 a 2025

Em dezembro de 2020, o Conselho de Administração da Eletrobras aprovou o novo Plano Diretor de Negócios e Gestão para o período de 2021 a 2025 ("PDNG 2021-2025"), o qual contempla metas e iniciativas para o alcance dos objetivos estratégicos, mantendo o alinhamento com a Identidade Empresarial da Eletrobras – Missão, Visão 2035 e Valores, atualizados com a aprovação do seu Plano Estratégico das Empresas Eletrobras 2020-2035, em 31 de julho de 2020, bem como apresenta algumas atualizações em relação ao PDNG 2020-2024.

O novo Plano Diretor de Negócios e Gestão para o período de 2021 a 2025 ("PDNG 2021-2025") deriva-se de um arcabouço de diretrizes, objetivos, iniciativas estratégicas e indicadores de atuação do Plano Estratégico 2020-2035 e é uma evolução do PDNG anterior (o PDNG 2020-2024), conforme descrito a seguir:

*Pesquisa a ser aplicada em 2021 com meta para 2022. ** Metas estratégicas por isso não serão divulgadas.

No PDNG 2021-2025 estão previstos investimentos que totalizam R$ 41,1 bilhões, dos quais R$ 38,3 bilhões representam investimentos corporativos e R$ 2,8 bilhões em SPE.
O cenário aprovado para esse quinquênio prevê majoritariamente investimentos em projetos existentes e/ou em contratação, com exceção apenas para negócios que foram considerados estratégicos para a Companhia.

Do total de investimento previsto, destaca-se o empreendimento corporativo da Usina Nuclear de Angra 3 que totaliza R$ 15,3 bilhões, representando 37% de todo o investimento no quinquênio.

2. Justificativa da Contratação

A boa Governança Corporativa é medida por quatro pilares: Responsabilidade Corporativa, Prestação de Contas, Equidade e Transparência. Os negócios da Empresa devem ser conduzidos com o objetivo de perenizar a organização, zelando pela viabilidade econômico-financeira da mesma, reduzindo externalidades negativas dos seus negócios e operações, aumentando as externalidades positivas, levando sempre em consideração no seu modelo de negócios, os diversos capitais (financeiro, humano, intelectual, etc.) da empresa no curto, médio e longo prazos.

Assim, em 23 de fevereiro de 2021, o governo federal entregou ao Congresso Nacional a Medida Provisória (MP) nº 1.031, que trata da capitalização da Eletrobras.

A edição da Medida Provisória visa permitir que o Banco Nacional de Desenvolvimento Econômico e Social (BNDES) comece os estudos que estruturarão a capitalização da Eletrobras. O texto traz modificações em relação ao projeto de lei apresentado em 2019.

Justamente em virtude das incertezas e indefinições que pairam sobre o processo de capitalização é que a companhia optou pelo auxílio de uma consultoria especializada, esperando somar esforços, conhecimento e experiência para uma melhor análise da proposta de capitalização da Companhia em busca de trazer insumos importantes para tomada de decisão do Conselho de Administração da Eletrobras.

3. Objeto

Serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias. Particularmente, no que tange à descotização, a proposta autoriza a comercialização dessa energia a preços de mercado, desde que haja a capitalização da Eletrobras.

Item	Produtos	Estimativa de horas para a atividade	Estimativa de quadro de profissionais
1	Modelo econômico-financeiro, em Excel, desbloqueado, sem abas ocultas e com todas as fórmulas disponíveis, para cálculo do valor da outorga, quantificando o impacto financeiro utilizando a metodologia de fluxo de caixa descontado. Os dados de entrada estão definidos conforme a MP 1.031/2021 e o fato relevante publicado pela Eletrobras de 23/02/2021. Considerando que estes dados estão sujeitos a mudanças, o modelo deverá permitir as variações adequadas. O modelo deverá prever, por usina, o fluxo de caixa descontado do cenário atual de regime de exploração por cota e do regime de produção independente.	600	1 Gerente do Projeto 1 analista pleno 1 analista de finanças sênior

6	Realização de 8 (oito) reuniões executivas, com preparação de material específico, no âmbito dos itens anteriores, com a participação de membros da diretoria Executiva e Conselheiros de Administração.	240	1 Gerente do Projeto 1 analista pleno 1 analista de finanças sênior

A estimativa de horas previstas nas tabelas acima não constituirá qualquer obrigação da **ELETROBRAS** com a empresa a ser contratada. É de responsabilidade do licitante a elaboração de sua proposta de preços, tendo por base as especificações descritas neste Termo de Referência.

Considerações Gerais para execução do objeto:

a) Todas as metodologias e premissas utilizadas e necessárias para o desenvolvimento do trabalho, com base na legislação e regulamentação vigentes aplicáveis ao caso, deverão ser validadas pela contratante ao início das atividades, quais sejam, não se limitando a: Garantia física das usinas hidrelétricas, hedge para mitigação de risco hidrológico (GSF) no cenário de regime de exploração para produção independente, perdas elétricas, preço da

energia, receita de cotas, taxa de desconto, prêmio de risco, tributos, análise de risco do negócio, etc.

b) A projeção de preços para comercialização de energia deverá ser fundamentada em pesquisa de mercado para o período de concessão em conjunto com utilização de metodologia comumente usada no mercado para projeção de preços de longo prazo.

Sobre o cálculo da nova Garantia Física das usinas hidrelétricas envolvidas no processo, a proponente deverá realizar, partindo da consideração, como referência, da metodologia estabelecida em legislação vigente, assim como do caso base (*decks* dos modelos computacionais envolvidos no cálculo) e/ou das premissas específicas que possivelmente serão considerados pela Empresa de Pesquisa Energética para o cálculo.

4. Requisitos Obrigatórios

A Proponente deverá apresentar comprovação de experiência e qualificação técnica compatível com o objeto da presente contratação.

5. Condições de Prestação de Serviço

Os trabalhos serão realizados remotamente. O preço deve contemplar gastos com tributos, impostos. Ressalta-se que nenhum ônus ou despesas gerais incorridas pela contratada durante a execução dos serviços de consultoria será reembolsado pela Eletrobras.

Será de responsabilidade da Contratada toda e qualquer despesa necessária à execução dos serviços ora citados, tais como passagens aéreas e terrestres, deslocamentos, táxis, hospedagem, alimentação, telefonemas, horas extras, dentre outros, bem como de todos os impostos incidentes na prestação dos serviços. A Eletrobras não reembolsará nenhuma despesa incorrida pela contratada.

Apresentar à ELETROBRAS a relação dos profissionais que serão colocados à disposição da ELETROBRAS para a prestação dos serviços.

Comunicar e submeter à aprovação da ELETROBRAS todas as substituições de profissionais, inclusive as provisórias.

O contratado deverá levar em consideração que os trabalhos a serem desenvolvidos, objeto do presente TR, deverão levar em conta a legislação e regulamentação vigentes não somente na data da contratação, mas também durante todo o período de vigência do contrato, incluindo, mas não se limitando a alterações que possam ocorrer ao longo do processo legislativo de tramitação do texto da MP 1.031/2021 até a sua conversão lei.

6. Prazo e Cronograma de Execução

A execução dos serviços contratados deverá ocorrer em até 10 (dez) semanas após a assinatura do contrato, conforme cronograma a seguir:

2	3%
3	5%
4	11%
5	12%
6	20%

9. Condições de Recebimento

A **ELETROBRAS**, por meio do agente de fiscalização técnica, deve receber o objeto do presente termo de referência, parcialmente, em até **10 (dez) dias corridos**, a contar da comunicação da **CONTRATADA** para a **ELETROBRAS**, relativo à entrega de cada produto, conforme definido no item 3 e no cronograma de execução indicado no item 6 do Termo de Referência, representando aceitação da execução da etapa.

10. Qualificação Técnica dos Profissionais

Profissionais de liderança

1. Pelo menos 1 profissional com mais de 10 anos de experiência, apresentando em seu currículo, nos últimos 5 anos, atividades relacionadas a projetos de valuation de empresas de energia no Brasil ou no exterior.

Profissionais da equipe de execução

2. Pelo menos 1 profissional com mais de 5 anos de experiência apresentando em seu currículo atividades relacionadas a projetos relacionados ao mercado de energia brasileiro, notadamente no que se refere a projeção de preços e comercialização de energia, cálculo de garantia física de usinas hidrelétricas, regulação do setor elétrico brasileiro relativa à geração de energia;

3. Pelo menos 1 profissional com mais de 3 anos de experiência apresentando em seu currículo atividades relacionadas a projetos relacionados a finanças corporativas no Brasil.

Critérios de comprovação

- Experiência profissional: apresentação de carteira de trabalho, CV atestado pelo proponente, contrato social, contrato de prestação de serviço, referências de contatos de clientes, e atestados ou certidões contendo os seguintes dados: local de execução, nome do contratante e da pessoa jurídica contratada, nome(s) do(s) responsável(is) técnico(s), seu(s) título(s) profissional(is) e número(s) de registro(s), se a profissão exigir; descrição técnica indicando os serviços e quantitativos executados, assim como o período. Tais documentos poderão ser apresentados alternativamente.

A Contratada deverá apresentar a documentação dos profissionais em até 10 (dez) dias corridos após a assinatura do contrato.

11. Termo de confidencialidade

Considerando a natureza das atividades, a contratada se compromete que no momento da contratação, a CONTRATADA, bem como sua equipe técnica, sócios, diretores e outras pessoas envolvidas na execução dos serviços que constituem o objeto do contrato, assinarão Termo de Confidencialidade e não divulgação das informações a que, eventualmente, possam ter acesso no curso da execução dos serviços.

12. Obrigações específicas da Contratada

12.1. Apresentar à **ELETROBRAS** equipe composta por profissionais devidamente qualificados, experientes e com expertise necessária para a realização dos serviços, conforme exigido pelo Termo de Referência.

12.2. Comprovar a qualificação dos profissionais alocados nos serviços por meio da apresentação de documentações e currículos que comprovem a experiência exigida no item 10 do Termo de Referência, até 10 dias após assinatura do contrato.

12.3. No caso de necessidade de substituição de profissional, deverá realizá-la em tempo hábil de forma a submetê-la à **ELETROBRAS**, de forma a não comprometer o andamento e o resultado dos trabalhos.

12.4. Transferir para o domínio da **ELETROBRAS** todas as informações e documentações produzidas por ocasião do término da vigência deste Contrato.

12.5. A **CONTRATADA** não poderá atuar em conflito de interesses com a **ELETROBRAS**.

12.6. Apresentar por escrito, esclarecimentos sobre seus relatórios, quando solicitados pela **ELETROBRAS**.

12.7. É vedado à **CONTRATADA** subscrever ações no aumento de capital por subscrição pública previsto na Medida Provisória 1.031/2021.

CONTRATO QUE ENTRE SI CELEBRAM CENTRAIS ELÉTRICAS BRASILEIRAS S.A. – ELETROBRAS E....., PARA A PRESTAÇÃO DE SERVIÇOS ESPECIALIZADOS NO SUPORTE À DECISÃO DA ALTA ADMINISTRAÇÃO QUE VISE DEFINIR O VALOR DA OUTORGA NO POSSÍVEL PROCESSO DE PRIVATIZAÇÃO DA COMPANHIA

A **CENTRAIS ELÉTRICAS BRASILEIRAS S.A.** - **ELETROBRAS**, doravante denominada **ELETROBRAS**, sociedade de economia mista, constituída na forma da Lei nº 3.890-A, de 25 de abril de 1961, com sede na cidade de Brasília, Distrito Federal, e escritório central na Rua da Quitanda, nº 196- 24º andar, Rio de Janeiro, Estado do Rio de Janeiro, inscrita no Cadastro Nacional de Pessoas Jurídicas sob o nº 00001180/0002-07, Inscrição Municipal nº 92.405-7, Inscrição Estadual nº 77.410.805, devidamente autorizada pelo Memorando nº ..., de .../.../2021, neste ato representada por seus Diretores, abaixo assinados, em conformidade com o item 1.2 da Resolução 506/2020, de 17/08/2020 e com o artigo 49, inciso VII, do seu Estatuto Social, e

a**.....**, doravante simplesmente designada **CONTRATADA**, empresa com sede na ....., na cidade ....., Estado ....., inscrita no Cadastro Nacional da Pessoa Jurídica do Ministério da Fazenda sob o nº ....., neste ato representada por seu representante legal, nome....., nacionalidade....., estado civil....., profissão....., identidade..... e CPF....., abaixo assinado, de conformidade com os poderes que lhe são conferidos e que constam do seu Contrato Social/Estatuto Social, em consonância com o Edital de Pregão Eletrônico DSS Nº 10/2021, cujo Aviso foi publicado no Diário Oficial da União do dia 25 de maio de 2021, têm entre si, justo e contratado, o que se contém nas cláusulas e condições que se seguem:

CLÁUSULA PRIMEIRA

OBJETO

Constitui objeto deste Contrato a prestação de serviços especializados no suporte à decisão da alta administração, que vise definir o valor da outorga no possível processo de privatização da Companhia, estabelecendo cenários, avaliando os impactos positivos e negativos relativos ao encaminhamento da MP 1.031/21 pelo Ministério de Minas e Energia (MME) à Câmara dos Deputados, assim como fato relevante publicado pela Eletrobras de 23/02/2021, e possíveis alternativas regulatórias, conforme disposto no Edital de Licitação e seus Anexos.

CLÁUSULA SEGUNDA

VALOR DO CONTRATO

2.1. Como contrapartida à execução do objeto do presente Contrato, a **ELETROBRAS** deve pagar à **CONTRATADA** o valor total de _____, de acordo com as parcelas definidas no item 3 e no cronograma definido no item 6 do Termo de Referência, anexo I do edital, sendo que

PE- 10/2021

o recurso financeiro destinado ao pagamento está definido no orçamento da **ELETROBRAS**, na Requisição de Compra nº 3000234919.

CLÁUSULA TERCEIRA

PRAZOS

3.1. O prazo de execução do objeto desta contratação é de até 10 (dez) semanas, contados a partir da data da última assinatura do instrumento contratual pela autoridade competente da ELETROBRAS, respeitados os prazos das parcelas definidas no item 3 e no cronograma definido no item 6 do Termo de Referência, anexo I do edital, e o prazo de vigência é de 5 (cinco) meses, também contados a partir da data da última assinatura do instrumento contratual pela autoridade competente da ELETROBRAS.

3.2. Caso o presente contrato seja assinado antes da conversão da MP 1.031/2021 em lei, os prazos de execução do objeto e de vigência serão contados somente a partir da data de conversão da referida medida provisória em lei, conforme o disposto na cláusula vinte - **CONDIÇÃO SUSPENSIVA DO CONTRATO.**

CLÁUSULA QUARTA

DA FUNDAMENTAÇÃO LEGAL E PEÇAS CONSTITUTIVAS DO CONTRATO

4.1. O presente **CONTRATO** será regido por suas cláusulas, que devem ser fundamentadas nas disposições da lei nº 13.303/2016, no Regulamento de Licitações e Contratos da **ELETROBRAS** e na legislação civil.

4.2. A contradição involuntária entre, por um lado, o instrumento de contrato ou documento equivalente, e, de outro, as condições licitadas, configuradas pelo edital e seus documentos anexos, ou ao termo de dispensa ou contratação direta, e as propostas apresentadas pela contratada, resolvem-se em prol das condições licitadas, preservado o princípio da boa-fé objetiva.

CLÁUSULA QUINTA

EXECUÇÃO DO CONTRATO

5.1. O Contrato deve ser executado fielmente pelas partes de acordo com as cláusulas e condições avençadas, as normas ditadas pela Lei n. 13.303/2016 e pelo Regulamento de Licitações e Contratos da **ELETROBRAS**, neste instrumento denominado "Regulamento", respondendo cada uma das partes pelas consequências de sua inexecução total ou parcial.

5.1.1. A **CONTRATADA** é responsável pelos danos causados direta ou indiretamente à **ELETROBRAS** ou a terceiros em razão da execução do Contrato, não excluindo ou reduzindo essa responsabilidade a fiscalização ou o acompanhamento pela **ELETROBRAS**.

5.1.2. A fiscalização da execução do presente Contrato deve ser realizada por fiscal técnico e fiscal administrativo, formalmente designados pelo gestor da Unidade Técnica e pela autoridade competente da **ELETROBRAS**, respectivamente, e consiste na verificação do cumprimento das

PE- 10/2021

obrigações contratuais por parte da **CONTRATADA**, com a alocação dos recursos, pessoal qualificado, técnicas e materiais necessários.

5.1.3. Os serviços da **CONTRATADA** estarão, permanentemente, sujeitos à fiscalização geral da **ELETROBRAS**, que a exercerá por meio de representantes credenciados, cujo pleno exercício de suas funções a **CONTRATADA** facilitará.

5.1.4. O gestor do Contrato pode suspender a sua execução em casos excepcionais e motivados tecnicamente pelo fiscal técnico do Contrato, devendo comunicá-la ao preposto da **CONTRATADA**, indicando:

a) o prazo da suspensão, que pode ser prorrogado, se as razões que a motivaram não estão sujeitas ao controle ou à vontade do gestor do Contrato;

b) se deve ou não haver desmobilização, total ou parcial, e quais as atividades devem ser mantidas pela **CONTRATADA**;

c) o montante que deve ser pago à **CONTRATADA** a título de indenização em relação a eventuais danos já identificados e o procedimento e metodologia para apurar valor de indenização de novos danos que podem ser gerados à **CONTRATADA**.

5.1.5. Constatada qualquer irregularidade na licitação ou na execução contratual, o gestor do Contrato deve, se possível, saneá-la, evitando-se a suspensão da execução do Contrato ou outra medida como decretação de nulidade ou rescisão contratual.

5.1.6. As partes contratantes não são responsáveis pela não execução, execução tardia ou parcial de suas obrigações, desde que essa falta resulte, comprovadamente, de fato necessário, cujo efeito não era possível evitar ou impedir. Essa exoneração de responsabilidade deve produzir efeitos nos termos do parágrafo único do artigo 393 do Código Civil Brasileiro.

5.1.7. No caso de uma das partes se achar impossibilitada de cumprir alguma de suas obrigações, por motivo de caso fortuito ou força maior, deve informar expressa e formalmente esse fato à outra parte, no máximo até 10 (dez) dias consecutivos contados da data em que ela tenha tomado conhecimento do evento.

5.1.8. A comunicação de que trata o item 5.1.7 deve conter a caracterização do evento e as justificativas do impedimento que alegar, fornecendo à outra parte, com a maior brevidade, todos os elementos comprobatórios e de informação, atestados periciais e certificados, bem como comunicando todos os elementos novos sobre a evolução dos fatos ou eventos verificados e invocados, particularmente sobre as medidas tomadas ou preconizadas para reduzir as consequências desses fatos ou eventos, e sobre as possibilidades de retomar, no todo ou em parte, o cumprimento de suas obrigações contratuais.

5.1.8.1. O prazo para execução das obrigações das partes, nos termos desta Cláusula, deve ser acrescido de tantos dias quanto durarem as consequências impeditivas da execução das respectivas obrigações da parte afetada pelo evento.

5.1.9. Na hipótese prevista no item 5.1.7 desta Cláusula, a **CONTRATADA** deve submeter à **ELETROBRAS**, por escrito, todas as medidas que lhe parecerem oportunas, com vistas a reduzir ou eliminar as dificuldades encontradas, bem como os custos envolvidos. A **ELETROBRAS** compromete-se a manifestar-se, por escrito, no prazo máximo de 10 (dez) dias consecutivos, quanto à sua aprovação, recusa ou às disposições por ela aceitas, com seus custos correlatos.

5.1.10. A não utilização pelas partes de quaisquer dos direitos assegurados neste Contrato, ou na Lei em geral, ou no Regulamento, ou a não aplicação de quaisquer sanções, não invalida o restante do Contrato, não devendo, portanto, ser interpretada como renúncia ou desistência de aplicação ou de ações futuras.

5.1.11. Qualquer comunicação pertinente ao Contrato, a ser realizada entre as partes contratantes, inclusive para manifestar-se, oferecer defesa ou receber ciência de decisão sancionatória ou sobre rescisão contratual, deve ocorrer por escrito, preferencialmente nos seguintes e-mails:

E-mail ELETROBRAS - _____

E-mail CONTRATADA -_____

5.1.12. As partes estão obrigadas a comunicarem uma a outra, com 5 (cinco) dias de antecedência, qualquer alteração nos respectivos e-mails. No caso de falha ou problema técnico, as partes devem comunicar, uma a outra, em até 5 (cinco) dias.

CLÁUSULA SEXTA

RECEBIMENTO DO OBJETO

6.1. A **ELETROBRAS**, por meio do agente de fiscalização técnica, deve receber o objeto do presente Contrato, parcialmente, em até 10 (dez) dias corridos, a contar da comunicação da **CONTRATADA** para a **ELETROBRAS**, relativo à entrega de cada produto, conforme definido no item 3 e no cronograma de execução indicado no item 6 do Termo de Referência, anexo I do edital, representando aceitação da execução da etapa.

6.2. Caso verifique o descumprimento de obrigações por parte da **CONTRATADA**, o agente de fiscalização técnica ou administrativa deve comunicar ao preposto deste, indicando, expressamente, o que deve ser corrigido e o prazo máximo para a correção. O tempo para a correção deve ser computado no prazo de execução de etapa, parcela ou do Contrato, para efeito de configuração da mora e suas cominações.

6.3. Realizada a correção pela **CONTRATADA**, abrem-se novamente os prazos para os recebimentos estabelecidos no item 6.1 desta Cláusula.

6.4. O agente de fiscalização técnica encaminhará o Termo de Aceite Técnico, referente ao item 6.1, devidamente assinado, para o agente de fiscalização administrativa, que ficará responsável pela conferência dos valores contratados, encaminhamento do Termo à **CONTRATADA** e respectiva autorização para faturamento.

6.5. O recebimento definitivo, relativo à integralidade do **CONTRATO**, representa a aceitação integral do **CONTRATO** e a liberação da **CONTRATADA** no tocante a vícios aparentes.

6.6. O recebimento definitivo, de responsabilidade do agente de fiscalização técnica, será realizado no prazo de até 15 (quinze) dias úteis, contados da entrega do Produto Final.

CLÁUSULA SÉTIMA

CONDIÇÕES DE FATURAMENTO E PAGAMENTO

7.1. O pagamento é condicionado ao recebimento parcial, conforme Cláusula Sexta, e deve ser efetuado mediante a apresentação de Nota Fiscal/Fatura pela **CONTRATADA** à unidade de gestão de contrato da **ELETROBRAS**, que deve conter o detalhamento do objeto executado, o número deste Contrato, a instituição e agência bancária, e a conta corrente na qual deve ser depositado o respectivo pagamento.

7.1.1. Os pagamentos se darão conforme entrega e recebimento dos produtos estipulados nos itens 3 e 6 do Termo de Referência, anexo I do edital e quantificados na Planilha de Preços, anexo II do edital, observado o disposto na Cláusula Sexta deste Contrato.

7.2. As Notas Fiscais/Faturas correspondentes aos serviços efetivamente prestados deverão ser emitidas em conformidade com a legislação do município onde a **CONTRATADA** esteja estabelecida, observado o disposto no item 7.4.

7.2.1. Nos casos em que a **CONTRATADA** se enquadre nas hipóteses de obrigatoriedade de emissão de Nota Fiscal de Serviços Eletrônica (NFS-e), as notas fiscais, correspondentes aos serviços efetivamente prestados, deverão ser enviadas, obrigatoriamente em PDF, até o 2° (segundo) dia útil após a autorização da **ELETROBRAS** para faturamento, para o seguinte endereço: **faturamento-dssg@eletrobras.com**, com cópia para o agente de fiscalização administrativa.

7.2.2. Nos casos em que a **CONTRATADA,** com a devida comprovação, não se enquadrar nas hipóteses de obrigatoriedade de emissão de Nota Fiscal de Serviços Eletrônica (NFS-e), deverá apresentar, em duas vias, as notas fiscais/faturas, correspondentes aos serviços efetivamente prestados, sem conter rasuras de qualquer natureza, até o 2° (segundo) dia útil após a autorização da **ELETROBRAS** para faturamento.

7.2.3. A **CONTRATADA** deverá enviar as notas fiscais/faturas, nos casos especificados no item 7.2.2, para o endereço abaixo:

Centrais Elétricas Brasileiras – ELETROBRAS
Departamento de Gestão de Contratos Corporativos - DSSG
Rua da Quitanda, 196, 5º andar (Ed. Mario Bhering)
Centro – Rio de Janeiro – RJ
CEP: 20.091-005

7.2.4. O CNPJ das notas fiscais deve ser aquele que consta no preâmbulo do contrato e deve se referir ao estabelecimento que participou da licitação.

7.3. Caso a **CONTRATADA** emita documento fiscal autorizado por outro município que não o do Rio de Janeiro, a **ELETROBRAS**, nos termos do Decreto Municipal do Rio de Janeiro nº 28248, de 30 de julho de 2007, regulado pela Resolução SMF nº 2515, de 30 de julho de 2007, antes de efetuar o pagamento mensal, verificará a situação cadastral da **CONTRATADA** junto ao Cadastro de empresas Prestadoras de Outros Municípios – CEPOM da Secretaria Municipal de Fazenda da Prefeitura do Rio de Janeiro, através do sítio http://dief.rio.rj.gov.br/cepom.

PE- 10/2021

7.4. De acordo com a instrução fornecida pela Secretaria Municipal de Fazenda da Prefeitura do Rio de Janeiro, com base no resultado da consulta supracitada, ressalvadas as exceções constantes no artigo 3º da Lei Complementar Federal nº. 116, de 31 de julho de 2003, a **ELETROBRAS** deverá fazer ou não a retenção na fonte da quantia equivalente ao ISS dos serviços faturados bem como providenciar, nos termos da legislação vigente, o devido recolhimento.

7.5. Para o efetivo pagamento à **CONTRATADA** deve haver manifestação da **ELETROBRAS**, através do agente de fiscalização administrativa, conforme descrito no item 6.4., informando o aceite dos serviços e a respectiva autorização para faturamento. As Notas Fiscais/Faturas emitidas e apresentadas pela **CONTRATADA** à revelia do agente de fiscalização administrativa serão devolvidas pela **ELETROBRAS**.

7.6. O prazo para pagamento dos serviços é de, no máximo, 15 (quinze) dias, a contar do ateste da Nota Fiscal/Fatura pela unidade de gestão de **CONTRATO** da **ELETROBRAS**.

7.6.1 A partir do recebimento da Nota Fiscal/Fatura emitida pela **CONTRATADA**, a unidade de gestão de **CONTRATO** da **ELETROBRAS** disporá de 03 (três) dias úteis para efetuar a análise e o respectivo ateste ou, no mesmo prazo, devolvê-la motivadamente à **CONTRATADA**, observado o disposto nos item 7.5 e 7.7.

7.7. As faturas que apresentarem erros ou cuja documentação suporte esteja em desacordo com o contratualmente exigido devem ser devolvidas à **CONTRATADA** pela unidade de gestão de **CONTRATO** da **ELETROBRAS** para a correção ou substituição. A **ELETROBRAS**, por meio da unidade de gestão de **CONTRATO**, deve efetuar a devida comunicação à **CONTRATADA** dentro do prazo fixado no item 7.6.1.

7.7.1. Depois de apresentada a Nota Fiscal/Fatura, com as devidas correções, o prazo previsto no item 7.6 deve começar a correr novamente do seu início, sem que nenhuma atualização ou encargo possa ser imputado à **ELETROBRAS**.

7.8. A **ELETROBRAS** pode reter ou glosar os pagamentos, sem prejuízo das sanções cabíveis, se a **CONTRATADA**:

a) não produzir os resultados, deixar de executar, ou não executar com a qualidade mínima exigida as atividades contratadas; ou

b) deixar de utilizar materiais e recursos humanos exigidos para a execução do serviço, ou utilizá-los com qualidade ou quantidade inferior à demandada; ou

c) não arcar com as obrigações trabalhistas e previdenciárias dos seus empregados, quando dedicados exclusivamente à execução do Contrato.

7.9. Havendo controvérsia sobre a execução do objeto, quanto à dimensão, à qualidade e à quantidade, o montante correspondente à parcela incontroversa deverá ser pago no prazo previsto no item 7.6 e o relativo à parcela controvertida deve ser retido.

7.10. É vedado o pagamento antecipado.

7.11. É permitido à **ELETROBRAS** descontar dos créditos da **CONTRATADA** qualquer valor relativo à multa, ressarcimentos e indenizações, sempre observado o contraditório e a ampla defesa.

7.12. Quando da ocorrência de eventuais atrasos de pagamento provocados exclusivamente pela **ELETROBRAS**, o valor devido deve ser acrescido de atualização financeira, desde a data do vencimento até a data do efetivo pagamento, com base na variação acumulada *pro rata die* da Taxa Referencial - TR.

CLÁUSULA OITAVA

ALTERAÇÕES INCIDENTES SOBRE O OBJETO DO CONTRATO

8.1. A alteração incidente sobre o objeto do Contrato deve ser consensual e pode ser quantitativa, quando importa acréscimo ou diminuição quantitativa do objeto do Contrato, ou qualitativa, quando a alteração diz respeito a características e especificações técnicas do objeto do Contrato.

8.1.1. A alteração quantitativa sujeita-se aos limites previstos nos § 1º e 2º do artigo 81 da Lei nº 13.303/2016, devendo observar o seguinte:

a) a aplicação dos limites deve ser realizada separadamente para os acréscimos e para as supressões, sem que haja compensação entre os mesmos;

b) deve ser mantida a diferença, em percentual, entre o valor global do Contrato e o valor orçado pela **ELETROBRAS**, salvo se o fiscal técnico do Contrato apontar justificativa técnica ou econômica, que deve ser ratificada pelo gestor do Contrato;

8.1.2. A alteração qualitativa não se sujeita aos limites previstos nos §§ 1º e 2º do artigo 81 da Lei nº 13.303/2016, devendo observar o seguinte:

a) os encargos decorrentes da continuidade do Contrato devem ser inferiores aos da rescisão contratual e aos da realização de um novo procedimento licitatório;

b) as consequências da rescisão contratual, seguida de nova licitação e contratação, devem importar prejuízo relevante ao interesse coletivo a ser atendido pela obra ou pelo serviço;

c) as mudanças devem ser necessárias ao alcance do objetivo original do Contrato, à otimização do cronograma de execução e à antecipação dos benefícios sociais e econômicos decorrentes;

d) a capacidade técnica e econômico-financeira da **CONTRATADA** deve ser compatível com a qualidade e a dimensão do objeto contratual aditado;

e) a motivação da mudança contratual deve ter decorrido de fatores supervenientes não previstos e que não configurem burla ao processo licitatório;

f) a alteração não deve ocasionar a transfiguração do objeto originalmente contratado em outro de natureza ou propósito diverso.

8.1.3. As alterações incidentes sobre o objeto, observadas as disposições do art. 94 do Regulamento de Licitações e Contratos da **ELETROBRAS**, serão realizadas mediante termo aditivo e devem ser:

a) instruídas com memória de cálculo e justificativas de competência do fiscal técnico e do fiscal administrativo da **ELETROBRAS**, que devem avaliar os seus pressupostos e condições e, quando

for o caso, calcular os limites;

b) as justificativas devem ser ratificadas pela autoridade da unidade de gestão de contratos da **ELETROBRAS**; e

c) submetidas à área jurídica e, quando for o caso, à área financeira da **ELETROBRAS**;

CLÁUSULA NONA

EQUILÍBRIO ECONÔMICO FINANCEIRO DO CONTRATO

9.1. O equilíbrio econômico-financeiro do Contrato deve ocorrer por meio de:

a) reajuste: instrumento para manter o equilíbrio econômico-financeiro do contrato diante de variação de preços e custos que sejam normais e previsíveis, relacionadas com o fluxo normal da economia e com o processo inflacionário, devido ao completar 1 (um) ano a contar da data da proposta, ou

b) revisão: instrumento para manter o equilíbrio econômico-financeiro do Contrato diante de variação de preços e custos decorrentes de fatos imprevisíveis ou previsíveis, porém com consequências incalculáveis, e desde que se configure álea econômica extraordinária e extracontratual, sem a necessidade de periodicidade mínima.

9.1.1. A revisão deve ser precedida de solicitação da **CONTRATADA**, acompanhada de comprovação:

a) dos fatos imprevisíveis ou previsíveis, porém com consequências incalculáveis;

b) da alteração de preços ou custos, por meio de notas fiscais, faturas, tabela de preços, orçamentos, notícias divulgadas pela imprensa e por publicações especializadas e outros documentos pertinentes, preferencialmente com referência à época da elaboração da proposta e do pedido de revisão; e

c) de demonstração analítica, por meio de planilha de custos e formação de preços, sobre os impactos da alteração de preços ou custos no total do Contrato.

9.1.2. A revisão que não for solicitada durante a vigência do Contrato considera-se preclusa com a prorrogação ou renovação contratual ou com o encerramento do Contrato.

9.1.3. A criação, a alteração ou a extinção de quaisquer tributos ou encargos legais, bem como a superveniência de disposições legais, quando ocorridas após a data da apresentação da proposta, com comprovada repercussão nos preços contratados, implicarão a revisão destes para mais ou para menos, conforme o caso.

9.1.4. O reajuste dos preços será efetuado pela variação do Índice de Preços ao Consumidor Amplo – IPCA, do Instituto Brasileiro de Geografia e Estatística – IBGE, na periodicidade anual. O número índice base será o do mês da data limite para a apresentação da proposta e a variação se dará

PE- 10/2021

pelo quociente obtido através da divisão do número índice do mês do primeiro aniversário da proposta pelo número índice do mês base.

9.1.4.1. A **CONTRATADA,** para obter direito à correção, deverá pleiteá-la por meio de correspondência à **ELETROBRAS**, preferencialmente explicitando a forma de aplicação do índice e o valor reajustado.

9.1.4.2. Após a análise do pleito pela **ELETROBRAS**, sendo devida a correção, a mesma será formalizada por meio de Apostila, a qual será o documento autorizativo para o pagamento.

CLÁUSULA DEZ

FORMALIZAÇÃO DAS ALTERAÇÕES CONTRATUAIS

10.1. As alterações contratuais incidentes sobre o objeto e as decorrentes de revisão contratual devem ser formalizadas por termo aditivo firmado pela mesma autoridade que firmou o Contrato, salvo regra de alçada da Eletrobras, devendo o extrato do termo aditivo ser publicado no sítio eletrônico da **ELETROBRAS**.

10.1.1. A decisão sobre o pedido de aditivo contratual deve ser feita no prazo máximo de 60 (sessenta) dias, contados a partir da solicitação. O prazo é suspenso quando se realizar diligência para requerer comprovações ou informações complementares.

10.1.2. Não caracterizam alteração do Contrato e podem ser registrados por simples apostila, dispensando a celebração de termo aditivo:

a) as atualizações, as compensações ou as penalizações financeiras decorrentes das condições de pagamento previstas no Contrato;

b) a correção de erro material havido no instrumento de Contrato;

c) as alterações na razão ou na denominação social da **CONTRATADA**;

d) as alterações na legislação tributária que produzam efeitos nos valores contratados, na hipótese do item 9.1.3 do presente Contrato;

e) renovações contratuais, sejam por extensão do prazo de execução ou prorrogação do prazo de vigência.; e

f) a variação do valor contratual para fazer face ao reajuste de preços e repactuação previstos no próprio contrato.

10.1.3. Os aditivos contratuais ou apostilamentos devem ser firmados dentro da vigência do respectivo contrato. Se o encerramento da vigência do contrato ocorrer em dia não útil ou sem expediente, os aditivos ou apostilamentos podem ser firmados no dia útil subsequente.

CLÁUSULA ONZE

RESCISÃO

11.1. O inadimplemento contratual de ambas as PARTES autoriza a rescisão, que deve ser formalizada por distrato. Aplica-se a teoria do adimplemento substancial, devendo as partes contratantes ponderar, no que couber, antes de decisão pela rescisão:

a) impactos econômicos e financeiros decorrentes do atraso na fruição dos benefícios do empreendimento;

b) riscos sociais, ambientais e à segurança da população local decorrentes do atraso na fruição dos benefícios do empreendimento;

c) motivação social e ambiental do empreendimento;

d) custo da deterioração ou da perda das parcelas executadas;

e) despesa necessária à preservação das instalações e dos serviços já executados;

f) despesa inerente à desmobilização e ao posterior retorno às atividades;

g) possibilidade de saneamento dos descumprimentos contratuais comprovados;

h) custo total e estágio de execução física e financeira do CONTRATO;

i) empregos diretos e indiretos perdidos em razão da paralisação do CONTRATO;
j) custo para realização de nova licitação ou celebração de novo CONTRATO;

k) custo de oportunidade do capital durante o período de paralisação.

11.2. O descumprimento das obrigações trabalhistas ou a não manutenção das condições de habilitação pela **CONTRATADA** pode dar ensejo à rescisão contratual, sem prejuízo das demais sanções.

11.3. Na hipótese do item 11.2 desta Cláusula, a **ELETROBRAS** pode conceder prazo para que a **CONTRATADA** regularize suas obrigações trabalhistas ou suas condições de habilitação, sob pena de rescisão contratual, quando não identificar má-fé ou a incapacidade da **CONTRATADA** de corrigir a situação.

11.4. O CONTRATO pode ser rescindido pela **ELETROBRAS** caso seja constatada violação das Leis Anticorrupção ou do Programa de Integridade (*Compliance*) das Empresas Eletrobras, por parte da **CONTRATADA**, condicionada à prévia manifestação fundamentada da Diretoria de Compliance ou equivalente.

11.5. A rescisão contratual, quando promovida pela **ELETROBRAS**, deve seguir o processo administrativo preceituado no artigo 97 do Regulamento.

CLÁUSULA DOZE

SANÇÕES ADMINISTRATIVAS

12.1. Pela inexecução total ou parcial do Contrato, a **ELETROBRAS** poderá, garantida a prévia defesa, de acordo com o processo administrativo preceituado no artigo 97 do Regulamento, aplicar ao contratado as sanções de advertência ou suspensão temporária de participação em licitação e impedimento de contratar com a **ELETROBRAS** por prazo não superior a 2 (dois) anos, que podem ser cumuladas com multa.

12.1.1. Na forma prevista no art, 96 do Regulamento, poderão ser aplicadas sanções administrativas à **CONTRATADA** na ocorrência de qualquer das hipóteses abaixo:

a) dar causa à inexecução parcial ou total do contrato;

b) deixar de entregar a documentação exigida para o certame, salvo na hipótese de inversão de fases prevista;

c) não manter a proposta, salvo se em decorrência de fato superveniente, devidamente justificado;

d) não celebrar o contrato ou não entregar a documentação exigida para a contratação, quando convocado dentro do prazo de validade de sua proposta.

e) ensejar o retardamento da execução ou da entrega do objeto da licitação sem motivo justificado.

f) apresentar documentação falsa exigida para o certame ou prestar declaração falsa durante a licitação ou a execução do contrato;
g) fraudar a licitação ou praticar ato fraudulento na execução do contrato;

h) comportar-se com má-fé ou cometer fraude fiscal;

i) praticar atos ilícitos visando a frustrar os objetivos da licitação.

12.1.1.1. A sanção de suspensão, referida no inciso III do artigo 83 da Lei nº 13.303/2016, deve observar os seguintes parâmetros:

a) se não se caracterizar má-fé, a pena base deve ser de 6 (seis) meses;

b) caracterizada a má-fé ou intenção desonesta, a pena base deve ser de 1 (um) ano e, no mínimo, de 6 (seis) meses, mesmo que aplicadas todas as atenuantes do Item 12.1.2 desta Cláusula.

12.1.1.2. As penas bases definidas no item 12.1.1.1 desta Cláusula podem ser qualificadas nos seguintes casos:

a) em 1/2 (um meio), se a **CONTRATADA** for reincidente;

b) em 1/2 (um meio), se a falta da **CONTRATADA** tiver produzido prejuízos relevantes para a ELETROBRAS.

TEL: (21) 2514-5580 / 5225
PE- 10/2021

12.1.2. As penas bases definidas no item 12.1.1.1 desta Cláusula podem ser atenuadas nos seguintes casos:

a) em 1/4 (um quarto), se a **CONTRATADA** não for reincidente;

b) em 1/4 (um quarto), se a falta da **CONTRATADA** não tiver produzido prejuízos relevantes para a **ELETROBRAS**;

c) em 1/4 (um quarto), se a **CONTRATADA** tiver reconhecido a falta e se dispuser a tomar medidas para corrigi-la; e

d) em 1/4 (um quarto), se a **CONTRATADA** comprovar a existência e a eficácia de procedimentos internos de integridade, de acordo com os requisitos do artigo 42 do Decreto n. 8.420/2015.

12.1.2.1. Na hipótese do item 12.1.2 desta Cláusula, se não caracterizada má-fé ou intenção desonesta e se a **CONTRATADA** contemplar os requisitos para as atenuantes previstos nas alíneas "a", "b", "c" e "d" do item 12.1.2, a pena de suspensão deve ser substituída pela de advertência, prevista no inciso I do artigo 83 da Lei n. 13.303/2016.

12.1.3. A **CONTRATADA** estará sujeita à multa:

a) de mora, por atrasos não justificados no prazo de execução de 0,5% (cinco décimos por cento) do valor da parcela do objeto contratual em atraso, por dia de atraso, limitada a 10% (dez por cento) do valor do Contrato.

b) compensatória, pelo descumprimento parcial do **CONTRATO**, referente ao não atendimento de cláusula contratual (inadimplemento parcial), no montante de até 10% (dez por cento) do valor do **CONTRATO**.

c) compensatória, pelo descumprimento total do Contrato, no montante de 25% (vinte e cinco por cento) do valor do Contrato.

12.1.4. Se a multa moratória alcançar o seu limite e a mora não se cessar, o Contrato pode ser rescindido, salvo decisão em contrário, devidamente motivada, do gestor do Contrato, fundamentada no item 11.1 do presente Contrato.

12.1.5. Se a multa for aplicada em decorrência de inadimplemento parcial, o percentual deve ser apurado em razão do valor da obrigação inadimplida.

12.1.6. Caso a multa não cubra os prejuízos causados pela **CONTRATADA**, a **ELETROBRAS** pode exigir indenização suplementar, valendo a multa como mínimo de indenização, na forma do preceituado no parágrafo único do artigo 416 do Código Civil.

12.1.7. A multa pode ser descontada da garantia, dos pagamentos devidos à **CONTRATADA** em razão do Contrato em que houve a aplicação da multa ou de eventual outro Contrato havido entre a **ELETROBRAS** e a **CONTRATADA**, aplicando-se a compensação prevista nos artigos 368 e seguintes do Código Civil.

CLÁUSULA TREZE

PUBLICIDADE E CONFIDENCIALIDADE

13.1. Quaisquer informações relativas ao presente Contrato, somente podem ser dadas ao conhecimento de terceiros, inclusive através dos meios de publicidade disponíveis, após autorização, por escrito, da **ELETROBRAS**. Para os efeitos desta Cláusula, deve ser formulada a solicitação, por escrito, à **ELETROBRAS**, informando todos os pormenores da intenção da **CONTRATADA**, reservando-se, à **ELETROBRAS**, o direito de aceitar ou não o pedido, no todo ou em parte.

CLÁUSULA QUATORZE

ATOS LESIVOS À ELETROBRAS

14.1. Com fundamento no artigo 5º da Lei nº 12.846/2013, a **CONTRATADA** estará sujeita às sanções estabelecidas na Cláusula Quinze deste contrato, observados o contraditório e a ampla defesa, e sem prejuízo das demais cominações legais, no caso dos atos lesivos à **ELETROBRAS**, assim definidos:

a) Prometer, oferecer ou dar, direta ou indiretamente, vantagem indevida a agente público, ou a terceira pessoa a ele relacionada, atuando em nome da **ELETROBRAS**;
b) Comprovadamente, financiar, custear, patrocinar ou de qualquer modo subvencionar a prática dos atos ilícitos previstos na Lei nº 12.846/2013, atuando em nome da **ELETROBRAS**;
c) Fraudar o presente contrato;
d) Criar, de modo fraudulento ou irregular, pessoa jurídica para celebrar o presente contrato;
e) Obter vantagem ou benefício indevido, de modo fraudulento, de modificações ou prorrogações deste contrato, sem autorização em lei, no ato convocatório da licitação ou neste instrumento contratual;
f) Manipular ou fraudar o equilíbrio econômico-financeiro deste contrato;
g) Dificultar atividade de investigação ou fiscalização de órgãos, entidades ou agentes públicos, ou intervir em sua atuação, inclusive no âmbito das agências reguladoras e dos órgãos de fiscalização do sistema financeiro nacional, no âmbito do objeto do presente Contrato;
h) Comprovadamente, utilizar-se de interposta pessoa física ou jurídica para ocultar ou dissimular seus reais interesses ou a identidade dos beneficiários dos atos praticados.

14.2. As sanções indicadas no item 14.1 desta Cláusula se aplicam quando a **CONTRATADA** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

14.3. Ainda que não se enquadre na definição legal presente no parágrafo único do art. 1º da Lei nº 12.846/2013, a **CONTRATADA** compromete-se a não cometer os atos lesivos listados nesta cláusula junto a outros agentes públicos, durante a execução das atividades que concernem o âmbito do contrato firmado com a **ELETROBRAS**.

14.4. A **CONTRATADA** compromete-se a não realizar quaisquer ações ou omissões que constituam prática ilegal ou de corrupção, nos termos da Lei nº12.846/2013, Decreto nº 8.420/2015, Lei nº.13.303/2016 e Decreto nº8.945/2016, ou de quaisquer outras leis ou regulamentos aplicáveis.

CLÁUSULA QUINZE

DA RESPONSABILIZAÇÃO ADMINISTRATIVA

15.1. Caso a **CONTRATADA** pratique qualquer ato lesivo previsto no art. 5º da Lei nº 12.846/2013, estará sujeita às sanções administrativas previstas no art. 6º da referida lei, a seguir descritas, sem prejuízo da garantia a ampla defesa e ao contraditório:

a) multa, no valor de 0,1% (um décimo por cento) a 20% (vinte por cento) do faturamento bruto do último exercício anterior ao da instauração do processo administrativo, excluídos os tributos, a qual nunca será inferior à vantagem auferida, quando for possível sua estimação;
b) publicação extraordinária da decisão condenatória.

15.1.1 Na hipótese da alínea 'a' do item anterior, caso não seja possível utilizar o critério do valor do faturamento bruto da pessoa jurídica, a multa será de R$ 6.000,00 (seis mil reais) a R$ 60.000.000,00 (sessenta milhões de reais)."

15.2. A **ELETROBRAS** deve levar em consideração na aplicação das sanções aqui previstas o estabelecido no artigo 7º e seus incisos da Lei n. 12.846/2013.

15.3. Caso os atos lesivos apurados envolvam infrações administrativas ao Regulamento de Licitações e Contratos das empresas Eletrobras ou às disposições referentes à Lei nº.13.303/2016, e tenha ocorrido a apuração conjunta, a **CONTRATADA** também estará sujeita a sanções administrativas previstas na Lei nº.13.303/2016 e no Regulamento de Licitações e Contratos da Eletrobras que tenham como efeito restrição ao direito de participar em licitações ou de celebrar contratos com a administração pública, a serem aplicadas mediante Processo Administrativo de Responsabilização (PAR).

15.4. As sanções referenciadas no item 15.1 desta Cláusula serão aplicadas fundamentadamente, isolada ou cumulativamente, de acordo com as peculiaridades do caso concreto e com a gravidade e natureza das infrações.

15.5. A decisão administrativa proferida pela autoridade julgadora ao final do PAR será publicada no Diário Oficial da União e no site da **ELETROBRAS**.

15.6. A **CONTRATADA** sancionada administrativamente pela prática de atos lesivos contra a **ELETROBRAS**, nos termos da Lei nº 12.846/2013, publicará a decisão administrativa sancionadora, cumulativamente:

a) em meio de comunicação de grande circulação na área da prática da infração e de atuação da pessoa jurídica contratada ou, na sua falta, em publicação de circulação nacional;
b) em edital afixado no próprio estabelecimento ou no local de exercício da atividade, em localidade que permita a visibilidade pelo público, pelo prazo mínimo de 30 (trinta) dias;
c) em seu site eletrônico, pelo prazo de trinta dias e em destaque na página principal do referido site.

15.7. A aplicação das sanções previstas nesta Cláusula não exclui, em qualquer hipótese, a obrigação da reparação integral do dano causado.

15.8. A publicação a que se refere o 15.6 será efetuada a expensas da pessoa jurídica sancionada.

PE- 10/2021

15.9. O processamento do PAR não interfere no seguimento regular dos processos administrativos específicos para apuração da ocorrência de danos e prejuízos à **ELETROBRAS** resultantes de ato lesivo cometido pela **CONTRATADA**, com ou sem a participação de agente público.

15.10. O PAR e a sanção administrativa obedecerão às regras e aos parâmetros dispostos em legislação específica, notadamente, na Lei nº 12.846/2013 e no Decreto nº 8.420/2015, inclusive suas eventuais alterações, sem prejuízo ainda da aplicação do ato de que trata o art. 21 do Decreto nº 8.420/2015.

15.11. Na esfera administrativa, a responsabilidade da pessoa jurídica não afasta a possibilidade de sua responsabilização na esfera judicial.

15.12. As disposições desta Cláusula se aplicam quando a **CONTRATADA** se enquadrar na definição legal do parágrafo único do art. 1º da Lei nº 12.846/2013.

15.13. Não obstante o disposto nesta Cláusula, a **CONTRATADA** está sujeita a quaisquer outras responsabilizações de natureza cível, administrativa e, ou criminal, previstas neste Contrato e, ou na legislação aplicável, no caso de quaisquer violações.

CLÁUSULA DEZESSEIS

DO PROGRAMA DE INTEGRIDADE (COMPLIANCE)

16.1. A **CONTRATADA** é responsável por conhecer e cumprir, no que couber, os princípios e padrões do Programa de Integridade (*Compliance*) da **ELETROBRAS** que se encontra disponível para consulta no site www.eletrobras.com.

16.2. Cabe à **CONTRATADA** apresentar a "Declaração de Integridade dos Representantes ou Fornecedores de Bens ou Serviços", Anexo II deste contrato, confirmando estar ciente dos termos e condições do Programa de Integridade (*Compliance*) das Empresas Eletrobras.

16.3. CONTRATADA deverá ter preenchido, previamente à assinatura do contrato, o "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras", disponível no site da Eletrobras.

16.4. A **CONTRATADA** está ciente que a **ELETROBRAS** poderá analisar informações públicas sobre sócios, diretores, dirigentes e administradores das empresas licitantes, a fim de assegurar o cumprimento do Programa de Integridade (Compliance) das Empresas Eletrobras.

16.5. A **CONTRATADA** se compromete a cumprir a legislação anticorrupção a qual esteja submetida e que lhe é aplicável.

16.6. A **CONTRATADA** estará sujeita, durante a vigência do contrato, à avaliação de risco de integridade prevista no Programa de Integridade (*Compliance*) da **ELETROBRAS**, podendo ser requisitados esclarecimentos adicionais. Nestes casos, a **CONTRATADA** se compromete a prestar os esclarecimentos solicitados e apresentar documentos que comprovem as informações disponibilizadas em prazo máximo de 05 (cinco) dias úteis, sempre que necessário.

16.7. Entendendo que é papel de cada organização fomentar padrões éticos e de transparência em suas relações comerciais, a **ELETROBRAS** incentiva a **CONTRATADA**, caso ainda não possua,

a elaborar e implementar programa de integridade próprio, observando os critérios estabelecidos no Decreto nº 8.420/2015.

16.8. A **CONTRATADA** se compromete a acionar o Canal de Denúncias da Eletrobras, que funciona 24 (vinte e quatro) horas por dia, 07 (sete) dias por semana através do telefone 0800 377 8037, bem como através do link: http://www.canaldedenuncias.com.br/eletrobras/), caso venha a ter conhecimento de atitudes ilícitas ou suspeitas, bem como se compromete a divulgar entre os seus funcionários a utilização do referido Canal de Denúncias, quando necessário.

CLÁUSULA DEZESSETE

DECLARAÇÕES

17.1. A **CONTRATADA** declara e garante que nem a **CONTRATADA**, diretamente ou por intermédio de qualquer subsidiária ou afiliada, e nenhum de seus diretores, empregados, ou qualquer pessoa agindo em seu nome, realizou ou realizará qualquer ato que possa consistir em violação às proibições descritas na Lei Contra Práticas de Corrupção Estrangeiras de 1977 dos Estados Unidos da América (United States Foreign Corrupt Practices Act of 1977, 15 U.S.C. §78-dd-1, et seq., as amended), doravante denominada FCPA, incluindo pagamento, oferta, promessa ou autorização de pagamento de dinheiro ou algo de valor, direta ou indiretamente, a (i) qualquer empregado, oficial de governo ou representante de, ou qualquer pessoa agindo oficialmente para ou em nome de (A) uma entidade de governo, uma de suas subdivisões políticas ou uma de suas jurisdições locais; (B) um órgão, conselho, comissão, tribunal ou agência, seja civil ou militar, de qualquer dos indicados no item anterior, independentemente de sua constituição; (C) uma associação, organização, empresa ou empreendimento controlado ou de propriedade de um governo; ou (D) um partido político (os itens A a D doravante denominados conjuntamente AUTORIDADE GOVERNAMENTAL); (ii) um oficial legislativo, administrativo ou judicial, independentemente de se tratar de cargo eletivo ou comissionado; (iii) um oficial de, ou indivíduo que ocupe um cargo em, um partido político; (iv) um candidato a cargo político; (v) um indivíduo que ocupe qualquer outro cargo oficial, cerimonial, comissionado ou herdado em um governo ou qualquer um de seus órgãos; ou (vi) um oficial ou empregado de uma organização supranacional (por exemplo, Banco Mundial, Nações Unidas, Fundo Monetário Internacional, OCDE) (doravante denominado OFICIAL DE GOVERNO); ou a qualquer pessoa enquanto se saiba, ou se tenha motivos para crer que qualquer porção de tal troca é feita com o
propósito de, no âmbito do presente contrato:

a) Influenciar qualquer ato ou decisão de tal (tais) OFICIAL(IS) DE GOVERNO em seu ofício, incluindo deixar de realizar ato oficial, com o propósito de assistir a ELETROBRAS, a CONTRATADA ou qualquer outra pessoa a obter ou reter negócios, ou direcionar negócios a qualquer terceiro;

b) Assegurar vantagem imprópria;

c) Induzir tal (tais) OFICIAL(IS) DE GOVERNO a usar de sua influência para afetar ou influenciar qualquer ato ou decisão de uma AUTORIDADE GOVERNAMENTAL com o propósito de assistir a ELETROBRAS, a CONTRATADA ou qualquer outra pessoa a obter ou reter negócios, ou direcionar negócios a qualquer terceiro;

d) Fornecer um ganho ou benefício pessoal ilícito, seja financeiro ou de outro valor, a tal (tais) OFICIAL(IS) DE GOVERNO.

17.2. A CONTRATADA, inclusive seus diretores e empregados e todas as pessoas agindo em seu nome, com relação a todas as questões afetando a **ELETROBRAS** ou seus negócios, se obrigam a (i) permanecer em inteira conformidade com o FCPA, e com qualquer outra legislação antissuborno, anticorrupção e de conflitos de interesses aplicável, ou qualquer outra legislação, regra ou regulamento de propósito e efeito similares, abstendo-se de qualquer conduta que possa ser proibida a pessoas sujeitas ao FCPA; e (ii) observar, no que for aplicável, o Programa de Integridade (Compliance) das Empresas Eletrobras.

CLÁUSULA DEZOITO

OBRIGAÇÕES DA CONTRATADA

18.1. Cumprir fielmente todas as cláusulas e condições estabelecidas neste Contrato, bem como no edital e seus anexos,independentemente de transcrição, sendo certo que o não cumprimento sujeitará a **CONTRATADA** às penalidades previstas no Contrato.

18.2. Manter, durante a execução deste Contrato, em compatibilidade com as obrigações por ela assumidas, todas as condições de habilitação e qualificação exigidas na licitação.

18.3. Não ceder, transferir a terceiros, no todo ou em parte, bem como não sub-rogar os direitos e obrigações decorrentes deste Contrato.

18.4. Responder pelos encargos trabalhistas, sociais, previdenciários, tributários, comerciais e demais resultantes da prestação dos serviços objeto deste contrato.

18.5. Responsabilizar-se pelo comportamento dos profissionais componentes da sua equipe técnica, e substituir quaisquer deles cuja permanência na equipe venha a ser considerada indesejável, a critério da **ELETROBRAS**.

18.6. Responder pelas indenizações, danos e prejuízos causados a empregados da **ELETROBRAS**, bem como a terceiros, por culpa ou por consequência de imperícia, negligência ou imprudência de pessoas por ela designadas para o cumprimento do objeto deste Contrato, resguardado o direito da **CONTRATADA** ao contraditório e à ampla defesa.

18.7. Pagar pontualmente aos empregados, que sejam disponibilizados para os serviços objeto desta contratação, sem qualquer ônus adicional para a **ELETROBRAS**, e atender prontamente aos demais encargos decorrentes das leis trabalhistas, da previdência social, de seguros e acidentes de trabalho e quaisquer adicionais e direitos de seus empregados, sendo todos os recolhimentos feitos em seu nome.

18.8. A **CONTRATADA** não poderá divulgar dados, informações ou programas relacionados ao objeto a que se refere o presente Contrato, devendo ser mantido sigilo absoluto em relação a todas as bases de dados, acessadas ou que venham a ser geradas na prestação do serviço.

18.9. Manter sigilo sobre todas as informações fornecidas pela **ELETROBRAS** postas à sua disposição para a execução dos serviços, e não reproduzir ou copiar, total ou parcialmente, qualquer documento que lhe seja entregue por meio físico ou eletrônico, exceto nas necessidades decorrentes dos serviços objeto do Contrato.

18.10. Todos os tributos, despesas e quaisquer ônus de natureza federal, estadual ou municipal, relativos aopresente Contrato e decorrentes da legislação brasileira em vigor nesta data ficarão a cargo exclusivo da **CONTRATADA**, que também se responsabilizará por seus recolhimentos e pelo cumprimento de todas as obrigações e formalidades legais perante as autoridades competentes.

18.11. A **CONTRATADA** é responsável por conhecer o "Código de Conduta Ética e Integridade das Empresas Eletrobras" e o "Guia de Conduta para Fornecedores da Eletrobras", disponíveis no site da Eletrobras (http://eletrobras.com/pt/Paginas/Fornecedores.aspx), além dos princípios e padrões do Programa de Integridade (*Compliance*) das Empresas Eletrobras, cuidando para que suas disposições sejam observadas, no que couber, por todos os seus diretores, empregados, prepostos ou qualquer pessoa agindo em seu nome alocados para os serviços ou fornecimento de bens, objeto deste Contrato, ao longo de toda a sua execução.

18.12. A **ELETROBRAS** poderá solicitar documentos específicos relativos ao Contrato, realizar diligências na **CONTRATADA**, bem como conversar com o responsável pela auditoria interna da **CONTRATADA** (ou responsável por atividades correlatas) - desde que com a prévia anuência da **CONTRATADA** e diante da existência de indícios de fraude, que serão submetidos à **CONTRATADA** para conhecimento e manifestação - para monitorar e verificar sua conformidade com as disposições contidas no "Guia de Conduta para Fornecedores da Eletrobras", no "Código de Conduta Ética e Integridade das Empresas Eletrobras", no "Formulário de Due Diligence", disponibilizado no endereço a seguir: https://extranet.eletrobras.com/sites/pdd/SitePages/Formulario.aspx?isdlg=1, que deverá ser preenchido e assinado pela **CONTRATADA**, além das leis anticorrupção aplicáveis e do Programa de Integridade (*Compliance*) das Empresas Eletrobras, sendo a **CONTRATADA** responsável por manter em sua guarda todos os arquivos e registros evidenciando tal conformidade, assim como disponibilizá-los à **ELETROBRAS** dentro de 05 (cinco) dias a contar de sua solicitação.

18.13. Designar preposto para representá-la durante a execução do Contrato, o qual deverá apresentar-se à **ELETROBRAS** comprovando formalmente a condição de representante da **CONTRATADA** para tal encargo.

18.14. O não cumprimento de qualquer das condições estabelecidas sujeitará a **CONTRATADA** às penalidades previstas no contrato.

18.15. Cumprir e obedecer a política corporativa de segurança da informação estabelecida pela **ELETROBRAS.**

18.16. Notificar à **ELETROBRAS**, por escrito, quaisquer fatos que possam por em risco a execução do presente objeto;

18.17. Notificar prontamente à **ELETROBRAS** qualquer divulgação ou uso não autorizado de informações que porventura tomar conhecimento, adotando todas as medidas recomendadas pela **ELETROBRAS** para remediar qualquer divulgação ou uso.

18.18. Providenciar junto aos órgãos competentes e manter atualizadas todas as licenças e alvarás necessários à execução dos serviços.

18.19. Comunicar a imposição de penalidade que acarrete o impedimento de contratar com a **ELETROBRAS**.

18.20. Refazer, exclusivamente às suas custas e dentro do prazo fixado pela **ELETROBRAS**, os serviços executados com vícios ou defeitos, sem que tal fato possa ser invocado para justificar modificações no preço e nos prazos inicialmente pactuados.

18.21. Reparar todos os danos e prejuízos causados à **ELETROBRAS** em razão da prestação dos serviços, decorrentes de suas culpa ou dolo, não restando excluída esta responsabilidade pela presença da fiscalização.

18.22. Obedecer às instruções e aos procedimentos estabelecidos pela **ELETROBRAS** para a execução deste **CONTRATO**.

18.23. Apresentar à **ELETROBRAS** equipe composta por profissionais devidamente qualificados, experientes e com expertise necessária para a realização dos serviços, conforme exigido pelo Termo de Referência e indicado em sua Proposta.

18.23.1. No caso de necessidade de substituição de profissional, deverá submetê-la à **ELETROBRAS** em tempo hábil, de forma a não comprometer o andamento e o resultado dos trabalhos.

18.24. Comunicar à **ELETROBRAS**, em cada caso, sujeito à confirmação de recebimento, qualquer fato que exija sua manifestação ou providência, sem prejuízo da eventual adoção de medidas urgentes com vistas ao cumprimento do objeto do contrato.

18.25. Transferir para o domínio da **ELETROBRAS** todas as informações e a documentação produzidos por ocasião do término da vigência deste Contrato.

18.25.1. Nos termos do art. 80, da Lei nº 13.303/2016, os direitos patrimoniais e autorais de projetos ou serviços técnicos especializados desenvolvidos pela passam a ser propriedade da ELETROBRAS, sem prejuízo da preservação da identificação dos respectivos autores e da responsabilidade técnica a eles atribuída.

18.26. A **CONTRATADA** não poderá atuar em conflito de interesses com a **ELETROBRAS**.

18.27. Apresentar por escrito, esclarecimentos sobre seus relatórios, quando solicitados pela **ELETROBRAS**.

18.28. A **CONTRATADA**, bem como sua equipe técnica, sócios, diretores, profissionais e outras pessoas envolvidas na execução dos serviços que constituem o objeto do presente Contrato deverão assinar **Termo de Confidencialidade**, contido no Anexo I deste Contrato, comprometendo-se a manter em sigilo todas as informações não públicas fornecidas pela **ELETROBRAS**.

CLÁUSULA DEZENOVE

OBRIGAÇÕES DA ELETROBRAS

19.1. Mediante o fiel cumprimento das condições ajustadas, a **ELETROBRAS** deverá pagar à **CONTRATADA** pela execução do serviço.

19.2. Facilitar, em tempo hábil para a **CONTRATADA,** o acesso a documentos e/ou informações de que disponha, porventura necessários à execução dos serviços.

19.3. Disponibilizar o acesso físico da **CONTRATADA** às dependências **ELETROBRAS**.

19.4. Orientar a **CONTRATADA** com relação à indicação de possíveis fontes de informação, porventura necessárias para a execução do serviço.

19.5. Designar empregado responsável para acompanhar a execução do Contrato.

19.6. Notificar a **CONTRATADA** sobre qualquer irregularidade verificada na execução do objeto.

19.7. Exercer permanentemente gestão e fiscalização da execução do objeto contratado, registrando ocorrências relacionadas à execução do objeto e determinando as medidas necessárias para a regularização dos problemas observados.

CLÁUSULA VINTE

CONDIÇÃO SUSPENSIVA DO CONTRATO

20.1. A presente contratação será realizada com base na Medida Provisória 1.031/21. Porém, como a MP ainda se encontra em tramitação nas duas casas do Congresso Nacional, seu conteúdo pode sofrer modificações, ou mesmo a MP não ser convertida em Lei, hipótese esta, inclusive, prevista em seu artigo 16.

20.2. O presente contrato tem condição suspensiva, estando o início da prestação do Serviço condicionado à convolação da MP 1.031 em lei. Dessa forma, em caso de não aprovação ou prescrição da MP 1.031, o que ocorrer primeiro, o contrato deverá ser rescindido, sem nenhum ônus para ambas as partes.

CLÁUSULA VINTE E UM

PROTEÇÃO DE DADOS PESSOAIS

21.1. Em cumprimento à Lei nº 13.709/2018 - Lei Geral de Proteção de Dados – LGPD, no desenvolvimento de quaisquer atividades relacionadas com a execução do Contrato celebrado, as Partes devem observar o regime legal da proteção de dados pessoais, comprometendo-se a proteger e tratar os dados coletados estrita e necessariamente para a execução do Contrato.

21.2. As partes são solidariamente responsáveis por eventuais incidentes de segurança de informação, nos termos da legislação vigente, mas a CONTRATANTE garante, no âmbito deste Contrato, o seu direito de regresso contra o Contratado, caso fique comprovado não ter sido ela a dar causa ao evento.

21.3. As partes obrigam-se a:

PE- 10/2021

a)Tratar e usar os dados pessoais coletados para os fins a que se destinam, mantendo-os registrados, organizados, conservados e disponíveis para consulta.

b)Realizar o compartilhamento dos dados apenas e somente nos casos em que o seu titular tenha dado o consentimento inequívoco, ou nas situações legalmente previstas;

c) Tratar os dados de modo compatível com as finalidades para as quais tenham sido coletados e pelo mínimo de pessoas possível, devendo ser as mesmas identificáveis de plano.

d)Conservar os dados apenas durante o período necessário à execução das finalidades contratuais ou pelo prazo necessário ao cumprimento de eventual obrigação legal, garantindo a sua efetiva confidencialidade;

e)Implementar medidas técnicas e administrativas necessárias para proteger os dados contra alteração, perda, ou ainda difusão, acesso ou destruição - acidental ou intencionalmente – não autorizados, bem como contra qualquer outra forma de tratamento ilícito.

f) Informar, no prazo de até 24 horas, a outra Parte caso haja alguma suspeita ou incidente de segurança concreto envolvendo dados pessoais, devendo prestar toda a colaboração necessária a qualquer investigação que venha a ser realizada.

g)Garantir o exercício, pelos titulares dos dados, dos respectivos direitos de informação, acesso, revogação, oposição e portabilidade;

h)Assegurar que todas as pessoas que venham a ter acesso a dados pessoais no contexto do Contrato cumpram as disposições legais aplicáveis em matéria de proteção de dados pessoais, não cedendo ou divulgando tais dados pessoais a terceiros, nem deles fazendo uso para quaisquer fins que não os estritamente consentidos pelos respectivos titulares.

CLÁUSULA VINTE E DOIS

FORO

22.1. As partes contratantes elegem o foro da cidade do Rio de Janeiro, para solução de qualquer questão oriunda do presente Contrato, com exclusão de qualquer outro. E por estarem assim justas e contratadas, as partes assinam o presente Contrato.

A data de assinatura deste contrato é a data da última assinatura eletrônica/digital da autoridade competente da ELETROBRAS, conforme protocolo de assinaturas anexo a este contrato.

Efetuados os preenchimentos devidos, o presente Contrato está de acordo com a Minuta aprovada pelo Jurídico.

CONSIDERANDO QUE:

A **PARTE INTERESSADA** irá promover discussões, receber informações e manter tratativas para subsidiar execução de serviços técnicos, a ser realizado em conformidade com o Edital de pregão eletrônico nº. xxxxxx, para a realização do objeto deste contrato.

A fim de viabilizar a execução dos serviços objeto do Edital de pregão eletrônico nº. xxxxxx, a ELETROBRAS disponibilizará à **PARTE INTERESSADA** informações confidenciais relativas aos negócios, à operação e/ou ao patrimônio da ELETROBRAS e das empresas objeto da contratação, incluindo o acesso pela **PARTE INTERESSADA** às outras informações confidenciais adicionais que entenda pertinentes;

A ELETROBRAS deseja proteger as **Informações Confidenciais** de divulgação para terceiros e de seu uso não autorizado e exige, para franquear acesso às **Informações Confidenciais**, que a **PARTE INTERESSADA** preste certas declarações e garantias e se obrigue, por si e por todos os seus **REPRESENTANTES**, a manter a confidencialidade dessas **Informações Confidenciais**;

A **PARTE INTERESSADA** compromete-se, por meio deste **TERMO DE CONFIDENCIALIDADE**, a observar e submeter-se às regras e condições abaixo descritas:

ª - DEFINIÇÕES

1.1. O termo "**Informação Confidencial**" significa, para fins deste **TERMO DE CONFIDENCIALIDADE**, toda e qualquer informação de natureza operacional, econômica, técnica, contábil, comercial, ambiental, jurídica ou de qualquer outra natureza, revelada, fornecida ou comunicada, seja verbalmente ou por escrito, em forma eletrônica ou não, incluindo, sem limitação, textos, fotografias, desenhos, gráficos, projetos, estudos, documentos, mapas, planos, especificações, diagramas, padrões, procedimentos, técnicas, direitos, relações comerciais,

PE- 10/2021

knowhow, tecnologia, composição de preços, inventos, segredos de comércio, contratos, instrumentos, relatórios, interpretações, previsões, registros ou qualquer outro documento relativo à ELETROBRAS e/ou às empresas objeto da contratação, fornecido ou disponibilizado à **PARTE INTERESSADA** ou a seus **REPRESENTANTES**, por qualquer meio.

1.1.1. Todas e quaisquer análises, compilações, previsões, estudos ou outros documentos elaborados pela ELETROBRAS, pela **PARTE INTERESSADA**, ou por seus **REPRESENTANTES** com base nas **Informações Confidenciais** descritas no item 1.1 acima serão também considerados como **Informação Confidencial** para os fins do presente instrumento.

1.1.2. A ELETROBRAS não prestou, nem prestará, qualquer declaração ou garantia, explícita ou implícita, com relação à exatidão ou abrangência das **Informações Confidenciais,** e a **PARTE INTERESSADA** reconhece que a ELETROBRAS não terá qualquer responsabilidade relacionada à **Informação Confidencial**, incluindo por eventuais erros ou omissões.

1.2. O termo **REPRESENTANTES**, quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, deverá incluir qualquer diretor, conselheiro, administrador, empregado, preposto a qualquer título, auditor, advogado, consultor, representantes autorizados, ou outros assessores, da ELETROBRAS, das empresas objeto da contratação, da **PARTE INTERESSADA** e/ou de suas respectivas **AFILIADAS**, conforme o caso, que tenham acesso à **Informação Confidencial**, nos termos deste **TERMO DE CONFIDENCIALIDADE**.

1.3. O termo **AFILIADA,** quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, significa, conforme o caso, todos os eventuais controladores diretos ou indiretos da ELETROBRAS, das empresas objeto da contratação e/ou da **PARTE INTERESSADA,** bem como qualquer outra entidade que seja direta ou indiretamente controlada pela ELETROBRAS e/ou pela **PARTE INTERESSADA**, ou por seu(s) controlador(es).

1.3.1. Para fins deste **TERMO DE CONFIDENCIALIDADE**, controle acionário deverá ser entendido segundo o significado atribuído no artigo 116 da Lei 6.404, de 14 de dezembro de 1976, conforme alterada e em vigor.

1.4. O termo **PARTE DIVULGADORA** significa, no âmbito deste **TERMO DE CONFIDENCIALIDADE**, a ELETROBRAS, as empresas objeto da contratação e/ou suas respectivas **AFILIADAS**, a depender de quem for detentor da respectiva **Informação Confidencial** divulgada, e o termo **PARTE RECEPTORA** significa a **PARTE INTERESSADA,** que recebe tal **Informação Confidencial** (quando em conjunto, **PARTES**).

ª - DO OBJETO

O presente **TERMO DE CONFIDENCIALIDADE** tem por objeto assegurar, e comprometer a **PARTE INTERESSADA** com, durante todo o prazo previsto na Cláusula 3ª abaixo, o sigilo, a confidencialidade e o acesso restrito de todas e quaisquer **Informações Confidenciais** relacionadas ao serviço objeto da contratação pelo do Edital de pregão eletrônico nº. xxxxxx, sem

prejuízo de qualquer outra proteção assegurada à **PARTE DIVULGADORA** por normas de propriedade industrial ou intelectual.

ª - DO PRAZO

As obrigações previstas neste **TERMO DE CONFIDENCIALIDADE** permanecerão vigentes pelo período de 5 (cinco) anos contados da assinatura do presente **TERMO DE CONFIDENCIALIDADE**, independentemente das negociações continuarem ou da segregação patrimonial da Eletronuclear e da Itaipu Binacional ser consumada, ou da conversão da MP 1.031/2021.

ª - DAS OBRIGAÇÕES

4.1. Em decorrência do compromisso de sigilo firmado neste **TERMO DE CONFIDENCIALIDADE**, a **PARTE INTERESSADA** obriga-se por si e por seus **REPRESENTANTES** a:

Manter toda e qualquer **Informação Confidencial** como confidencial e, exceto conforme disposto na Cláusula 7ª abaixo, não revelar qualquer **Informação Confidencial** sob qualquer forma, assegurando a cautela razoável que a **PARTE INTERESSADA** normalmente exerce em relação à preservação de suas próprias informações confidenciais, utilizando-as exclusivamente para os fins previstos neste **TERMO DE CONFIDENCIALIDADE**, ressalvado, no entanto, que a **PARTE INTERESSADA** poderá revelar a **Informação Confidencial** a seus **REPRESENTANTES** que (a) necessitem conhecer a **Informação Confidencial** exclusivamente para os fins de avaliação da **operação de segregação patrimonial**, (b) sejam previamente informados acerca da natureza confidencial da **Informação Confidencial**, e (c) concordem, por escrito, em agir de acordo com os termos deste **TERMO DE CONFIDENCIALIDADE**; e

Enviar, imediatamente, notificação por escrito à ELETROBRAS informando a respeito de qualquer má utilização, revelação não autorizada, esbulho ou apropriação indébita das **Informações Confidenciais** que lhe forem reveladas, ou qualquer violação deste **TERMO DE CONFIDENCIALIDADE** que chegue ao seu conhecimento.

ª - DA DEVOLUÇÃO DE INFORMAÇÕES CONFIDENCIAIS

5.1. Caso a **PARTE INTERESSADA** não prossiga na execução dos serviços objeto do do Edital de pregão eletrônico nº. xxxxxx ou, a qualquer momento, mediante requerimento da **PARTE DIVULGADORA**, a **PARTE INTERESSADA** obriga-se e compromete-se a devolver ou destruir todas as **Informações Confidenciais** recebidas, dentro do prazo de 10 (dez) dias úteis a contar da interrupção dos serviços ou do requerimento da **PARTE DIVULGADORA**, sem retenção de cópias e com a devida confirmação escrita de eventual destruição pela **PARTE RECEPTORA**.

ª - DAS PENALIDADES

A **PARTE INTERESSADA** reconhece e concorda que o descumprimento de qualquer obrigação estabelecida neste **TERMO DE CONFIDENCIALIDADE** sujeitará a **PARTE INTERESSADA** a uma

multa não compensatória no valor de 25% do valor da contratação devida à ELETROBRAS, adicionalmente à responsabilização da **PARTE INTERESSADA** por perdas e danos, incluindo danos indiretos, causados à **PARTE DIVULGADORA**, que deverá ser integralmente indenizada pela **PARTE INTERESSADA**, sem prejuízo da adoção pela **PARTE DIVULGADORA** lesada de todas as medidas jurídicas cabíveis para assegurar a total proteção de suas **Informações Confidenciais**. Adicionalmente, a **PARTE INTERESSADA** assegura que fará com que seus **REPRESENTANTES** observem os termos deste **TERMO DE CONFIDENCIALIDADE** e será responsável por qualquer descumprimento deste **TERMO DE CONFIDENCIALIDADE** por qualquer de seus **REPRESENTANTES**.

ª - DA EXCEÇÃO À CONFIDENCIALIDADE

7.1. Os termos e condições deste instrumento não se aplicam:

às informações que porventura foram, comprovada e legitimamente, obtidas pela **PARTE INTERESSADA** antes da assinatura deste **TERMO DE CONFIDENCIALIDADE** e não representem quebra por qualquer pessoa de qualquer obrigação de confidencialidade anterior aos termos deste **TERMO DE CONFIDENCIALIDADE**;

se a **PARTE DIVULGADORA** concordar previamente e por escrito em disponibilizar a terceiros determinada informação, observados os limites expressamente consentidos pela **PARTE DIVULGADORA** com relação à divulgação para tais terceiros;

à revelação obrigatória por força da legislação vigente, regulamento ou ato normativo de caráter mandatório, por exigência de qualquer autoridade governamental ou órgão regulador, ou em caso de decisão judicial, arbitral ou administrativa que determine a disponibilização de **Informação Confidencial**, devendo, entretanto, a **PARTE INTERESSADA** (i) divulgar somente a parcela da **Informação Confidencial** exigida para o cumprimento da respectiva obrigação, e (ii) envidar seus melhores esforços para que seja assegurado tratamento confidencial às **Informações Confidenciais** divulgadas;

se a informação houver sido expressamente identificada pela **PARTE DIVULGADORA** como não sendo informação de natureza privilegiada e confidencial; e

se, no momento da revelação, as informações já forem de domínio público em geral ou que, a partir desse momento, tenham se tornado de domínio público através de publicação ou procedimento equivalente que não constitua violação deste **TERMO DE CONFIDENCIALIDADE**.

Na hipótese de ocorrência do disposto na alínea (c), a **PARTE INTERESSADA** deverá imediatamente, antes de proceder a qualquer divulgação da **Informação Confidencial**, notificar a ELETROBRAS sobre tal solicitação ou exigência para que a **PARTE DIVULGADORA** possa buscar, na medida do possível, uma proteção ou dispensa de apresentação de tais **Informações Confidenciais**, em consonância com as disposições deste **TERMO DE CONFIDENCIALIDADE**.

8.3. Cada uma das **PARTES** é responsável por notificar a outra caso ocorra mudança de endereço, dados ou representantes, considerando-se válida a comunicação realizada nos termos desta Cláusula 8ª, até o recebimento da referida notificação.

ª - DOS LIMITES DO TERMO DE CONFIDENCIALIDADE

9.1. Este **TERMO DE CONFIDENCIALIDADE** representa a livre manifestação de vontade da **PARTE INTERESSADA**, obrigando-a de forma irrevogável e irretratável e revertendo em benefício da ELETROBRAS e de qualquer outra **PARTE DIVULGADORA**.

9.2. O presente **TERMO DE CONFIDENCIALIDADE** não constitui compromisso de exclusividade entre as **PARTES,** assim como não obriga as **PARTES** a celebrar qualquer negócio futuro, incluindo a **POTENCIAL OPERAÇÃO**, e restringe-se somente às disposições que dele constem.

PE- 10/2021

10.1 A **PARTE INTERESSADA** declara que não realizou, e concorda que não deverá, em conexão com as atividades contempladas por este **TERMO DE CONFIDENCIALIDADE**, ou em relação a quaisquer outras operações, comerciais ou não, que envolvam a ELETROBRAS, pagar, oferecer, prometer, ou autorizar o pagamento ou transferência de qualquer coisa de valor, direta ou indiretamente, a qualquer funcionário público ou empregado (incluindo funcionários de empresas estatais ou controladas pelo governo ou organização internacional público) ou a qualquer partido político, funcionário de partido, ou candidato internacional público, ou a qualquer outra pessoa ou entidade de uma forma que possa violar a Lei dos EUA contra Práticas de Corrupção Estrangeira, de 1977, e subsequentes alterações (o *Foreign Corrupt Practices Act* - FCPA) e a Lei Brasileira nº 12.846/2013.

ª - DAS DISPOSIÇÕES GERAIS

11.1 A **PARTE INTERESSADA** reconhece que a demora pela **PARTE DIVULGADORA** em exercer qualquer direito ou privilégio em virtude deste instrumento não importará na renúncia aos termos do presente **TERMO DE CONFIDENCIALIDADE** ou prejudicará qualquer das declarações ora prestadas pela **PARTE INTERESSADA**.

11.2. Na hipótese em que qualquer dispositivo do presente **TERMO DE CONFIDENCIALIDADE** venha a ser considerado inválido, ilegal ou inexequível diante da legislação aplicável em vigor, tal fato não afetará a validade, legalidade ou exigibilidade de suas outras disposições que permanecerão válidas se com ele não conflitarem.

ª - DO FORO E DA LEI APLICÁVEL

12.1. A **PARTE INTERESSADA** expressamente reconhece o foro da Comarca da Capital do Estado do Rio de Janeiro como o único e exclusivo foro competente para dirimir quaisquer controvérsias em decorrência deste **TERMO DE CONFIDENCIALIDADE**. A **PARTE INTERESSADA** renuncia expressamente a qualquer outro, por mais privilegiado que seja.

12.2. Este **TERMO DE CONFIDENCIALIDADE**, bem como a execução dos direitos e obrigações dele decorrentes, são inteiramente regidos e interpretados de acordo com a legislação brasileira.

TERMO DE CONFIDENCIALIDADE INDIVIDUAL

[Local], [Data]

À

CENTRAIS ELÉTRICAS BRASILEIRAS S.A. – ELETROBRAS

Nome do Profissional....., nacionalidade....., estado civil....., profissão....., identidade..... e CPF....., endereço ....., se compromete, por intermédio do presente **Termo de Confidencialidade Individual**, a não divulgar sem autorização quaisquer informações de propriedade da **Eletrobras** que tenha acesso em decorrência da execução do contrato que seu empregador ou empresa para a qual presta serviços mantém com a Eletrobras, em conformidade com as seguintes condições:

O **Responsável** reconhece que, no desempenho de suas funções em decorrência do Contrato nº _____/2021, celebrado em ___/___/___ entre a empresa _____ e a Eletrobras, estabelece contato com informações privadas da **Eletrobras**, que podem e devem ser conceituadas como segredo de indústria ou de negócio. Estas informações devem ser tratadas confidencialmente sob qualquer condição e não podem ser divulgadas a terceiros não autorizados, aí se incluindo os próprios empregados da **Eletrobras**, sem a expressa e escrita autorização do representante legal signatário do Contrato ora referido.

CONSIDERANDO QUE:

A **PARTE INTERESSADA** irá promover discussões, receber informações e manter tratativas para subsidiar execução de serviços técnicos, a ser realizado em conformidade com o Edital de pregão eletrônico nº. xxxxxx, para a realização do objeto deste contrato.

A fim de viabilizar a execução dos serviços objeto do Edital de pregão eletrônico nº. xxxxxx, a ELETROBRAS disponibilizará à **PARTE INTERESSADA** informações confidenciais relativas aos negócios, à operação e/ou ao patrimônio da ELETROBRAS e das empresas objeto da contratação, incluindo o acesso pela **PARTE INTERESSADA** às outras informações confidenciais adicionais que entenda pertinentes;

A ELETROBRAS deseja proteger as **Informações Confidenciais** de divulgação para terceiros e de seu uso não autorizado e exige, para franquear acesso às **Informações Confidenciais**, que a **PARTE INTERESSADA** preste certas declarações e garantias e se obrigue, por si e por todos os seus **REPRESENTANTES**, a manter a confidencialidade dessas **Informações Confidenciais**;

A **PARTE INTERESSADA** compromete-se, por meio deste **TERMO DE CONFIDENCIALIDADE**, a observar e submeter-se às regras e condições abaixo descritas:

1.1. O termo "**Informação Confidencial**" significa, para fins deste **TERMO DE CONFIDENCIALIDADE**, toda e qualquer informação de natureza operacional, econômica, técnica, contábil, comercial, ambiental, jurídica ou de qualquer outra natureza, revelada, fornecida ou comunicada, seja verbalmente ou por escrito, em forma eletrônica ou não, incluindo, sem limitação, textos, fotografias, desenhos, gráficos, projetos, estudos, documentos, mapas, planos, especificações, diagramas, padrões, procedimentos, técnicas, direitos, relações comerciais, *knowhow*, tecnologia, composição de preços, inventos, segredos de comércio, contratos, instrumentos, relatórios, interpretações, previsões, registros ou qualquer outro documento relativo à ELETROBRAS e/ou às empresas objeto da contratação, fornecido ou disponibilizado à **PARTE INTERESSADA** ou a seus **REPRESENTANTES**, por qualquer meio.

1.1.1. Todas e quaisquer análises, compilações, previsões, estudos ou outros documentos elaborados pela ELETROBRAS, pela **PARTE INTERESSADA**, ou por seus **REPRESENTANTES** com base nas **Informações Confidenciais** descritas no item 1.1 acima serão também considerados como **Informação Confidencial** para os fins do presente instrumento.

1.1.2. A ELETROBRAS não prestou, nem prestará, qualquer declaração ou garantia, explícita ou implícita, com relação à exatidão ou abrangência das **Informações Confidenciais,** e a **PARTE INTERESSADA** reconhece que a ELETROBRAS não terá qualquer responsabilidade relacionada à **Informação Confidencial**, incluindo por eventuais erros ou omissões.

1.2. O termo **REPRESENTANTES**, quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, deverá incluir qualquer diretor, conselheiro, administrador, empregado, preposto a qualquer título, auditor, advogado, consultor, representantes autorizados, ou outros assessores, da ELETROBRAS, das empresas objeto da contratação, da **PARTE INTERESSADA** e/ou de suas respectivas **AFILIADAS**, conforme o caso, que tenham acesso à **Informação Confidencial**, nos termos deste **TERMO DE CONFIDENCIALIDADE**.

1.3. O termo **AFILIADA,** quando utilizado neste **TERMO DE CONFIDENCIALIDADE**, significa, conforme o caso, todos os eventuais controladores diretos ou indiretos da ELETROBRAS, das empresas objeto da contratação e/ou da **PARTE INTERESSADA,** bem como qualquer outra entidade que seja direta ou indiretamente controlada pela ELETROBRAS e/ou pela **PARTE INTERESSADA**, ou por seu(s) controlador(es).

1.3.1. Para fins deste **TERMO DE CONFIDENCIALIDADE**, controle acionário deverá ser entendido segundo o significado atribuído no artigo 116 da Lei 6.404, de 14 de dezembro de 1976, conforme alterada e em vigor.

1.4. O termo **PARTE DIVULGADORA** significa, no âmbito deste **TERMO DE CONFIDENCIALIDADE**, a ELETROBRAS, as empresas objeto da contratação e/ou suas respectivas **AFILIADAS**, a depender de quem for detentor da respectiva **Informação Confidencial** divulgada, e o termo **PARTE RECEPTORA** significa a **PARTE INTERESSADA,** que recebe tal **Informação Confidencial** (quando em conjunto, **PARTES**).

ª - DAS PENALIDADES

A **PARTE INTERESSADA** reconhece e concorda que o descumprimento de qualquer obrigação estabelecida neste **TERMO DE CONFIDENCIALIDADE** sujeitará a **PARTE INTERESSADA** a uma multa não compensatória no valor de 25% do valor da contratação devida à ELETROBRAS, adicionalmente à responsabilização da **PARTE INTERESSADA** por perdas e danos, incluindo danos indiretos, causados à **PARTE DIVULGADORA**, que deverá ser integralmente indenizada pela **PARTE INTERESSADA**, sem prejuízo da adoção pela **PARTE DIVULGADORA** lesada de todas as medidas jurídicas cabíveis para assegurar a total proteção de suas **Informações Confidenciais**. Adicionalmente, a **PARTE INTERESSADA** assegura que fará com que seus **REPRESENTANTES** observem os termos deste **TERMO DE CONFIDENCIALIDADE** e será responsável por qualquer descumprimento deste **TERMO DE CONFIDENCIALIDADE** por qualquer de seus **REPRESENTANTES**.

ª - DA EXCEÇÃO À CONFIDENCIALIDADE

7.1. Os termos e condições deste instrumento não se aplicam:

às informações que porventura foram, comprovada e legitimamente, obtidas pela **PARTE INTERESSADA** antes da assinatura deste **TERMO DE CONFIDENCIALIDADE** e não representem quebra por qualquer pessoa de qualquer obrigação de confidencialidade anterior aos termos deste **TERMO DE CONFIDENCIALIDADE**;

se a **PARTE DIVULGADORA** concordar previamente e por escrito em disponibilizar a terceiros determinada informação, observados os limites expressamente consentidos pela **PARTE DIVULGADORA** com relação à divulgação para tais terceiros;

à revelação obrigatória por força da legislação vigente, regulamento ou ato normativo de caráter mandatório, por exigência de qualquer autoridade governamental ou órgão regulador, ou em caso de decisão judicial, arbitral ou administrativa que determine a disponibilização de **Informação Confidencial**, devendo, entretanto, a **PARTE INTERESSADA** (i) divulgar somente a parcela da **Informação Confidencial** exigida para o cumprimento da respectiva obrigação, e (ii) envidar seus melhores esforços para que seja assegurado tratamento confidencial às **Informações Confidenciais** divulgadas;

se a informação houver sido expressamente identificada pela **PARTE DIVULGADORA** como não sendo informação de natureza privilegiada e confidencial; e

se, no momento da revelação, as informações já forem de domínio público em geral ou que, a partir desse momento, tenham se tornado de domínio público através de publicação ou procedimento equivalente que não constitua violação deste **TERMO DE CONFIDENCIALIDADE**.

Na hipótese de ocorrência do disposto na alínea (c), a **PARTE INTERESSADA** deverá imediatamente, antes de proceder a qualquer divulgação da **Informação Confidencial**, notificar a ELETROBRAS sobre tal solicitação ou exigência para que a **PARTE DIVULGADORA** possa buscar,

Se endereçadas à PARTE INTERESSADA:

[=] [dados do representante]

8.3. Cada uma das **PARTES** é responsável por notificar a outra caso ocorra mudança de endereço, dados ou representantes, considerando-se válida a comunicação realizada nos termos desta Cláusula 8ª, até o recebimento da referida notificação.

ª - DOS LIMITES DO TERMO DE CONFIDENCIALIDADE

9.1. Este **TERMO DE CONFIDENCIALIDADE** representa a livre manifestação de vontade da **PARTE INTERESSADA**, obrigando-a de forma irrevogável e irretratável e revertendo em benefício da ELETROBRAS e de qualquer outra **PARTE DIVULGADORA**.

DocuSign Envelope ID: CB05780F-DD97-48DB-A095-6D4134B31C43

PE- 10/2021

9.2. O presente **TERMO DE CONFIDENCIALIDADE** não constitui compromisso de exclusividade entre as **PARTES,** assim como não obriga as **PARTES** a celebrar qualquer negócio futuro, incluindo a **POTENCIAL OPERAÇÃO**, e restringe-se somente às disposições que dele constem.

ª - ÉTICA E CONFORMIDADE

10.1 A **PARTE INTERESSADA** declara que não realizou, e concorda que não deverá, em conexão com as atividades contempladas por este **TERMO DE CONFIDENCIALIDADE**, ou em relação a quaisquer outras operações, comerciais ou não, que envolvam a ELETROBRAS, pagar, oferecer, prometer, ou autorizar o pagamento ou transferência de qualquer coisa de valor, direta ou indiretamente, a qualquer funcionário público ou empregado (incluindo funcionários de empresas estatais ou controladas pelo governo ou organização internacional público) ou a qualquer partido político, funcionário de partido, ou candidato internacional público, ou a qualquer outra pessoa ou entidade de uma forma que possa violar a Lei dos EUA contra Práticas de Corrupção Estrangeira, de 1977, e subsequentes alterações (o *Foreign Corrupt Practices Act* - FCPA) e a Lei Brasileira nº 12.846/2013.

ª - DAS DISPOSIÇÕES GERAIS

11.1 A **PARTE INTERESSADA** reconhece que a demora pela **PARTE DIVULGADORA** em exercer qualquer direito ou privilégio em virtude deste instrumento não importará na renúncia aos termos do presente **TERMO DE CONFIDENCIALIDADE** ou prejudicará qualquer das declarações ora prestadas pela **PARTE INTERESSADA**.

11.2. Na hipótese em que qualquer dispositivo do presente **TERMO DE CONFIDENCIALIDADE** venha a ser considerado inválido, ilegal ou inexequível diante da legislação aplicável em vigor, tal fato não afetará a validade, legalidade ou exigibilidade de suas outras disposições que permanecerão válidas se com ele não conflitarem.

ª - DO FORO E DA LEI APLICÁVEL

12.1. A **PARTE INTERESSADA** expressamente reconhece o foro da Comarca da Capital do Estado do Rio de Janeiro como o único e exclusivo foro competente para dirimir quaisquer controvérsias em decorrência deste **TERMO DE CONFIDENCIALIDADE**. A **PARTE INTERESSADA** renuncia expressamente a qualquer outro, por mais privilegiado que seja.

12.2. Este **TERMO DE CONFIDENCIALIDADE**, bem como a execução dos direitos e obrigações dele decorrentes, são inteiramente regidos e interpretados de acordo com a legislação brasileira.

DECLARAÇÃO DE INTEGRIDADE DOS REPRESENTANTES OU FORNECEDORES DE BENS OU SERVIÇOS
(subitem 16.2)

A **CONTRATADA** neste ato declara em caráter irrevogável e irretratável que está ciente dos termos e condições aplicáveis à legislação anticorrupção vigente em decorrência do relacionamento com as Empresas Eletrobras, em especial os itens a seguir:

1. Definições

1.1. "**Agente de Governo**" significa (i) funcionário, gerente ou representante que atue em caráter oficial ou em nome de: (a) um governo nacional, uma divisão política ou uma jurisdição de tal governo; (b) órgão, conselho, comissão, tribunal ou agência, civil ou militar, de qualquer dos entes acima mencionadas, independente da sua constituição; (c) associação, organização ou empresa de propriedade ou controlada pelo governo; ou (d) partido político (no conjunto, "**Autoridade Governamental**"); (ii) funcionário que atue nos órgãos legislativo, administrativo ou judicial, quer tenha sido eleito ou nomeado; (iii) gerente ou indivíduo que ocupe cargo em partido político; (iv) candidato a cargo político; (v) gerente ou funcionário de organização supranacional (por exemplo, Banco Mundial, Nações Unidas, Fundo Monetário Internacional, OCDE, CAF); ou (vi) qualquer outra pessoa ligada ou associada, inclusive por parentesco direto, a quaisquer das categorias acima.

1.2. "**Leis Anticorrupção**" significa a Lei dos EUA contra Práticas de Corrupção Estrangeira, de 1977, e subsequentes alterações, (*Foreign Concept Practices Act* "**FCPA**"), a Lei Anticorrupção Brasileira (Lei nº 12.846/2013) e qualquer lei ou regulamento antissuborno, anticorrupção e de conflitos de interesses aplicável, ou qualquer outra legislação, regra ou regulamento de propósito e efeito similares.

2. Garantias e Compromissos da CONTRATADA

2.1. A **CONTRATADA** analisou, está familiarizada e entende os requisitos do Programa de Integridade (*Compliance*) das Empresas Eletrobras ("**Programa**") e deverá sempre observar tal Programa no que diz respeito ao desempenho de seus serviços em nome da **ELETROBRAS**. A **CONTRATADA** declara que tomou as medidas necessárias para garantir que todos os diretores, empregados, prepostos ou qualquer outra pessoa agindo eu seu nome envolvido nos serviços também esteja familiarizado com os requisitos do Programa de Integridade (*Compliance*) das Empresas Eletrobras.

2.2. Com relação aos serviços fornecidos pela **CONTRATADA**, a **CONTRATADA** não tomou e não tomará nenhuma medida que possa violar as proibições descritas nas Leis Anticorrupção, se as Leis Anticorrupção forem consideradas aplicáveis, inclusive:

a) pagar, oferecer, concordar em pagar, ou fazer com que sejam pagas, direta ou indiretamente, quaisquer contribuições, taxas ou comissões políticas a qualquer Agente do Governo, ou;
b) oferecer, pagar, prometer pagar ou autorizar que se dê dinheiro ou benefício em qualquer forma ou valor, direta ou indiretamente, a qualquer Agente do Governo ou a qualquer pessoa,

PE- 10/2021

mesmo tendo conhecimento ou estando ciente da grande probabilidade de que toda ou parte de tal dinheiro ou benefício em qualquer forma ou valor será oferecido, dado, ou prometido, direta ou indiretamente, a qualquer Agente do Governo com a finalidade de:

i. influenciar em qualquer ato ou decisão de tal Agente do Governo, em sua qualidade oficial, inclusive uma decisão de deixar de cumprir suas funções oficiais; ou
ii. induzir tal Agente do Governo a usar sua influência junto à Autoridade Governamental com a finalidade de afetar ou influenciar qualquer ato ou decisão de tal Autoridade Governamental, ou assegurar uma vantagem indevida para a **ELETROBRAS** ou a **CONTRATADA**, com a finalidade de ajudar a **ELETROBRAS** ou a **CONTRATADA** a obter ou contratar negócios, ou encaminhar negócios a quaisquer terceiros.

2.3. A **CONTRATADA** garante ainda que entende plenamente e que anteriormente não se envolveu e não se envolverá em conduta que tenha resultado ou venha a resultar em violação das disposições de todos os requisitos legislativos e de órgãos reguladores, conforme aplicáveis, ao fornecimento dos serviços e aos termos desta declaração.

2.4. Com relação à execução dos serviços, a **CONTRATADA** preparará e manterá livros, registros e contas que, em detalhes razoáveis, reflitam, de forma precisa e clara, as transações e alienações dos ativos, e manterá um sistema de controle contábil interno suficiente para assegurar, de forma razoável, que:

a) as transações sejam executadas de acordo com a autorização geral ou específica da **ELETROBRAS** e sejam registradas de acordo com os princípios contábeis geralmente aceitos e/ou os padrões contábeis internacionais de forma a manter a contabilização de tais ativos;
b) o acesso aos ativos seja permitido somente de acordo com as demais obrigações do representante nos termos desta declaração;
c) a contabilização registrada dos ativos seja comparada aos ativos existentes, em níveis razoáveis, e que medidas adequadas sejam adotadas com relação a quaisquer diferenças.

2.5. Diante da presença de indícios de que a **CONTRATADA** esteja violando qualquer Lei Anticorrupção ou outra Lei prevista no item 1.2, ou no caso da **ELETROBRAS** ser acionada por qualquer órgão com objetivo de fornecer informação sobre seus terceiros, a **CONTRATADA** será comunicada de tais fatos e se compromete a colaborar com esclarecimentos formais ou permissão de acesso aos livros e registros contábeis, restritos aos termos do presente Contrato, no prazo de 10 (dez) dias úteis da referida comunicação. A **ELETROBRAS** se reserva o direito de indicar o profissional para verificação de livros e registros contábeis, a seu critério exclusivo, arcando com todos os custos incorridos.

2.6 A **CONTRATADA** se compromete a cumprir com as Leis Anticorrupção a que esteja submetida e que lhe são aplicáveis.

2.7. A **CONTRATAD**A garante que nenhum de seus administradores, diretores, empregados ou qualquer pessoa agindo em seu nome, nem qualquer membro direto de sua família (por exemplo, pais, cônjuges e irmãos) é um Agente do Governo e que nenhum deles possui parentesco ou relacionamento comercial com qualquer Agente do Governo a não ser conforme divulgado no "Formulário de *Due Diligence* de Fornecedores do Sistema Eletrobras", disponível no website da **ELETROBRAS**. A **CONTRATADA** informará imediatamente à **ELETROBRAS** sobre quaisquer relacionamentos futuros com qualquer Agente do Governo durante a vigência de sua contratação.

2.8. Em adição, a **CONTRATADA** declara estar ciente da possibilidade de a **ELETROBRAS** solicitar sua anuência para efetuar diligências e auditorias em suas dependências e/ou locais de prestação de serviços para monitorar e verificar o cumprimento das disposições contidas no "Guia de Conduta para Fornecedores da Eletrobras" e no "Código de Conduta Ética e Integridade das Empresas Eletrobras".

2.9. A **CONTRATADA** se compromete a não realizar ações de corrupção ativa e tráfico de influência em transação comercial internacional no âmbito de sua atuação na prestação dos serviços no exterior contratados pelas Empresas Eletrobras.

3. Honorários e Pagamentos

3.1. A **CONTRATADA** receberá todos os pagamentos devidos por transferência eletrônica de fundos diretamente para a conta bancária periodicamente indicada à **ELETROBRAS**, em seu nome e país de residência da **CONTRATADA** ou no país em que os serviços são realizados.

4. Dever de informar

4.1. A **CONTRATADA** declara ter ciência da existência do Canal de Denúncias da Eletrobras, disponibilizado por meio do endereço eletrônico www.canaldedenuncias.com.br/eletrobras e do telefone 0800 377 8037, disponível 24 (vinte e quatro) horas por dia, 07 (sete) dias por semana e da responsabilidade de utilizá-lo, quando necessário, para manifestação de condutas que envolvam a **ELETROBRAS**, direta ou indiretamente, e que representem violações ao "Código de Conduta Ética e Integridade das Empresas Eletrobras" ou sejam incompatíveis com a legislação vigente.

4.2. A **CONTRATADA** compromete-se a informar imediatamente a **ELETROBRAS** se quaisquer eventos subsequentes fizerem com que as informações ou declarações aqui relatadas deixem de ser precisas ou completas.

5. Rescisão

5.1. O Representante/Fornecedor de Bens ou Serviços declara que concorda que as Empresas Eletrobras poderão suspender, por tempo determinado, ou rescindir sua contratação mediante aviso por escrito, após a realização do processo administrativo preceituado nos arts. 88 e 97 do Regulamento, respectivamente, caso entendam que o representante violou o Programa ou violará, ou se for processado por violação de uma Lei Anticorrupção.

A data de assinatura desta declaração é a data da assinatura eletrônica/digital pelo Representante Legal da **CONTRATADA**, conforme protocolo de assinaturas anexo.

5. Assessment of the assumptions 10
6. Conclusion 12

1. Purpose

Assessment of the generation expansion and Levelized Cost of Energy (LCOE) assumptions used by Upside consulting firm in the Economic and Financial Study Report for Calculation of the Concession Amount.

2. Contextualization

The Economic and Financial Study Report for Calculation of the Concession Amount prepared by Upside is within the context of Eletrobras capitalization, pursuant to the guidelines defined by Law No. 14,182/2021.
In an extraordinary meeting held on August 31, 2021, the National Council for Energy Policy – CNPE determined that the concession bonus to be paid to the Federal Government shall be BRL23.2 billion, while the concession bonus for the Energy Development Account (CDE) shall be BRL29.8 billion. Upside was contracted by Eletrobras to calculate, independently, the concession amount in order to support the decision making of the Eletrobras' Board of Directors with respect to whether accept or not the abovementioned amounts.

3. Assumptions adopted by the Consulting firm

3.1. Generation Expansion

The generation expansion assumptions are presented in items V.4.3 Expansion and V.4.4 Upside Report Guaranteed Power Output.

With respect to the expansion

The consulting firm indicates that the expansion combines the generation and transmission projects already contracted, the expected progress, and the long-term future expectations, derived from an optimization model compatible with the tools of Empresa de Pesquisa Energética – EPE, but does not describe it nor indicate any references.

It emphasizes that information presented is based on the 2030 Ten-Year Energy Expansion Plan (2030 PDE) and the 2050 National Energy Plan (2050 PNE) reports and briefly describes its procedures for consolidating the final expansion. It also indicates the use of a model similar to the MDI[1] (of EPE) to calculate the optimal expansion but does not describe it nor indicate any references.

It also states that a model that analyzes the climatological dynamics of each series (drainage basin, regional wind speeds, and solar irradiance) was used to "extract" frequencies and combine its projections in future scenarios, but it does not describe such model nor indicates any references.

It states that the growth of the Brazilian electricity charge had, in the past, significant annual growth of 3-4%, resulting in the incorporation of about 2 avgGW (as guaranteed power output) to the country per year and that, even with much more modest dynamics, the charge still grows, leading to substantial expansion. Nevertheless, it does not indicate clearly whether it assumes the average historical growth rate.

It assumes that the hydroelectric source shall be expanded by using small hydro power plants (SHPs) only, including the mandatory ones, pursuant to Law No. 14,120/2021, and that the additions of fossil fuel power plants would not be significant.

It rules out the expansion of nuclear power plants.

It presents the resulting expected basic expansion for the next years, by source, according to the chart reproduced below. By reading the chart, it is indicated that the consulting firm expects an aggregation of approximately 50 GW of capacity up to 2030 and other 25 GW between 2030 and 2035 when it comes to the guaranteed power output.

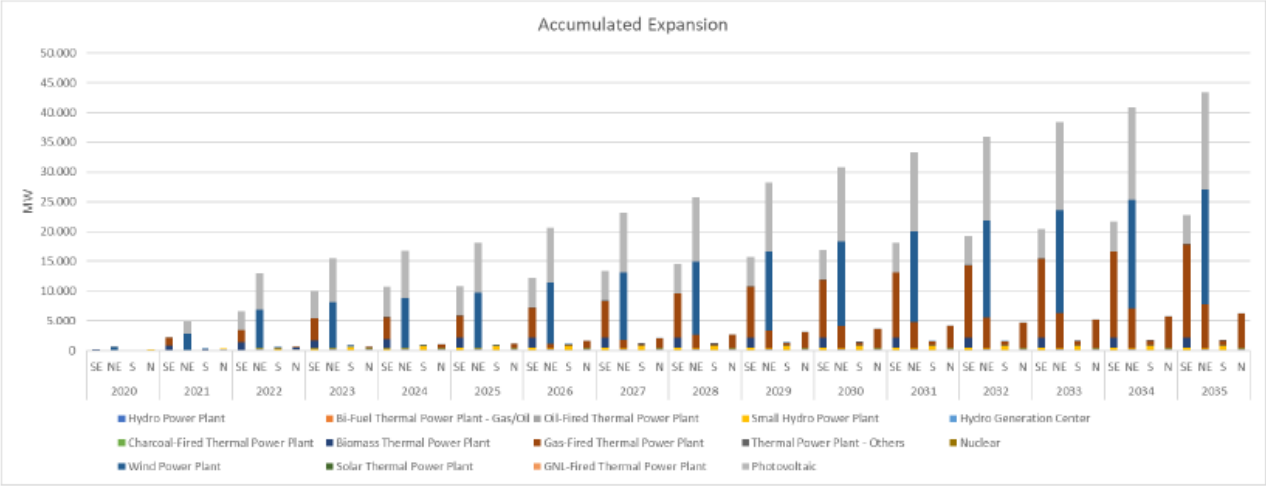

Figure 1 – Cumulative Expansion by Source and Sub-market
Source: Upside

With respect to the guaranteed power output

It states that the guaranteed power output of the Eletrobras plants was taken as described in EPE Technical Notes EPE-DEE-RE-086/2021-r0, EPE-DEE-RE-087/2021-r0, and EPE-DEE-RE-088/2021-r0 and indicates that it takes into account the decrease in the guaranteed power output of

1
Investment Decision Model for Expansion of the National Interconnected System (SIN) (epe.gov.br)

the other Energy Reallocation Mechanism (MRE) plants as being 2.0% (beginning in 2023), and an additional decrease of 1.5% (beginning in 2028).

It emphasizes that inflexible renewable energy and thermal generator are "non-dispatchable" units and that their outflows are mandatorily used for charge supply, creating a significant impact (decrease) in the Price for Settlement of Differences (PLD), as their operational costs are defined as equivalent to zero in all assessment models.

It presents a table indicating the expansion of the Brazilian Energy Sector (SEB) Guaranteed Power Outputs, which we reproduce below with modifications (removal of some periods).

Table 1 – Generation Expansion – Guaranteed Power Output (averageMW)

Year	SHP	BIO	WIND	PVP	INFLEX	HYDRO	TOTAL
2022	3553.69	4217.98	9935.56	2257.98	5268.40	56238.28	81471.89
2030	5240.52	4497.47	14764.64	7488.21	14811.86	54381.94	101184.64
2040	5401.54	4497.47	19625.84	11138.19	15740.83	54381.94	110785.81
2050	5401.54	4497.47	24654.67	16243.05	16460.01	54381.94	121638.68

Source: Upside

3.2. Levelized Cost of Energy (LCOE)

In item V.4.9. LCOE Calculation, the consulting firm states that the LCOE (Levelized Cost of Energy) is equivalent to the marginal cost of the system expansion in the long term.

It also states that it conducts a survey with industry investors every six months, aiming at based on their recent experience, charting the production costs and, consequently, the LCOE. However, the source of such information (document or report) is not public and was not provided to Eletrobras for analysis. The consulting firm presents a table with the LCOEs obtained using the July 2021 survey for each source, which we reproduce below with modifications (removal of some periods).

Table 2 – Production cost of the Southeast region (LCOE-SE) in BRL/MWh per source

	Hydraulic Power	SHP Hydraulic Power	Wind Power	Solar Photovoltaic Power	Biomass-based Thermal Power	Gas-based Thermal Power	LNG-based Thermal Power	Oil-based Thermal Power	Mineral Coal-based Thermal Power
2022	142	245	155	167	140	270	270	400	250
2030	140	251	169	179	124	280	280	400	250
2040	145	241	159	157	120	270	270	400	250
2050	150	231	149	127	120	260	260	400	250

Source: Upside

Soon after, the consulting firm presents a table with LCOEs per sub-market, obtained using the consulting firm's own method, which we reproduce below with modifications (removal of some periods).

Table 3 – Production cost (LCOE) BRL/MWh

	SE	NE	S	N	Weighted average based on each source total
2022	195.97	153.05	199.58	171.81	178.95
2030	166.32	137.61	193.28	165.28	154.4
2040	180.28	136.01	183.64	165.28	158.88
2050	184.19	136.01	183.64	165.28	164.14

2060	184.19	136.01	183.64	165.28	164.14

Source: Upside

4. Reference documents for assessment of the assumptions adopted by the Consulting firm

4.1. 2050 National Energy Plan

The 2050 National Energy Plan – 2050 PNE comprises a set of studies and guidelines for designing a long-term strategy for the Brazilian energy sector. The strategy is guided by four major goals – energy security, proper return to investments, availability of access for the population, and criteria. The 2050 PNE presents and discusses a wide variety of possible futures within what was called the "uncertainty cone."

Figure 2 – Uncertainty Cone
Source: 2050 PNE

Legend:
Scenario
Expansion Challenge
Uncertainty cone
Stagnation scenario

In the 2050 PNE, the following questions of interest for designing the long-term strategy were explored: what is the profile of the electric energy matrix in the Stagnation scenario? Is a 100% renewable matrix economically possible and feasible? What is the difference between a 100% renewable matrix and that with no greenhouse gas emissions at the end of the horizon? The 2050 PNE presents in its annexes 64 simulations[2] based on several assumptions taken into account collectively or individually (economic stagnation, 100% renewable expansion, expansion based on non-GHG emission technologies, decrease in water availability, hydro power plant (HPP) retrofit, fully electrical light vehicle fleet in 2050, wind power plant offshore with 20% decrease in CAPEX, among others.)

4.2. 2030 Ten-Year Energy Expansion Plan

The Ten-Year Energy Expansion Plan (PDE) is prepared every year by EPE following the guidelines and with support from the teams of the Energy Planning and Development Office – SPE/MME and the Office of Oil, Natural Gas, and Biofuels – SPG/MME. Its purpose is indicating,

[2] 2050 PNE – Anexo.pdf (epe.gov.br)

not determining, the energy industry expansion expectations on the horizon of ten years. EPE itself emphasizes that the PDE shall not be read as a static plan that establishes what shall happen in the next 10 years due to the uncertainty related to the definition of a vision of the future.

Source or activity	Expansion of the 2030 PDE
HPPs	**4,537 MW** Contracted: 204 MW (2 HPPs in the South region) Indication: 4,333 MW (revamping of existing HPPs in all Brazilian regions)
SHPs	**2,246 MW** Contracted: 746 MW (57 SHPs), mainly in the South, Southeast, and Midwest regions. Indication: 1,503 MW in the SE/CO and S subsystems.
Fossil fuel power plants (FFPPs) (natural gas, coal, and diesel) and NPP	**17,101 MW** Contracted: 6,396 MW – 8 natural gas (NG)-based TPPs (4,703 MW). 2 diesel-based TPPs (288 MW). 1 NPP (1,405 MW). Indication: 10,355 MW from natural gas-based TPPs in the SE/CO and S subsystems.
Biomass-based TPPs	**1,095 MW** Contracted: 635 MW (15 TPPs), being 80% from sugarcane bagasse and 20% from forest waste/wood chips. Indication: 460 MW: 87% from sugarcane bagasse and 13% from urban solid waste biogas.
Wind power plants	**16,363 MW** Contracted: 4,488 MW (140 wind farms) in the Northeast region. Indication: 11,875 MW in the NE subsystem.
Photovoltaic power plants	**5,332 MW** Contracted: 1,675 MW (48 projects) in the Northeast and Southeast regions. Indication: 3,657 MW in the SE/CO subsystems.

4.3. 2021 Generation Price List

The document "2021 Generation Price List" (EPE-DEE-RE-089/2021-r0 of August 18, 2021) presents studies carried out by EPE on the calculation of the estimated amounts (or amount ranges) for the costs related to the sources of electricity generation included in the indicative basket of energy for the Investment Decision Model (MDI), used for the preparation of the Ten-Year Energy Expansion Plan (PDE), or the calculation of the Marginal Cost Benchmark (ceiling prices) of the energy generation auctions.

4.4. Technical Note EPE-DEE-NT-082/2020 – Marginal Cost for Expansion of the Brazilian Energy Sector – Method and Calculation

The Technical Note presents the method and calculation of the Marginal Cost of Expansion (CME) of the Brazilian Energy Sector (SEB) obtained using the Investment Decision Model (MDI) used in the preparation of the Ten-Year Energy Expansion Plan (2030 PDE). The note was prepared with an emphasis on the calculation of the CME of the Brazilian electrical system obtained using the studies carried out by EPE during the preparation of the 2030 PDE.
The TN ends presenting the marginal costs of expansion when considering the mitigation of total investment, implementation, and maintenance costs for an expansion arising from the need for energy and the instantaneous maximum demand.

	Energy CME	Power CME	Expansion CME
Year	BRL/MWh	BRL/KW/year	BRL/MWh
2026	46.43	688.03	128.35
2027	61.5	688.03	143.50
2028	110.33	688.03	192.01
2029	144.90	688.76	226.67
2030	165.09	688.06	246.79
Average	105.65	688.18	187.46

Figure 8 – CME
Source: Technical Note EPE-DEE-NT-082/2020

5. Assessment of the assumptions

"… the growth of the Brazilian electricity charge had, in the past, a significant annual growth of 3-4%, resulting in the incorporation of about 2 avgGW (as guaranteed power output) to the country per year…"

The expansion assumptions used by the consulting firm create scenarios consistent with those considered in the 2050 PNE and the 2030 PDE.

"... the hydroelectric source shall be expanded by using small hydro power plants (SHPs) only, including the mandatory ones, pursuant to Law No. 14,120/2021, and that the additions of fossil fuel power plants would not be significant."

The limited growth of the hydraulic source is consistent with some scenarios presented in the 2050 PNE and the base case presented in the 2030 PDE.

"... rules out the expansion of nuclear power plants."

The limited growth of the nuclear source is also consistent with some scenarios presented in the 2050 PNE and 2030 PDE.

"... expects an aggregation of approximately 50 GW of capacity up to 2030 and another 25 GW between 2030 and 2035."

The expansion indicated up to 2030 is consistent with the scenario indicated in the 2030 PDE. The extrapolation made by the consulting firm for the period from 2030 to 2035 fits several of the multiple scenarios simulated in the 2050 PNE.

"*... decrease in the guaranteed power output of the other MRE plants as being 2.0% (beginning in 2023), and an additional decrease of 1.5% (beginning in 2028).*"

The guaranteed power output (GF) of a Power Plant is the fraction assigned thereto of the National Interconnected System (SIN) GF, pursuant to Decree No. 2,655/98,[3] and is the contract limit for the hydroelectric generators of the system. The Decree establishes that the GF shall be revised every five years or upon the occurrence of material facts, with a limit of 5% reduction on each revision and 10% of the total original amount during the concession.

EPE is responsible for calculating the GF of generation developments, as well as for revising it, and follows methods and criteria defined by specific regulations.[4] The GF of existing HPPs[5] is calculated according to the guidelines and regulations prevailing at the time of calculation. The GF amounts of each development become effective after the enactment of an MME ordinance.

Therefore, the initial assumptions of decrease in the GF of the other MRE plants are within the regulatory limit of up to 5% in five-year revisions. Nonetheless, we suggest verifying whether the cumulative effect of the reductions respects the limit of 10% of the total original amount during the concession.

"...expansion of the Guaranteed Power Outputs of the SEB.."

The expansion assumptions used by the consulting firm create scenarios consistent with those considered in the 2050 PNE and in the 2030 PDE.

"... the LCOE (Levelized Cost of Energy) is equivalent to the marginal cost of the system expansion in the long term."

[3] http://www.planalto.gov.br/ccivil_03/decreto/d2655.htm
[4] https://www.epe.gov.br/pt/areas-de-atuacao/energia-eletrica/garantia-fisica
[5] https://www.epe.gov.br/pt/publicacoes-dados-abertos/publicacoes/calculo-de-garantia-fisica-de-uhes-existentes

It was not possible to confirm the convergence of the LCOE with the CME based on data available in the 2021 Generation Price List and in the Technical Note about the method and calculation of the Marginal Cost of Expansion (CME) of the Brazilian Energy Sector (SEB) obtained using the Investment Decision Model (MDI).

"... LCOEs obtained using the July 2021 survey for each source..."

The LCOE amounts presented by the consulting firm are within the limits presented in the 2021 Generation Price List, except for the hydraulic source, whose costs are calculated per project. Nonetheless, it is important to highlight that there is a significant variation in the LCOE of each source.

Therefore, we believe that it is important that this variable sensitivity is analyzed in the model, within the cost ranges presented in the "2021 Generation Price List" (EPE-DEE-RE-089/2021-r0 of August 18, 2021), considering the most adequate discount rate scenario, between the minimum and maximum amounts for the LCOE of each source.

"... LCOEs per sub-market, obtained using the consulting firm's own method..."

The LCOE amounts per sub-market presented by the consulting firm were defined using its own method and are within the limits presented in the 2021 Generation Price List, except for the hydraulic source, whose costs are calculated per project. Nonetheless, it is not possible to assess their degree of adequacy, neither confirming nor refuting the amounts presented. We suggest analyzing the variable sensitivity in the model, enabling the assessment of different scenarios.

6. Conclusion

The assessment of the generation expansion assumptions and the levelized costs per source by the Upside Report, in view of the official documents of the energy sector, evidences that the expansion assumptions used by the consulting firm create scenarios consistent with those considered in the 2050 PNE and 2030 PDE. The limited growth of the hydraulic and nuclear sources is consistent with some scenarios presented in the 2050 PNE and 2030 PDE. The expansion indicated up to 2030 is consistent with the scenario indicated in the 2030 PDE. The extrapolation made by the consulting firm for the period from 2030 to 2035 fits several of the multiple scenarios simulated in the 2050 PNE.

With respect to the assumptions of decrease in the GF of the HPPs of the other MRE plants, we have verified that they are within the regulatory limit of up to 5% in five-year revisions. Nonetheless, we suggest verifying whether the cumulative effect of the reductions respects the limit of 10% of the total original amount during the concession.

It was not possible to confirm the convergence of the LCOE with the CME based on data available in the 2021 Generation Price List and in the Technical Note about the method and calculation of the Marginal Cost of Expansion (CME) of the Brazilian Energy Sector (SEB) obtained using the Investment Decision Model (MDI). It is not possible to assess the degree of adequacy of the LCOE amounts used in the Report by the consulting firm, as the costs per source vary significantly. Finally, the LCOE amounts per sub-market presented by the consulting firm were defined using its own method and it is not possible to assess its degree of adequacy, neither confirming nor refuting the amounts presented.

The expansion scenarios and levelized costs per source are consistent with official documents, but there are models and assumptions chosen by the consulting firm, based on its expertise and on

information not open to the general public, which may not be audited or reproduced. Therefore, we believe that it is important verifying whether the cumulative effect of the reductions in the GF of the HPPs participating in the MRE respects the limit of 10% of the total original amount during the concession and analyze the LCOE variable sensitivity in the model, within the cost ranges presented in the "2021 Generation Price List," considering the most adequate discount rate scenario, between the minimum and maximum amounts for the LCOE of each source, thus creating alternative scenarios.

1. Purpose

Assessment of the generation expansion and Levelized Cost of Energy (LCOE) assumptions used by Upside consulting firm in the Final Economic and Financial Study Report for Calculation of the Concession Amount. This shall be performed on the observations recorded through the assessment of the consulting firm's Preliminary Report and documented by the Generation Asset Expansion and Management (DGE) through TECHNICAL NOTE DGE 008/2021 (October 8, 2021), verifying whether the recommendations made were adjusted or not or incorporated in the final version of the report.

2. Contextualization

The Economic and Financial Study Report for Calculation of the Concession Amount prepared by Upside is within the context of Eletrobras capitalization, pursuant to the guidelines defined by Law No. 14,182/2021. In an extraordinary meeting held on August 31, 2021, the National Council for Energy Policy – CNPE determined that the concession bonus to be paid to the Federal Government shall be BRL23.2 billion, while the concession bonus for the Energy Development Account (CDE) shall be BRL29.8 billion. Upside was contracted by Eletrobras to calculate, independently, the concession amount in order to support the decision making of the Eletrobras' Board of Directors with respect to whether accept or not the abovementioned amounts. The Report with the detailed assumptions and methods related to the Agreement executed with UPSIDE for the Calculation of the Value Added by New Concession Granted was approved by Eletrobras' Board of Executive Officers on October 20, 2021.

The assessment of the generation expansion assumptions and levelized cost of energy (LCOE) used by the consulting firm Upside was performed and documented by the Superintendent's Office for Generation Asset Expansion and Management (DGE) through Technical Note DGE 008/2021 of October 8, 2021.

2.1. Main findings of Technical Note DGE 008/2021

- The consulting firm indicated that the expansion combines the generation and transmission projects already contracted, the expected progress, and the long-term future expectations, derived from an optimization model compatible with the tools of Empresa de Pesquisa Energética – EPE, but does not describe it nor indicate any references.

- It emphasized that information presented is based on the 2030 Ten-Year Energy Expansion Plan (2030 PDE) and the 2050 National Energy Plan (2050 PNE) reports and briefly describes its procedures for consolidating the final expansion. It also indicates the use of a model

similar to the MDI[1] (of EPE) to calculate the optimal expansion but does not describe it nor indicate any references.

- It also stated that a model that analyzes the climatological dynamics of each series (drainage basin, regional wind speeds, and solar irradiance) was used to "extract" frequencies and combine its projections in future scenarios, but it does not describe such model nor indicates any references.

- The consulting firm stated that the LCOE (Levelized Cost of Energy) is equivalent to the marginal cost of the system expansion in the long term. It also states that it conducts a survey with industry investors every six months, aiming at based on their recent experience, charting the production costs and, consequently, the LCOE. However, the source of such information (document or report) is not public and was not provided to Eletrobras for analysis.

- The consulting firm showed a table with LCOEs per sub-market, obtained using the consulting firm's own method, which we reproduce below with modifications (removal of some periods).

3. Reference documents for assessment of the assumptions adopted by the Consulting Firm

3.1. 2050 National Energy Plan

The 2050 National Energy Plan – 2050 PNE comprises a set of studies and guidelines for designing a long-term strategy for the Brazilian energy sector. The strategy is guided by four major goals – energy security, proper return to investments, availability of access for the population, and criteria. The 2050 PNE presents and discusses a wide variety of possible futures within what was called the "uncertainty cone."

In the 2050 PNE, the following questions of interest for designing the long-term strategy were explored: what is the profile of the electric energy matrix in the Stagnation scenario? Is a 100% renewable matrix economically possible and feasible? What is the difference between a 100% renewable matrix and that with no greenhouse gas emissions at the end of the horizon? The 2050 PNE presents in its annexes 64 simulations[2] based on several assumptions taken into account collectively or individually (economic stagnation, 100% renewable expansion, expansion based on

[1] Investment Decision Model for Expansion of the National Interconnected System (SIN) (epe.gov.br)
[2] PNE 2050 - Anexo.pdf (epe.gov.br)

non-GHG emission technologies, decrease in water availability, hydro power plant (HPP) retrofit, fully electrical light vehicle fleet in 2050, wind power plant offshore with 20% decrease in CAPEX, among others.)

3.2. 2030 Ten-Year Energy Expansion Plan

The Ten-Year Energy Expansion Plan (PDE) is prepared every year by EPE following the guidelines and with support from the teams of the Energy Planning and Development Office – SPE/MME and the Office of Oil, Natural Gas, and Biofuels – SPG/MME. Its purpose is indicating, not determining, the energy industry expansion expectations on the horizon of ten years. EPE itself emphasizes that the PDE shall not be read as a static plan that establishes what shall happen in the next 10 years due to the uncertainty related to the definition of a vision of the future.

3.3. 2021 Generation Price List

The document presents studies carried out by EPE on the calculation of the estimated amounts (or amount ranges) for the costs related to the sources of electricity generation included in the indicative basket of energy for the Investment Decision Model (MDI), used for the preparation of the Ten-Year Energy Expansion Plan (PDE), or the calculation of the Marginal Cost Benchmark (ceiling prices) of the energy generation auctions.

3.4. Technical Note EPE-DEE-NT-082/2020 – Marginal Cost for Expansion of the Brazilian Energy Sector – Method and Calculation

The Technical Note presents the method and calculation of the Marginal Cost of Expansion (CME) of the Brazilian Energy Sector (SEB) obtained using the Investment Decision Model (MDI) used in the preparation of the Ten-Year Energy Expansion Plan (2030 PDE). The note was prepared with

an emphasis on the calculation of the CME of the Brazilian electrical system obtained using the studies carried out by EPE during the preparation of the 2030 PDE.

The TN ends presenting the marginal costs of expansion when considering the mitigation of total investment, implementation, and maintenance costs for an expansion arising from the need for energy and the instantaneous maximum demand.

	CME Energia	CME Potência	CME Expansão
Ano	R$/MWh	R$/KW/ano	R$/MWh
2026	46,43	688,03	128,35
2027	61,53	688,03	143,50
2028	110,33	688,03	192,01
2029	144,90	688,76	226,67
2030	165,09	688,06	246,79
Média	105,65	688,18	187,46

Figure 4 – CME
Source: Technical Note EPE-DEE-NT-082/2020

4. Reassessment of the assumptions of the Final Economic and Financial Study Report for Calculation of the Concession Amount

"*…the growth of the Brazilian electricity charge had, in the past, a significant annual growth of 3-4%, resulting in the incorporation of about 2 avgGW (as guaranteed power output) to the country per year…*"

The expansion assumptions used by the consulting firm create scenarios consistent with those considered in the 2050 PNE and the 2030 PDE.

"*…the hydroelectric source shall be expanded by using small hydro power plants (SHPs) only, including the mandatory ones, pursuant to Law No. 14,120/2021, and that the additions of fossil fuel power plants would not be significant*."

The limited growth of the hydraulic source is consistent with some scenarios presented in the 2050 PNE and the base case presented in the 2030 PDE.

"*…rules out the expansion of nuclear power plants*."

The limited growth of the nuclear source is also consistent with some scenarios presented in the 2050 PNE and 2030 PDE.

"*…expects an aggregation of approximately 50 GW of capacity up to 2030 and another 25 GW between 2030 and 2035*."

The expansion indicated up to 2030 is consistent with the scenario indicated in the 2030 PDE. The extrapolation made by the consulting firm for the period from 2030 to 2035 fits several of the multiple scenarios simulated in the 2050 PNE.

"*…decrease in the guaranteed power output of the other MRE plants as being 2.0% (beginning in 2023), and an additional decrease of 1.5% (beginning in 2028)*."

We were not able to find in the documents issued by MME, EPE, and ANEEL information to confirm or refute the assumption of future decrease in the guaranteed power output of the plants forming part of the MRE.

"*…expansion of the Guaranteed Power Outputs of the SEB…*"

The expansion assumptions used by the consulting firm create scenarios consistent with those considered in the 2050 PNE and in the 2030 PDE.

4.1. Weighted Cost of Production per Sub-Market (CPPS)

Previously, the consultant indicated, for estimates of energy production costs and the marginal cost of expansion of the system, the use of the LCOE (Levelized Cost of Energy). In the Preliminary Report, Upside stated: "*…the LCOE (Levelized Cost of Energy) is equivalent to the marginal cost of the system expansion in the long term*."

At that moment, it was not possible to confirm the convergence of the LCOE with the CME based on data available in the 2021 Generation Price List and in the Technical Note about the method and calculation of the Marginal Cost of Expansion (CME) of the Brazilian Energy Sector (SEB) obtained using the Investment Decision Model (MDI).

Even though the LCOE amounts presented by the consulting firm were within the limits presented in the 2021 Generation Price List, except for the hydraulic source, whose costs are calculated per project, there was a significant variation in the LCOE of each source, so it was not possible to assess the degree of adequacy of the amounts used in the consulting firm's Preliminary Report.

Classification: Confidential

In the Final Report, the LCOE was replaced by a Weighted Cost of Production per Sub-Market (CPPS). CPPS is defined as the division of total project costs by the energy generated throughout the plant's operation, similar to the LCOE, and in its study, Upside took into account the experience of the professionals involved in the preparation of the Final Report, a survey with investors in the industry in order to tabulate the production costs per source and sub-market, and its own method.

5. Conclusion

The assessment of the generation expansion assumptions and the levelized costs per source by the Upside Report, in view of the official documents of the energy sector, evidences that the expansion assumptions used by the consulting firm create scenarios consistent with those considered in the 2050 PNE and 2030 PDE. The limited growth of the hydraulic and nuclear sources is consistent with some scenarios presented in the 2050 PNE and 2030 PDE. The expansion indicated up to 2030 is consistent with the scenario indicated in the 2030 PDE. The extrapolation made by the consulting firm for the period from 2030 to 2035 fits several of the multiple scenarios simulated in the 2050 PNE.

On the other hand, we were not able to find elements in the documents issued by MME, EPE, and ANEEL to confirm or refute the assumption of future decrease in the guaranteed power output of the plants forming part of the MRE. It was not possible to confirm the convergence of the CPPS with the CME based on data available in the 2021 Generation Price List and in the Technical Note about the method and calculation of the Marginal Cost of Expansion (CME) of the Brazilian Energy Sector (SEB) obtained using the Investment Decision Model (MDI). It is not possible to assess the degree of adequacy of the CPPS amounts used in the Final Report by the consulting firm, as the costs per source vary significantly. Finally, the CPPS amounts per sub-market presented by the consulting firm were defined using its own method and it is not possible to assess its degree of adequacy, neither confirming nor refuting the amounts presented. Also, there are references to their own models and methods that are not described and to which there are no references.

Therefore, despite the expansion scenarios and levelized costs per source be consistent with official documents, there are aspects of the consulting firm's report and choices which may not be audited or reproduced, due to the use of specific methods and models.

TECHNICAL NOTE

SUBJECT: Law No. 14,182/21 – Eletrobras Capitalization Project. Hiring of a consulting firm to assist Eletrobras' management regarding the critical view of the value added by the new generation concession granted in the Company privatization process. Assessment of assumptions under the regulatory aspect of generation by the Generation Regulation Office – DGDR, in order to assist the issuance of the "Economic and Financial Study Report – Calculation of the Value of the Grant" issued by the Consulting Firm **Upside Finance**.

INTRODUCTION:

Upon amendment of Provisional Measure No. 1,031/2021 (MP 1,031/2021), of February 23, 2021, the Federal Government launched the bases of ELETROBRAS capitalization project.

The company, in coordination with the Ministry of Mines and Energy – MME, released on the same day, on February 23, 2021, a Material Fact (FR 23.02.2021) with information available at that moment.

Following the enactment of Provisional Measure (MP) No. 1,031/2021, a series of internal measures were adopted within the scope of the company, such as the formation of working groups to organize and adopt the necessary steps to incorporate and implement operational measures, which should be followed at the corporate level to comply with the laws and regulations in reference, as well as commands from the Granting Authority.

At first, it is worth mentioning that the privatization model chosen by the federal government has as its main pillar the approval of new concession agreements for electricity generation, most of which with the expected change in the quota system, created by Law No. 12,783/2013, for a new system of independent production of energy, pursuant to MP 1,031/2021 – "The so-called *descotização* (process of termination of the quota system)."

In this context, ELETROBRAS decided to engage a specialized company to support the decision of top management to evaluate the advantageous of the value added by added by the new concession in the potential Company privatization process.

Particularly, regarding the *descotização*, the proposal authorizes the trading of the total amount of this energy at market prices, upon at least ELETROBRAS capitalization, in addition to compliance with the deadline and percentage of *descotização*, as shall be seen below.

Reference Term No. 1 (TR1), of the ELETROBRAS Capitalization Project, used in the contracting process, which led to the choice of UpSide, reflects, therefore, the assumptions and conditions for the performance of the service by the contracted company, in the abovementioned terms.

From the more specific point of view of ELETROBRAS' area that regulates the generation, Advisory Division of Regulation of the Generation (DGDR), the work that was developed together with the other areas of the Generation Division – DG, as well as other areas of the company involved, for example, areas of conformity and risk, financial area, legal area, among others, was to support the clarification of doubts pertinent to the area that is regulating the generation, which could

serve to support the establishment of normative benchmarks and references to the execution of the service object by the contracted company.

In this regard, at some points of such TR1, there is an express mention that the contracted company should lead out of consideration for prevailing laws and regulations throughout the contract performance period, not only linked to, but in the detail, to the acts that could be issued, for example, by the National Council for Energy Policy – CNPE), Ministry of Mines and Energy – MME, the Brazilian Electricity Regulatory Agency – ANEEL, and the Brazilian National Water and Basic Sanitation Agency – ANA, in addition to all applicable regulations.

While the process that led to the engagement of the company UpSide was in progress, ELETROBRAS under the initiatives in progress inside the company, remitted to MME Letter CTA-DC-0860/2021 of April 06, 2021, seeking, pursuant to the referred subject, "Clarification – ELETROBRAS capitalization process and the Definition of the Guaranteed Power Output (GF) of Energy of the Plants Affected by the Provisional Measure (MPV) No. 1,031 of February 23, 2021."

Official Letter No. 158/2021/SE-MME of April 20, 2021, addressed to ELETROBRAS the MME's understanding about the topics that the company had searched for clarification in the context of MP No. 1,031/2021.

MP 1,031/2021 was eventually converted, with the changes introduced to the original text during the legislative discussion process, into Law 14,182/2021 of July 12, 2021.

Also during the month of July 2021, ELETROBRAS formalized the engagement of the Upside company for the performance of the purpose provided for in TR1.

The internal works followed its flow with a series of meetings and interactions between the several areas engaged in and outside of the DG, sharing information available to ELETROBRAS until that time, always in order to support technical regulatory to clarify doubts and seek for cooperate with the UpSide company in the performance of the object of the agreement of its responsibility.

1. Guideline of agility established by the Executive Branch to the process:

It is important to mention that MME and ANEEL prioritized the ELETROBRAS capitalization process, seeking to speed and expedite their examination. In this way, it is worth highlighting some initiatives that go against this premise of celerity defined by the Executive Branch itself when it published PM 1,031/2021, which reflect the urgency and relevance of the political option of this Branch, as well as acts issued by MME, ANEEL, and CNPE in this context.

Thus, the different governmental bodies engaged with the capitalization process have been adopting a series of measures in the last few weeks in the meaning of seek for materialize the guideline given by the Executive Branch in the implementation of agility in the arrangements of the different proceedings related to the topic.

Just as an example of the priority given by the Granting Authority to the topic, it is possible to mention Official Letter 274/2021/SE-MME, referred by the Executive Secretary of MME to the Reporting Officer of ANEEL about the topic of the Generation Scaling Factor (GSF), Hélvio Neves Guerra, dated July 12, 2021, as well as Official Letter 59/2021/SPE-MME, from the Secretary of Energy Planning and Development, directed to ANEEL's General Director about the topic of defining the GFs. Finally, there is Official Letter No. 317/2021/SE-MME, dated August 04, 2021, directed to the Director Sandoval de Araújo Feitosa Neto, in which MME requests ANEEL to speed up the execution of the technical and administrative process to establish the model of the draft

concession agreement for the HPPs covered by the ELETROBRAS capitalization process, as provided for in art. 2 of Law 14,182/2021, under the justification of not being obstacles to the compliance with the schedule of the privatization of MME and the studies carried out by BNDES.

2. GSF – Law No. 13,203/15 (amendments to Law 14,052/20):

On March 30, 2021, ANEEL scheduled, pursuant to Normative Resolution No. 895/2020 (REN No. 895/2020), two (2) administrative processes for decision.

The first administrative process treated of a decision on an appeal by some companies and entities, with emphasis on the appeal by ELETROBRAS Furnas, questioning the time basis of the scope of REN 895/2020, which restricted the calculation of GSF values to the years from 2016 onwards. The acceptance of the appeal of Furnas by ANEEL's executive office, based on the text of Law 14,052/2020 itself, it extended to the plants that were renegotiated in 2015 the possibility to include the years 2013, 2014, and 2015 for purposes of calculating the GSF compensation values.

As a result, ANEEL issued Normative Resolution No. 930/2021 (REN 930/2021), making it possible for the Electricity Trading Chamber (CCEE) to recalculate the values related to the GSF for hydroelectric plants (UHEs) that were entitled to receive amounts between the years 2013 and 2015.

However, the Brazilian Government Accountability Office – TCU questioned ANEEL regarding the adequacy of its decision reflected in REN 930/2021.

This interaction between ANEEL and TCU ended up postponing ANEEL's decision as to the second administrative process, which was scheduled for ANEEL's executive office meeting of March 30, 2021.

In light of the necessary interactions between ANEEL and TCU on the one hand, in addition to MME request to ANEEL to expedite the progress in the solution of the GSF issue, on the other hand a decision of the executive office of the agency occurred on August 03, 2021, at the 28th Ordinary Public Board Meeting (RPOD) of ANEEL, partially homologating the GSF calculations for the UHEs not impacted by REN 930/2021.

This decision of the 28th RPOD of ANEEL of August 03, 2021, resulted in the amendment to Homologation Resolution No. 2,919/2021 (REH 2,919/2021), which materialized such partial homologation of the GSF issue.

As the progress of the topic, and ANEEL had the opportunity to express its opinion when compared to TCU as to challenge of REN 930/2021, the topic of the approval of the GSF complementary values was scheduled for ANEEL's 34th RPOD, held on September 14, 2021, resulting in the amendment to Homologation Resolution No. 2,932/2021 (REH 2,932/2021).

3. Remaining indemnification for the generation assets:

On July 22, 2021, ANEEL published Normative Resolution No. 942/2021 (REN 942/2021), which establishes criteria and procedures for calculating the portion of investments linked to reversible assets, not yet amortized or not depreciated, of hydro power plants, referred to in art. 2 of Decree No. 7,850/2012, amending ANEEL Normative Resolution No. 596/2013 (REN 596/2013).

Timely, through CTA-DGDR 1,441/2021 of August 2, 2021, ELETROBRAS filed a request for clarification as to processing of some topics related to the inspection process initiated as of August

2, 2021, according to Art. 9 of REN 942/2021. Thus, it was possible to have more clarity in the segregation of items under the competence of ANEEL, in itself understanding, those that the Agency deems being MME's competence, according to the understanding presented by the technical areas in Technical Note No. 96/2019 (TN 96/2019 – closing of Public Hearing No. 03/2019) and housed in the vote of the reporting officer who generated the aforementioned REN 942/21.

Accordingly, shall be responsible for ANEEL address only to the calculation of the remaining indemnifications, pursuant to its understanding in REN 942/2021. REN No. 942/21 establishes up to twelve (12) months, as of August 02, 2021, for the inspection process of ANEEL may be ended, and it is allowed to, at agency's sole discretion, be extended for up to more twelve (12) months.

Again, it is ANEEL's understanding that MME should establish a regulatory framework aiming at address to the items and initials not contemplated by REN 942/21, for example, reservoir land, material errors of calculation, and social and environmental expenses not captured.

All these points were subject to of letter CTA-PR-01787/2021 of September 24, 2021, in which ELETROBRAS requests to MME clarification regarding the regulatory uncertainties, in addition to apply for access to the assumptions and method of the economic and financial model that supported CNPE Resolution No. 15/2021 (RES 15/2021). This topic will also be more detailed below.

On the other hand, it is worth mentioning that RES 15/2021 of August 31, 2021 (published in the Federal Official Gazette (DOU) on September 2, 2021 – reviewed in more detail in the topic most below), in its art. 2, ¶¶ 6 and 7, addresses the issue of indemnity, mentioning that for calculating in the amount of concession bonus of new concession agreements we considered the indemnifications for investments (¶ 6).

This very same wording of ¶ 6 of art. 2 of RES 15/2021 is included in the Material Fact of Eletrobras of August 31, 2021 (FR-3108.2021) in the topic 'Other Information.' In addition, the annexes to FR-31.08.2021 have tables showing values related to Regulatory Operating Costs (GAGO&M), Annual Cost of Annual Cost of Movable and Immovable Facilities (CAIMI), Cost of Capital of Investments in Improvements (GAGMelhorias), Charge for the Use of the Distribution or Transmission System (EUSD/EUST).

However, the abovementioned ¶ 7 of art. 2 of RES 15/2021 determines that the new concession agreements referred to in the main section of the article shall establish that the electric utilities shall not be entitled to the indemnifications provided for in ¶ 6.

It is not clear, however, whether any amounts related to the indemnification had already been established when RES 15/2021 was issued, even before the ANEEL inspection process provided for in REN 942/2021 was completed, as well as what were the assumptions and calculation methodology adopted to obtain the amounts in the annex to FR-31.08.2021.

These and other questions related to CNPE Resolution No. 15/21, *vis à vis* pending of solutions to issues in progress when compared to ANEEL and/or MME (see paragraph above and the example of the damages initials that ANEEL understands are not within its competence), cause the dispatch from Eletrobras to MME CTA-PR-01787/2021 of September 24, 2021, basically requesting the opportunity to know the full content of the note that would have supporting CNPE Resolution No. 15/2021.

This fact is also analyzed below in the topic CNPE RESOLUTION No. 15/2021.

4. ANEEL Public Consultation (CP) No. 48/2021:

ANEEL's 29th RPOD, held on August 10, 2021, resolved to initiate a Public Consultation with the purpose of collecting information to support the new generation concession agreements, pursuant to the terms set forth in Law No. 14,182/2021. Probably, due to the fact that the already mentioned guideline speeds up the process (Official Letter No. 317/2021/SE-MME, referred to in item 2 of this Technical Note), the agency gave only twenty (20) days to the agents to send their contributions in the scope of CP 48/2021, which ended on August 31, 2021.

CP ANEEL 48/2021 is mentioned, not to narrate the steps of its corresponding administrative process initiated by ANEEL, aiming at to collecting contributions from the agents, but only to mark the opportunity that ELETROBRAS and controlled electric Utilities had to formally express its opinion in a public process about drafts of the new concession agreements.

Given the connection with UpSide's work, it is worth noting that some assumptions and/or topics of interest to the consulting firm for the construction of its economic and financial model could be addressed in the draft agreement subject to criticism and suggestions in the scope of CP 48/2021.

In this context, ELETROBRAS has prepared, together with the Electric Utilities affected by Law No. 14,182/2021, which may have their respective contracts amended, a robust contribution aimed at improving the way the topics covered in its scope are dealt with. In summary, we report the points of emphasis and relevance of this contribution:

i. Individualization of concessions;

ii. Issues about pre-existing rights and the waiver clause;

iii. Extension of grant deadlines: GSF (CNPE regulated, but we have no further detail);

iv. Indemnifications for investments in reversible assets not yet amortized and/or depreciated (regulated by CNPE, but we have no further detail);

v. Rights not yet exercised: e.g., material errors in indemnifications, losses of turbine overflow;

vi. Recalculation of GF (already recalculated);

vii. Grant of water resources;

viii. Further possibility of extension of the concession agreements;

ix. *Descotização* process (CNPE regulated);

x. Provision/Reimbursement of ancillary services;

xi. Limitation of liability of the concessionaire: contribution of values and locks;

xii. Contractual and administrative penalties;

xiii. Provision of energy to the PISF (The exact amount that shall be deducted from the concession bonus as a result of the delivery of energy to the PISF should be equal to the difference between the market value and BRL80.00/MWh);

xiv. Contribution to the Electric Energy Research Center – CEPEL.

Due to the suggestions for improvement made by all the interested parties who contributed to CP 48/2021, which raised a series of doubts regarding the adequate treatment of certain topics in the new draft generation concession agreements, the Superintendent's Office for Generation Concessions and Authorizations – SCG of the agency itself requested, in Memorandum No. 175/2021-SCG-ANEEL, the Office of Federal Prosecution at ANEEL – PF ANEEL to assess certain aspects.

PF ANEEL, through Opinion No. 00284/2021/PFANEEL/PGF/AGU of September 24, 2021, issued by the Chief Prosecutor on the late afternoon of September 28, 2021, analyzed the issues directed to it by SCG. Item 47 of the PF ANEEL opinion, cites Technical Note No. 46/2021 of the Economic Advisory Division of MME (NT 46/2021-ASSEC/MME).

We note that this TN 46/2021-ASSEC/MME may be the note referred to in item 2 of Official Letter No. 350/2021/ SE-MME, which ELETROBRAS has not had the opportunity to know yet.

The end of CP 48/2021 was even put on the agenda for ANEEL's 36th RPOD, held on September 28, 2021. However, whether because the PF ANEEL opinion was only issued on the late afternoon of September 28, 21 or because of the non-availability of the Contribution Analysis Report (RAC), a type of technical note with the analysis of the technical areas of ANEEL involved in the technical and administrative process of CP 48/2021, the topic was removed from the agenda on the afternoon of September 27, 2021.

On September 30, 2021, the closing of CP 48/2021 was again put on the agenda for the 37th RPOD, scheduled for October 5, 2021. ANEEL TN on CP 48/2021 was provided only on the afternoon of the day before the 37th RPOD (October 4, 2021).

In this scenario, ELETROBRAS filed the video of the oral arguments, as provided for in ANEEL internal regulations, on the afternoon of October 4, 2021, without, however, being aware of the analysis by ANEEL's technical areas.

Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT/ANEEL and the draft Vote of the Reporting Officer were made available on the afternoon of October 4, 2021.

The focal point of the narrative of this item of CP 48/2021, making a correlation with the subject matter of this Technical Note of ELETROBRAS that assesses the impact of UpSide's work, is precisely to point out the need to provide ELETROBRAS with a later opportunity to talk to the agencies involved in the capitalization process, in view of the occurrence of supervening facts, which could have an impact on the final conclusion of UpSide's work.

CP No. 48/21 was effectively closed with the vote that took place at ANEEL's 37th RPOD on October 5, 2021, with the approval of the draft of the new generation agreements, as amended by the version originally submitted for public consultation.

5. CNPE Resolution:

On the evening of August 31, 2021, the last day to contribute to CP 48/2021, ELETROBRAS disclosed a Material Fact giving initial information about CNPE Resolution No. 15/2021 of the same September 31, 2021, which was published in the Federal Official Gazette (DOU) on September 2, 2021.

FR-31.08.2021 is accompanied by MME Official Letter No. 350/2021/SE-MME, dated the same day August 31, 2021, which informed the company of the publication of CNPE Resolution No. 15/2021. Item 2 of MME Official Letter No. 350/21 mentions that a note would be published on its website giving more details on the content of the approved resolution.

In need of more details and information, given that the note mentioned in MME Official Letter 350/2021 had not been published on MME's website until September 24, 2021, the company sent MME CTA-PR-01787/2021 of September 24, 2021, basically requesting the opportunity to know the full content of the note that would have been the basis for CNPE Resolution 15/2021.

In this sense, it would be extremely important that ELETROBRAS technical areas could have access to the already mentioned Technical Note ASSEC MME No. 46/2021 (TN 46/2021-ASSEC/MME). This way, the company could have better conditions, for example, to reproduce the calculations of CNPE, as they would be able to know the assumptions and methodology used with a view to the necessary internal analysis of the company focusing on the benefits of the proposal outlined in CNPE Resolution No. 15/2021.

6. Perspectives for regulatory changes – example ANEEL regulatory agenda:

It is important to highlight that ANEEL discloses annually, as well as reviews eventually in the course of the year, its regulatory agenda, in which the matters that may have progress under the decisions of the agency's executive office are established, whether with the opening of takes of subsidies (TSs), public consultation (CPs) and/or public hearings (PAs), whether with the closing and/or decision of certain procedures previously made and which had not been completed.

It is important remembering that ANEEL's regulatory agenda is indicative, and historically it is common for an agenda item scheduled for one semester to be carried over to the next or even from one year to the next.

For the context of this TN, the point of attention is that there are items on ANEEL's current regulatory agenda that may bring, in the near future, changes in the regulatory framework that may have an impact for purposes of simulations of the results for the companies of the sector.

Just as an example, we mention Public Consultation 39/2021 (CP 39/2021), which presents a proposal for changes in the regulation of the method of the Tariff for the Use of the Transmission System (TUST), still with an repayment period for contribution pending until October 14, 2021 and without the possibility, at the moment, of anticipate the result for such CP. Another example is the expected opening of a CP on ancillary services, scheduled for December 2021.

Still as a last example of potential impacts of legislative and regulatory modifications that may impact the perspective of revenues of the agents of the sector, it is worth mentioning the recent change in Law 12,334/2010, known as law of safety of the dams, brought by Law 14,066/2020 of September 2020, which is pending of regulation in order to include the potential impact on the electric utilities that operate dams.

It is worth mentioning that in the execution of activities in any segments the economy, companies are subject to the so-called business risk. This does not mean that companies affected by legislative and regulatory changes in the sectors in which they operate cannot seek to be compensated by changes introduced in the course of the development and/or operation and maintenance of their undertakings, particularly in highly regulated sectors.

7. TCU:

As a last topic of this technical note, it is also worth mentioning that TCU is in the process of evaluating the privatization modeling as a whole, and may suggest adjustments to it, which may lead to the eventual need for re-analysis of certain aspects by the different bodies engaged in the decision-making process of the capitalization of ELETROBRAS.

8. Highlights:

- The highlights of this technical note are as follows:

- CNPE, MME, and ANEEL, have sought, so far, to meet the agility guideline dictated by the Executive Branch;

- Eletrobras has been contributing to the improvement of the capitalization process and the legal certainty when dealing with the issues listed above, for example, in addressing the issues in CP 48/2021 – drafts of new contracts, participation in meetings, sending letters to the different agencies involved seeking clarification to support its decision-making process;

- Because of the laws and regulations and orders issued by regulatory authorities (Law No. 14,182/2021, MME Official Letters, ANEEL executive board decisions, CNPE Resolution), Eletrobras complied with the decisions and followed the guidelines of the Executive Branch and other agencies involved;

- The convenience for ELETROBRAS of receiving the clarifications requested in CTA PR No. 01787/2021 of September 24, 2021 is noteworthy, as well as the content of TN 46/2021-ASSEC/MME, which could help even more a well-founded corporate decision regarding the issues in CNPE Resolution No. 15/2021;

- It is also worth highlighting the need to evaluate Eletrobras' opportunity, and/or of the electric utilities affected by Law No. 14,182/2021, to later contribute to any improvement needs – (i) MME: indemnification, reproducibility of calculations, etc.; and (ii) ANEEL: final draft agreement, highlighting any adjustments pointed out by TCU.

Conclusion:

DGDR participated in the meetings among the several areas of Eletrobras with the contracted consulting firm company, seeking to clarify questions related to its area of competence and regulation of the generation area applicable to the matters, with emphasis on the items listed in this technical note, having nothing to oppose the application occupational of UpSide Finance, emphasizing that DGDR does not evaluate calculation methodology and results derived from the economic and financial model produced by the contracted company as one of the final products of its agreement.

Rio de Janeiro, October 7, 2021.

TECHNICAL NOTE

SUBJECT: Law No. 14,182/2021 – Eletrobras' Capitalization Project. ANEEL Public Consultation No. 048/2021 (CP No. 048/2021), filed by the Brazilian Electricity Regulatory Agency – ANEEL, aiming at obtaining information to enhance the draft concession agreement that shall regulate the exploitation of the hydraulic power potentials covered by Law No. 14,182/2021, which addresses the privatization of the Centrais Elétricas Brasileiras S.A. – Eletrobras.

INTRODUCTION:

Upon amendment of Provisional Measure No. 1,031/2021 (MP 1,031/2021) of February 23, 2021, converted into Law No. 14,182/2021 of July 12, 2021, the Federal Government launched the bases of ELETROBRAS capitalization project.

At first, it is worth mentioning that the privatization model chosen by the federal government has as one of its main pillars the approval of new concession agreements for electricity generation, most of which with the expected change in the quota system, created by Law No. 12,783/2013, for a new system of independent production of energy, pursuant to Law 14,182/2021 – the so-called *descotização* (process of termination of the quota system).

In this context, **TN-DGDR-005/2021**, of October 7, 2021 (attached), which terms we referred to in the preparation of this Technical Note (**TN DGDR No. 006/2021 of December 23, 2021**), which shall be understood in a complementary and systematic manner with TN-DGDR-005/2021, registered, from the generation regulation area point of view, the monitoring of the activities developed by Eletrobras and contracted consulting services, to assist the company in a critical view of the calculation of the value added by new concessions.

This Technical Note – which we will refer to as '**TN CP No. 48/2021**,' just to facilitate references between the analyzes of this TN and **TN-DGDR-005/2021**, which, as already registered, focused on the regulatory generation assumptions that could impact the work of the economic and financial consulting services contracted – aims at pointing out, also from the Generation Regulation Advisory Services point of view, the work developed by Eletrobras and the law firm specialized in the legal-regulatory area

contracted by the company, related to the process of contributions under **ANEEL CP Nº 048/2021**.

The work to be provided by the legal and regulatory law firm contracted is, pursuant to the Contract ECE-DSS-4640-2021 and as it shall be detailed throughout this TN CP No. 048/2021, for example, holding leveling meetings with Eletrobras and subsidiaries affected by Law No. 14,182/2021, the preparation of contributions and oral arguments on behalf of Eletrobras and subsidiaries to ANEEL CP No. 048/2021, preparation of opinions, participation in meetings with the relevant governmental bodies, preparation of an evaluation report on the results of the social participation processes, made by ANEEL and/or the Ministry of Mines and Energy – MME on the matter, in order to identify the effectiveness of the contributions presented and any related impacts.

1. 1. Term for contributions to ANEEL CP No. 048/2021:

It is important to reiterate, as stated in TN-DGDR-005/2021, the priority that the National Council for Energy Policy – CNPE, the MME, ANEEL, and the Brazilian Government Accountability Office – TCU have given to the Eletrobras capitalization process, seeking to expedite its process.

More specifically for ANEEL CP No. 048/2021, the term for social participation in the contribution process was extremely short. ANEEL CP No. 48/2021 was initiated on August 10, 2021, and the agents had only twenty (20) days to submit the contributions. Therefore, those interested in contributing to such relevant and complex matter had only from August 11, 2021 to August 31, 2021 to do so in such ANEEL CP No. 48/2021.

It is worth mentioning that the best practices of the regulatory agency itself prescribe, pursuant to the provisions of ¶ 2 of art. 9 of Law No. 13,848/2019, the so-called Regulatory Agency Law, a term of at least forty-five (45) days for proper contribution to the social participation processes, a term that, in many situations where complex issues are involved, is commonly extended beyond forty-five (45) days.

For this specific case, ANEEL prepared two (2) technical notes (TNs No. 255/2021-SCG/SRG/SRM/SFG/SFF/ANEEL and No. 493/2021-SCG/SRG/SRM/SFG/SFF/SGT/ANEEL) to analyze the matter, for which, given the complexity of the matter, there was a technical multidisciplinary participation of several departments of the Agency.

2. Remaining indemnification for the generation assets:

On July 22, 2021, ANEEL published Normative Resolution No. 942/2021 (REN No. 942/2021), which established criteria and procedures for calculating the portion of investments linked to reversible assets, not yet amortized or not depreciated, of hydro power plants, referred to in art. 2º of Decree No. 7,850/2012, amending ANEEL Normative Resolution No. 596/2013 (REN No. 596/2013).

Seeking to complement the analysis of TN-DGDR-005/2021 on this indemnification matter, this TN CP nº 48/2021 seeks to update the understanding on the matter of the remaining indemnification for generation assets.

In order to facilitate the treatment of the matter brought by ANEEL and MME/CNPE, there are:

a) <u>Quotaholder Plants – Normative Resolution (REN) No. 942/2021 (amending REN No. 596/2013)</u>:

(i) Regulates only the criteria and procedures required to calculate the amounts related to the indemnification for non-depreciated and unamortized assignable generation assets extended by Law No. 12,783/2013;

(ii) Does not define the cost or payment method;

(iii) Closes Public Hearing No. 03/2019, reviewing REN No. 596/201 wording;

(iv) Established the beginning of the inspection process for August 2, 2021, stipulating a term of up to 12 (twelve) months for the completion of the administrative process, aiming at calculating the amounts due to the electric utilities;

(v) Establishment of a valuation criteria, prioritizing the reference price database, which requires re-inspection of all assets (physical, technical, administrative, and accounting) to verify which assets could be valued by ANEEL's Price Database;

(vi) Does not cover certain indemnity items referring to expenditures up to the basic project, such as material calculation errors, value of the reservoir lands, and social and environmental investments not related to assignable assets.

b) <u>Quotaholder Plants – Revenue Received for Improvements (Costs of Investments in Improvements (GAGmelhorias)</u>:

(i) Without regulatory definition;

(ii) ANEEL TN No. 146/2018 proposed, in the past, the possibility of full deduction in GAGmelhorias in the final indemnification amount, if the generation agent expresses waiver of the right to indemnification;

(iii) ANEEL TN No. 96/2019, prepared by the technical areas later, proposed the exclusion of the possibility of a discount, pursuant to items 53, 54, and 55 of this TN 96/19;

(iv) Condition of removal of this possibility confirmed in the vote of Officer Efrain (items 73, 74, and 75 – expository part of the vote of Officer Efrain, section II.6), indicating that the hypothesis of discount in the installment (being important to emphasize that it is not a full discount) of GAGmelhorias, would be possible to be defined at a future time and would depend on the items/lines taken into account in the inspection process and amounts actually calculated and approved (items 76 and 77 – expository part of the vote of Officer Efrain, section II.6);

(v) It is necessary to know the indemnification amount, define the costing method for the proper application of item 34 of sub-module 12.1 of the Tariff Regulation Procedures (PRORET) (prevailing – evaluated below).

c) <u>Payable Plants not Operating under the Quota System – not addressed in REN No. 942/2021</u>:

(i) Not covered by TN No. 96/19, the vote of the Reporting Officer Efrain, as well as in REN No. 942/2021 wording (amending REN No. 596/2013);

(ii) Vote by the Reporting Officer Efrain, in item 28, section II.2 Depreciation, payment method *and* interest on equity, also provides that, for concessions that were not extended, it is necessary to consider the depreciation accrued until the end of the effective period of the concession;

(iii) Indemnification Value Calculation Methodology: No regulation of the criteria and procedures required to calculate the assignable assets and non-depreciated and unamortized investments of

generation assets not extended by Law No. 12,783/2013, at the MME/Granting Authority's order to do so.

2.1 Composition of the indemnification to the plants operating under the quota system:

2.1.1) Component 1: until basic project – amounts already paid. It does not include (i) reservoir land, (ii) material calculation errors, and (iii) social and environmental expenditures not related to assignable assets. The amounts considered were paid in a previous calculation cycle pursuant to the calculation made by the Energy Research Company – EPE (Decree No. 7,805/2012)[1].

2.1.2) Component 2: investments made after the basic project until the start-up of the last generating unit (GU) not amortized and not depreciated. Calculation pursuant to REN No. 596/2013 (amended by REN No. 942/2021). Need for the electric utilities to contract companies accredited with ANEEL for the preparation of Assessment Reports (ARs). Inspection process with an expected term of up to twelve (12) months after August/2021 for the Agency to approve the amounts due to the electric utilities;

2.1.3) expenses accounted for after the start-up of the last GU and not amortized and/or depreciated: lack of proper treatment by REN No. 596/13, which may be correlated with the component related to asset improvements (GAGmelhorias);

2.1.4) method of costing (treasury or tariff) and adjustment payment criteria: according to ANEEL's understanding, the Granting Authority is responsible for defining them (see information in section 2, letter "b)");

Indemnification to the plants not operating under the quota system: lack of proper treatment/need for regulation by the granting authority, pursuant to ANEEL's understanding (see information in section 2, letter "c)").

[1] It regulates Provisional Measure No. 579 of September 11, 2012 providing for the concessions of electricity generation, transmission, and distribution, reduction in sectoral charges, lower tariffs, among other provisions.

2.2. Understanding of Sub-module 12.1 of the PRORET: Understanding of item 34, Sub-module 12.1 of PRORET pursuant to the provisions in ¶ 7, art. 2, of CNPE Resolution No. 15/21.

As seen above, there is a regulation established for the calculation of amounts related to the remaining indemnification to the plants operating under the quota system after the basic project until the start-up of the last GU. In such situations, the provisions in Sub-module 12.1 of the PRORET may apply, emphasis added to item 34, subject to assessment in ANEEL TN No. 096/19, as well as to breakdown in the Reporting Officer Efrain's vote, entailing in REN No. 942/21 (which amended REN No. 596/13):

> *34.* ***The (i) compensation for investments made in hydro power plants, in concession periods prior to the quota system for guaranteed power output, (ii) known and approved by an act of the Government, upon acknowledgement that they will be recovered through tariffs, (iii) shall be discounted from equation (4), (iv) as an adjustment factor per plant, and, retroactively, from the amounts effectively paid to the electric utilities, (v) with due inflation adjustments, as of the implementation of this methodology.*** *[Emphasis added]"*

It seems to us that, in order to be able to deduct some amount due as remaining indemnification to the plants operating under the quota system related to the previous concession cycle (prior to the quotas, pursuant to Law No. 12,783/2013), from amounts to be paid for the current concession cycle (under quota regime), as GAGmelhorias, in the best understanding of the transcript transcribed item 34 above, it should have a logical and interlinked sequence as follows:

(i) assess the amounts due in an inspection process established by REN nº 596/13 (amended by REN nº 942/21) – presentation of ARs by the electric utilities and approval of amounts by ANEEL;

(ii) (a) knowledge and approval (of the amounts) by a Government act and (b) acknowledgment that such amounts shall be paid as tariff;

(iii) establishment of criteria for discounting the amounts calculated in equation (4);

(iv) The discount cannot be in full (see information in section 2, letter "b)");

(v) there shall be criteria for inflation adjustment of the amounts.

Therefore, it is possible to note that, to eventually come to a conclusion of the possibility of discounting an amount related to the indemnification for the past cycle, considering the prospect of payment of GAGmelhorias in the current cycle, the path above should be followed, by observing the inspection process aiming at calculating the amounts, followed by the publication of acts, by the Government, meeting the requirements set out above.

However, the abovementioned ¶ 7º of art. 2 of CNPE RES No. 15/2021 establishes that the new concession agreements referred to in the main section of the article shall establish that the electric utilities shall not be entitled to the indemnifications provided for in ¶ 6. Additionally, in an extra publication of the Federal Official Gazette (DOU) yesterday, December 22, 2021, RES CNPE No. 30/2021 was published, amending RES CNPE No. 15/2021, for which we will make additional comments below.

Additionally, it is not clear, however, whether any amounts related to the indemnification had already been established when CNPE RES No. 15/2021 was issued, even before the ANEEL inspection process provided for in REN No. 942/2021 was completed, as well as what were the assumptions and calculation methodology adopted to obtain the amounts in the annex to FR-31.08.2021. Also, as supplemental information, it is worth noting that the company published a Material Fact (MF-December 21, 2021) on the night of December 21, 2021 due to the receipt of Official Letter No. 571/2021/SE/MME (annex to MF-December 21, 2021).

Regarding this matter, it should be noted that, on December 20, 21, Eletrobras, through letter CTA PR No. 02253/2021, sent remaining doubts to the MME regarding CNPE Resolution No. 15/2021, which are not necessarily contemplated in CNPE Resolution No. 30/2021, and the matter of treatment of the remaining indemnification for generation assets is to be emphasized, not as the only matter of this CTA PR No. 02253/2021.

2.3. Summary of points related to the indemnification – Points that would need treatment by the Granting Authority (MME), pursuant to ANEEL's understanding, as stated in Official Letter No. 214/2021-DR/ANEEL of August 13, 2021:

Plants operating under the quota system	• until the basic project: Reservoir land, material calculation errors, and social and environmental expenditures not related to assignable assets; • after the basic project until the start-up of the last GU: after calculation of amounts in the inspection process (knowledge and approval of the amounts by a Government act), the definition of the costing method (act of the granting authority)/GAGMelhorias discount methodology and form of adjustment of the amounts; • after start-up of the last GU: the need for establishing criteria;
Plants not operating under the quota system	• need for establishing criteria. It would not be appropriate to use the methodology for plants operating under the quota system, as the concept of RAG (annual generation revenue, where are the items related to the Management of Generation Assets (GAG) does not apply to plants not operating under the quota system;

This fact is further analyzed in CNPE Resolution No. 15/2021.

3. ANEEL Public Consultation (CP) No. 48/2021:

ANEEL's 29th RPOD (Ordinary Public Board Meeting), held on August 10, 2021, resolved to initiate a Public Consultation with the purpose of collecting information to support the new generation concession agreements, pursuant to the terms set forth in Law No. 14,182/2021. Probably, due to the fact that the already mentioned guideline speeds up the process (Official Letter No. 317/2021/SE-MME, referred to in item 2 of this Technical Note), the Agency gave only twenty (20) days to the agents to send their contributions in the scope of CP No. 48/2021, which ended on August 31, 2021.

In this context, Eletrobras has prepared, together with the Electric Utilities affected by Law No. 14,182/2021, which may have their respective contracts amended, a robust contribution (see *ASSESSMENT OF THE RESULTS OF THE CONTRIBUTIONS BY ELETROBRAS UNDER ANEEL PUBLIC CONSULTATION NO. 48/2021* attached hereto) aimed at improving the way the topics covered in its scope are dealt with. In summary, we report the points of emphasis and relevance of this contribution:

i. Individualization of concessions see section "*III – INDIVIDUALIZATION OF NEW CONCESSIONS*" of Eletrobras' public contribution to CP nº 48/2021);

ii. Issues on pre-existing rights and the waiver clause: The draft contract approved by ANEEL at the conclusion of CP No. 48/21 and forwarded to MME by ANEEL Official Letter No. 594/2021 – SCG/ANEEL, does not have a waiver of preexisting rights pursuant to the decision expressed in item 20 of the Vote of Officer Sandoval de Araújo Feitosa Neto, of October 5, 2021:

> "*In view of the foregoing, it can be concluded that the waiver of any preexisting rights that contravene Law No. 8,987 should be suppressed, whether because it is not an extension regulated by Law No. 9,074 or there was already a waiver of identical content signed by the electric utilities in past agreements.*"

Based on the legal advice described in ANEEL PF Opinion No. 00284/2021/PFANEEL/PGF/AGU, section III, item 92, in transcript:

> *"1. (...) the Office of Federal Prosecution questions ANEEL if there are grounds in the allegations brought to the Public Consultation, and, for specific cases, the provisions in art. 25 of Law No. 9,074 of 1995?*
> *R: The* ***waiver of any preexisting rights*** *that contravene Law No. 8,987 of 1995 in the draft of the concession agreement* ***must be suppressed****, whether because it is not an extension regulated by Law No. 9,074 or there was already a waiver of identical content signed by the electric utilities in past agreements." [emphasis added];*

iii. Extension of the permit terms: GSF (CNPE provided for in CNPE Resolution No. 15/2021) – see section "V – INDEMNIFICATION FOR NON-HYDROLOGICAL RISKS UNDULY SUPPORTED BY HYDROELECTRIC GENERATORS (GENERATION SCALING FACTOR (GSF))" of the public contribution of Eletrobras to CP No. 48/2021);

iv. Indemnifications for investments in reversible assets not yet amortized and/or depreciated (regulated by CNPE, but we have no further detail – item addressed above);

v. Rights not yet exercised: There are records referring to demands for reimbursement rights not yet judged either by ANEEL or the Granting Authority, e.g., (a) material errors in the amount of the first component of indemnifications related to the basic project subject to decision by the MME; (b) Treatment of the regulatory issue of the turbinable spillage in the Tucuruí HPP, application registered with ANEEL on February 2, 2021, through letter CE-RRG-0088/2021 (NUP: 485130179862021), which requires the right to compensation for losses caused by generation restrictions in ANEEL's evaluation process, without a final decision;

vi. Recalculation of the Guaranteed Power Output (already recalculated in Ordinance No. 544/2021/GM/MME of August 30, 2021): The current regulatory collection imposes limits on failure to comply with provisions in Law No. 10,848/2004[2] and Decree No. 2,655/1998[3]. It turns out that the new (re)calculation of the guaranteed power output, to support the definition included in CNPE Resolution No. 15/2021, of the aforementioned projects, does not constitute a necessary condition for the application of MME Ordinance No. 101/2016[4] and MME Ordinance No. 463/2009.[5] In addition, we highlight that the projects mandatorily follow the centralized dispatch order and are operational with guaranteed power output already published by MME Ordinance 178/2017,[6] and the new definition of guaranteed power output for these hydroelectric projects has a direct impact on the operation and planning of the National Interconnected System. We note also that, in Law No. 14,182/2021, there is no order of calculation of a new guaranteed power output for the plants covered by this law;

vii. Permit to use water resources: there must be a treatment suitable for the prevailing permits to use water resources, since ANEEL has considered that the provisions of ANA-ANEEL Joint Resolution No. 1,305/2015 apply to plants affected by Law nº 14,182/2021;

[2] Determines that CNPE shall establish the general criteria for guaranteeing SIN power supply.

[3] Establishes that the Guaranteed Power Output (GF) of HPPs (MRE) is the contracting amount that shall be reviewed every 5 years or if there are relevant facts, without exceeding the reduction limit greater than 5% of the amount of the last review and the limit of 10% informed in the current contract (base).

[4] Establishes the methodology for calculating the Guaranteed Power Output of new electricity generation projects of the SIN (CNPE Resolution No. 9/2008).

[5] Establishes the methodology for calculating the Guaranteed Power Output of the HPPs without a centralized order.

[6] MME Ordinance that publishes and defines the amounts of the guaranteed power output of the hydroelectric projects pursuant to art. 87, sole paragraph, items II and IV, of the Constitution, in view of the provisions of art. 21, ¶¶ 4 and 5, of Decree No. 2,655/1998, in art. 4, ¶ 1, of Decree No. 5,163/2004.

viii.Future possibility to extend the concession agreements: see items 54, 55, and 56 of section "INDEMNIFICATION FOR NON-HYDROLOGICAL RISKS UNDULY SUPPORTED BY HYDROELECTRIC GENERATORS (GENERATION SCALING FACTOR (GSF))" of the public contribution of Eletrobras to CP No. 48/2021);

ix. process of termination of the quota system (*descotização*) (regulated by CNPE – see Annex II, da CNPE Resolution No. 15/2021): defines a percentage on the process of termination of the quota system of twenty percent (20%) per annum as of 2023;

x. Provision/Reimbursement of ancillary services: The draft contract approved by ANEEL (above) does not provide for a term related to the provision of ancillary services. A question that is directly related to the reduction of the guaranteed power output of the plants, as they shall maintain their respective installed nominal capacities and give rise to an increase in the rotating operating power reserve available for safe and reliable execution of the operation in real time by the National Electric System Operator – ONS. ANEEL informs that this matter has a specific regulation, and the appropriate treatment in Public Consultation, as stated in activity 39 of Regulatory Agenda 22/23 (Ordinance No. 6,705/2021) is expected for the first half of 2022. However, it should be noted that, as provided for in art. 12 of ANEEL Normative Resolution No. 514/2012 (ANEEL REN No. 514/2012), the power plants contracted under the quota system do not receive additional compensation for the provision of ancillary services, but, at a time when they are in the process of termination of the quota system, it is necessary to provide, in the rule of transition of the contractual model, for the reimbursement for such services in proportion to the ongoing cancellation. After complete cancellation of the quotas, there shall be full compensation to the utility company, under the independent generation regime, for ancillary services that may be provided and duly regulated;

xi. Limitation of liability on the utility company: financial and sluice gate contribution. ANEEL makes it clear in Secti9on Four, Subsection Eighteenth, of the approved draft contract that, in the event that the National Department of Transport Infrastructure – DNIT or competent state authority subcontracts the operation of the sluice gates, its

participation shall be as an intervening-consenting party, as directed by ANEEL PF Opinions No. 102/2021/PFANEEL/PGF/AGU and 284/2021/PFANEEL/PGF/AGU;

xii. Contractual and administrative penalties;

xiii. Provision of energy to the PISF (The exact amount that shall be deducted from the concession bonus as a result of the delivery of energy to the PISF should be equal to the difference between the market value and BRL80.00/MWh): Until now, the intention to contract this electricity and the modulation curve intended by CODEVASF has not been informed, pursuant to the guidelines of the São Francisco River Integration Project (PISF) state operators. Thus, it is not possible to define the contractual purchase and sale model to be adopted or even assess the neutrality condition established in art. 4, II, "d", Law No. 14,182/2021, where, at least, until the beginning of the process of termination of the quota system (as Eletrobras CHESF has no electricity available and shall have to purchase electricity to make it available to the PISF), the economic value should be the difference between the electricity purchased and the value paid by the PISF (BRL80.00/MWh); and after the beginning of process of termination of the quota system, the economic value should be the difference between the value of electricity defined by CNPE to measure the Added Economic Benefit and the value borne by the PISF (BRL80.00/MWh);

XIV. Contribution to Electric Energy Research Center – Cepel: ANEEL did not predict, in the draft contract, the legal obligation of the future Utility Company to maintain, for a six (6)-year term (art. 3, item IV, Law No. 14,182/2021), the payment of related contributions maintaining the Electric Energy Research Center ("CEPEL"). Therefore, Eletrobras proposed the inclusion of a section in the draft contract contemplating the matter. (See section "XVI – CONTRIBUTION TO CEPEL" of Eletrobras' public contribution to CP No. 48/2021)

Due to the suggestions for improvement made by all the interested parties who contributed to CP 48/2021, which raised a series of doubts regarding the adequate treatment of certain topics in the new draft generation concession agreements, the Superintendent's Office for Generation Concessions and Authorizations – SCG of the Agency itself requested, in

Memorandum No. 175/2021-SCG-ANEELANEEL, the Office of Federal Prosecution at ANEEL (PF ANEEL) to assess certain aspects.

PF ANEEL, through Opinion No. 00284/2021/PFANEEL/PGF/AGU of September 24, 2021, issued by the Chief Prosecutor on the late afternoon of September 28, 2021, analyzed the issues directed to it by SCG. Item 47 of the PF ANEEL opinion cites Technical Note No. 46/2021 of the Economic Advisory Division of MME (NT 46/2021-ASSEC/MME).

We note that this TN 46/2021-ASSEC/MME may be the note referred to in item 2 of Official Letter No. 350/2021/ SE-MME, which Eletrobras has not had the opportunity to know yet.

The end of CP No. 48/2021 was even put on the agenda for ANEEL's 36th RPOD, held on September 28, 2021. However, whether because the PF ANEEL opinion was only issued on the late afternoon of September 28, 21 or because of the non-availability of the Contribution Analysis Report (RAC), a type of technical note with the analysis of the technical areas of ANEEL involved in the technical and administrative process of CP No. 48/2021, the topic was removed from the agenda on the afternoon of September 27, 2021.

On September 30, 2021, the closing of CP No. 48/2021 was again put on the agenda for the 37th RPOD, scheduled for October 5, 2021. ANEEL TN, which analyzed the contributions to CP No. 48/2021, was provided only on the afternoon of the day before the 37th RPOD (October 4, 2021).

In this scenario, Eletrobras filed the video of the oral arguments, as provided for in ANEEL internal regulations, on the afternoon of October 4, 2021, without, however, being aware of the analysis by ANEEL's technical areas.

Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT/ANEEL and the draft Vote of the Reporting Officer were made available on the afternoon of October 4, 2021.

The focal point of the narrative of this item of CP No. 48/2021, making a correlation with the subject matter of NT-DGDR-005/2021, is precisely to point out the need to provide Eletrobras with a later opportunity to talk to the agencies involved in the capitalization process, in view of the occurrence

of supervening facts, which could have an impact on the final conclusion of UpSide's work, whether those regarding the economic and financial evaluation of the value added by the new permits or the impact of the matters in the draft of the generation concession agreement to be finally considered, which shall be subject to the approval of the minority shareholders in the general shareholder's meeting of Eletrobras, pursuant to art. 3, main section and item II, together with ¶ 6 of the same article.

CP No. 48/2021 was effectively closed with the vote that took place at ANEEL's 37th RPOD on October 5, 2021, with the approval of the draft of the new generation agreements, as amended by the version originally submitted for public consultation.

ANEEL formally remitted to MME, by sending Official Letter No. 594/2021–SCG/ANEEL of October 19, 2021, the draft of new generation concession agreements provided for in Law 14,182/2021, ending ANEEL CP No. 48/2021.

As we will highlight below, some reflections draw attention to this point at this time (December 17, 2021):

- Possibility of the Brazilian Government Accountability Office – TCU to recommend adjustments that may reflect the need for changing the draft contract – mention in the topic TCU below. ENTRY OF JUDGMENT No. 3176/2021 – TCU – Plenary Session, decided:

> ***"The Minister of Brazilian Government Accountability Office, in a Plenary Session, AGREE to interrupt the evaluation at the examination request of the Minister Vital do Rêgo for the statutory period and to authorize the resumption of the studies, and the measures and the signatures in the concession agreements are deemed effective, depending on the assessment of the merits of the process in the resolution taken by the Plenary Session when the examination request returns***." *[emphasis added]*

- Need for reviewing CNPE Resolution No. 15/2021, as indicated in the Information Note No. 20/21 itself, of the MME Economic Advisory (NI ASSEC MME No. 20/2021 – mention in the topic CNPE Resolution below – section 5 of this TN). As already highlighted above, CNPE Resolution No.

30/2021 was published in an extra publication of the DOU yesterday, December 21, 2021, with the following provision in Art. 3-B:

> ***"Article 3-B This Resolution may be reviewed depending on the assessment of the merits in TC 008.845/2018-2 proceeding, by the Brazilian Government Accountability Office (TCU), on the decision taken by the Plenary Session, pursuant to Entry of Judgment No. 3176/2021 – TCU – Plenary Session***" *[emphasis added];*

- Need for MME to issue a formal act stating the final draft of the new generation concession agreements;

- Convenience/need to give Eletrobras the opportunity, subject matter of the capitalization process provided for in Law No. 14,182/2021, which provides for the preparation of new drafts of the generation concession agreement, to express its opinion on the subsequent acts, final drafts of acts, and contracts.

4. TCU – TCU Proceeding: 008.845/2018-21:

It is also worth mentioning that TCU is in the process of evaluating the privatization modeling as a whole, suggesting adjustments to it, which could lead to possible need for a new analysis of certain aspects by the different bodies involved in the decision-making process for capitalization of Eletrobras.

As already mentioned above, ENTRY OF JUDGMENT No. 3176/2021 – TCU – Plenary Session, did not resolve upon the merits of the privatization process of Eletrobras.

5. CNPE Resolution / NI ASSEC MME No. 20/21:

On the evening of August 31, 2021, the last day to contribute to CP No. 48/2021, Eletrobras disclosed a Relevant Fact giving initial information about CNPE Resolution No. 15/2021 of the same September 31, 2021, which was published in the Federal Official Gazette (DOU) on September 2, 2021.

FR-31.08.2021 is accompanied by MME Official Letter No. 350/2021/SE-MME, dated the same day August 31, 2021, which informed the company of the publication of CNPE Resolution No. 15/2021. Item 2 of MME Official

Letter No. 350/2021 mentions that a note would be published on its website giving more details on the content of the approved resolution.

In need of more details and information, given that the note mentioned in MME Official Letter No. 350/2021 had not been published on MME's website until September 24, 2021, the company sent MME CTA-CTA-PR-01787/2021 of September 24, 2021, basically requesting the opportunity to know the full content of the note that would have been the basis for CNPE Resolution No. 15/2021.

In this sense, it would be extremely important that ELETROBRAS technical areas could have access to the already mentioned Technical Note ASSEC MME No. 46/2021 (TN No. 46/2021-ASSEC/MME). This way, the company could have better conditions, for example, to reproduce the calculations of CNPE, as they would be able to know the assumptions and methodology used with a view to the necessary internal analysis of the company focusing on the benefits of the proposal outlined in CNPE Resolution No. 15/2021.

Additionally, the Technical Note on Economic Advisory of the Ministry of Mines and Energy – MME (MME ASSEC TN No. 20/2021) mentions relevant impacts on the calculation and definition of the value added by the new agreements, which MME itself identifies the need for adjustments, to be made in a new CNPE Resolution for their incorporation:

(i) Inclusion and consideration of the calculation of the New Replacement Value (VNR) for the Curuá-Una HPP (see item 2.4);

(ii) Inclusion and consideration of the contractual extension terms of the Tucuruí, Mascarenhas de Moraes, and Itumbiara HPPs, referring to the GSF renegotiation recently approved by ANEEL, in ANEEL Authorizing Resolution No. 2,932/2021 (ANEEL Authorizing Resolution No. 2,932/2021), after the publication of CNPE Resolution No. 15/2021 (see item 2.17).

As mentioned above, CNPE Resolution No. 30/2021 of December 22, 2021 expressly provides the possibility for reviewing its wording considering a future decision by TCU on the merits of the case.

6. Highlights:

The highlights of this technical note are as follows:

- CNPE, MME, ANEEL, and TCU have sought, so far, to meet the agility guideline dictated by the Executive Branch;
- Eletrobras has been contributing to the improvement of the capitalization process and the legal certainty when dealing with the issues listed above, for example, in addressing the issues in CP No. 48/2021 – drafts of new contracts, participation in meetings, sending letters to the different agencies involved seeking clarification to support its decision-making process;

- Because of the laws and regulations and orders issued by regulatory authorities (Law No. 14,182/2021, MME Official Letters, ANEEL executive board decisions, CNPE Resolution, and the expected end of the evaluation of the topic by TCU), Eletrobras complied with the decisions and followed the guidelines of the Executive Branch and other agencies involved;

- The convenience for ELETROBRAS of receiving the full clarifications requested in CTA PR No. 01787/2021 of September 24, 2021 is noteworthy, as well as CTA PR No. 02253/2021 of December 20, 2021, in addition to the content of TN 46/2021-ASSEC/MME, which could help even more a well-founded corporate decision regarding the issues in CNPE Resolution No. 15/2021;

- The publication of CNPE Resolution No. 30/2021, on December 22, 2021, in an extra publication of the DOU, amending CNPE Resolution No. 15/2021, explains the possibility that the decision on the merits of TCU may lead to the need for reviewing the CNPE's own resolutions;

- TCU Decision No. 3176/2021, on the other hand, explains that the studies carried out may proceed, being understood that no concrete measure may be implemented before the final court decision on the merits of the matter, which shall only occur after the vote granted to Minister Vital do Rego. In short, in case of any recommendation of TCU causing amendments to the draft of new generation concession agreements, the decision of Eletrobras evaluating the draft

agreements should be revised, taking into account the final draft agreements after any additions by recommendation of TCU;

- It is also worth highlighting the need to evaluate Eletrobras' opportunity, and/or of the electric utilities affected by Law No. 14,182/2021, to later contribute to any improvement needs – (i) MME: indemnification, reproducibility of calculations, etc.; and (ii) ANEEL/MME: final draft generation concession agreement, highlighting any adjustments pointed out due to the expected decisions of TCU.

Conclusion:

Regarding ANEEL CP No. 48/21, except for the items highlighted above, which may trigger possible questions to the bodies involved, and that the General Directorate of Regional Development – DGDR does not strictly evaluate legal matters, the generation regulation area participated in several meetings with the utility companies affected by the possibility of execution of new generation concession agreements, pursuant to the provisions of Law No. 14,182/21, including other areas of Eletrobras involved in the matter and the law firm specialized in the legal-regulatory area contracted, seeking to clarify doubts related to its field of expertise and regulation of the generation area applicable to the matters, highlighting the topics listed in this technical note (TN CP No. 048/21), especially those included in the contributions filed with ANEEL CP No. 48/2021, having nothing to oppose the submission of the work.

TABLE OF CONTENTS

CHAPTER I – CONTEXTUALIZATION AND CONSULTATION

1.1 – Initial considerations on the privatization of Eletrobras;

1.2 – Consultation.

CHAPTER II – Provisional Measure No. 1,031/2021 and Law No. 14,182/2021

2.1 – Provisional Measure No. 1,031/2021;

2.2 – Examination of the Bill for Enactment and the presidential vetoes.

CHAPTER III – EXAMINATION OF THE POINTS INDICATED IN THE CONSULTATION

3.1 – Prior considerations about the analysis of the new concession agreement;

3.2 – Analysis of the new concession agreement;

3.3 – The system of the Tucuruí and Mascarenhas de Moraes HPPs; and

3.4 – The special systems of the Sobradinho and Itumbiara HPPs.

CHAPTER IV – FINAL CONSIDERATIONS

CHAPTER I – CONTEXTUALIZATION AND CONSULTATION

1.1 – Initial considerations on the privatization of Eletrobras

In the mid-1990s, the Executive Branch redefined the role it intended to assign to public legal entities in the Brazilian energy sector. From an almost exclusively state-run service provision model – in which State-controlled companies were responsible for the generation, transmission and distribution of electricity – the intention was to attract private capital to make the necessary investments to fully meet the national demand for electricity, a fundamental feature for the proper development of the Brazilian economy.

Considering this context, the State would no longer be the *developer* of the activities that characterize the different segments of the energy sector, turning into the *regulator*. In this new scenario, the role of the State would essentially consist in *defining the rules*, *inspecting* the compliance with the aforementioned rules by the sectoral agents, and *punishing* any irregularities. The development of the sectoral economic activities would then be essentially a duty of the private sector.

This model envisioned the privatization of several state-owned companies, including at the federal level, namely Centrais Elétricas Brasileiras S.A. ("Eletrobras"), Furnas Centrais Elétricas S.A. ("Furnas"), Companhia Hidro Elétrica do São Francisco ("CHESF"); Centrais Elétricas do Norte do Brasil S.A. ("Eletronorte"), and Eletrosul Centrais Elétricas S.A. ("Eletrosul").

Although the companies of the Eletrobras Group have been included in the National Privatization Program (PND), pursuant to Decree No. 1,503/1995,[1] several constraints prevented the effective privatization of most of the aforementioned federal public-private companies. In fact, only the generation assets of Eletrosul – by that time held by Centrais Elétricas Geradoras do Sul S.A. ("Gerasul") – were privatized at the federal level, which took place in 1998.

[1] Art. 1 The following companies are included in the National Privatization Program (PND), for purposes of the Law No. 8031 of April 12, 1990:
I – Centrais Elétricas Brasileira S.A. ELETROBRÁS;
II – Furnas – Centrais Elétricas S.A.;
III – Centrais Elétricas do Norte do Brasil S.A. ELETRONORTE;
IV – Centrais Elétricas do Sul do Brasil S.A. ELETROSUL;
V – Companhia Hidroelétrica do São Francisco (CHESF).
Art. 2 The shares representing the shareholdings in the companies referred to in the previous article, owned by the Federal Government and indirect Federal Public Administration entities covered by the Decree No. 1,068 of March 2, 1994, shall be deposited to the National Privatization Fund (FND), within a maximum period of five days from the date of publication of this decree.

Additionally, several distribution utilities, mostly under state control, were privatized. These privatization initiatives were based on art. 27 of Law No. 9,074/1995.[2]

As seen, the administration of President Fernando Henrique Cardoso did not manage to implement the privatization of the Eletrobras Group, an attempt buried under the overwhelming electricity supply crisis experienced in 2001, characterized by the mandatory reduction in electricity consumption in most of the National Interconnected System (SIN).

The administrations of President Luiz Inácio Lula da Silva and President Dilma Roussef did not continue the privatization of Eletrobras. At that time, the operations of the respective state-owned companies were expanded, especially in large generation projects, referred to as structuring projects.

During the administration of President Michel Temer, the Granting Authority promoted the privatization of the distribution utilities that were still under federal control, expanding the private share in such economic sector.

During the current administration, the privatization of the Eletrobras Group returned to the surface, pursuant to what will be described throughout this opinion. This scenario brings up several questions and points of attention to Eletrobras and its subsidiaries. Such concerns reflected in the consultation addressed below.

1.2 – Consultation

[2] Art. 7. Cases in which public services, provided by legal entities under the direct or indirect control of the Federal Government, to promote privatization simultaneously with the granting of a new concession or with the extension of existing concessions, the Federal Government, except for public telecommunications services, may:
I – use, in the bidding procedure, the auction category, observing the need to sell minimum amounts of shares or quotas that guarantee the transfer of corporate control;
II – fix, prior to, the value of the shares or quotas held by to be disposed of, and proceed with the bidding procedure in the competitive type.
§ 1 In the event of postponement, this may be done for different periods of time, so that the final ones of all the postponed concessions occur within the same period of time, which will be necessary for amortization of the investments, limited to thirty years, counted from the date of signature of the new concession agreements.
§ 2 In the preparation of the notices for privatization of public utility companies, the Federal Government shall comply with the requirements of Laws No. 8,031 of 1990 and 8,987 of 1995, including the publication of the essential clauses of the agreement and the concession term.
§ 3 The provisions of this article may also be applied in the case of privatization of a public utility company under the direct or indirect control of the Federation States, the Federal District or the Municipalities, at the same level of their respective branches.
§ 4 The postponement referred to in this article is subject to the conditions established in art. 25.

The Eletrobras Group prepared specific Terms of Reference ("TR") to engage a set of legal and/or regulatory opinions to support them during the relevant discussions related to the privatization of their economic group.

Given the importance of such document, item 3, which deals specifically with the aspects to be analyzed in each of the opinions contracted, is reproduced below:

> **3. Specialized Services**
> 3.1. The specialized services as provided for in this Terms of Reference are as follows:
>
> 3.1.1 Preparation of legal opinions addressing all legal and regulatory issues referred to in Law 14,182/2021 directly linked to capitalization of Eletrobras, under corresponding items 1 (Purpose), 2 (Justification), as well as specified below:
>
> a) Analysis of the clauses of the new concession agreement(s), arising from the new concession(s) provided for, for example, in art. 3, II (independent production), art. 1º (Tucuruí e Mascarenhas de Moraes), art. 2º (special systems – Itumbiara and Sobradinho);
>
> b) Examination of the issues related to the payment of indemnifications within the scope of extended concessions based on Law 12,783/2013 (quota system), and any indemnifications within the scope of extended concessions based on Law 11,943/2009 amended by Law 13,182 /2015 (Sobradinho), as well as the indemnifications of the Tucuruí and Mascarenhas de Moraes HPPs, stipulating hypothetical ways for the receipt form of these amounts concomitant with the alteration of the proposed system;
>
> c) Examination of the issues related to the extension of concessions, pursuant to ANEEL Resolution nº 845/20 and ANEEL Resolution nº 930/21, which may impact the Eletrobras capitalization process (Law nº 14.182/21);
>
> d) Advising on the several ways of interaction of the Granting Authority, represented by MME, or ANEEL, such as, without limitation, the preparation of contributions for the collection of supporting information (TS), public consultations (CP), and public hearings (AP), assisting in the preparation of the contributions;
>
> e) Assessment of the results of the social participation processes initiated by ANEEL and/or MME to approach the matter, aiming to identify the effectiveness of the contributions presented and any associated impacts.

> 3.1.2 Participation in up to 5 (five) virtual or in-person meetings in Brasília, DF, at Eletrobras' discretion, together with the Eletrobras companies, for discussion about temporary or final opinions and about contributions to social participations promoted by ANEEL;
>
> 3.1.3 Participation in up to five (5) virtual or in-person meetings in Brasília/DF, together with the Management of Eletrobras, Board of Directors and Board of Executive Officers, as well as with the Granting Authority (MME) and ANEEL;
>
> At each meeting held, for item 3.1.2 and 3.1.3, the contracted party shall prepare the report containing the list of the participants and the main issues approached, and subsequent actions, if any.
>
> 3.2. The services described in items 3.1.1 and 3.1.3 shall be provided for a fixed price.
>
> 3.3. The concept of this TR is that the contracted expert can legally advise, with a regulatory focus, Eletrobras and subsidiaries on the risks of the change of proposed system, assessing the potential impacts and proposing risk mitigation options related to the provisions of Law No. 14,182/21, which shall materialize in the preparation, as exemplified above, of contributions in the public hearing processes, sectoral agents or Eletrobras itself and subsidiaries, legal opinion, and participation in meetings with the actors involved.

The more general issues about privatization, including those referred to in item 3.1.1, shall be examined in this opinion statement ("***Opinion 01*** – *General Part and Assessment of the Concession Agreement*"), which shall also comprehend the other issues mentioned in point "a" of item 3.1.1. Additionally, the legal and regulatory issues indicated in points "b" and "c" of item 3.1.1 shall be the object of two specific opinions, namely: "***Opinion 02*** – *Indemnifications*"; and "***Opinion 03*** – *Impacts of the Compensation to the MRE Generators for Non-Hydrological Risks in the Privatization of Eletrobras*."

The assistance described in sub–item "d" of item 3.1.1 of the TR has as its main activity the discussion of several legal and regulatory issues, already addressed in the contribution under ANEEL Public Consultation No. 48/2021 (sent to the Agency on August 31, 2021), as well as the discussion of several topics with the requesting party (e.g. about acts and documents published by the National Council for Energy Policy – CNPE).

As widely known, the Public Consultation No. 48/2021, carried out by means of document exchange and with a deadline on August 31, 2021, presents the following purpose:

> Purpose: obtain subsidies for the improvement of the draft concession agreement that shall regulate the exploitation of the hydraulic power potentials covered by Law No. 14,182/2021, which addresses the privatization of the Centrais Elétricas Brasileiras S.A. – Eletrobras.

ANEEL, in addition to making the draft of the concession agreement itself, made two specific opinion statements: a) the Technical Note No. 255/2021-SCG/SRG/SRM/SFG/SFF/ANEEL of May 7, 2021, which analyzes the "*proposal to open public consultation with a view to collecting subsidies to improve the draft of the concession agreement*"; and b) the Technical Note No. 255/2021-SCG/SRG/SRM/SFG/SFF/SGT ANEEL of August 6, 2021, which complements the previous opinion statement.

It is worth remembering that Public Consultation No. 48/2021 has been opened after deliberation by ANEEL's Board, in such form of the vote of the Reporting Officer Mr. Sandoval Feitosa, who summarized the processing of the referred law and the preparation of the agreement drafts as follows:

> 1. REPORT
> On February 23, 2021, Provisional Measure No. 1,031/2021 was published setting the rules and conditions to be observed in the process of privatization of Eletrobras, including in regards to new generation concession agreements resulting from this operation.
>
> 2. On March 19, 2021, through Official Letter No.109/2021/SE-MME1, the Ministry of Mines and Energy – MME requested from ANEEL the preparation of the draft concession agreement including the guidelines defined in the Provisional Measure.
>
> 3. On May 7, 2021, Technical Note No.255/2021 – SCG/SRG/SRM/SFG/SFF/ANEEL was issued, suggesting the text for the Draft Concession Agreement according to the Provisional Measure and recommending its submission to Public Consultation.
>
> 4. On May 10, 2021, the process was assigned, by random draw, to my responsibility.
>
> 5. On July 9, 2021, through Memorandum No.183/2021/ASD – ANEEL, it was requested the adjustment of the draft concession agreement according to the Law to be sanctioned after enactment of Provisional Measure No. 1,031/2021.
>
> 6. On July 12, 2021, Law No.14,182 was sanctioned, which provides for the privatization of Eletrobras.
>
> 7. On August 4, 2021, the MME Executive Office, through Official Letter No. 317/2021/SE-MME, argued that "the approval, by the Agency, of the draft concession agreement as speedy as possible is essential for the compliance with the schedule for the privatization of Eletrobras, as the provision of this document shall allow MME to advance on the schedule, enabling the progression of studies carried out by the Brazilian National Bank for Economic and Social Development – BNDES aiming the capitalization of Eletrobras."
>
> 8. On August 6, 2021, it was issued Technical Note No. 493/2021 – SCG/SRG/SRM/SFG/SFF/SGT/ANEEL, which complements the previous Technical Note.

After presenting the general aspects of such Public Consultation, we now convey the object of the current Opinion; such analysis initiates upon amendment of the Provisional Measure which originated Law No. 14,182/2021.

CHAPTER II – PROVISIONAL MEASURE No. 1,031/2021 AND LAW No. 14,182/2021

2.1 – Provisional Measure No. 1,031/2021

In its original text, Provisional Measure No. 1,031/2021, published in the Federal Official Gazette on February 23, 2021 – Extra Publication – provides for the following topics:

a) [Art. 1] privatization of Eletrobras, under Law No. 9,491/1997 (which provides for the National Privatization Program – PND)[3], subjecting it to the granting of the new concession, for thirty (30) years, related to the Concession Agreement No. 07/2004 (Eletronorte);
b) [art. 2] authorization for the Federal Government to grant new concessions, for thirty (30) years, upon the execution of new agreements;
c) [art. 3] restructuring of Eletrobras to maintain Itaipu Binacional and Eletrobras Termonuclear S.A. under Federal Government control. The device also addresses the change to the commercial exploitation system for independent production, including indemnifications;
d) [art. 4] addresses payment to the CDE, by Eletrobras and its subsidiaries, of an annual quota, in twelve parts, corresponding to 50% of the amount added to the concession by the new agreements, as well as payment of a concession bonus, also 50% of the amount added to the concession by the new agreements. Finally, the device addresses the assumption of the hydrological risk and the sealing to the renegotiation;
e) [art. 5] assignment to CNPE of the responsibility to appoint the amount added by the new concession agreements for electric power generation;

[3] Art. 1 National Privatization Program (PND) has the fundamental aim to:
I – reorder the State's strategic position in the economy, transferring to the private sector activities unduly explored by the public sector;
II – contribute to the public sector economic restructuring, especially through the improvement of its profile and the reduction in liquid government debt;
III – enable the restart of investments on companies and activities that might be transferred to the private sector;
IV – contribute to the private sector economic restructuring, especially to the revamping of the infrastructure and of the country's industrial facility, expanding competitiveness and reinforcing business capacity in the several economy sectors, including through credit concession;
V – allow the Public Administration to concentrate its efforts on activities in which the State's presence is essential for the achievement of national priorities;
VI – contribute to the strengthening of the capital market through the addition of the offer of securities and democratization of the capital property of all companies that are part of the Program.

f) [art. 6] obligation on the part of the generation electric utilities in the river São Francisco to make annual contributions, for ten (10) years, to the revitalization of the corresponding watershed;

g) [art. 7] obligation on the part of the generation electric utilities that acquire the Eletronorte concession to make annual contributions, for ten (10) years, to the structural reduction in the power generation cost in the Legal Amazon;

h) [art. 8] obligation on the part of the generation electric utilities that acquire concessions related to the Furnas watershed to make annual contributions, for ten (10) years, to the revitalization of the corresponding hydric sources;

i) [art. 9] authorizes the Federal Government to create a public-private company or governmental entity to exercise control over Itaipu/Eletronuclear;

j) [art. 10] prohibit the Federal Government regarding the subscription of new shares from Eletrobras on its privatization;

k) [art. 11] reimbursement to the Global Reversal Reserve (RGR);

l) [arts. 12 to 18] final provisions.

It is important to bring to attention some excerpts from MME/Ministry of Economy – ME Interministerial Statement of Reasons (EMI) No. 03/2021 of the corresponding Provisional Measure, which contributes to include the proposed rules in their adequate context.

First, about the model of privatization adopted, the EMI highlighted:

> 12. In view of the foregoing, here is the summary of the main aspects of the legislative proposal to implement the privatization of Eletrobras, hereby forwarded.
> 13. The **privatization model proposed shall take place through an increase in capital stock upon public subscription of common shares**, without the Federal Government monitoring such subscription. The Federal Government shall have its shares participation reduced and shall cease to be the controlling shareholder. In order to ensure that the Federal Government shall have minority participation in the Company, the capital increase may be accompanied by a secondary public offer of shares owned by the Federal Government.
> **14. The privatization model through capitalization of Eletrobras ensures the Federal Government a permanent place on the private Eletrobras and, given the actual prospects for the increase in the value of the Company, the Federal Government shall benefit from the dividends received proportional to its share participation.**
> 15. Eletrobras capitalization is conditioned to the renewal of the Concession Agreements to Eletrobras' Hydro Power Plants contemplated by the quotas system created by Law No. 12,783, from January 11, 2013, which altered the system of such Plants to the Independent Power Generation System, as well as the extension of the Concession Agreement of the Tucuruí Hydro Power Plant. Therefore, in the first case, Eletrobras subsidiaries shall cease to compulsorily sell the electric power generated for the price determined by ANEEL and so shall deal in freely in the regulated market or in the free market. On the other hand, the

> companies start to assume the risks of this transaction, such as the hydrological risk, since it is their responsibility to adopt the best commercialization strategy. (emphasis added)

After giving justification to the reason why the capital increase model was selected, the EMI addressed the allocation of benefits resulting from privatization:

> 16. The change in the electricity trading system, even considering the risks inherent in it, adds value to the Concession Agreement as the Company shall have the flexibility to sell electricity in the regulated market or the free market, being allowed to choose their clients with prices and delivery times established by them or the market. On the other hand, to mitigate tariff impact **it is proposed that half of the value added to the Agreement reverts to tariff-moderateness** through its allocation to the CDE, the organ in charge of paying several subsidies present in electric power fees.
>
> 17. **The remaining amount added to the new Concession Agreements shall be intended for the Federal Government** as a concession bonus, acknowledging that the Federal Government shall have financial return with the new Concession Agreements and observing the Company's economic and financial sustainability.
>
> 18. CNPE shall define the value added by the new Concession Agreements for Electricity Generation and set the amounts that shall be allocated to the CDE and the Federal Government. (emphasis added)

The legislator, on one hand, provided for the privatization through the execution of a new concession agreement, for thirty years. However, the same legislator defined that the benefits resulting from the new agreement should be shared between the consumer (via contributions to the CDE) and the Federal Government (through concession bonus).

Another relevant part of the EMI deals with the equity limit of ten percent (10%) of the voting capital, namely:

> 19. In addition, it is a condition for the proposed privatization that the Bylaws of Eletrobras be amended in order to: (i) limit the voting power of shareholders to 10% of the voting capital; (ii) prohibit the execution of shareholders' agreements for the exercise of voting rights, except for the formation of blocks with number of votes lower than the limit of ten percent of the voting capital; and (iii) create special class preferred stock, owned exclusively by the Union, which shall give veto power in the event of changes to the Bylaws.

> 20. These requirements are intended to transform the company into a corporation, like other global companies in the electric sector and large Brazilian companies. The percentage of ten percent, besides being in line with other examples of corporations in the Brazilian capital market, is consistent with Eletrobras' current level of governance. The importance of this corporation model is to avoid Eletrobras being traded to an already established agent in the electric sector, concentrating the market and inhibiting competition.
> 21. It is worth noting that, to avoid conflict of interest, the Federal Government shall not vote on the acceptance of the conditions for privatization submitted to the General Meeting of Eletrobras shareholders.

Subsequently, after referring to the corporate restructuring to keep Itaipu Binacional and Eletronuclear under Federal control, the EMI explained three groups of ten-year financial obligations related to the Eletrobras subsidiaries, aimed at: i) recovery of the São Francisco river basin; ii) reduction of generation costs in the Legal Amazon; and iii) recovery of the watersheds related to Furnas. On the subject, is transcribed hereunder:

> 25. The proposal also defines the obligation of the electric utilities whose concession agreements shall be affected by the Provisory Measure in question to make annual contributions, for a period of ten years, in the amount of three hundred and fifty million Reais (BRL350,000,000.00), for the purpose of promoting the revitalization of the São Francisco River. The definition of the projects to be executed shall be done by a Managing Committee, according to the regulations. The actions and projects financed by these resources shall focus on the recharge of the affluent flows and on the increase of the operational flexibility of the reservoirs, without harming the priority use and the multiple use of the water resources.
>
> 26. The proposal also establishes the possibility of allocating, to the operator of the São Francisco Transposition, 78.4 avgMW for a period of twenty years, starting in 2022, at the price of BRL80/MWh, to be corrected by the National Wide Consumer Price Index (IPCA).
>
> 27. Also, it is proposed that the electric utility operating the Tucuruí Hydro Power Plant contribute BRL295 million Reais annually, for a ten-year period, for the development of projects in the Legal Amazon, also to be defined by the Steering Committee, in order to structurally reduce the costs of energy generation in this Region, considering the development of renewable energy projects or from renewable fuel, as well as the interconnections of Isolated and Remote locations.
>
> 28. It is also proposed, in the same line, an obligation to the electric utilities located in the influence area of the reservoirs of Furnas Centrais Elétricas S.A.'s Hydro Power Plants, whose concession agreements are affected by this Provisory Measure, to contribute BRL230 million Reais annually, for a period of ten years, for the revitalization of the water resources of the hydrographic basins in the area of influence of the referred reservoirs with a focus on actions that generate recharge of the

> tributary flows and increase their operational flexibility, without harming the priority and multiple use of the water resources.

These, in summary, are the main rules of the referred Provisional Measure, which were soon subject to examination, additions, and modifications by the National Congress.

2.2 – Summary of the examination of the Bill for Enactment and the presidential vetoes

Provisional Measure No. 1,031/2021 was received by the National Congress on February 23, 2021. Within the statutory deadline, the Provisional Measure (MP) received five hundred and seventy (570) amendments by federal representatives. On May 19, 2021, the final wording passed the House of Representatives, signed by the Reporting Congressman, Representative Elmar Nascimento (DEM-BA). The matter was forwarded to the Federal Senate, including the one examined as Bill for Enactment (PLV) No. 07/2021.

After that, another sixty-two (62) amendments were made by the Federal Senate. In the end, PLV No. 07/2021 passed with amendments, pursuant to Opinion No. 136 of 2021-PLEN/SF.

As can be seen in the document titled "Comparison of Amended Legislation x MPV 1031/2021 x PLV 7/2021 x Changes in PLV 7/2021 in the SF" B,[4] the main changes in the Provisional Measure can be summarized as follows:

i) The insertion, in art. 1 (main section), of an express mention to the extension of Concession Agreement No. 04/2004 (regarding the Mascarenhas de Moraes HPP);

ii) The inclusion, in art. 1, ¶ 1, of the obligation to contract natural gas thermoelectric generation by the Federal Government, as reserve capacity, in metropolitan regions that do not have, in their capital, a natural gas supply point, and this contracting shall occur with at least seventy percent (70%) of inflexibility;

iii) The provision, in art. 1, ¶ 1, for the possibility of extending PROINFA agreements for twenty (20) years;

iv) In parallel, the same art. 1, ¶ 1 established the duty of the new A-5 and A-6 contests to reserve at least 50% of the contracting for SHPs and small HPPs;

v) Provided certain requirements are met, the Federal Government considered to start work on the Linhão de Tucuruí (which connects

Available at<https://legis.senado.leg.br/sdleg-getter/documento?dm=8981930&ts=1628093853328&disposition=inline>, retrieved on September 2, 2021.

the capitals of the states of Pará, Amapá, Amazonas, and Roraima, considerably improving the transmission infrastructure in the Brazilian North Region);

vi) The insertion of the need to recover the Parnaíba River basin, together with the São Francisco River basin;

vii) The provision that the recovery indicated in the preceding item, besides being possible to be performed by CHESF, may also be performed by the Brazilian Army;

viii) Addition of the navigability of the Madeira River and Tocantins River among the possible destinations of the resources to be contributed, initially destined only for the reduction of generation costs in the Legal Amazon;

ix) The abatement of subscription bonus amounts to be paid to the Federal Government (related to the revitalization of the drainage basins of the São Francisco/Parnaíba River and related

ii) The inclusion, in art. 1, ¶ 1, of the obligation to contract natural gas thermoelectric generation by the Federal Government, as reserve capacity, in metropolitan regions that do not have, in their capital city, a natural gas supply point, and this contracting shall occur with at least seventy percent (70%) of inflexibility;

iii) The provision, in art. 1, ¶ 1, for the possibility of extending PROINFA agreements for twenty (20) years;

iv) In parallel, the same art. 1, ¶ 1 established the duty of the new calls A-5 and A-6 reserve at least 50% of the contracting for SHPs and small HPPs;

v) Provided certain requirements are met, the Federal Government to start the works for the Linhão de Tucuruí (which connects the capitals of the States of Pará, Amapá, Amazonas, and Roraima, improving considerably the transmission infrastructure in the Brazilian Northern Region);

vi) The insertion of the need to recover the drainage basin of the Parnaíba River, together with that of the São Francisco River

vii) The provision that the recovery indicated in the preceding item, besides being possible to be done by CHESF, may also be done by the Brazilian Army;

viii) Addition of the navigability of Madeira River and Tocantins River among the possible destinations of the resources to be contributed, initially destined only for the reduction of generation costs in the Legal Amazon;

ix) The discount of the subscription bonus amounts to be paid to the Federal Government (referring to the revitalization of the São Francisco/Parnaíba river basins and related to Furnas, as well as to the

reduction of generation costs in the Legal Amazon and with the Madeira and Tocantins Rivers' navigability);

x) The forecast that the destination of the resources from the privatization forwarded to the CDE shall be restricted to the ACR;

xi) The modification of the change in the terms for decommissioning (*descotização*) to a minimum of five (5) years and a maximum of ten (10) years; and

xii) The destination to the CDE of an eventual balance of resources destined to the revitalization of drainage basins, to the reduction of costs in the Legal Amazon and navigability improvements.

The President of the Republic, exercising the powers conferred upon him by, vetoed some provisions of the normative text approved by the National Congress. Among the devices that were vetoed, the following should be highlighted:

a) ¶¶ 6 to 8 of art. 1 (which dealt with the acquisition of Eletrobrás shares by its employees and the use, by the Federal Government, of employees dismissed during the one-year period following privatization);

b) art. 3, VII (which dealt with the impossibility of various corporate transactions and the change of domicile of the privatized legal entity for a period of ten years);

c) art. 5, ¶ 1, IV (which was aimed at establishing contributions to CEPEL for a period of six years);

d) art. 17 (which destined to the CDE the amounts related to resources foreseen in arts. 3 and 8 of Law No. 13,182/2015 and which were not committed to projects contracted until February 23, 2021, as well as those related to failed projects or whose execution has not been proven);

e) ¶ 3 of art. 28 (which conditioned hydroelectric generation within the restriction strip upon the declaration of water scarcity by ANA);

f) ¶ 4 and ¶ 5 of art. 28 (which attributed to ANA, in coordination with ONS, the role of establishing the transition rules for the recovery of the reservoir levels in a period not exceeding two years);

g) ¶ 8 of art. 6 (which provided for ANA's duty to supervise the execution of revitalization projects foreseen in Law 14,182/2021, art. 3, V, "a" and "c", as well as to apply the applicable penalties)

h) arts. 19 (which refers to the prioritization of the reallocation of residential units in transmission line easements)

i) art. 15, which included item VI to ¶ 1 of art. 13 of Law No. 10,438/2002, which attributed to the CDE the financial results of the public company or mixed economy company originated from the referred corporate restructuring; and

j) art. 29 (which submitted the approval of the ONS Directors to the approval of the Federal Senate).

To date, there has been no modification of the presidential vetoes by the National Congress, nor any change in Law No. 14,182/2021.

Having thus set out the rules effectively inserted into the Brazilian legal system related to the privatization of Eletrobras, we will now examine, in the following items, the aspects pointed out by the consultant in item 3.1.1, "a", of the Terms of Reference. This object requires the analysis of: i) the clauses of the new concession agreements; ii) the concession under the independent production regime, both in the form of art. 1 of Law No. 14,182/2021 (applicable to the Tucuruí and Mascarenhas de Moraes HPPs), and in its art. 2 (special regimes for the Itumbiara and Sobradinho HPPs).

CHAPTER III – EXAMINATION OF THE POINTS INDICATED IN THE CONSULTATION

3.1 – Prior considerations about the analysis of the new concession agreement

Before even the enactment of MP No. 1,031/2021, ANEEL received Official Letter No. 109/2021 of March 19, 2021, in which the Executive Office of the Ministry of Mines and Energy ("SE/MME") requested the Agency to prepare the draft of the new concession agreements. Such legal instruments would be executed by the electric utilities of the Eletrobras group and by the Granting Authority as a result of the privatization process.

The request of SE/MME gave rise to the initiation by ANEEL of administrative proceeding No. 48500.001427/2021-53, which was initially analyzed, before the enactment of the Provisional Measure, in Technical Note SCG SRG SRM SFG SFF/ANEEL No. 255/2021 of May 7, 2021. This study originated a first draft agreement.

Thereafter, under the same administrative proceeding, the technical areas (SCG SRG SRM SFG SFF SGT/ANEEL) prepared Technical Note No. 493/2021 of August 6, 2021. This happened after the enactment of Law No. 14,182/2021 on July 13, 2021 and originated a second draft concession agreement.

Such second draft was submitted to the interested parties' appreciation, under Public Consultation No. 48/2021, with contributions accepted between August 11 and August 31, 2021.

Eletrobras submitted, on August 31, 2021, a contribution regarding the several aspects discussed in the draft concession agreement. About this issue, it is good to record that all contributions may be examined at ANEEL's website.[5]

According to the Superintendent's Office for Mediation and Arbitrage – SMA[6] of ANEEL, ten interested parties sent contributions under Public Consultation No. 48/2021:

1. Eletrobras Employees' Association – AEEL;
2. Engie Brasil Energia – ENGIE;
3. Furnas Centrais Elétricas S/A – FURNAS;
4. Pinheiro Neto Advogados;
5. Centrais Elétricas Brasileiras S.A. – ELETROBRAS;
6. Kennedy Alves Vieira – ELECTRICAL ENGINEER;
7. Edgard Monteiro de Menezes – Cidadania Constitucional;
8. Companhia Hidro Elétrica do São Francisco – CHESF;
9. Instituto Ilumina; and
10. Energy Workers Union of the State of São Paulo – Sinergia CUT

According to the spreadsheet prepared by ANEEL, the abovementioned agents made ninety (90) specific contributions, which were properly numbered by the Agency. It is worth to say that the Eletrobras' suggestions cover contributions Nos. 37-50, 52-60, and 63.

It should be noted that the contribution of Eletrobras was made before the disclosure, by the National Council for Energy Policy – CNPE, of the Added Value amounts of the contributions to the CDE, and the warrants payable to the Federal Government, as provided for in Law No. 14,182/2021, which were only disclosed after the end of the contribution period, on August 31, 2021.

3.2 – Analysis of the new concession agreement

This Opinion shall present, in this item, a brief analysis of all items of the concession agreement. In the following items of this Opinion (No. 01 – General Part and Analysis of the Concession Agreement), and in other documents (Opinion No. 02 – Indemnifications and Opinion No. 03 – GSF), several items shall be re-examined with a deeper analysis and a specific look.

[6] 48542.002623/2021-00 Annex 1

The draft Concession Agreement submitted to Public Consultation contains thirteen (13) sections and countless subsections about different topics, as examined individually below.

[Section One]

After the identification of the parties (Federal Government, as the Granting Authority, represented by ANEEL; the [company], as the electric utility to use the public property for electricity generation; and Eletrobras, as an intervening-consenting party), the agreement presents its Section One, which addresses its subject matter. Such provision of the agreement contains, in addition to the main section, three subsections:

> SECTION ONE – SUBJECT MATTER
>
> To regulate the exploitation by the Electric Utility of the hydraulic power potentials through the Hydro Power Plants listed in Annex 1, hereinafter referred to as Hydro Power Plants, as well as the respective Transmission Facilities of Interest Restricted to Hydro Power Plants listed in Annex 2, whose concessions were granted through the privatization of CENTRAIS ELÉTRICAS BRASILEIRAS – Eletrobras, as provided by Law No. 14,182 of July 12, 2021.
>
> Subsection One – The exploitation of the electricity generation, granted to the Electric Utility, is the object of specific concessions for each of the Hydro Power Plants listed in Annex 1 of this Agreement, for all contractual and legal purposes, including for any declaration of forfeiture, intervention, taking over, transfer, or cancellation of the concessions.
>
> Subsection Two – The Transmission Facilities of Interest Restricted to the Hydro Power Plants are deemed to be an integral part of the concession of electricity generation referred to in this Agreement.
>
> Subsection Three – The Electric Utility waives any preexisting rights that contravene Law No. 8,987 of February 3, 1995, according to art. 25 of Law No. 9,074 of July 7, 1995, regarding the concession of the Hydro Power Plants.

Section One, main section, shows that the new agreement to be executed shall be based on Law No. 14,182/2021. It is therefore clear that the instrument is not confused with the mere extension of the previous agreement. It is the execution of a new agreement, in a peculiar form, provided for in the aforementioned law, according to the legislator's choice. Regarding the main section, it was not necessary to submit any contribution under CP No. 48/2021.

Section One, *subsection one*, provides that the concession to be granted shall be individualized. However, after a closer analysis, it is clear in the draft that a single concession agreement shall cover

several HPPs. This fact may cause impacts and problems in the future, such as increased penalties or difficulties to extend concession terms related to just one HPP, etc.

In order to effectively individualize the HPPs for all purposes, Eletrobras (see item III of its contribution) contributed to this contractual provision, as follows:

> **III – INDIVIDUALIZATION OF THE NEW CONCESSIONS**
>
> 21. It is important to separate the projects affected by art. 2 of Law No. 4,182/2021 from those not affected directly by the rule, as stated by Technical Note No. 255/2021 – SCG/SRG/SRM/SFG/SFF/ANEEL.
>
> 22. For Eletrobras, it is important that the new concession agreements are individualized by project, due to the peculiarities of each plant, as stated in item 9 of the aforementioned Technical Note. Although it is possible to execute one concession agreement for several HPPs, it should be recalled that, for a long time, new concessions have been granted per HPP, and not per a set of HPPs or river courses.
>
> 23. It should also be noted that there should be a transitional period in which the quota system, which establishes guaranteed annual revenues – Annual Generation Revenue (RAG) per plant, and the system of independent producers with the energy sold according to the Electric Utility disposal shall coexist.
>
> 24. Thus, the opportunity should be taken to separate in specific Concession Agreements all the hydro power plants affected by Law No. 14,182/2021, by adapting the draft concession agreement submitted for the Public Consultation, such as, for example, in the respective subject matter, among other provisions.

Eletrobras then suggested the following modification to the concession agreement:

WORDING – DRAFT CONCESSION AGREEMENT	**PROPOSED AMENDMENT**
SECTION ONE – SUBJECT MATTER (…) To regulate the exploitation by the Electric Utility of the hydraulic power potentials through the Hydro Power Plants listed in Annex 1, hereinafter referred to as Hydro Power Plants, as well as the respective Transmission Facilities of Interest Restricted to Hydro Power Plants listed in Annex 2, whose concessions were granted	**SECTION ONE – SUBJECT MATTER (…)** To regulate the exploitation by the Electric Utility of the hydraulic power potential through Hydro Power Plant <NOME OF THE PLANT>, hereinafter referred to as Hydro Power Plant, as well as the respective Transmission Facilities of Interest Restricted to the Hydro Power Plants listed in Annex 2, whose concession was granted through the privatization of CENTRAIS ELÉTRICAS

through the privatization of CENTRAIS ELÉTRICAS BRASILEIRAS – Eletrobras, as provided by Law No. 14,182 of July 12, 2021.	BRASILEIRAS – Eletrobras, as provided by Law No. 14,182 of July 12, 2021.
Subsection One – The exploitation of the electricity generation, granted to the Electric Utility, is the object of specific concessions for each of the Hydro Power Plants listed in Annex 1 of this Agreement, for all contractual and legal purposes, including for any declaration of forfeiture, intervention, taking over, transfer, or cancellation of the concessions.	**Exclusion**. Given the individualization of the agreements by development, Subsection One and the others shall be adjusted accordingly.

Eletrobras' opinion statement aims to the segregation of the projects, upon execution of a concession agreement by the *HPP*, which is aligned with the most recent sectoral practice, with several advantages for the Granting Authority and the electric utility. The inspecting authority, extension of concessions, imposition of penalties, in short, the individualization of each concession is facilitated.

S*Subsection* two, in its turn, regulates only the transmission facilities of restricted interest of the corresponding HPPs, which does not arise any controversy and was not object of contribution.

Subsection three, soon after, addresses the waiver of preexisting rights. This is an extremely important topic, which was the subject of a detailed and specific opinion statement of Eletrobras. As such subject very nearby to the theme about indemnifications, which is the central subject of Opinion No. 02, this topic will be detailed later. At this point, it is enough to point out that Eletrobras contributed to preserving the pre-existing rights, especially those arising from the indemnifications for non-amortized or depreciated assets and those related to term extensions by the Generation Scaling Factor (GSF). In other words, a generic waiver clause shall not be included in the concession agreement.

[Section Two]

Section Two, which contains only one subsection, was worded as follows:

> SECTION TWO - EFFECTIVE PERIOD OF THE CONCESSION
>
> The concession referred to in this Agreement is hereby granted for a period of thirty (30) years, counted as of the date of its execution.
> Sole subsection - This Agreement does not provide with expected extension.

The period of thirty years, indicated in the main section, was expressly established by Law No. 14,182/2021, so the provision does not bring any controversy. However, the *sole subsection* suggests the impossibility of agreement extension.

Although, as a matter of fact, according to the current legislation, there is no provision for the extension of the generation concession agreement that may be adapted to the approached concessions herein; it is possible that, in the future, the Brazilian legislative authority shall establish an alternative for different types of extension. In this context, the suggested provision does not seem to be adequate, which led Eletrobras to make the following contribution:

> **X – EXTENSION OF THE CONCESSION AGREEMENT**
>
> 118. The draft concession agreement submitted to public consultation points out that the "Agreement does not have a provision of extension," according to Sole Subsection of Section Two.
>
> 119. The point is that Law No. 14,182/2021 does not prohibit the extension of the new concession agreements, a reason why the restriction suggested by ANEEL shall be suppressed. In fact, given the extension of the term of the concessions resulting from the provisions in Law No. 13,203/2015 as amended, including the regulation of ANEEL, and having the possibility, even though in theory, of compensation for other indemnifications through the extension of the term of the concession, the adjustment to the wording of the contract clause is imposed, as follows:

SECTION TWO – EFFECTIVE PERIOD OF THE CONCESSION The concession referred to in this **Agreement** is hereby granted for a period of thirty (30) years, counted as of the date of its execution. **Sole subsection** – This Agreement does not provide with expected extension.	**SECTION TWO – EFFECTIVE PERIOD OF THE CONCESSION** The concession referred to in this **Agreement** is hereby granted for a period of thirty (30) years, counted as of the date of its execution, pursuant to the provisions in **SECTION ONE, Subsection Three**. **Sole Subsection** – This Agreement may be extended as provided by law.

The recommendation of Eletrobras is justified by the recurring sector practical of include, at several moments, the possibility of extension of generation concessions (see Laws No. 9,074/1995, 12,783/2013, 13,360/2016, among others). Thus, the solution of remitting the possibility to extend the laws and regulations on the topic seems proper. In the case of legal permissive, the extension shall be possible, and if there is no such provision, there shall have no extension of the concession.

[Section Three]

The third clause of the agreement, in its main section and its eight subsections, addresses, essentially, the obligations and the charges of the electric utility.

The main section and the first subsection itself do not address disputed topics, but only the adoption of the independent production regime:

> SECTION THREE – PERFORMANCE
>
> In exploiting Hydro Power Plants, the Electric Utility is free to conduct its business, including the necessary measures for making investments, hiring personnel, buying material and technology, subject to the provisions of this Agreement, specific legislation, regulations, and the instructions and determinations of the Granting Authority and ANEEL.
>
> Subsection One – Pursuant to art. 4, item III, of Law No. 14,182 of July 12, 2021, the exploitation regime of the Plants in Annex 1 is the Independent Electric Energy Production with energy availability for the new Electric Utility as per the following items.

Items I and II of subsection one, provided for in sequence, apply only to the HPPs operating under the quota system, once are related to the process of termination of the quota system (*descotização*) and the form of trading of the corresponding electrical energy:

> <ONLY FOR THE PLANTS REFERRED TO IN ITEMS I, II, AND III OF ART. 2 OF LAW NO. 14,182 OF 2021, WHICH SHALL BE SUITABLE FOR CONTEMPLATING THE DETAIL TO BE ESTABLISHED>
>
> I – the termination of the electricity contracted pursuant to the provisions of art. 1 of Law No. 12,783 of January 11, 2013, to comply with the provisions of item III of the main section of art. 4º of Law No. 14,182 of July 12, 2021, shall be gradual and uniform, within <number of years established by CNPE> years, after <initial year established by CNPE>, pursuant to Resolution <Resolution to be issued by CNPE> of the National Council for Energy Policy – CNPE, with the provisions of the <Amendment No.> Amendment to the Concession Agreement< CONCESSION AGREEMENT No.> for the respective portion of the plant.
>
> II – The Electric Utility shall sell or use the energy produced by the Hydro Power Plants, up to the limit of the respective Hydro Power Plants Guaranteed Power Output, under the conditions established in this Agreement, at prices freely negotiated between the Electric Utility and the buyers, pursuant to art. 12 of Law No. 9,074 of 1995, and Law No. 10,848 of March 15, 2004, in their regulations and specific legal rules.

Eletrobras suggested, in its contribution, the inclusion of items III to V in subsection one, as follows:

> SECTION THREE – PERFORMANCE (…)
>
> Subsection One (…)

III - During the period of agreements terminated of the referred to item I, the portion of guaranteed power output allocated to the quota system shall be granted the treatment provided for in <Amendment No.> to the Concession Agreement No. <Concession Agreement No.>, while the portion intended for independent production regime shall follow the rules related to this regime.

IV - During the period agreements terminated referred to in item I, the Electric Utility shall be entitled to revenues linked to investments in expansions and improvements held during the effectiveness of the Concession Agreement <Concession Agreement No.>, which shall be completely paid until the deadline of transition established by CNPE.

V – The performance of the obligations of the Hydro Power Plant shall satisfy the proportional criterion of business regarding the quota system and the independent production regime.

As noted, the amendments suggested intended to address in more detail the period of co-existence between the previous system (quotas) and the later regime (independent production).

Subsections two to five were conceived by ANEEL as follows:

SECTION THREE – PERFORMANCE (…)

Subsection Two – Hydro Power Plants shall be operated in accordance with safety criteria and according to specific technical standards, in accordance with current legislation, subject to the reservoir operation conditions defined by the National Water Agency – ANA alongside the National Electric System Operator – ONS, and instructions they order, according to the operation modality, and observing the Grid Procedures approved by ANEEL.

Subsection Three – Hydro Power Plants shall be operated in the integrated type, subject to National Electric System Operator – ONS orders instructions under the conditions provided for in the current regulations, and following the rules for access to the National Interconnected System – SIN approved by ANEEL.

Subsection Four – Hydro Power Plants shall participate in the Energy Reallocation Mechanism (MRE), with the Electricity Trading Chamber – CCEE, under the conditions provided for in the current regulation.

Subsection Five – Adherence to this Agreement implies assuming hydrological risk management, renegotiation being prohibited under Law No. 13,203 of December 8, 2015.

The topics above were not subject to the contribution by Eletrobras. However, in relation to *subsection six*, the requesting party understood its amendment adjusted to the cases of maintenance the guaranteed power output of the HPPs, reason why sent the following contribution:

Subsection Six – Hydro Power Plants guaranteed power outputs were defined by Ordinance of the Ministry of Mines and Energy – MME No. <Technical and Budget Analysis System (approval of guaranteed	**Subsection Six –** Hydro Power Plants guaranteed power outputs were defined by Ordinance of the Ministry of Mines and Energy – MME No. <Technical and Budget Analysis System (approval of guaranteed

power output of the projects>, < issuance date of the act>. **I**. Hydro Power Plants guaranteed power output values were set considering the defining elements of the hydraulic potential that characterize the projects, as shown in Annex 1; and **II**. Hydro Power Plants guaranteed power output shall be revised and amended in accordance with current legislation.	power output of the projects>, < issuance date of the act>. (...) **I**. Hydro Power Plants guaranteed power outputs shall be revised and amended in accordance with current legislation, pursuant to the limits in Decree No. 2,655/1998.

The purpose persecuted by Eletrobras was the maintenance of the guaranteed power outputs of the HPPs, subject to any amendment to the limits of Decree No. 2,655/1998. This is a disputed topic, especially as it addresses a *new concession agreement*.

In subsection seven, the agreement regulates any expansions in the granted HPPs:

> SECTION THREE – PERFORMANCE (…)
>
> Subsection Seven – Hydro Power Plants expansions and modifications shall comply with the specific legal procedures and the regulations of the Granting Authority and ANEEL and shall be incorporated into the respective concession, provided they are authorized by ANEEL after assessment, being governed by the provisions of this Agreement and the relevant legal rules.
>
> I. In order to carry out any expansion or modification of the Hydro Power Plants, the studies shall follow the applicable technical standards and be submitted to ANEEL for assessment and subsequent authorization, prior to construction.
>
> II. After approval, if there is an amendment to any provision in this Agreement, the Electric Utility shall sign an Amendment, aiming to consolidate the expansions and modifications that may have occurred.
>
> III. If the Hydro Power Plants expansions imply changes in the conditions established in the respective concession for the right to use water resources, the Electric Utility shall, prior to the expansion, obtain the corresponding amendments to the concession for the right to use water resources from the agency responsible, as well as obtain the relevant licenses from the licensing environmental agency.

Although Eletrobras did not forward a contribution in relation to such subsections, it made regarding Section Four, subsection five, which also addresses the expansions (which topic shall be revisited later).

Finally, in subsection eight, the draft agreement establishes specific treatment to the Sobradinho and Itumbiara HPPs:

> SECTION THREE – PERFORMANCE (…)

<ONLY FOR THE SOBRADINHO HPP, SUBJECT TO ITEM II DO ART. 2 OF LAW NO. 14,182 of 2021>

Subsection Eight – the obligations set forth in art. 22 of Law No. 11,943 of May 2009, 006/2004-ANEEL are hereby preserved, subject to the conditions and validity of the current power sales agreements referred therein, as regulated by the Third Amendment to the Concession Agreement No. 006/2004-ANEEL – CHESF.

<ONLY FOR THE ITUMBIARA HPP, SUBJECT TO ITEM III OF ART. 2 OF LAW No. 14,182 of 2021>

Subsection Eight – the obligations set forth in art. 10 of Law No. 13,182 of May 2015, 004/2004-ANEEL are hereby preserved, subject to the conditions and validity of the current power sales agreements referred therein, as regulated by <Amendment No. > Amendment to Concession Agreement No. 004/2004-ANEEL – FURNAS.

The topic shall be addressed in a specific chapter of this opinion. On that issue, Eletrobras sent a contribution that shall be detailed in the due course.

[Section Four]

Section four addresses the obligations and charges of the utility company and regulates varied topics on its sixteen (16) subsections. In order to simplify the review, let it be known that there was no need to amend subsections 1, 2, 3, 6, 7, 8, 9, 10, 12, 13, 14, 15, and 16. However, amendments were made to subsections 4, 5, and 11, and there was the suggestion to include four (4) more subsections (17, 18, 19, and 20), as follows.

Regarding subsection four, which addresses the concession of water resources, Eletrobras presented the following amendment:

WORDING – DRAFT CONCESSION AGREEMENT	PROPOSED AMENDMENT
SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES In order to enable the exploitation of the water resources referred to in Section One, the Electric Utility undertakes all responsibilities and charges related to the operation and maintenance of the Hydro Power Plants, observing the applicable technical standards and legal requirements. (...) **Subsection Four** – The specific charges related to the operation and maintenance of Hydro Power Plants by the Electric Utility are: **I.** Obtain the use permit of water resources from the authority in charge of the water resources management, under ANA-ANEEL Joint Resolution No. 1,305 from November 20, 2015;	**SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES** In order to enable the exploitation of the water resources referred to in Section One, the Electric Utility undertakes all responsibilities and charges related to the operation and maintenance of the Hydro Power Plants, observing the applicable technical standards and legal requirements. (...) **Subsection Four** – The specific charges related to the operation and maintenance of the Hydro Power Plants by the Electric Utility are: **I. Keep effective and current** the use permit of water resources during the concession period, requiring from the authority in charge of it the extension or renewal of the current concession with at least one hundred and eighty (180) days advance before the due date;

	II. In cases in which there is no current use permit of the water resources, the Electric Utility shall request to the authority in charge of the water resources management the issuance of such concession, in up to one hundred and eighty (180) days after execution of the Concession Agreement. **[or, on a subsidiary basis]** **Subsection Four** – The specific charges related to the operation and maintenance of the Hydro Power Plants by the Electric Utility are: I. To request from the agency responsible for the management of water resources the extension, renewal, or issuance of a new use permit related to water resources, as the case may be, within one hundred and eighty (180) days after the execution of the Concession Agreement, as provided for in Joint Resolution ANA-ANEEL No. 1,305 of November 20, 2015;

As it is possible to observe, the amendment aimed at the maintenance of current concessions. In order to safeguard the Granting Authority's interests, it was suggested above that the new electric utility be responsible for acquiring an extension of the current water resources concession before the expiration of the term of the corresponding administrative act. The intention is to avoid modification, at this time, of current concessions and their corresponding guaranteed power outputs. However, as mentioned before, as they are new concession agreements, there are also grounds for the procurement of new water resources concessions and recalculation of the guaranteed power output, and in case these facts are confirmed, they should be considered in the added value calculation.

Another topic addressed in Eletrobras' amendment was the one approached in subsection five, which concerns the expansion in an extremely generic way, subject to multiple interpretations:

> SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES [...]
>
> Subsection Five – It is the Electric Utility's obligation to completely implement the expansions, revamping, or improvements of any kind, provided for or already in performance on the date of execution of this agreement.

Treating *"expansions (...) provided for"* as obligations of the Electric Utility may cause several discussions by its terminological inaccuracy. It is not possible to know if an expansion being studied would be an "expansion provided for," or if only the expansions "already granted" would receive similar treatment. For this reason, the amendment below was made:

WORDING – DRAFT CONCESSION AGREEMENT	**PROPOSED AMENDMENT**

SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...) **Subsection Five** – It is the Electric Utility's obligation to completely implement expansions, revamping, or improvements of any kind, expected or under execution as of date of execution of this agreement.	**SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)** **Subsection Five – exclude.** **[or, on a subsidiary basis]** **Subsection Five** – It is the Electric Utility's obligation to completely implement expansions, revamping, or improvements of any kind already granted in a specific instrument by MME or ANEEL on the date of execution of this Concession Agreement or resulting from inspection processes by ANEEL.

As a basis for the amendment above Eletrobras highlighted:

> 155. According to item III, Subsection Four, SECTION FOUR, Independent Power Producers are already obligated to permanently maintain their equipment and facilities in perfect conditions, so it is not necessary to include in the agreement obligations such as making revamping or improvements as these obligations are inherent in the management of their assets in order to maintain them in perfect conditions. Moreover, expansions are addressed in Subsection Seven, Section Three.
>
> 156. Nevertheless, in case ANEEL disagrees with this assessment, we suggest that unrealized expansions, revamping, or improvements be restricted to those already agreed upon on inspection processes, as suggested in Technical Note No. 255/2021-SCG/SRG/SRM/SFG/SFF/ANEEL of May 7, 2021.

For this reason, Eletrobras suggested that subsection five be excluded or replaced by different wording in order to rule out the inaccuracy indicated above.

The next topic in Section Four to be mentioned is the one in subsection eleven, which addresses the obligations to the São Francisco River Integration Project including the Watersheds on the Northern part of the Northeast region (PISF) imposed upon CHESF.

Eletrobras' amendments had a double approach: a) demonstrate the impossibility of the abovementioned obligations beginning with the publication of Law No. 14,182/2021 (the reason why Eletrobras suggested such obligations begin after the execution of the new concession agreements); and b) the need for the difference between the market value of the power disposed of to the PISF and the amount hereby disbursed (BRL80.00/MWh) to be considered in the calculation of the amount of concession bonus (to be paid to the Federal Government).

Here is the proposed amendment to the text:

WORDING – DRAFT CONCESSION AGREEMENT	PROPOSED AMENDMENT
SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)	**SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)**
Subsection Eleven – Pursuant to art. 6º of Law No. 14,182 of July 12, 2021, to comply with the measure referred to in subitem "a" of item V of the main section of art. 3º of Law No. 14,182 of July 12, 2021, the Electric Utility shall contribute with three hundred and fifty million Reais (BRL350,000,000.00) annually, for a period of ten (10) years, adjusted by the Extended National Consumer Price Index (IPCA), released by the Brazilian Institute of Geography and Statistics – IBGE, or by another index that replaces it, as of the month this Agreement is executed. (...)	**Subsection Eleven –** Pursuant to art. 6 of Law No. 14,182 of July 12, 2021, to comply with the measure referred to in subitem "a" of item V of the main section of art. 3 of Law No. 14,182 of July 12, 2021, the Electric Utility shall contribute with three hundred and fifty million Reais (BRL350,000,000.00) annually, for a period of ten (10) years, adjusted by the Extended National Consumer Price Index (IPCA), released by the Brazilian Institute of Geography and Statistics – IBGE, or by another index that replaces it, as of the month this Agreement is executed. (…)
VI. In addition to the contribution specified in the main section, the electricity generation Electric Utilities located in the basins of the São Francisco River, whose concession agreements are affected by Law No. 14,182 of July 12, 2021, shall make electricity available in an annual amount of eighty-five average megawatts (85 avgMW), for a period of twenty (20) years, as of the date of enactment of Law No. 14,182 of July 12, 2021, for the price of eighty Reais per megawatt-hour (BRL80.00/MWh), to be adjusted by the IPCA, or by another index that replaces it, through a specific agreement executed directly with the PISF Federal Operator.	VI. In addition to the contribution specified in the main section, the electricity generation Electric Utilities located in the basins of the São Francisco River, whose concession agreements are affected by Law No. 14,182 of July 12, 2021, shall make electricity available in an annual amount of eighty-five average megawatts (85 avgMW), for a period of twenty (20) years, as of the month that the new concession agreements are executed, for the price of eighty Reais per megawatt-hour (BRL80.00/MWh), to be adjusted by the IPCA, or by another index that replaces it, through a specific agreement executed with the PISF Federal Operator. The electric utility shall draft the corresponding purchase agreement on the time agreed upon with the PISF Federal Operator, which shall submit all information required for drafting of the agreement, including the modulation intended;
VII. The annual amount provided for in item VI of this Subsection may be modulated over the months of each year, in order to optimize the use of water by the state operators of the receiving basins supplied by the PISF.	VII. The annual amount provided for in item VI of this Subsection may be modulated over the months of each year, in order to optimize the use of water operation by the state operators of the receiving basins supplied by the PISF. The submission of the modulation curve, in writing, by the PISF Federal Operator to the electric utility is a condition precedent clause for the obligation to provide electricity to the PISF to become effective, maintained, in any case, the twenty (20)-year period for the provision of electricity.
	VIII. Neutrality is ensured to the Electric Utility when it comes to compliance with the provisions in item VI of this Subsection.
	IX. To comply with item VIII of this Subsection, the reimbursement by the amount provided for in art. 4, II, 'd' of Law No. 14,182/2021, shall be: a) until the process of termination of the quota system (*descotização*) begins, the difference between the electricity acquired and the amount paid by the PISF (BRL80.00/MWh); and b) after the process of termination of the quota system (*descotização*) begins, the difference between the value of the electricity defined by CNPE to measure the Economic Benefit Added and the amount paid by the PISF (BRL80.00/MWh).

The topic of the start of the obligations to the PISF was apparently overcome as CNPE, at the moment of calculation of the added value, has informed that it considered the initial term of the obligations in January 2023.

Nevertheless, the calculation chart of the added value could not be accessed so far, which precludes the verification of the value effectively taken into account by CNPE with respect to the obligations of CHESF towards the PISF.

In addition to the amendments to the foregoing subsections, Eletrobras suggested the inclusion of four (4) subsections.

First, for the topic of the sluice gates, Eletrobras highlighted the already solid understanding of the sector regarding the clear lack of responsibility of the generation utilities as to the costs of implementation, operation, and maintenance of the sluice gates in existing HPPs. In order to prevent further discussions, Eletrobras suggested the inclusion of subsections seventeen and eighteen:

WORDING – DRAFT CONCESSION AGREEMENT	**PROPOSED AMENDMENT**
SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...) **Subsection Seventeen** – (None)	**SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)** **Subsection Seventeen** – The Electric Utility is not responsible for the implementation, permitting, operation, and maintenance of sluice gates, pursuant to, in this respect, Law No. 13,081/2015, as well as the obligations provided for in art. 7 of Law No. 14,182/2021.
Subsection Eighteen – (None)	**Subsection Eighteen** – In the hydroelectric dams integrated by sluice gates, the infrastructure shall be delimited, as well as the rights and obligations of each concessionaire regarding the safety of the dam, by an operating agreement and specific regulation.

Next, Eletrobras released a recommendation in CP No. 48/2021 to clarify that the obligations related to arts. 6, 7, and 8 of Law No. 14,182/2021 imposed upon the electric utilities CHESF, Eletronorte, and Furnas, end with fund contribution, as the implementation of the projects is not their duty. Thus, the inclusion of the following provision was recommended:

WORDING – DRAFT CONCESSION AGREEMENT	**PROPOSED AMENDMENT**
SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)	**SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)**

Subsection Nineteen – (None)	**Subsection Nineteen –** The Electric Utility is not responsible, directly or indirectly, for the implementation and development of the projects referred to in arts. 6, 7, and 8 of Law No. 14,182/2021, and is solely responsible for the funding contributions provided for in the referred law.

Finally, Eletrobras suggested the inclusion of subsection twenty:

WORDING – DRAFT CONCESSION AGREEMENT	PROPOSED AMENDMENT
SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...) **Subsection Twenty** – (none)	**SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES (...)** In order to enable the exploitation of the water resources referred to in Section One, the Electric Utility undertakes all responsibilities and charges related to the operation and maintenance of the Hydro Power Plants, observing the applicable technical standards and legal requirements. **Subsection Twenty –** The Electric Utility shall maintain, for six (6) years of the privatization, the payment of associative contributions to the Electric Energy Research Center – CEPEL.

Thus, only the period of maintenance of the obligations to CEPEL was addressed.

[Section Five]

Section Five, with its six (6) subsections, governs the rights and prerogatives of the electricity company. Notwithstanding, Eletrobras not identifying the need to amend the foregoing provisions contributed to the sense of adding subsection seven, as follows:

WORDING – DRAFT CONCESSION AGREEMENT	PROPOSED AMENDMENT
SECTION FIVE – RIGHTS AND PREROGATIVES OF THE UTILITY COMPANY (…) **Subsection Seven** – (None)	**SECTION FIVE – RIGHTS AND PREROGATIVES OF THE UTILITY COMPANY** (…) **Subsection Seven –** The Generation Utility, as of the beginning of the cancellation of the electricity contract referred to in Section Three, Subsection One, shall be entitled to compensation for the corresponding ancillary services related to the part of the generation from the plant intended for independent generation.

Note that the adoption of the independent generation system to replace the quota system results in the need for ancillary services. The justification presented in the contribution is quite clarifying:

XIII – ADJUSTMENTS TO THE INDEPENDENT GENERATION SYSTEM

13.1. Ancillary services

136. As already commented, MME considers defining new guaranteed power output parameters for the hydro power plants affected by privatization. With that, there would be the maintenance of the installed capacity of the HPPs of the Eletrobras group and the potential decrease in guaranteed power output.

137. In case the scenario described above occurs, the operating reserve of such hydro power plants, used by the ONS to control frequency in the National Interconnected System (SIN), including within the scope of the Automatic Generation Control (CAG), shall increase.

138. Pursuant to art. 12 of ANEEL Normative Resolution No. 514/2012 ("REN ANEEL No. 514/2012"), the power plants contracted by the quota system do not receive additional compensation for the provision of ancillary services. After the beginning of the process of termination of the quota system (*descotização*), however, it is necessary to provide for the compensation for such services, proportionally to the cancellation in progress, in the Concession Agreement. After complete cancellation of the quotas, there shall be full compensation to the utility company, under the independent generation system, for ancillary services that may be provided.

As noted, the plants operating under the quota system are not compensated for the provision of ancillary services, but the HPPs under the independent generation system are. Thus, Eletrobras shall receive similar compensation.

[Section Six]

Section Six addresses inspection and has seven (7) subsections. Eletrobras did not identify the need to amend the provisions indicated in such concession agreement, which are similar to the ones in other concession agreements recently entered into by the Agency.

[Section Seven]

Section Seven governs the penalties contractually and has three (3) subsections. Eletrobras made a modest contribution, aligned with REN No. 846/2019:

WORDING – DRAFT CONCESSION AGREEMENT	**PROPOSED AMENDMENT**
SECTION SEVEN – PENALTIES The **Electric Utility** shall be subject to the penalties, pursuant to the prevailing laws and regulations, especially those established in **ANEEL** Resolutions, without prejudice to the provisions in items III and IV of art. 17 of ANNEX	**SECTION SEVEN – PENALTIES** The **Electric Utility** shall be subject to the penalties, pursuant to the prevailing laws and regulations, especially those established in **ANEEL** Resolutions, without prejudice to the provisions in items III and IV of art. 17 of ANNEX

I of Decree No. 2,335 of October 6, 1997, as a result of failure to comply with the legal, regulatory or contract provisions related to the exploitation of the **Hydro Power Plants**. **Subsection One** – Among other sanctions, the Electric Utility shall be subject to a fine, imposed by ANEEL, in the maximum amount of two percent (2%) per infraction of the annual revenue of the Electric Utility or the estimated amount of energy generated, corresponding to the last twelve months before the drawing-up of the notice of infraction or estimated for this period of twelve months.	I of Decree No. 2,335 of October 6, 1997, as a result of failure to comply with the legal, regulatory or contract provisions, related to the exploitation of the **Hydro Power Plants**. **Subsection One** – Among other sanctions, the Electric Utility shall be subject to a fine, imposed by ANEEL, in the maximum amount of two percent (2%) per infraction of the amount of the net Operating Revenue Net (NOR) of the Electric Utility or the estimated amount of energy generated, corresponding to the last twelve months before the drawing-up of the notice of infraction or estimated for this period of twelve months, and the corresponding base for calculation is only for the development in which the infraction was identified. <NOTE: In case of agreements of plants operating under the quota system> **Subsection Four** – In case the infraction is committed during the period of cancellation, the maximum percentage indicated in Subsection One shall apply to the amount of the Annual Generation Revenue ("RAG") of the utility company, meeting calculation criteria. **Subsection Five** – In case the infraction is committed during the period of cancellation, the maximum percentage indicated in Subsection One shall apply to the amount of the estimated amount of energy generated, meeting calculation criteria.

Note that the indication of the NOR of the development is aligned with REN No. 846/2019 and the principle of proportionality. After all, the revenue of developments other than the penalized shall not be taken into account for the purpose proposed by the Agency. In addition, two subsections specific to the system transition period, i.e., in which the quota and independent generation systems co-exist, were suggested.

[Sections Eight and Nine]

Section eight addresses intervention in the concession, while section nine provides for the cancellation of the concession and the reversal of assets. We explain in advance that the topic of intervention was not subject to Eletrobras' opinion nor does require a detailed examination, as it was contractually addressed similarly to as provided for in Law No. 8,987/1995.

However, with respect to section nine, it is an extremely relevant topic, as it provides for (especially in *subsection two*) how shall be deemed, for *purposes of indemnification*, the assets used in such concession:

SECTION NINE – CANCELLATION OF THE CONCESSION AND ASSIGNMENT OF RELATED ASSETS AND FACILITIES

Subsection One – The assets of the concession hereby granted are all those exclusively and permanently used in the activity of electricity generation and shall be stated on an accounting basis and controlled as provided for in the equity accounting and control manuals, and the other equity accounting and control instructions and guidelines issued by ANEEL.

Subsection Two – In the advent of the final term of this Agreement, all assignable assets and facilities related to the Hydro Power Plants shall become an integral part of the Federal Government assets.

I. All existing assignable assets related to the Hydro Power Plants at the time of the Bid of which this Agreement is a result shall be deemed fully amortized for purposes of the equity control of the Electric Utility, and no indemnification is due as of their assignment to Federal Government assets.

II. The assignable assets related to the concession of the Hydro Power Plants not covered by item I of Subsection Two of Section Nine may be indemnified when it comes to investments not amortized yet, as long as they have been approved, when applicable, by the Granting Authority and made in order to ensure continuity and presentness of the service provided.

III. The indemnification payable to the Electric Utility shall have its amount calculated pursuant to the current rules; and

IV. In order to enable full, continuous electricity generation, the assets and the facilities related to the Hydro Power Plants to be reversed due to the cancellation of the concession shall be in proper operating conditions, according to the basic characteristics and technical requirements.

This topic will be addressed in further detail in Opinion 2, which is focused exactly on indemnification. Regarding this topic, we reproduce:

WORDING – DRAFT CONCESSION AGREEMENT	**PROPOSED AMENDMENT**
SECTION NINE – CANCELLATION OF THE CONCESSION AND ASSIGNMENT OF THE RELATED ASSETS AND FACILITIES (…)	**SECTION NINE – CANCELLATION OF THE CONCESSION AND ASSIGNMENT OF THE RELATED ASSETS AND FACILITIES (…)**
Subsection Two – In the advent of the final term of this **Agreement**, all assignable assets and facilities related to the **Hydro Power Plants** shall become an integral part of the Federal Government assets.	**Subsection Two** – In the advent of the final term of this Agreement, all assignable assets and facilities related to the Hydro Power Plants shall become an integral part of the Federal Government assets.
I. All existing assignable assets related to the **Hydro Power Plants** at the time of the Bid of which this **Agreement** is a result shall be deemed fully amortized for purposes of equity control by the **Electric Utility**, and no indemnification is due as of their reversal to the **Federal Government**. II. The assignable assets related to the concession of the **Hydro Power Plants** not covered by item I of Subsection Two of Section Nine may be indemnified when it comes to investments not amortized yet, as long as they have been approved, when applicable, by the **Granting Authority** and	I. The assignable assets related to the concession of the **Hydro Power Plants** reversed during the concession period shall be indemnified when it comes to investments not amortized yet, as long as they have been approved, when applicable, by the **Granting Authority** and reversed in order to ensure continuity and presentness of the service provided.

reversed in order to ensure continuity and presentness of the service provided.	
III. The indemnification payable to the **Electric Utility** shall have its amount calculated pursuant to the current rules; and IV. In order to enable full, continuous electricity generation, the assets and the facilities related to the **Hydro Power Plants** to be reversed due to the cancellation of the concession shall be in proper operating conditions, according to the basic characteristics and technical requirements.	II. The indemnification payable to the **Electric Utility** shall have its amount calculated pursuant to the current rules. III. In order to enable full, continuous electricity generation, the assets and the facilities related to the **Hydro Power Plants** to be reversed due to the cancellation of the concession shall be in proper operating conditions, according to the basic characteristics and technical requirements. **[On a subsidiary basis, in case of failure to previously pay the indemnification provided for in the agreement in effect]**: I – The assignable assets related to the concession of the **Hydro Power Plants** reversed during the concession period shall be indemnified when it comes to investments not amortized yet, as long as they have been approved, when applicable, by the **Granting Authority** and made in order to ensure continuity and presentness of the service provided. II – All investment in existing assignable assets not amortized or depreciated yet and related to the Hydro Power Plants on the date of execution of this **Agreement** shall be calculated and indemnified to the **Electric Utility** by the Granting Authority within 5 years. III – The indemnification payable to the Electric Utility shall have its amount calculated pursuant to the current rules. IV. In order to enable full, continuous electricity generation, the assets and the facilities related to the Hydro Power Plants to be reversed due to the cancellation of the concession shall be in proper operating conditions, according to the basic characteristics and technical requirements.

Thus, Eletrobras' wording suggestion sought to clarify that the assets reversed during the concession shall be indemnified if not amortized yet, a wording that is aligned with the sector laws and regulations.

[Sections Ten to Thirteen]

Section Ten provides for the controller's commitment; Section Eleven refers to the settlement of divergences and the contract jurisdiction; Section Twelve, in its turn, encompasses the final provisions; finally, Section Thirteen governs the publication and registration of the agreement.

Thus presented the main characteristics of the draft concession agreement subject to CP No. 48/2021, as well as the main content of the corresponding amendment by Eletrobras, we will now examine the other topics indicated in item 3.1.1, "a", of the terms of reference.

3.3 – The system of the Tucuruí and Mascarenhas de Moraes HPPs

The electricity generation utilities of the Eletrobras group were strongly affected by the advent of Law No. 12,783/2013, which provided for the possibility to extend generation concessions through the quota system. In summary, the intention was to pay a lower price for the electricity generated in HPPs already amortized, which required the creation of a specific system ("quota system").

The privatization of Eletrobras, as provided by Law No. 14,182/2021, had the cancellation of such quota system as one of its main pillars. Therefore, the revenue to be obtained by the electric utilities of the Eletrobras Group that are currently under the quota system will probably be considerably high during the new concession period.

Nevertheless, not all HPPs of the Eletrobras group are currently under the quota system. The Tucuruí HPP, for example, was granted to Eletronorte by Decree No. 74,279 of July 11, 1974, by the public service system, for fifty (50) years:

> Article 1 Centrais Elétricas do Norte do Brasil S.A. – ELETRONORTE is granted the permit for progressive use of the hydraulic power of the Tocantins River, in its entirety, from the headwaters of its forming rivers, in the state of Goiás, to its mouth, in the estuary of the Amazon River, in the State of Pará.
>
> Paragraph 1. The electricity generated is intended for the electricity public service, for the area of expertise of the utility company, or the supply of other electric utilities, when authorized. (...)
>
> Article 3. The utility company shall prioritize the hydro power plants located in the Tucuruí region, in the State of Pará, and the São Félix region, in the State of Goiás. (...)
>
> Article 4 This concession shall be effective for fifty (50) years.

That is exactly why the Concession Agreement for the Tucuruí HPP (No. 07/2004) was executed as a "CONCESSION AGREEMENT FOR ELECTRICITY GENERATION INTENDED FOR PUBLIC SERVICE" and establishes the following final term for the concession:

SECTION TWO – CONCESSION AND AGREEMENT TERMS

The electricity generation concession governed by this Agreement has its final term as established in the corresponding concession act, reproduced below:

Hydro Power Plant	Location of the Powerhouse/State	Concession		End of the Concession
		Act	Date	
Tucuruí HPP	Tucuruí / PA	Decree No. 74,279	-	11-Jul-2024

Note that the Tucuruí HPP is still in its initial exploitation period, i.e., **it was not** extended based on Law No. 9,074/1995 (simple extension), nor Law No. 12,783/2013 (through the quota system), or any other legal ground. Therefore, the privatization of Eletrobras does not impose the "process of termination of the quota system (*descotização*)" of the Tucuruí HPP, but only the transformation from its exploitation for public service system to independent production.

The Mascarenhas de Moraes HPP was similarly granted to Furnas through Decree No. 73,056 of October 31, 1973, also under the public service system, as follows:

> Article 1. Furnas – Centrais Elétricas S. A. is hereby granted the concession for progressive use of the hydraulic power of a stretch of the Grande River, located 24 km away from the upstream of the mouth of the Canoas River, close to the location referred to as Ponte dos Peixotos, where the Marechal Mascarenhas de Morais Plant (formerly Peixoto) is installed, between the city of Ibiraci and the district of Desemboque, pertaining to the city of Sacramento, in the State of Minas Gerais, whose owner is Companhia Paulista de Força e Luz, as a result of Decree No. 28,166 of June 1, 1950, complemented by Decree No. 31,132 of July 11, 1952, amended by Decree No. 1,187-A of June 18, 1962.
>
> Sole paragraph. The electricity generated is intended for the electricity public service under the responsibility of the utility company, for the supply of other electric utilities, when authorized. (…)
>
> Article 3. This concession shall be effective for thirty (30) years; after such period, the assets and facilities that exist at that moment due to the services provided shall be reverted to the Federal Government.

However, unlike the Tucuruí HPP, the concession of the Mascarenhas de Moraes HPP had the original effectiveness of thirty (30) years, i.e., ending on October 31, 2003. Nevertheless, such concession was extended for twenty (20) years as of January 1, 2003, pursuant to Law No. 9,074/1995 and Decree No. 1,717/1995, as it can be verified in art. 2, item III of MME Ordinance No. 226/2004:

> THE MINISTER OF STATE FOR MINES AND ENERGY, by using the powers vested in her by art. 3 of Decree No. 1,717 of November 24, 1995, pursuant to art. 19 of Law No. 9,074 of July 7, 1995, and considering Proceeding No. 48500.000500/01-19, resolves to: (…)
>
> Article 2. Extend, for twenty years, the concessions for the exploitation of the hydro power plants specified below, whose owner is Furnas Centrais Elétricas S.A. (…)

> III – The Mascarenhas de Moraes HPP, in the Municipalities of Delfinópolis and Ibiraci, State of Minas Gerais, as of November 1, 2003.

Based on the abovementioned extension, Concession Agreement No. 004/2004 was executed, whose Section Two presents a summary chart with the following information about the Mascarenhas de Moraes HPP:

Hydro Power Plant and Thermal Power Plant	**City of Location / State**	**Acts**		**Final Term of the Concession**
Mascarenhas de Morais HPP	Delfinópolis and Ibiraci/MG	Decree No. 73,056 of 31-Oct-1973	MME Ordinance No. 226 of 30-Sep-04	31-Oct-2023

Thus, the HPP is currently granted until October 31, 2023.

Additionally, such Concession Agreement establishes the exploitation under the public service system:

> SECTION THREE – OPERATION OF THE HYDRO POWER PLANTS, THERMAL POWER PLANTS, AND ELECTRICITY TRADING (…)
>
> Subsection One – The electricity generated in the Hydro Power Plants and Thermal Power Plants shall be intended for the electricity public service and the electricity shall be traded under this Agreement and the specific laws and regulations.

Thus, it can be noticed that the Tucuruí and Mascarenhas de Moraes HPPs are currently granted under the public service system, and are not subject to the quota system or the transition rules related to the process of termination of the quota system (*descotização*) provided for in Law No. 14,182/2021.

3.4 – The special systems of the Sobradinho and Itumbiara HPPs

In addition to the Tucuruí and Mascarenhas de Moraes HPPs, the Reference Term, in item 3.1.1, "a", expressly refers to the specific systems of the Sobradinho and Itumbiara HPPs. Thus, we will indicate the specific characteristics of these HPPs in the following lines:

First, it is worth noting that large industrial consuming groups, who historically obtained the contract of electricity at differential pricing (lower), sought, in the late 2000s, legal grounds for the extension of then-prevailing power purchase agreements.

For large consumers based in the Northeast region, who acquired great volumes of electricity from CHESF, the extension of this special agreement was approved by the legislator upon amendment to Law No. 11,943/2009.

This agreement was made starting with the Sobradinho HPP, as it can be observed in art. 22, ¶ 2, item II of Law No. 11,943/2009 (as amended by Law No. 13,182/2015), applicable to ninety percent (90%) of its guaranteed power output (deducted from the energy losses and the domestic consumption):

> Art. 22. The electricity supply agreements entered into by and between electric utilities generating public service, including those under federal control with end consumers, prevailing on the date of enactment of this Law and that have met the provisions in art. 3 of Law No. 10,604 of December 17, 2002, shall be added as of July 1, 2015, as long as the conditions established in this article were satisfied, maintaining other contractual conditions.
>
> Paragraph 1. The agreements addressed in the main section shall be terminated on February 8, 2037.
>
> Paragraph 2. The power reserves to be contracted from July 1, 2015 to February 8, 2032, shall correspond to the amount of electricity equivalent to the sum of the following: installments:
>
> I – all installment of the guaranteed power output linked to and in compliance with supply agreements reached by the main section, which was not directed to the allocation of quotas with physical and power guarantees, under ¶¶ 10, 11, and 12 of art. 1 of Law No. 12,783 of January 11, 2013; and
>
> II – installment linked to ninety percent (90%) of the guaranteed power output of the **Sobradinho Hydro Power Plant**, in the gravity center of the sub-market of the plant, deducted energy losses and internal consumption.
>
> Paragraph 3. Starting on February 9, 2032, the power reserves contracted shall be reduced evenly at the ratio of one-sixth every year, pursuant to the provisions in ¶ 1.
>
> Paragraph 4. In periods established below, shall be subject to allocation of quotas with physical and power guarantees to electric utilities and public service licensees for electric power distribution of the National Interconnected System (SIN), pursuant to art. 1 of Law No. 12,783 of January 11, 2013, the amounts of electricity corresponding to:
>
> I – uniform and an annual reduction in agreements established in ¶ 3 from February 9, 2032 to February 8, 2037; and
>
> II – any termination or permanent reduction in amounts contracted during the effective period, from February 9, 2022 to February 8, 2037, pursuant to the provisions in ¶ 12. (...)

Therefore, such law provides that agreements executed with these large industrial consumers shall be reduced at the ratio of one-sixth per year, starting on February 9, 2032 and ending on February

8, 2037. With that, it may be said that the Sobradinho HPP has a special electricity trade system, provided by law, which shall be considered in the calculation of the added value by CNPE.

For the Itumbiara HPP, art. 10 of Law No. 13,182/2015 provides that the special system lies in 80% of the respective guaranteed power output (deducting energy losses and internal consumption). Additionally, such law also provides the disengagement, at the ratio of one-sixth per year, as of February 27, 2030, so there shall be an expiration of the purchase agreement under a special system on February 26, 2035.

It is also important to reproduce the content of art. 10, ¶ 5, of Law No. 13,182/2015, regarding the Itumbiara HPP:

> Art. 10. (…) ¶ 5 Ordinary revisions of the guaranteed power output of the plant as provided for in ¶ 3 that entails a reduction in the guaranteed power output shall cause a proportional reduction of the amounts contracted.

The provision above refers to the contractual consequences of any ordinary revision of the guaranteed power output, event provided for in art. 21, ¶ 4, of Decree No. 2,655/1998. According to such provision, in case of reduction in guaranteed power output of the Itumbiara HPP, every sale agreement under a special system entered into industrial consumers would be reduced proportionally.

In summary, the Sobradinho HPP and the Itumbiara HPP have special systems for the sale of electricity, provided for in specific rules (Law No. 11,943/2009 and Law No. 13,182/2015), which established the compulsory disposal of electricity to large industrial consumers that meet the legal requirements.

For the privatization of Eletrobras, new guaranteed power outputs may be defined for the Sobradinho and Itumbiara HPPs. About the matter, on August 31, 2021, CNPE finished the calculation of the Added Value including the privatization. In such opportunity, such Board pointed out new guaranteed power outputs to such HPPs. According to the document "ANNEX – ELETROBRAS CAPITALIZATION PROCESS – LAW No. 14,182 OF 2021," containing the "*Metrics used in the economic and financial model for the added value by new concession agreements*," disclosed by CNPE, the new guaranteed power outputs are as follows:

Current and New Guaranteed Power Outputs

#	Subsidiary	Hydro Power Plant	Power (MW)[1]	Current Guaranteed Power Output (avgMW)	Guaranteed Power Output – New MME Ordinance No. 544 of August 31, 2021 (avgMW)
9	Chesf	Sobradinho	1,050.3	505.5	457.5
21	Furnas	Itumbiara	2,082.0	964.3	948.9

Therefore, in both cases, the guaranteed power output of the HPP related to each one of the special systems decreased. For the Itumbiara HPP, there is an express provision for the possibility of reducing the respective contractual amounts in case of a reduction in guaranteed power output. It is worth mentioning that, as a precaution only, such provision (art. 10, ¶ 5, of Law No. 13,182/2015) is slightly different from the reduction in guaranteed power output under examination, given that it did not occur due to extraordinary review, but by recalculation in the privatization process. Still, the arguments for the reduction in the disposal of amounts under this system are quite strong, especially if the new guaranteed power output is not enough to fully meet the abovementioned agreements.

For the Sobradinho HPP, laws and regulations do not expressly include the possibility of a reduction in the amounts agreed in case of a review in guaranteed power output. Still, in case of the new guaranteed power output for the HPP is not enough to meet the amounts agreed, it seems suitable to reduce agreements proportionally.

Note that, the agreements, as provided by such laws, were based on *percentages of the respective guaranteed power outputs*. Therefore, in order to maintain the percentage provided by law, is it worth decreasing the traded amounts, in case the guaranteed power outputs appointed by CNPE are insufficient to fully cover the traded amounts.

CHAPTER IV – FINAL CONSIDERATIONS

This opinion was prepared as indicated in the Terms of Reference by Eletrobras, which in its turn, supports its privatization process. Several points addressed herein were subject to contribution by the Eletrobras group under ANEEL CP No. 48/2021, which preparation had a collaboration of Baggio e Costa Filho Sociedade de Advogados, naturally after several meetings with Eletrobras and its subsidiaries (especially CHESF, Eletronorte, and Furnas), in addition to the analysis of different opinions of such companies.

Some of the points addressed in the concession agreement – which was subject to analysis in this opinion – are also mentioned in other items of such Terms of Reference, the reason why its analysis shall also be performed in "Opinion 02 – Compensations" and/or in "Opinion 03 – Impacts

of Compensation to the MRE Generators by Non-Hydrological Risks in the Privatization of Eletrobras."

Anyway, Baggio e Costa Filho Sociedade de Advogados is willing to provide clarification and additional analyses if requested by the requesting party.

These are the considerations on the topic of this consultation.

2.3.3 – Technical areas' examination of the contributions

CHAPTER III – ANALYSIS OF THE EFFICACY OF THE CONTRIBUTIONS BY ELETROBRAS

I – CONTEXTUALIZATION AND CONSULTATION

On July 13, 2021, Law No. 14,182/2021 was enacted, providing for the privatization of Centrais Elétricas Brasileiras – Eletrobras. Shortly thereafter, the consulting firm hired *Baggio e Costa Filho Sociedade de Advogados* to be of assistance in the respective legal and regulatory discussions, especially within the scope of the Brazilian Electricity Regulatory Agency – ANEEL, the Ministry of Mines and Energy – MME, and the National Council for Energy Policy – CNPE.

The hiring was guided by a specific Term of Reference ("TR"), whose scope of work comprises the legal and regulatory manifestations desired by the agreement party, as listed below:

> 3.1.1 Preparation of legal opinions addressing all legal and regulatory issues referred to in Law 14,182/2021 directly linked to capitalization of Eletrobras, under corresponding items 1 (Purpose), 2 (Justification), as well as specified below:
>
> a) Analysis of the clauses of the new concession agreement(s), arising from the new concession(s) provided for, for example, in art. 3, II (independent production), art. 1º (Tucuruí and Mascarenhas de Moraes), art. 2 (special systems – Itumbiara and Sobradinho);
>
> b) Examination of the issues related to the payment of indemnifications within the scope of extended concessions based on Law 12,783/2013 (quota system), and any indemnifications within the scope of extended concessions based on Law 11,943/2009 amended by Law 13,182 /2015 (Sobradinho), as well as the indemnifications of the Tucuruí and Mascarenhas de Moraes HPPs, stipulating hypothetical ways for the receipt form of these amounts concomitant with the alteration of the proposed system;
>
> c) Examination of the issues related to the extension of concessions, pursuant to ANEEL Resolution No. 845/20 and ANEEL Resolution No. 930/21, which may impact the Eletrobras capitalization process (Law No. 14.182/21);
>
> d) Advising on the several ways of interaction of the Granting Authority, represented by MME, or ANEEL, such as, without limitation, the preparation of contributions for the collection of supporting information (TS), public consultations (CP), and public hearings (AP), assisting in the preparation of the contributions;

Classificação: Confidencial

e) Assessment of the results of the social participation processes initiated by ANEEL and/or MME to approach the matter, aiming to identify the effectiveness of the contributions presented and any associated impacts.

The assistance provided for in lines "a", "b", and "c" was duly carried out in three Opinions sent to Eletrobras on the issues in question, thus entitled: I) Opinion 01 – General Overview and Analysis of the Concession Agreement; II) Opinion 02 – Indemnifications; and III) Opinion 03 – Impacts of the Compensation on the MRE Generators for Non-Hydrological Risks in the Privatization of Eletrobras.

In addition, the advice described in item "d," regarding the preparation of contributions in any social participation lawsuits filed by the Government, was carried out by submitting a contribution to Public Consultation No. 48/2021 ("CP No. 48/2021"), established by ANEEL, whose deadline for submitting contributions ended on August 31, 2021.

It is worth to remember that CP No. 48/2021 aimed at "*obtaining information to support the improvement of the draft concession agreement that shall regulate the exploitation of the hydraulic power potentials covered by Law No. 14,182/2021, which addresses the privatization of Centrais Elétricas Brasileiras S.A. – Eletrobras.*"

The contributions submitted were intended to adapt the draft Concession Agreement to the applicable legal and non-statutory dictates, as well as to protect the interests of the consulting firm in the scope of the respective discussions.

The purpose of this Opinion, therefore, is **to examine the effectiveness and impacts of the contributions submitted by Eletrobras within the scope of CP No. 48/2021**, as provided for in **TR subsection 3.1.1, item "e**."

Finally, it should be noted that some changes are still expected in CNPE Resolution No. 15/2021, with an impact on the upcoming privatization. If the aforementioned changes are made, Baggio e Costa Filho Sociedade de Advogados shall prepare a complementary statement or update this Opinion.

II – IMPACT ANALYSIS OF ELETROBRAS CONTRIBUTIONS ON THE DRAFT CONCESSION AGREEMENT OBJECT OF ANEEL CP NO. 48/2021

Classificação: Confidencial

2.1 – Initial Considerations on Eletrobras Contributions

Eletrobras' contributions to CP No. 48/2021 considered the terms of the draft concession agreement presented attached to Technical Note No. 493/2021-SCG/SRG/SRM/SFG/SFF/SGT/ANEEL.

For the formation of contributions, several internal meetings were held with the companies of the Eletrobras Group (mainly CHESF, Furnas, and Eletronorte), in order to present the main legal and regulatory arguments to be considered in formatting the Concession Agreement.

As is natural for social participation mechanisms within ANEEL's scope, the contributions forwarded by the sector agents were subject to analysis, in particular: i) by Legal Opinion No. 284/2021/PFANEEL/PGF/AGU of September 28, 2021; ii) by Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT/ANEEL of October 1, 2021; and iii) by the Vote of the Reporting Officer, Dr. Sandoval Feitosa, of October 5, 2021. All these manifestations shall be examined below.

2.2 – The administrative process of PC No. 48/2021 – manifestations until the submission of contributions by stakeholders

On March 31, 2021, administrative process No. 48500.001427/2021-53 was opened, in which the following were included: a) Official Letter No. 109/2021/SE-MME (in which the Ministry requires the preparation of the draft concession agreement for the privatization of Eletrobras, pursuant to Provisional Measure No. 1,031/2021); b) Official Letter No. 197/2021 – SCG/ANEEL, in which ANEEL requires several data from Eletrobras; and c) Technical Note No. 255/2021 – SCG/SRG/SRM/SFG/SFF/ANEEL, of May 7, 2021; d) a first draft concession agreement; e) the order of the drawing of the process to the Reporting Officer Sandoval Feitosa; f) Official Letter 38/2021/SPE-MME, Official Letter 41/2021/DPE/SPE-MME, Official Letter No. 0269/2021/DEE/EPE, and Official Letter No. 59/2021/SPE-MME (which address the guaranteed power outputs of the consulting firm's HPPs); g) Technical Note No. 493/2021 – SCG/SRG/SRM/SFG/SFF/SGT/ANEEL, of August 6, 2021, in addition to the previous manifestation, which addressed the previous draft concession agreement adaptation to the changes resulting from the conversion of Provisional Measure No. 1,031/2021 into Law No. 14,182/2021; h) a second draft concession agreement, as an attachment to Technical Note No. 493/2021; and i) the opening vote of Public Consultation No. 48/2021, with contributions between August 11 and 31, 2021.

Classificação: Confidencial

There is an "*administrative appeal*" in the records from a syndicate unit against the opening of the public consultation.

After that, the Agency listed the receipt of the following contributions in the scope of CP No. 48/2021:

List of contributions in the 1st stage of Public Consultation 048/2021		
No.	**Company**	**Document No.**
1.	Eletrobras Employees' Association – AEEL	48542.002623/2021-00 Annex 1
2.	Engie Brasil Energia – ENGIE	
3.	Furnas Centrais Elétricas S/A – FURNAS	
4.	Pinheiro Neto Advogados	
5.	Centrais Elétricas Brasileiras S.A. – ELETROBRAS	
6.	Kennedy Alves Vieira – ELECTRICAL ENGINEER	
7.	Edgard Monteiro de Menezes – Cidadania Constitucional	
8.	Companhia Hidro Elétrica do São Francisco – CHESF	
9.	Instituto Ilumina	
10.	Energy Workers Union of the State of São Paulo – Sinergia CUT	

As already detailed in previous Opinions prepared by Baggio e Costa Filho Sociedade de Advogados, several aspects of the draft concession agreement submitted to CP No. 48/2021 should be modified, either to make it clearer or to make its content compatible with current laws and regulations.

For this very reason, Eletrobras prepared several contributions to the draft Concession Agreement submitted to public scrutiny, in a document attached to pages 161 and following of the aforementioned process, where the suggestions may be summarized as follows:

SUMMARY CONTRIBUTIONS BY ELETROBRAS		
ITEM	**DESCRIPTION**	**SECTION**
Chapter II	Information pending for the analysis of the agreement	(GENERAL)
Chapter III	Individualization of the new concessions	Sec. 1st, main sec. and Subsec. 1st
Chapter IV	Pre-existing rights (waiver)	Sec. 1st, Subsec. 3rd
Chapter V	GSF Compensation	Sec. 1st, Subsec. 3rd. Sec. 2nd, Sole Subsec.
Chapter VI	Compensation for non-amortized assignable assets	Sec. 9th, Subsec. 2nd
Chapter VII	Pending rights and waiver clause	Sec. 1st, Subsec. 3rd
Chapter VIII	Guaranteed power output	Sec. 3rd, Subsec. 6th
Chapter VIII, 8.1	Guaranteed power output (Itumbiara and Sobradinho)	Sec. 3rd, Subsec. 8th and 9th
Chapter IX	Current Concessions of Water Resources	Sec. 4th, Subsec. 4th
Chapter X	Extension of Concession Agreement	Sec. 2nd, Subsec. Ún.
Chapter XI	Concession bonus	Sec. 4th, Subsec. 13th
Chapter XII	*Descotização*	Sec. 3rd, Subsec. 1st

Classificação: Confidencial

Chapter XIII, 13.1	Ancillary services	Sec. 5th, Subsec. 7th
Chapter XIII, 13.2	Free sale of energy	Sec. 3rd, Subsec. 1st
Chapter XIII, 13.3	Locks	Sec. 4th, Subsec. 17th and 18th
Chapter XIII, 13.4	Obligations and contribution	Sec. 4th, Subsec. 19th
Chapter XIII, 13.5	Expansions and revamping	Sec. 4th, Subsec. 5th
Chapter XIV	Fines	Sec. 7th, Subs. 1st, 4th and 5th
Chapter XV	PISF	Sec. 4th, Subsec. 16th
Chapter XVI	CEPEL	Sec. 4th, Subsec. 20th

Besides Eletrobras, other agents (also Furnas and CHESF) presented contributions. The Agency, after examining the referred manifestations, cataloged ninety-one (91) distinct suggestions, according to the passage below, extracted from Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT of October 1, 2021:

> 15. During CP No. 48/2021 period, ninety (90) contributions from interested parties were received through the web form made available. Additionally, a contribution was received through electronic messages. Of these **ninety-one (91) contributions received**, forty-eight (48) have content to be analyzed.

After the contributions were filed, the sector agents, including Eletrobras, followed the disclosure of several acts related to such privatization process, which shall be discussed below.

2.3 – Acts after submission of contributions by stakeholders

2.3.1 – CNPE Resolution No. 15/2021

After the contributions were submitted in CP No. 48/2021, but before ANEEL's Executive Board deliberated on the draft Concession Agreement, the National Council for Energy Policy – CNPE edited **CNPE Resolution No. 15/2021**, which dealt with several issues of great relevance to the privatization of Eletrobras.

Despite being a document referring to August 31, 2021, CNPE Resolution No. 15/2021 was only published in the Official Gazette on September 2, 2021, and data related to it were not known at the time of the contributions' preparation to CP No. 48/2021.

In summary, CNPE Resolution No. 15/2021:

Classificação: Confidencial

i) Established the added value at sixty-two billion, four hundred seventy-nine million, six hundred fifty-six thousand, three hundred seventy Reais, and ten cents (BRL62,479,656,370.10);

ii) Indicated the amount to be deducted from the added value of two billion, nine hundred six million, four hundred ninety-eight thousand, five hundred forty-seven Reais, and thirty-seven cents (BRL2,906,498,547.37), related to the reimbursement for the purchase of fuel until June 30, 2017;

iii) Established the concession bonus at twenty-three billion, two hundred eighteen million, four hundred eighty-eight thousand, seven hundred fifty-four Reais, and seventy-three cents (BRL23,218,488,754.73);

iv) Explained that, in calculating the concession bonus, the amounts of three hundred fifty million Reais (BRL350,000,000.00) per year, two hundred ninety-five million Reais (BRL295,000,000.00) per year, and two hundred thirty million Reais (BRL230,000,000.00) per year were discounted, all for a ten-year term;

v) Specified that the electricity supply in an annual amount of eighty-five average megawatts (average of 85 MW) to the PISF should occur as of January 1, 2023, for a twenty-year term and at a price of eighty Reais per megawatt-hour (BRL80.00/MWh);

vi) Indicated that, in the calculation of the concession bonus, were considered the indemnifications for investments: a) not yet amortized regarding the Basic Projects of the HPPs listed in Annex I; and b) tied to assignable assets of hydro power plants listed in Annex I, not yet amortized or not depreciated, whose concessions were extended or not, pursuant to art. 1 of Law No. 12,783 of January 11, 2013, whose criteria and procedures for calculating these investments were defined in ANEEL Resolution No. 596 of December 19, 2013, pursuant to art. 2 of Decree No. 7,850 of November 30, 2012;

vii) Established that the concession agreements shall establish that the electric utilities shall not be entitled to the foregoing indemnifications;

viii) Regulated the form for agreements terminated at twenty percent (20%) per annum, beginning on January 1, 2023, except for the Mascarenhas de Moraes, Tucuruí, and Curuá-Una HPPs;

ix) Additionally, it fixed at twenty-nine billion, seven hundred eighty-six million, five hundred seventy-eight thousand, nine hundred eleven Reais, and fifty-five cents (BRL29,786,578,911.55) the amount to be paid by Eletrobras or its subsidiaries to the Energy Development Account (CDE);

x) Detailed that the payment to the CDE shall be made as follows: an initial contribution of five billion Reais (BRL5,000,000,000.00) in up to thirty days of the execution of new concession agreements and annual contributions, beginning in 2023, for the period of twenty-five years.

Classificação: Confidencial

Besides the Resolution itself, the Ministry of Mines and Energy released an Annex, called "Parameters used in the economic and financial model regarding the value added by the new concession agreements",[1] where some additional information was disclosed.

First, it should be noted that the aforementioned document does not explain the calculation chart of the added value, but only provides some additional information about the criteria used by CNPE in its calculations.

Specifically, from what may be extracted from the referred document, CNPE, when editing Resolution No. 15/2021:

- Considered new guaranteed power outputs values for the HPPs, with values given by MME Ordinance No. 544 of August 31, 2021, which amounts to 7.34% less than the guaranteed power outputs then in force;
- Indicated some economic parameters considered in the calculations (WACC, taxes, TFSEE, R&D, CFURH, UBP, GAG O&M, CAIMI, GAG Melhorias, EUSD/EUST), as well as energy price in the free market, energy losses, *hedge* (hydrological risk), and indemnification;
- Indicated, regarding the Tucuruí HPP, an estimate of the new replacement compensation value for non-depreciated and non-amortized assets, in the amount of BRL5,103,744,550.00;
- Explained that the discounted cash flow methodology was used.

Additionally, MME released a presentation with a more didactic exposition of the abovementioned parameters,[2] as well as the Presidential Order (Statement of Reasons No. 45), approving CNPE Resolution No. 15/2021.

Although CNPE's act was not a response to the contributions forwarded in Public Consultation No. 48/2021, some topics addressed therein met (in whole or in part) some of Eletrobras' requests forwarded in the scope of that Public Consultation, although other points remained unresolved.

Thus, it is appropriate to deal with ANEEL's acts that preceded the preparation of the draft concession agreement approved.

Classificação: Confidencial

2.3.2 – Office of Federal Prosecution analysis

In the scope of ANEEL, even before the preparation of Technical Note No. 675/2021 (which examined the contributions), SCG forwarded Memorandum No. 175/2021 of September 16, 2021, in which it requested clarifications from the Office of Federal Prosecution about some specific items addressed in the contributions to CP nº 48/2021, especially regarding: i) the waiver of pre-existing rights; ii) the provision for the extension of the concession; iii) the obligations of arts. 6, 7, and 8 of Law No. 14,182/2021; iv) locks; v) intervention in the concession.

In response, the Office of Federal Prosecution issued its Opinion No. 284/2021, summarized below:

> SUMMARY: Administrative. Contributions to Public Consultation No. 48/2021, which provides for the draft generation concession agreement that shall regulate the exploitation of hydroelectric potentials under Law No. 14,182 of July 12, 2021. Waiver of pre-existing right to Law 8,987/95. Inapplicability. Provision regarding the extensions referred to in Law 9,074/95. Waiver already formalized in previous instruments. Section attesting the absence of legal provision for the extension. Possibility. The agreement provisions shall reflect the legal order in force which does not provide for the extension of the agreement to be entered into. Contribution obligations. Primary liability of the electric utilities and Eletrobras' subsidiary. Power supply to the Federal Operator of the São Francisco River Integration Project facilities. Overcoming the literal interpretation of the device causes a series of legal inconveniences and fragilities. The initial supply milestone shall occur after execution of the agreement and the agreements terminated regarding the electricity currently committed to the guaranteed power output quota system. Liability in lock operation and maintenance. Absence of real conflict between Law 13,081/2015 and Law 14,182/2021. There is no legal prohibition to assign liability to generation electric utilities for lock implementation, licensing, operation, and maintenance. Minimal outlines of obligations regarding project contribution and execution defined by the managing committee are those provided for in the law itself. General adjustment of the proposed wording by SFG to reconcile lock operation with dam safety measures. Intervention in the concession. Compatibility with the independent production of energy regime.

As noted, Opinion No. 284/2021 brought important additions to some arguments indicated by Eletrobras in its contributions, especially:

- For recommending the waiver cancellation of pre-existing rights section, under the following terms:

> 19. Given the foregoing, it is possible to conclude that the **waiver clause** regarding any preexisting rights that contravene Law No. 8,987 of 1995 in the draft concession agreement **must be suppressed**, whether because it is not an

> extension regulated by Law No. 9,074/95 or there was already a waiver of identical content signed by the electric utilities in past agreements.

- For explicitly that the clause mentioning the absence of extension provision shall not be understood as a prohibition to its future extension, should the laws and regulations at the time of the end of the concession term allow it:

> 31. In short, such a clause does not establish a prohibition on the extension of the term of the concession agreement, it only states the absence of legal provision for such extension in accordance with the current legal system.
>
> 32. For this reason, it is our understanding that the clause shall be maintained in the instrument.

- By clarifying that the main liability for the contributions of arts. 6, 7, and 8 of Law No. 14,182/2021 shall fall upon the respective electric utilities, and that Eletrobras' liability is subsidiary;

- By clarifying that the best legal interpretation excludes the beginning of obligations related to the São Francisco River Integration Project (PISF) as of the enactment of Law No. 14,182/2021, and clarifies that CNPE, in its Resolution No. 15/2021, established January 1, 2023, as the initial term of such obligations; and

- Commented on lock maintenance, and noted the absence of real conflict between Law No. 13,081/2015 and Law No. 14,182/2021.

After the preparation of the Legal Opinion summarized above, a technical declaration was issued with an even broader analysis of the contributions forwarded under CP No. 48/2021, as detailed below.

2.3.3 – Technical areas' examination of the contributions

The several contributions submitted during the aforementioned Public Consultation were examined in Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT of October 1, 2021. In general, such declaration made specific changes to the previous draft, especially on the topics discussed below.

As highlighted in the Technical Note, of the ninety-one (91) contributions, only forty-eight (48) had content to be analyzed. Among these, twenty-one (21) were sent by Eletrobras:

> III – THE ANALYSIS

Classificação: Confidencial

17. This deals with the analysis of the contributions for the improvement of the draft concession agreement that shall regulate the exploitation of the hydroelectric potentials under Law No. 14,182 of 2021 – conversion law of MP No. 1,031 of 2021 – which provides for the privatization process of Eletrobras.

18. In CP No. 48/2021, ninety (90) contributions were received through the web form made available and one (1) contribution by email, of which forty-three (43) had no content to be analyzed. Thus, forty-eight (48) contributions remained.

19. Table 1, presented below, lists the 48 contributions presented, coming from seven (7) institutions and one (1) consumer:

Interested Parties	Contributions
Instituto Ilumina	1
Individual (consumer)	1
Eletrobras Employees' Association – AEEL	1
Eletrobras	21
Engie Brasil Energia	3
Furnas Centrais Elétricas S.A.	1
Pinheiro Neto Advogados	19
Energy Workers Union of the State of São Paulo – Sinergia CUT	1
Total contributions	**48**

Table 1: Contributions received

An initial point explained in the referred declaration is that the draft concession agreement had to be adapted not only as a result of the contributions received but also due to the passing of CNPE Resolution No. 15/2021, which was subsequent to the opening of CP No. 48/2021:

III.1 – CNPE Resolution No. 15 of August 31, 2021

25. At the opening of this Public Consultation, the draft Concession Agreement already referred to the act that would be prepared by CNPE, as provided by Law No. 14,182 of 2021.

26. In this context, on August 31, 2021, CNPE issued Resolution No. 15, which established the value added by the new Concession Agreements for electricity generation under Law No. 14,182 of 2021. The referred Resolution also brought, under the provisions of Law No. 14,182 of 2021, other requirements for the new Concession Agreements to be celebrated according to the Law.

(...)

28. Thus, its provisions were considered in the draft agreement now under analysis, and expressly cited in the following sections:

i. Items I and III of Subsection One of Section Three;

ii. Subsections Twelve and Thirteen of Section Four; and

Classificação: Confidencial

iii. Item I of Subsection Two of Section Nine;

> 29. It is important to note that the publication of the act that eventually shall succeed CNPE Resolution No. 15 of 2021, shall be reflected in the draft Concession Agreement proposed, so that the obligations defined under CNPE's powers are correctly correlated with the obligations established in the agreement, which, in turn, shall govern the concession awards.

The first point examined was the **individualization of the agreements**. After acknowledging that "*the execution of individual agreements may represent advantages to the concession management*," the technical area argued that there is no damage in the execution of only one agreement per subsidiary. Thus, it concluded in favor of the "*execution of a Concession Agreement for each of Eletrobras' subsidiaries benefited by Law No. 14,182 of 2021*."

Next, it dealt with the **process of termination of the quota system (*descotização*)**. On the subject, the technical area referred to CNPE Resolution No. 15/2021 which removed most of the omissions and concerns regarding this specific topic.

Next, the subject of **waiver of pre-existing rights** was analyzed. After referring to the position of the Office of Federal Prosecution, it was agreed that this general clause should be suppressed. On the other hand, CNPE Resolution No. 15/2021 was mentioned, to finally recommend the agreement clauses to be strengthened, to avoid the possibility of the new electric utility requiring compensation for investments not yet made.

Regarding possible **extension of the agreements** currently formatted, the technical area mentioned the preparation, by the Office of Federal Prosecution, of an Order in which the adjustment of the suppression of the respective agreement provision is mentioned, to avoid confusing the existence of the clause as the future impossibility of its extension:

> 69. However, Order No. 00511/2021/PFANEEL/PGF/AGU of September 28, 2021, brought complementary analysis on the matter, as noted below.
>
> > 2. Despite the correct *ratio decidendi* and conclusion (2) of the opinion currently approved, in the sense that there is no impropriety in the section that states there is no provision for the term extension for the concession, we understand that the section may be incorrectly interpreted as a prohibition to the extension. The current regulatory guidelines do not provide for the possibility of extension of the concessions addressed by Law No. 14,182/2021. The fact that the possibility of extension is not provided for, however, shall not be confused in any way with the prohibition to extend the concession even in

Classificação: Confidencial

> case of changes in the regulatory guidelines. In the first hypothesis, supervening legislation may provide for the possibility of extension; in the second, not even supervening legislation could do so. Thus, to avoid any misunderstanding about the breadth of the section, we recommend removing it. However, we acknowledge its legal correctness, in case it is decided to maintain it.

> 70. For the foregoing reasons, although it has been demonstrated that there is no conflict between the wording proposed in the draft Concession Agreement made available in Public Consultation No. 48/2021 and the current laws and regulations, **it is recommended that Section Two, Sole Subsection**, in the draft Concession Agreement, be deleted, in line with the reasoning provided in Order No. 00511/2021, issued by the Office of Federal Prosecution in conjunction with ANEEL.

Thus, this action taken by the technical areas fully complied with Eletrobras' request on the matter.

The subsequent item of analysis is the subject of the obligations of **arts. 6, 7, and 8** of Law No. 14,182/2021. In line with the orientation of the Office of Federal Prosecution, improvements in the agreement's wording were made, to specify the main liability of the *electric utilities* regarding the amounts to be contributed, so that Eletrobras' liability is only subsidiary.

Soon after, the **PISF obligations** were examined. If properly examined, Eletrobras' contributions dealt with two aspects of these obligations: a) the first one, regarding the start date of the obligations; and ii) the second one, regarding the amount to be considered in the added value calculation.

Regarding the first aspect, the technical area referred to CNPE Resolution 15/2021, which properly dealt with the matter by discarding the interpretation of the immediate start of the obligations and establishing January 1, 2023, as the starting date. Thus, this aspect was fully met.

However, regarding the second aspect, according to the acts published by CNPE, only the value of BRL80.00/MWh for the PISF–delivered electricity was included in the added value calculation. But the document called "*parameters used in the economic and financial model for the value added by the new concession agreements*," prepared by CNPE itself and released along with its Resolution No. 15/2021, brings other market values for electricity:

Period	Energy Prices	Hedge (1-GSF)
2022 to 2025	BRL233/MWh	19.5%
2026	BRL207/MWh	14.7%
2027	BRL181/MWh	10.0%

Classificação: Confidencial

2028 on	BRL155/MWh	5.2%

In other words, CHESF shall sell to PISF for BRL80.00/MWh a certain amount of electricity that has a market value (between 2022 and 2025) of approximately BRL233.00/MWh, where the market price is taken from the documents released by CNPE together with its Resolution No. 15/2021. However, considering that article 4, II, "d", of Law No. 14,182/2021 determines the reimbursement of the "*economic value*," the added value calculation should consider the value of BRL233.00/MWh and not only BRL80.00/MWh, which can be translated as a neutrality guarantee to Eletrobras with the aforementioned supply.

However, in the added value calculations, only the value of BRL80.00/MWh was adopted for the PISF–addressed electricity. That is, this item was not addressed by CNPE and/or ANEEL, to the prejudice of CHESF and in non–compliance with the provisions of Law No. 14,182/2021.

In the following item, the technical areas addressed the **locks**. In the same line indicated by the Office of Federal Prosecution, the technical areas said:

> 94. It is important to note that a similar issue is under analysis by SCG and the Superintendent's Office for Inspection of the Generation Services – SFG for the case of existing locks, based on the particular case of the Três Irmãos HPP. In this instruction, SFG proposed to SCG to assess the opportunity of including, through an Amendment to the Concession Agreement in force, a section in all concession agreements of existing power plants already equipped with navigation structures. The wording proposed by SFG is as follows:
>
> > Subsection [XX]. If there is a lock for river navigation on the same dam as the hydro power plant, the Electric Utility remains responsible for the dam safety, pursuant to Law No. 12,334 of September 20, 2010.
> >
> > Subsection [XX]. If the lock is operated by a third party, the Electric Utility shall execute an operating agreement with the entity maintaining the structure, in which the parties' responsibilities and attributions shall be defined, aiming at the dam safety.
> >
> > I – the operating agreement shall be signed between the Electric Utility and the National Department of Transport Infrastructure – DNIT or competent state agency;
> >
> > II – the agreement shall contain, at least:
> >
> > a) definition regarding the sharing of information on the structure safety;
> >
> > b) notification for emergency cases;
> >
> > c) provision on the taking out of insurance; and

Classificação: Confidencial

d) system to implement the instruments under the National Dam Safety Policy (PNSB).

Subsection [XX]. The Electric Utility is subject to inspection and any penalties provided for in Law No. 12,334/2010 regarding shared structures related to river navigation, considering the dam main use for generating electricity, pursuant to art. 5, II, of Law No. 12,334/2010.

95. It is important to note that the aforementioned proposal is based on Opinion No. 00102/2021/PFANEEL/PGF/AGU, issued in response to a consultation formulated by SFG through Memorandum 90/2021–SFG/ANEEL, which requested a statement from PFANEEL on the case. (...)

98. It is understood, therefore, that it is necessary to better delimit the liabilities to be borne by the stakeholders involved in electricity generation activities shared with vessel locking, especially regarding Dam Safety.

99. However, differently from the text proposed in the contributions, in convergence with what the Office of Prosecution concluded, sections were inserted into the draft Concession Agreement to address the subject, as follows.

SECTION FOUR – ELECTRIC UTILITY OBLIGATIONS AND CHARGES

[...]

Subsection Seventeen – if there is a lock for river navigation on the same dam as the Hydro Power Plant, the Electric Utility remains responsible for the dam safety, pursuant to Law No. 12,334 of 2010.

Subsection Eighteen – when the lock is operated by a third party, the Electric Utility is obligated to maintain an operating agreement, during the effectiveness of the concession, with the structure maintainer, in which the responsibilities and attributions of the parties shall be defined, aiming at dam safety.

I. The operating agreement shall be signed between the Electric Utility and the National Department of Transport Infrastructure – DNIT or competent state agency;

II. When the operation and maintenance of the locks is subcontracted by the institutions described in item I, the operating agreement shall be signed between the Electric Utility and the Subcontracted Third-Party Company, with the intervention and consent of DNIT or the competent state agency;

III. The agreement shall contain, at a minimum:

i) definition regarding the sharing of information on the structure safety;

ii) notification for emergency cases;

iii) provision on the taking out of insurance; and

iv) a system to implement the instruments under the National Dam Safety Policy (PNSB).

Classificação: Confidencial

> Subsection Nineteen – the Electric Utility shall be subject to the inspection and eventual penalties provided for in Law No. 12,334 of 2010, regarding the shared structures related to river navigation, in view of the preponderant use of the dam for the electricity generation, pursuant to art. 5, II, of Law No. 12,334 of 2010.

That is, regarding the locks, the technical areas modified the concession agreement, to make the electric utilities' liabilities clearer, and the proposed solution is in line with other discussions about locks held in the scope of ANEEL, in attention to the applicable laws and regulations.

Next, the technical areas addressed the possibility of **intervention**, arisen due to the contribution of another stakeholder. The Agency rejected the suggestions of that agent, which does not seem to be a problem since the intervention is expressively provided for in Law No. 8,987/1995 and is independent of even a provision in the concession agreement.

Therefore, the draft concession agreement was adapted, in the form of a Technical Note, and disclosed as an annex to the referred declaration. This is the third draft agreement presented in this administrative process.

After the aforementioned declarations – all prepared with the purpose of improving the draft agreement –, the process was effectively deliberated by the Collegiate Board, in the 37th Ordinary Public Board Meeting, held on October 5, 2021.

About the referred deliberation, it is convenient to present some comments regarding the vote of the Reporting Officer, Dr. Sandoval Feitosa. Firstly, the vote brings a concise report that essentially addresses the acts attached to the process so far, as well as the contributions presented during CP No. 48/2021.

Next, the vote addresses each of the topics related to the forty–eight (48) contributions considered by the technical areas, similar to what is stated in Technical Note No. 675/2021-SCG/SRG/SRM/SFG/SFF/SGT of October 1, 2021. In other words, no changes were identified, in the Vote of the Reporting Officer, regarding the draft concession agreement edited by the technical areas.

Thus, in the end, the Vote of the Reporting Officer concluded:

IV. PROVISION

Classificação: Confidencial

> 60. Given the aforementioned and what is in Process No. 48500.001427/2021-53, I vote for:
>
> I) The APPROVAL and FORWARDING to the Ministry of Mines and Energy – MME of the Draft Concession Agreements that shall regulate the exploitation of hydroelectric potentials covered by Law No. 14,182 of 2021, which deals with the privatization of Eletrobras.
>
> II) THE KNOWLEDGE and, with prejudice, DENY GRANT the Administrative Appeal filed by the Union of the Workers of Urban Industries, Environmental Activities, and Entities that Inspect and Regulate Electricity, Sanitation, Gas, and Environmental Services in the Federal District – STIU-DF, against the opening of Public Consultation No. 48 of 2021.

Such deliberation gave rise to Order No. 3,137/2021, reproduced below:

> THE General Director of the Brazilian Electricity Regulatory Agency – ANEEL (...) decides: (i) to approve and forward to the Ministry of Mines and Energy – MME, the Draft Concession Agreements that shall govern the exploration of the hydroelectric potentials addressed by Law No. 14,182 of 2021, which deals the with the privatization of Eletrobras; (ii) to acknowledge and, with prejudice, dismiss the Administrative Appeal filed by the Union of the Workers of Urban Industries, Environmental Activities, and Entities that Inspect and Regulate Electricity, Sanitation, Gas, and Environmental Services in the Federal District – STIU-DF, against the opening of Public Consultation No. 48 of 2021.

The act was published in the D.O.U. of October 8, 2021. With that, the [third] draft Concession Agreement was approved, and a comparison with the version submitted for Public Consultation allowed an assessment of the effectiveness of the contributions made by Eletrobras and other agents that expressed interest in the privatization under examination.

III – EFFECTIVENESS ANALYSIS OF ELETROBRAS' CONTRIBUTIONS

As mentioned, Eletrobras was the agent that presented the largest number of contributions. Some of its requests were answered (or lost their object) with the disclosure of information and added value by CNPE, in its Resolution No. 15/2021. Other subjects, in turn, were contemplated by ANEEL itself.

The following table summarizes the topics of Eletrobras' contributions, indicated in a summarized form, and is accompanied by information regarding their eventual compliance, along with a brief comment about each item:

Classificação: Confidencial

EFFICACY OF THE CONTRIBUTIONS BY ELETROBRAS		
Description	**Acceptance**	**Comment**
Pending information	Yes	CNPE Resolution No. 15/21 disclosed most of the information required, which were included in the agreement
Individualization of the new concessions	No	There shall be one agreement for each Eletrobras' subsidiary
Pre-existing rights (waiver)	Partially	The Agency suppressed the general waiver but highlighted that the agent may not request indemnifications
GSF compensation	No	Error. It was shown that "the added value" took into account current deadlines, allegedly extended by Homologation Resolution (REH) 2,932/21. However, such an act was after added value calculation.
Compensation (non-amortized assets)	No	It was appointed that the agent shall not be entitled to indemnifications other than provided by CNPE and referred to CNPE Resolution No. 15/2021.
Pending rights and waiver clause	Partially	The Agency suppressed the general waiver but highlighted that the agent may not request indemnifications
Guaranteed power output	No	The Guaranteed Power Output (GF) definition is under the competence of MME. MME Ordinance 544/21 defined new GFs.
Garantia física (Itumbiara e Sobradinho)	No	The Agency referred to Laws 11,943/09, 13,182/15, 14,182/21, and CNPE Resolution No. 15/2021
Current Concessions of Water Resources	No	The Agency considered the topic as a competence of other agencies (National Water and Sanitary Agency – ANA/State Agency).
Extension of Concession Agreement	Yes	The Agency suppressed the clause, in order to avoid mistaken interpretations in the future.
Concession bonus	No	The Agency referred to CNPE Resolution No. 15/2021
Descotização	Yes	CNPE Resolution No. 15/21 detailed the deadlines for the process of termination of the quota system (*descotização*). ANEEL adapted the draft concession agreement.
Ancillary services	No	The Agency considered the topic as an object of specific regulation.
Free sale of energy	Partially	Despite the negative response, the Agency showed that the electricity allocation for MRE shall comply with Decree No. 2,655/1998
Locks	Partially	Topic in better detail with a modification in the previous treatment.
Obligations of contribution	Partially	Despite the formally negative response, the Agency clarified that the assumption of the project liability is only a possibility.
Expansions and revamping	No	The Agency wants to prevent that only granted modernizations/expansions are made, which is understood to be undesirable.
Fines	No	It is explicit that the basis for the calculation shall be provided for in REN 846/2019
PISF	Partially	Full compliance with the deadline. As for the price, fails to comply with.
CEPEL	No	Topic not included in the concession agreement

It is possible to note that the main advances in the draft concession agreement may be thus summarized:

i) indication of previously undisclosed information, especially after the passing of CNPE Resolution No. 15/2021;

ii) elimination of the generic clause of waiver of pre-existing rights;

iii) explanation of a misleading assumption in the GSF case, since REH 2,932/21 is posterior to the added value calculation;

iv) elimination of a clause that could be interpreted in the future as a prohibition to the extension;

Classificação: Confidencial

v) breakdown of the process of termination of the quota regime (*descotização*);

vi) clarification of subjects regarding energy availability;

vii) breakdown of the subject of locks;

viii) clarification of the possibility of the electric utility being liable for projects, which contributes to highlighting that, in principle, they are not liable for them; and

ix) the postponement of the start date of PISF–related obligations.

As correctly noted by ANEEL, many of the issues regarding the current privatization process are under the competence of MME and CNPE. Thus, the remaining interests of Eletrobras regarding the privatization process should be discussed before these bodies, especially regarding the added value calculation.

In other words, one should keep in mind that, according to the administrative acts in place today (especially the draft concession agreement approved by ANEEL, through Order No. 3,137/2021 and CNPE Resolution No. 15/2021), there are some relevant consequences of the execution of the new concession agreement in such a format that is noteworthy.

For example, Eletrobras and its subsidiaries have claims regarding asset indemnification, concession extension due to the GSF, provision of ancillary services, and the neutralization of certain obligations that, until now, have not been properly addressed by CNPE, especially regarding the added value calculation. Note: meeting Eletrobras' legitimate interests does not always require amending the draft concession agreement itself. Sometimes, granting the company's and/or its subsidiaries' claims requires only the consideration of their arguments in the added value calculation.

These pending matters, which gravitate around the privatization of Eletrobras, may either be solved by CNPE (through the amendment of its Resolution No. 15/2021) or be maintained in their current status.

Classificação: Confidencial

Anyway, Eletrobras' actions, before ANEEL and the Granting Authority, have improved several aspects of the draft of the new concession agreement and the added value calculation regarding the privatization of the aforementioned company, provided for in Law No. 14,182/2021.

Finally, in case of any change in CNPE Resolution No. 15/2021, altering the added value, or should any other material fact regarding the subject of this statement occur, *Baggio e Costa Filho Sociedade de Advogados* is immediately available to provide clarifications and carry out additional analyses if so requested by the requesting party.

These are the considerations on the topic of this consultation.

CTA-PR-02253/2021

Rio de Janeiro, December 20, 2021.

To Your Excellency, Madam
Marisete Fátima Dadald Pereira
Executive Secretary
Ministry of Mines and Energy — MME
Esplanada dos Ministérios, Bloco "U", 7.º andar
70065-900 — Brasília, DF

Subject: **Official Letter No. 451/2021/SE-MME and CTA-PR-01787-2021 — Request for clarification regarding the capitalization process of Eletrobras, established by Law No. 14,182/2021.**

Madam Executive Secretary,

On October 18, 2021, Eletrobras received from this supervising ministry Official Letter No. 451/2021/SE-MME and its attachments, containing the answers to the questions made in our Letter CTA-PR-01787/2021 of September 24, 2021.

We thank you for sending the information described in Information Note No. 20/2021/ASSEC (NI 20/2021-ASSEC) of October 18, 2021, and in Report EPE-DEE-RE-080/2021-R0 of July 2021. However, Eletrobras still has some relevant questions and seeks the necessary condition of reproducibility of the economic and financial model adopted for the calculations that substantiate CNPE Resolution 15/2021.

In order to contribute with the delimitation regarding the remaining questions, we attach to this letter a correspondence we received from the electric utility Eletrobras Furnas, more specifically regarding the indemnification of the generation assets (CTA DR.E.037.2021, attached), which are reflected in the questions of the item "II.1) Questions regarding the block of questions related to the topic of the remaining indemnification to the generation assets of the Eletrobras System's HPPs operating under the quota system."

Thus, we will now outline, in topics, the points for which clarification is sought.

1. Background

NI 20/2021-ASSEC mentions documents to which content Eletrobras did not have access. NI 20/2021-ASSEC mentions documents to which content Eletrobras did not have access.

i. knowledge of Technical Note No. 046/2021-ASSEC/MME, referred to in item 47 of Opinion No. 00284/2021/PFANEEL/PGF/AGU (Sicnet 48516.002509/2021-00), mentioned in the scope of ANEEL Public Consultation No. 48/2021 (CP ANEEL 48/2021);

Classificação: Confidencial

ii. knowledge of Official Letter No. 143/2021-DR/ANEEL, in which data related to the calculation of the compensation to the Mascarenhas de Moraes HPP is informed, on the base date of January 2022; and

iii. access to Process No. 48300.000243/2021-22, which contains the documental proceedings, in the ASSEC database, referring to the capitalization process of Eletrobras.

Noteworthy, Eletrobras needs access to the document described, in which the calculation memory of the economic and financial model adopted is described, including the reference data of the calculation developed for the issue of CNPE Resolution 15/2021, as well as the future CNPE resolution that would be issued, as stated in NI 20/2021-ASSEC, regarding the need to revise the calculations due to the inclusion of the total indemnification amount to HPP Curuá-Una and the revision of the total indemnification amount to the Tucuruí HPP and Itumbiara HPP for insertion and consideration of the term extension of its concession due to the renegotiation of the hydrological risk (GSF), in accordance with the provisions of ANEEL Resolution No. 2,932/2021 (ANEEL Resolution No. 2,932/2021).

In the privatization process of Eletrobras, established in Law No. 14,182/2021, according to CNPE Resolution No. 15/2021, the company will disburse the equivalent of R$62,479,656,370.10, concerning the new electric energy generation concession grants.

According to the Accounting Pronouncement CPC 00 — Conceptual Structure for Financial Reporting, an asset is a present economic resource controlled by the entity as a result of past events, and the economic resource is a right that has the potential to produce economic benefits.

The amount to be disbursed by Eletrobras, referring to the value added by the new generation concession contracts, will be recorded as intangible assets, as determined by Technical Pronouncement CPC 04 (R1) — Intangible Assets, similar to International Accounting Standards (IAS) 38.

For a resource to be classified as an intangible asset, it should meet the following conditions:

a) Identification;
b) Controlled by the entity; and
c) Generation of future benefits.

The electric power generation activity has the potential to bring economic benefits and is controlled by the entity; therefore, it is understood that the right to explore the plants during the extended term for the concessions has the characteristics of control and generation of future benefits.

For the identification condition to be proven, it is necessary that the award bonus be priced by asset component.

After the initial recognition, the assets' values shall be periodically evaluated, in order to verify if the recorded balances do not exceed their recoverable value, as determined by Technical Pronouncement 01 (R1) – Impairment of Assets, similar to International Accounting Standards (IAS) 36.

The asset recoverability analysis is performed by Cash Generating Units (CGUs), being a CGU the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or other groups of assets. Therefore, in addition to the need to price the award bonus by component for the recognition of the asset, it is also necessary for the analysis of recoverability over the asset's permanence in the company's equity.

Classificação: Confidencial

We believe that both for the purposes of initial recognition and for the purposes of the recoverability test, the amount calculated by CNPE, related to the award bonus, should be presented individually, per electric power plant.

Additionally, considering that CNPE included in its calculations the indemnifications related to the assets not yet amortized and not yet depreciated, and that Eletrobras has in its accounting records the remaining amounts of the concessions' renewals derived from Law No. 12,783/13 and other residual assets, it will be necessary, for purposes of accounting reconciliation, that CNPE presents the indemnification amounts separated by electric power generating plant.

It is public knowledge the progress of the regulatory process within ANEEL to determine the respective values of non-depreciated and non-depreciated assets of hydro power plants whose concessions were renewed under the quota system according to Law No. 12,783/2013. Furthermore, ANEEL Normative Resolution No. 942/2021 (REN 942/2021) was published, which establishes the criteria and procedures for calculating the investments in reversible assets not amortized or not depreciated of extended generation concessions and reviews ANEEL Normative Resolution No. 596/2013 (REN 596/2013). However, the model adopted by MME considers that the assets of these plants would all be depreciated. Thus, it would be desirable for Eletrobras to have access to the regulatory and technical-accounting fundamentals that justify the statement that there are no non-depreciated and non-depreciated assets for the HPPs operating under the quota system, according to MME response of NI 20/2021-ASSEC. (See items 2.5 and 2.11 of NI 20/2021-ASSEC). Chesf, Eletronorte and Furnas are subject to the regulatory obligation of preparing the Evaluation Reports (RAs) established by REN-942/2021, supported by a specialized company and accredited at ANEEL. These RAs will be a subsidy for ANEEL to establish and homologate the amounts of the remaining indemnifications, not yet received. Therefore, Eletrobras cannot identify which was the financial amount considered in the calculations of the model structured to support CNPE Resolution 15/2021.

Given the conceptual basis of the methodology established in the Tariff Regulation Procedures (PRORET), Module 12, Sub-module 12.1 — Periodic Review of the Annual Generation Revenue of the Plants Operating under the Quota System, there is a question regarding the regulation in force for the assumptions used in the mathematical model of CNPE Resolution 15/2021, regarding the definition of the indemnification to plants not operating under the quota system. As the title of the PRORET sub-module itself specifies, this methodology is exclusive to the calculation of the revenue of the plants operating under the quota system. Therefore, as the Tucuruí, Mascarenhas de Moraes, and Curuá-Una HPPs are independent power producers (IPPs), the question is related to whether another methodology to be regulated should be adopted.

In the same line of reasoning of the paragraph above of this letter, the deduction of the topic Costs of Investments in Improvements (GAGmelhorias), revenue intended exclusively for the maintenance of the quality of services in the concession in effect (current cycle), deserves a more detailed contextualization for a proper understanding. The accounting nature of the indemnification for portions of investments not amortized and/or depreciated in the previous cycle is different from the nature of GAGmelhorias, as transcribed in another item of Sub-module 12.1 of the PRORET:

> 31. Having the investments of the 28 plants bid outside the quota system, with physical and power guarantee, the capital costs for investments in improvements for each hydro power plant are defined, in regulatory terms, with price index of July/2017:

$$GAG_{Melh} = Fator_{Anualização} * e^{15,28132} * CI^{0,731} * UG^{0,49185} - (Remuneração_{Anterior}) \quad (4)$$

> Where,

> *Fator de Anualização*: Annualization Factor, which depends on the number of generating units and the remaining period of the concession contract;
> CI = Installed Capacity in Operation (MW);
> UG = Number of Generating Units. If ANEEL does not have the updated amount and if no technical data sheet or other proof to be analyzed by ANEEL is presented, the value considered will be equal to 1; and
>
> *Remuneração Anterior (Previous Remuneration)*: One fifth of the remuneration for investments in improvements received in the previous cycle of effectiveness of the Annual Generation Revenue (RAG), adjusted for the IPCA price index.
> [....]
> 34. The compensation for investments made in hydro power plants, in **concession periods prior to the quota system** for guaranteed power output, known and approved by an act of the Government, **upon acknowledgement that they will be recovered through tariffs**, shall be discounted from equation (4), as an adjustment factor per plant, and, retroactively, from the amounts effectively paid to the electric utilities, with due inflation adjustments, as of the implementation of this methodology. [Emphasis added].
